see the possibilities of difficulties arising which may far exceed our so-called religious difficulty. That day is not yet, and perhaps the best way the teacher can prepare himself for or against its advent is by trying to set before his pupils (and I am thinking principally of the secondary schools) the pros and cons of each constitutional struggle without endorsing the hitherto widely accepted opinion that the side which won for the moment was always in the right, but rather leaving it to his pupils to decide for themselves, even if, like Cato, they opt for the beaten side. I hold that every age has a right to revise its historical judgments, and, right or wrong, it undoubtedly does so; but I hold almost equally strongly that children should be taught tolerance to the extent of respecting at least the sincerity of the beaten side. The cocksure spirit engendered by some history teaching is hateful.

I have alluded to Empire patriotism, though, as you all know, the citizenship of the British Empire is a singularly imperfect thing compared with the Roman, or even its modern counterpart the French. Of world patriotism or citizenship our notions are still more imperfect.

As regards teaching the more formal details of government, while I am not opposed to a certain amount of informal teaching, as the occasion may arise, around, say, such a question as a demand note for rates with which many town children at least of the shop-keeping class are more or less acquainted, we must first cultivate the spirit of local and of national patriotism. Once imbued with such sentiments and ideals the children will naturally come to see that the apparently arid and often unintelligible details of local and national government are the best means so far devised for giving scope and play to the civic spirit and its aspirations towards freedom and well-being. They will, therefore, be the more ready to take an earnest and even an intense interest in them, as they realize the underlying reasons for their creation and existence, all the more so as the English generally have an inordinate appetite for facts.

And, to quicken this communal spirit, there seems no better method than to arouse the sense of community and self-government within the school itself. Without turning every school into a George Junior Republic, the promising experiments in self-government in elementary schools in Warwickshire, London, and elsewhere and the prefect system so well established in our secondary schools, in spite of certain admitted drawbacks, do really appear to develop in pupils a sense of responsibility and of communal spirit which are essential to every self-governing democracy. I have been particularly struck when, interviewing recently several hundred candidates for the teaching profession, they have told me what a revelation life in the training college had been to them of the existence of communal duties and responsibilities. I know that in some cases, especially in secondary and University education, this school patriotism is liable to take too much of a caste form; but, even in this case, no one will, I think, contend that such patriotism is not better than mere blind self-seeking individualism.

This paper may seem rather vague and indefinite, but, in a matter like the present, it is essential to begin at the right end. To put my beliefs in a nutshell, I do not believe that civics is to be inculcated on the rising generation by ramming down their throat a set catechism, or by elaborate lessons on the machinery of government: these should come later. The first thing to do is to stimulate the interests, the imagination, and the emotions of the pupils in respect to the locality and the nation in which they live, to give them, in fact, ideals rather than mere ideas. If this is brought about, then the more formal instruction in the machinery of government will be more or less easy to effect, while, as regards a definite syllabus in the subject, the matter should be left to local option.

AN Examiner sends us the following howler from an unseen headed, "Gallio, Proconsul of Achaea":—"Il portait sur lui, même à la chasse, ses tablettes de cire et son stylet": "He took with him, even out hunting, sticks of sealing-wax and his fountain pen."

MYSTICISM AND SCHOOLBOY RELIGION.

BY A PUBLIC-SCHOOL MASTER.

IN a recently published volume of School Sermons, the Head Master of Repton has defended the introduction of some topics which are not usually considered to be within the grasp of the schoolboy intellect on two grounds: (1) that schoolboys understand a great deal more than they are given credit for understanding; (2) that there is a strong element of mysticism in the youthful mind, as there might necessarily be expected to be at a time when emotions are strongly developed. Of these pleas, the second is distinctly more convincing than the first. Head masters are, as a rule, better acquainted with the minds of their senior boys than their junior—or, it would be more accurate to say, of their upper boys than of their lower, seeing that age and place in the school do not correspond, even roughly, at a public school. Now it is true, even of a fourth form boy, that there are areas of intelligence and sources of mental activity which are too often overlooked, and which, when given a chance of asserting themselves, will take away the breath of their ordinary instructors with astonishment. I have known the most marvellous feats of authorship to proceed from boys who at their Latin or even French are not only dull or indolent, but actually impotent and helpless in the face of the very plainest, and what would appear the most common-sense, problems of language. Creative evolution is often at work in the mind of the individual when the analytical intelligence seems wholly lacking. But on the whole, and in the average case, it is on the material problems of the external world around them that their intelligences work most readily. Anything to do with an aeroplane or motor-car not only rouses their interest, but also draws them on to understand and master the mechanical complications involved by those inventions. Even if they are not poets, they will be fired by the external features of Nature—colour, motion, and incident; and indeed this is only healthy and natural and what one would expect. Anything like symbolism is to the normal boy-mind an unknown and unintelligible tongue. But symbolism is the language of the mystic, and it is not easy to see how anything which can be called mysticism, in something approximating to the true sense of the word, can exist in a mind which is incapable of symbolism. In the proper sense, mysticism is the immediate (*i.e.*, unmediated) apprehension of the Divine, and the very essence of mystical experience is that it can give no explicit account of itself; it can only dimly suggest its meaning by symbol and metaphor. For directly communicable knowledge is always of the outward and of that which can be expressed in terms of the senses; whereas mystical knowledge is wholly inward and incapable of exact or direct expression. So far as it is embodied in external facts, the fact, as such, is only important as a vehicle of an inner meaning; it is often indifferent, for mystical purposes, whether it is fact or fiction. Now to the junior schoolboy nothing matters but external fact. He treats the Bible, Old and New Testaments alike, with the most faithful literalism. If he is a believer in verbal inspiration, it is not as a theological doctrine that he believes it, but as an assumption which underlies all printed matter, except such as plainly announces that it is fiction, and even in the latter sphere he expects all the setting to be strictly in accordance with reality. His history and geography books must be verbally inspired, or they are naught. If historians differ, they have no business to do so. Their proper function is to agree.

This is the difficulty which besets modern Bible teaching. If we take all the divine commands of the Old Testament to have been literally and directly given as recorded, the resulting conclusions as to the character of God are not satisfactory; but if we suggest that they were not directly and literally given, like orders from a general to his brigade, but rather represent the best conduct known to that generation, then, argues the fourth form mind, the Bible is no good at all. It said so, and it ought not to have said so unless it meant it. If we may

judge by Mr. Temple's own sermons and other published writings, the kind of Biblical instance which he thinks that mysticism may legitimately make its own is the Ascension. Here for the mystic, young or old, the question of material fact must be the less important thing. The exaltation of the Christ as apprehended by the "spiritual," not by the "sensual," man, as St. Paul would put it, is the real thing. But to the schoolboy the question of fact, of space, of historical and scientific truth *seems* at any rate to be the point, and the only point. At any rate, if he is not satisfied about that, he is not satisfied at all. That the question whether the body of the risen Master is in space, and is or is not capable of being in two places at once (as the Articles quaintly put it), should be only of secondary importance, is to him the heresy of heresies. We feel therefore that any treatment, whether in sermon or classroom, which does not deal with fact as fact, will not make much impression below the sixth form, and perhaps little even there; and we are inclined to doubt whether Repton is any exception to this general rule. But that is not to say that there is no mystical element in schoolboy religion. It is possible that Mr. Temple uses the term as identical with religious emotion, and possibly he is right in so doing; for certainly there can be no mystical religion without religious emotion, though perhaps it would be unsafe to commit oneself to the converse statement. But anyone who has passed from the sphere of literalism to that of symbolism in religion must be aware that his literalism was tinged with emotion, perhaps with mystical emotion, though he was unconscious of it. The most formal of Pharisees is probably not without that experience. What the literal mind cannot do is to dissociate the two elements, so as to enable the fact to be viewed as a symbol, whether it be true or not. Not that the truth of fact is wholly a matter of indifference; no great religion was ever founded save on a quite solid substratum of fact. The absence of fact from its symbolism was the weakness of Greek religion and its presence the strength of Hebrew. But the inability to separate fact and symbol is a characteristic of all primitive religion—even the most mystical. It is as true of the earlier Christian mystics as of the Mana-cults of Polynesia. Indeed, Mr. A. A. Jack may be right in his half-serious suggestion that there is no religion but primitive religion.* And in this, as in so many other respects, the boy-mind is the mind of the primitive race, both in its strength and in its weakness. Its enthusiasms are whole-hearted, even to fanaticism; its devotion to literal truth is ineradicable. I once discovered that a boy of fifteen or so regarded all the symbolism of the book of the Revelation as literal fact. There was the dividing river, the gate of a single pearl, and everything else plainly existing. One has to be careful lest, in one's eagerness to establish the truth of fact, one destroy the truth of poetry in such cases, for it is better far to have in mind the conception of the Holy City, the New Jerusalem, coming down from Heaven as a bride adorned for her husband, and regard it as a fact destined to happen just as described, rather than to be able to conceive of no New Jerusalem coming down at all. The spirit must live, even if it requires that the letter should live with it too.

Mr. Lunn, in "The Harrovians," records of his hero that the emotion inspired by Confirmation could not compare with that of his first sight of snow mountains. Possibly he himself had been unlucky in what he experienced in the former respect. To many the two things will seem distinctly comparable, and to resemble one another in being religious; but his criticism of the ceremony of Confirmation in a school chapel has some truth, especially when applied to school addresses and services generally. The tendency of the modern sermon to schoolboys is to be strictly and severely ethical, only tinging the exhortation to virtuous living with here and there a spark of divine fire, as we are pointed to the perfect pattern of all virtuous living. The ideals of service, of school government, of self-discipline are all faithfully and well set forth, and sin is duly denounced. But somehow, speaking for myself, I find that they leave me

singularly cold. It is not so much that they are too negative. There used to be a tendency to speak of things not to be done, without laying sufficient emphasis on the prior duty of finding the right things to do and doing them (and without this the effort not to do will be strained and ineffective, and possibly morbid). But that fault is disappearing with the strengthening of the social ideal in school and nation. What is wanting is something of Promethean fire from Heaven. With all their literalism and externalism, boys can quite well feel that the oneness of mankind, as of school, is not merely a matter of a single round globe or a collection of buildings within a single wall, but of a real indwelling and sustaining spirit, whereby they cry "Abba, Father." Mr. Temple did well to be bold and deliver a series of sermons based on the idea of the Incarnation; only let us make it plain that we intend to be concrete when concrete and abstract when abstract. If we wish to employ fact as symbol, let us not leave our boyish audience in doubt whether we mean that it is fact or not.

Lastly, it is no less important that the whole service, hymns, canticles, prayers, should embody the qualities which properly belong to the religion of a boy. There should be no vagueness, no morbid introspection, no negation, and (but this leads into questions which there is not room to discuss here) no more repetition than is necessary. The conditions which determine how far it is possible to deviate from the actual services of the Prayer Book may differ in different school-chapels. The danger is that we should think we are catering for the spiritual needs of boys, when we are really providing food for adults. Liturgicalism corresponds to a real need of the adult soul; but, just as it is a feature of the adult rather than the infant Church, it does not so adequately fulfil the religious needs of boys. Boys want novelty and originality, not traditionalism. They have too much of that in their ordinary school life. If the Litany is the best and finest of universal petitions, it is yet not one into which boys can enter much. Its repetitions seem to them not emotional or heart-felt but fatuous; they suggest, not cumulative power, but inarticulate impotence. Again, their hymns must be positive and spirited and concrete, not abstract and devotional, nor, above all, negative and of low vitality. Hymns of low vitality are such as tell us that

With low sad voice He calleth thee,
"Leave this vain world and follow Me."

Not thus would the Master have spoken to schoolboys, and they know it. But if unrealities of this kind can awake no response in a boy's heart, Dr. Butler's "Lift up your hearts" can, and so can Wesley's "Forth in thy name, O Lord, I go." Both are mystical as well as practical. For this reason it is well that many of the Wesleys' hymns have been inserted in the Public Schools hymn-book. But many of those hymns that speak of weariness and longing for rest had better have been relegated, along with "O Paradise," to adult collections, if anyone must have them. As a well known preacher recently put it, "What you boys need is work, and it's no good your singing about your wanting rest." For this reason, much though one may resent the constant intrusion of military metaphors into religion, "Onward, Christian soldiers" and "Fight the good fight" must be endured gladly, seeing that even the schoolmaster must remember that he too was once a boy and loved such things.

THE execution of Admiral Byng has always been regarded as a blot on our national history, and Voltaire's gibe still rings in our ears. The view of General Wolfe, contained in notes written in his copy of the account of the trial, and recently published by the *Times*, reminds us, however, that there are two sides even to that question. Wolfe thought that, though Byng was not worse than some others who took part in the Minorca affair, an example had to be made for the good of the Service. Certainly the Navy needed at that moment a sharp lesson; there had been several cases of bad behaviour in the presence of the enemy, and quite as certainly the lesson was effective—there were no such cases afterwards. Byng's was one of the many hard cases in which one man has to die for the people.

* In the recently published collection of stories entitled "All Men are Ghosts."

JOTTINGS.

THE London County Council again issues its "Handbook of Classes for Teachers," Session 1914-15, a substantial pamphlet of 68 pages. The classes are three-fold:—(1) University Classes on subjects such as those treated by Extension Lecturers; (2) Classes in connexion with Galleries and Museums; (3) Strictly Professional Classes on Methods of Teaching Drawing, Handwork, &c. It is a feast of good things, and every one of the 25,000 London teachers will find his or her account. Copies of the Handbook may be obtained on application to Education Officer, L.C.C. Education Offices, Victoria Embankment, W.C.

THE Prize Fellowship of £100 offered by the Federation of University Women has been awarded to Dr. Mary Williams, Lecturer in French at King's College for Women, University of London. Dr. Williams is engaged in research on French Arthurian Romances and their connexion with Wales.

WOMEN, though still disqualified for the Parliamentary franchise, can vote for County Councils and other municipal elections. We would remind them that the last day for sending in new claims is August 20, and if they have any doubt as to their qualifications or as to the steps to be taken to be placed on the Register, they should apply for a leaflet issued by the Women's Local Government Society, 19 Tothill Street, S.W.

AN influential meeting of the Joint Committee for the Abolition of Half Time Labour was held on June 6, at 4 St. James's Square, with Mr. Waldorf Astor, M.P., in the chair. A resolution was proposed by Mr. R. D. Denman, and carried unanimously, calling on the Government to abolish half-timers in their forthcoming Education Bill. He said that since introducing his Bill he had received threatening letters, one vowing to have his life unless the Bill was withdrawn. The Bishop of London said that, in his opinion, the hope of the country rested mainly with the Labour movement, but Labour would fail unless it got more education in its ranks.

IN his last Speech Day at Repton, the Rev. William Temple celebrated his departure by a display of pedagogic squibs and crackers. "The great instrument for education was those subjects about which nobody knew the truth. As soon as anyone understood the truth about a thing, its value for education was gone. When they set to work to find truth which nobody had yet known, then they got true education, then they got real education. They might not get the truth; that did not matter; they got mental faculty." Again: "It did not matter twopence how a man spelt a word; it mattered frightfully where he put the stops." And in arithmetic his practice was to add a column up, then down, and afterwards split the difference between the two totals.

No one would take Mr. Temple seriously, or infer that had he stayed at Repton he would have substituted for science and history squaring the circle and discovering the primitive language of man. Stripped of paradox, he has only re-stated Lessing's famous saying, "If God offered me in His right hand truth, and in His left the search for truth, I should in all humility choose the left."

THE League of the Empire Challenge Cups and personal prizes of five and three guineas for Empire Day Essays were won this year by George Cooling, of Brisbane Grammar School, and Walter Albury, of the Boys' Central School, Nassau, Bahamas. Essays were sent in from nearly every British Colony.

AT the morning session of the annual meeting of the Association of Musical Competition Festivals on June 27, Dr. Yorke Trotter, of the London Academy of Music, gave a remarkable demonstration of the work of some dozen of his pupils. The hearing and naming of chords had been brought to an astonishing degree of perfection, and the improvisation was most creditable; the composition on a given theme in one particular case roused hearty and well deserved applause.

MR. FRANCIS WILLIAM PEMBER has been elected Warden of All Souls' College, Oxford, in succession to the late Sir William Anson. Mr. Pember swept the board at Harrow, carried off the Ireland, Craven, and Eldon Scholarships, and has for some years been Estates Bursar at All Souls.

AT the meeting of the Council of the East London College, held on June 22, it was announced that the Court of the Drapers' Company

had resolved to defray the cost of the erection and equipment of the new chemical laboratories of the college. The cost will amount to approximately £15,000, and it is hoped that the laboratories will be available for the use of students at the commencement of the new session in October next. The visit of the King, that was announced for last month, has been postponed till the laboratories are completed.

MISS MARIETTE SOMAN, who was educated by the Norwich High School for Girls and holds a research studentship from Girton College, has been awarded a Doctorate at the Sorbonne, with "mention très honorable" for her thesis on "La formation philosophique d'Ernest Renan."

HOODS AND FALSE HOODS.

FOREIGN DOCTORATES.

IT ought to be generally known (but, unfortunately, it is not in this country) that there are now two vastly different kinds of doctorates in France—viz. (1) the *doctorat d'Etat* [*ès lettres, ès sciences, en droit, en médecine*], the only genuine ones under Government control, obtainable by graduates as *bacheliers* and *licenciés*, and qualifying holders for lectureships and professorships in French Faculties; (2) the *doctorat d'Université*, which is not a degree at all, but an ornamental title conferred by the competing Universities almost exclusively on foreigners, who need not possess any previous degrees. It cannot even serve as a stepping-stone for securing the lowest State degree; it confers no practising rights in France.

When the *doctorat d'Université* was first mooted, in the nineties (as a means of drawing foreign students to France who might otherwise go to Germany for a cheap scientific title), it gave rise to numerous and lively criticisms. The protesters feared that it would, to all intents and purposes, be falsely identified with the *doctorat d'Etat*, and the event has but too fully justified their apprehension.

The following particulars, in French, are drawn from official sources:—

Article 15 du décret du 21 Juillet 1897.—En dehors des grades établis par l'Etat, les Universités peuvent instituer des titres d'ordre exclusivement scientifique (tels que le doctorat avec mention lettres, sciences, droit, médecine, etc.). Ces titres ne confèrent aucun des droits et privilèges attachés aux grades par les lois et règlements et ne peuvent, en aucun cas, être déclarés équivalents aux grades.

This statute is perfectly clear and goes to show the great difference in value that exists, for instance, between the degree of *docteur ès lettres* and the title *docteur d'Université* (mention lettres).

Les candidats au doctorat ès lettres doivent justifier du diplôme de licencié et soutenir deux thèses. La première thèse est rédigée en français; la seconde est généralement rédigée dans une des langues anciennes enseignées à la Faculté. Le jury se compose de trois docteurs ès lettres. Le nombre des examinateurs ne peut être de moins de six sous peine de nullité.

The theses presented for the *doctorat ès lettres* are elaborate, original works, sometimes of considerable length, evincing exhaustive research and deep scholarship; they form a unique and rare collection, which may be consulted at the British Museum Library. Since its institution in August 1810—a little more than a century ago—under fourteen hundred candidates have proved themselves worthy of the degree of *docteur ès lettres*.

It would be interesting to compute how many hundred foreigners have secured the *doctorat d'Université* in the fifteen French Faculties of Letters within the short period during which it has been in operation. The theses presented by these foreigners are mostly essays of an inferior cast—not always indited by those who sign them, and not to be compared with the theses bearing the Government hall mark. The *doyen* of a Faculty told me that it was next to impossible for outsiders to procure copies of foreigners' theses accepted by his University, as they were privately printed and not

intended for public inspection, and, he added, "Elles sont à peu près de la force d'un doctorat allemand." This is not saying much for them. One of my former pupils, having obtained a travelling scholarship, went to Strasburg without knowing a word of German, and, after about fifteen months' sojourn there, he came back a full-fledged Ph.D. When he presented me with a complimentary copy of his "Inaugural-Dissertation über den im Eisen durch schnell oszillierende Stromfelder induzierten Magnetismus" (35 pages octavo) he could not but own that it would have been humanly impossible for him to compose this dissertation in German, and yet he had to give a "schriftliche Versicherung an Eidesstatt, dass er die eingereichte Arbeit selbständig und ohne fremde Hilfe verfasst hatte!" *Ab uno disce omnes!*

Universités où les conditions d'obtention du nouveau doctorat sont à peu près les mêmes : Paris, Lille, Caen, Nancy, Besançon, Clermont, Lyon, Toulouse, Bordeaux, Aix. Les aspirants étrangers doivent produire, en s'inscrivant, un *curriculum vitae* et des attestations d'études de la valeur desquelles la Faculté est juge. La durée de la scolarité à accomplir en vue de ce doctorat est de deux à quatre semestres, mais la Faculté peut en accorder la dispense partielle ou totale. Les épreuves comprennent : (1) la soutenance d'une thèse composée en français ou en langue étrangère ; (2) une ou plusieurs interrogations sur des matières spéciales choisies par les candidats trois mois à l'avance et agréées par la Faculté. La thèse sera examinée par un ou plusieurs professeurs de la Faculté.

Universités dont les cours en vue du nouveau doctorat sont ouverts à tout le monde sans aucune condition d'âge, de grade ou d'études antérieures et dont les diplômés sont, d'après leurs circulaires officielles, spécialement réservés aux étudiants étrangers : Rennes, Poitiers, Dijon, Montpellier, Grenoble.

I have the permission of M. Condamin to quote from a letter (July 17, 1913) that he wrote to me in answer to my inquiry. M. Condamin is Dean of the Faculty of Letters in the University of Lyons.

Quant au doctorat "d'Université," vous aurez bien de la peine à en penser jamais plus de mal que moi. Cette invention burlesque ne pouvait se faire jour qu'en un temps et sous un Gouvernement où, en toutes choses, on semble prendre à tâche de mettre en haut ce qui devrait rester en bas ! C'est, en partie, pour faire le jeu des Premières (du menu fretin) qu'on l'a instituée. Mais, du même coup, on fait le jeu d'une foule de médiocrités apportées des quatre bouts de l'horizon par tous les vents du ciel, et l'on multiplie, comme à plaisir, le nombre des suffisants, des déclassés, et, à l'occasion, des intrigants. Je n'ai cessé de traquer tous ces arrivistes, ceux surtout qui ont l'impudeur de s'arroger un qualificatif qui ne figure pas sur leur diplôme, et de se nommer docteurs "ès lettres." Mais le moyen, je vous prie, d'éclairer le public et de le tenir en garde contre ces supercheries ?

Car enfin, le diplôme de docteur d'Université ne confère pas un *grade*, mais donne tout bonnement un *titre* ; et, *administrativement*, il ne confère, chez nous, aucun droit ; il ne compte pas ; il n'a aucune valeur ; ce n'est qu'un panache ! Vous devinez donc à quel point est usurpée, et de fantaisiste invention, la robe doctorale à hermine dans laquelle s'enveloppent les Scapins dont vous me parlez. Ce n'est pas l'emprisonnement qu'ils mériteraient, mais une bonne volée de bois vert : la matraque : il n'y a que ça !

A. B.

THE Chelsea Physical Training College for Women, attached to the South-Western Polytechnic Institute, deserves to be better known. The students are enabled to follow their studies under the University lecturers, and they have the use of the well equipped laboratories of the Institute, and so pursue the various subjects required for the profession under the most favourable conditions. During the course the students are not only educated in the subjects directly connected with the profession of physical training, but they can study at the same time the various subjects which comprise the curriculum of a Polytechnic. Adequate arrangements are made for securing experience in teaching. The weekly practising classes in gymnastics and dancing are attended by a large number of school children, and the students have, moreover, practical experience in treating school deformities, there being some thirty to forty patients attending the College daily. These patients are treated by the students under direct medical supervision. Miss Wilkë, the Head Mistress of the College, is always pleased to give advice and particulars to parents desiring information relating to the profession of physical training.

SAFE NOVELS.

The World Set Free. By H. G. WELLS. (6s. *Macmillan*.)

To say that Mr. Wells's fiction is scientific and his science pure fiction is a cheap epigram, but it has this much of truth in it that the romance is eminently readable, but it signally fails to convince us of its main thesis, that whatever is wrong, and that the one key to human progress is to be found in physical science. The opening words strike what to our ears is the false note: "The history of the world is the history of the attainment of external power." More truly than Galileo and Newton, Watt and Stevenson, Pasteur and Kelvin, the makers of history have been Moses and Plato, the Buddha and Mahomet, St. Paul and Luther, and a greater than they. "Man is the tool-using, fire-making animal." True; but he is even more widely distinguished from the brute as the dreamer of dreams, the one animal that looks before and after. The *mise en scène* is masterly—the raw, chuckle-headed Scotch lad who drinks in with all his ears a lecture on radium, and the professor's vision of the future, if only the secret could be discovered of quickening the natural process of radioactivity by the disintegration of the atom; and then his musing, as he gazes on the setting sun from Arthur's Seat and exclaims, "Ye auld red thing, we'll have ye yet!" Good, too, is the variation played on Browning's theme, "What porridge had John Keats?" Less convincing is the account of Armageddon, the last campaign in which the great capitals of Europe—Paris, Berlin, and London—are converted into active volcanoes by the action of atomic bombs. The next set shows us a *tabula rasa*—all the old machinery of the world scrapped, red ruin and a return to primitive barbarism staring men in the face. There is no resisting the almighty atom, which had proved more conclusively than a wilderness of Norman Angells the absurdity of war. A new Peter the Hermit, the French Ambassador at Washington, preaches an anti-war crusade, and gathers at Brissago, an Italian alp, all the potentates of the world. Kings lay down their crowns, and a Committee of World Safety is then and there formed which proceeds to abolish war, confiscate all atomic bombs and the plant, and then *dare jura gentibus*. Since the transmutation of metals has rendered gold a drug in the market, there can be no accumulation of wealth, but the sovereign is retained as a token, exchangeable for so many atoms of *vis* owned by the State. The Committee proceed to form a World Code of Laws, to make of English a *lingua franca*, and to devise a scheme of town-planning, providing for each family on the globe their cottage home, with everything handsome about them. The whole scheme works without a hitch, except for a few demagogues who are confounded by the grant of universal suffrage and a few capitalist owners of patents who are clapped into a lunatic asylum.

The drama ends artistically on the key-note, and Karemin, the Socrates of the New World, on his death eve, flings defiance at the setting sun: "Very soon now, old Sun, I shall launch myself at you, put my foot on your spotted face, and tug you about by your fiery locks." Our reflection as we close the volume is what a drab world the world of science will be when it is made. Four-fifths of mankind will be sitting, each under his own stoup, for a century or more, with twenty-four hours of leisure, for, with intensive culture,

one worker will suffice to maintain five, and a tabloid will take the place of sleep. There will be no more competition or heaping up of riches. It will be an age of "efflorescence," and the majority of the population will be artists, painting, modelling, and carving for the public good. Or, by way of a change, they will solve cubic equations and "some still opaque riddles in phenomena." Religion will be a negligible quantity, and if there are still poets they will no longer sing of love, for the man will be as the woman and the woman as the man. There will be no more "obsession of sex." Thank heaven for that!

Smiling Waters. By MAX RITTENBERG. (6s. *Methuen*.)

The protagonists are four—two financiers, both of whom deal in millions, and two women, the wife of the first financier, who proves a *furens femina*, and the Una, who eventually baffles the Duessa of the drama. The plot is well contrived, a duel between the rival millionaires in which the two women act as seconds, and the title has a double significance: first the Scylla and Charybdis of finance, and secondly the wreck of the yacht, which defeats the plot of the villain financier and removes the objectionable wife. There is no lack of incidents: a murder by *apaches* which turns out to be no murder; the tracking of the victim, who lives on as his own half-brother; vitriol-throwing, and forgery. The novel is non-moral, but in no way immoral.

DUSTLESS

and HYGIENIC ROOMS.

In **SCHOOLS, LABORATORIES, &c.**
USE The Odourless, or Powerful Germicidal

FLORIGENE

(A Regd. Name suggested by FLOOR-HYGIENE)

Very **EARLY** in the **SUMMER VACATION**
for best results.

"Florigene" has been used for many years on
Wood, Concrete, and Stone floors of every
description, also on Linoleum and Cork Matting
in Government and Municipal Buildings, and
in all kinds of Schools and other Institutions
in the United Kingdom and Colonies. It is
acknowledged to be unequalled for the Effective,
Economic, and Hygienic laying of dust, &c.

It is IMPORTANT TO NOTE that

ONE APPLICATION of "Florigene" **ALLAYS**
THE DUST and DIRT for 2 to 12 months,
according to traffic, not only during each sweeping
(without Sprinkling of any kind) but also throughout
all the intervening periods—wh'ch is even of greater
hygienic importance.

These beneficial results are not
attained by the use of sweeping
powders or any other method.

"Florigene" is easily applied—saves labour,
and is not sticky—the ordinary daily dry sweeping
alone required—Scrubbing being optional.

"Florigene" is strongly recommended by
Medical and other expert authorities.

A Head School Mistress writes:—

"I am glad to have the opportunity of recommending
'FLORIGENE.' We have used it regularly on both wood
and linoleum, and found its effects most beneficial, both in
laying the dust and preserving the surface. The linoleum
scarcely shows wear after six years."

(Repeat orders since received.)

A Grammar School Head Master writes:—

"We have used your 'FLORIGENE' for several years in
this School, and we have found it excellent in keeping down
dust, which is now never to be seen anywhere. I believe the
health of this School has been better since. The air is cer-
tainly more pleasant to breathe when movements are going
on, there is also a great saving of labour in cleaning."

(Repeat orders since received.)

Numerous similar Testimonials can be produced.

EXCHANGE OF TEACHERS BETWEEN LONDON AND CANADIAN SCHOOLS.

VICTORIA LEAGUE RECEPTION.

THE close connexion of the Victoria League with educational work throughout the Empire gave special interest to a party at the League's office on Tuesday, July 21. Lady Jersey (President) invited the thirteen London elementary-school teachers who are about to exchange posts for a year with an equal number of Canadians to meet members of the Executive and Education Committees of the Victoria League. Eleven of the teachers were able to be present. This party was the first occasion on which the teachers who are going to Canada had met one another, or had had an opportunity of discussing their prospects with Canadians. The exchanges are the outcome of negotiations between the London Education Committee and the "Hands across the Seas" Movement in Canada, both of which bodies have received the support and approval of their Governments, and the provisional recognition in these particular cases of the respective certificates for the year of exchange.

Lady Jersey, in a brief speech of welcome, pointed out that the teachers by these exchanges are carrying out in practical form the ideals of the Victoria League. Nothing could better contribute towards that "organization of sympathy" which, in Mr. Rudyard Kipling's words, is the object of all the League's work. She knew that, in the capable hands of the London Teachers' Association, the teachers were sure of first-rate arrangements. She hoped that the Victoria League might be allowed by introductions to their many personal friends in Canada to enlarge as much as possible the teachers' circle of friends in their new homes. She could answer for the friendliness with which they would be welcomed, and for the whole-hearted pleasure of her own Committee in helping to secure it. She thought that some advice given to her on her marriage by her mother might possibly be helpful to them: "As you go to new places, and see many things done differently from what you have been accustomed to, don't always feel quite sure that your own way must be the right one." On her own behalf, and for her companions of the Victoria League Committees, Lady Jersey wished the travellers a very happy time and the opportunity of both learning and teaching a great deal.

Mr. Hallam, at Lady Jersey's request, briefly outlined the working of the League among its Junior Associates, and asked the teachers to take any opportunities of inaugurating correspondence between their

new pupils and children in Great Britain. He congratulated them on their wonderful chance of interpreting the true "British touch" to the rising generation in Canada.

VILLAGE CHILDREN'S HISTORICAL PLAY SOCIETY.

THE Annual Meeting of this Society was held on Thursday, May 21, at 59 Palace Court, W., on the invitation of the Hon. Secretary, Miss Beatrice Beddington, Lady MAUD WARRENDER presiding. The Report stated that during the year 1913 sixty-eight performances had been arranged and assisted by the Society. The number of Associates had increased, but more funds were needed to provide more sets of costumes, and also a larger number of really good but simple plays.

Mr. EDMOND HOLMES delivered an address on "The Dramatic Instinct." The instinct to energize, to exercise nerves, muscles, senses, was common to children and the young of all the higher animals; but the instinct to imitate was peculiar to the human race, with the possible exception of their first cousins the monkeys. These two instincts fused into one became the dramatic instinct, and through the exercise of this dramatic faculty all the triumphs of self-education in early infancy were achieved. It was only of late years that teachers had begun to turn to account this truly formative and educative instinct. To-day in some of our more enlightened infant schools a certain amount of acting goes on, but it lacks spontaneity, and tends to become mechanical and unreal. It is practised also in the highest class, but the children have by then become self-conscious, and the attempt to revive their dramatic instinct, which has lain dormant for years, is seldom successful. In the ideal school acting should form part of the curriculum of every class from the bottom to the top. In urging this he had no intention of adding a new subject to the already overcrowded curriculum. Acting was not a separate subject, but an attitude and a method. Most of the subjects taught in our elementary schools could be treated dramatically, *par excellence* history and literature; but arithmetic became real to children who played at keeping shop, and handwork and needlework acquired a new meaning when they enabled children to make their own "properties." The dramatic treatment of history took two distinct forms. The first was that which the Society encouraged, and of which he had seen a perfect specimen at Winchelsea, where Mrs. Percy Matheson's play, "Sir Thomas More," was given by the village children, who had been carefully trained and coached. The other form was that practised at Sompting, and described in "What is and What might be." It had the great recommendation that the children are the players in every sense of the word—the playwrights, the actors, the costumiers, the machinists. On the other hand, the Winchelsea method sets before the children a high ideal, gives a truer presentment of history than they could possibly frame for themselves, and turns what before were mere names into living men and women. For both methods there is much to be said, and in his ideal school he would have one historical play such as "Sir Thomas More" acted once a year, and Sompting plays or the like going the whole year round. True there was not a Miss Beddington in every parish nor an Egeria in every school, but in every village, he hoped, might be found someone with a turn for acting, and in every school teachers keen to keep alive and foster the dramatic instinct in children.

At the conclusion of the meeting Lady MAUD WARRENDER announced that she was arranging for an open-air performance by the Winchelsea village children in the grounds of Leasam, Rye, on August 4, in aid of the funds of the Society.

WANTED STATISTICS OF ADOPTED CHILDREN.—There is still a considerable diversity of opinion as to the influence of an individual's inborn propensities upon his early home training and subsequent school education. One of the most direct ways of disentangling this knotty but important problem is to be sought in a comparison of adopted persons with their real and their adopted relatives. To this end a collection of data is being made by the writer, on schedules intended to make comparison less difficult. He would be greatly obliged if anyone knowing of a case would write for a schedule. The name of the family studied is not asked for, and the information will be used for statistical purposes only. The name of the recorder will be published or not, according to his wish. Information supplied by schoolmasters is particularly desired, because they have so much practice in judging and comparing the mental qualities of individuals. Let no one think that a case is not worth recording because it appears to have no outstanding features, or because it is in harmony with or runs counter to prevailing opinions.—Lewis F. Richardson, Eskdalemuir, Langholm, Scotland.

PITMAN'S SHORTHAND TEACHERS' JOINT EXAMINING BOARD.

President—ALFRED PITMAN, Esq.

EXAMINATIONS for the Shorthand Teacher's Diploma of this BOARD are held in the principal cities of the United Kingdom throughout the year. The Diploma is recognized by County Councils and other important Educational Authorities as the highest possible testimony to a Teacher's ability and its possession is, therefore, of the utmost value to Teachers seeking appointments. The Diploma is specified as a qualification by the Department of Technical Instruction for Ireland. Full particulars of the examination, together with a copy of "HINTS TO CANDIDATES," may be had, post free, from the

EXAMINATIONS SECRETARY, PHONETIC INSTITUTE, BATH.

NATURE STUDY AND BOTANY.

Instructive Nature Study cases and specimens for class work, as supplied to the Universities, Colleges, and Higher Grade Schools. Birds, mammals, shells, crustaceans, butterflies, &c., carefully mounted for painting studies.

Lists from

A. FORD, Naturalist, South View, Irving Road, Bournemouth, Hampshire.

HORLICK'S MALTED MILK

MALTED BARLEY, WHEAT, and MILK in Powder Form

The wholesome nutrition of pure rich milk and choice malted grain, supplying strength and vigour, with little tax on digestion. Instantly ready for use by stirring briskly in hot or cold water.

NO COOKING REQUIRED.

Equally useful to both

TEACHERS AND SCHOLARS.

A glass of "Horlick's" is an ideal lunch, as a delicious and nourishing food-drink may be easily prepared in a moment. **Keep a bottle in your desk.** Horlick's Malted Milk will be found to supply the strength and energy so necessary during the long hours of study, and its use will prevent lassitude.

An efficient corrective of insomnia, taken hot before retiring.

HORLICK'S MALTED MILK LUNCH TABLETS.

A delicious food confection, to be dissolved in the mouth. Especially useful during study for exams.

In Glass Bottles, 1/6, 2/6, 11/-, at all Chemists and Stores. Liberal Sample, either in Powder or Tablet Form, for trial free by post on request.

HORLICK'S MALTED MILK CO., SLOUGH, BUCKS.

METHUEN'S NEW BOOKS.

ANCIENT AND MEDIEVAL ART: A Short History.

By MARGARET H. BULLEY. With 40 Illustrations and a Chart.
Crown 8vo. 5s. net.

This book, which is the first of its kind, contains thirteen lessons on ancient, classic, and medieval art; an introduction which discusses the methods and the necessity of teaching the history of art in schools and homes; and a chart illustrating the great art periods of the world.

PRACTICAL APPLIED PHYSICS. By H. STANLEY,

B.Sc., F.I.C., Lecturer in the Merchant Venturers' Technical College, Bristol, Author of "Practical Science for Engineering Students." With many Diagrams. Crown 8vo. 3s.

This book is for the use of engineering students and others who are doing laboratory work beyond the elementary stages, particularly in heat, mechanics, and electricity.

PRELIMINARY PRACTICAL SCIENCE. By H.

STANLEY, B.Sc., F.I.C. Author of "Practical Applied Physics." With 120 Diagrams. Crown 8vo. 1s. 6d.

This little handbook is intended for use in the lower forms in trade schools and for technology students.

A TEXTBOOK OF ELEMENTARY BUILDING CONSTRUCTION. By ARTHUR R. SAGE, Chief Lecturer in

Building Construction and Mechanics of Building, L.C.C. School of Building, and WILLIAM E. FRETWELL, Chief Lecturer in Plumbers' Work, Sanitary Engineering, and Heating and Ventilating, L.C.C. School of Building. With many Diagrams. Crown 8vo. 3s. 6d. net.

A THIRD-YEAR COURSE OF ORGANIC CHEMISTRY. By T. P. HILDITCH, D.Sc. (Lond.), F.I.C., Author of "A

Concise History of Chemistry." With many Diagrams. Crown 8vo. 6s.

A SELECTION FROM METHUEN'S LIST.

Junior English. By F. J. RAHTZ, M.A., B.Sc., Senior Lecturer at Merchant Venturers' Technical College, Bristol. Tenth Edition. Crown 8vo. 1s. 6d.

Higher English. By F. J. RAHTZ, M.A., B.Sc. Eighth Edition. Crown 8vo. 3s. 6d.

A Historical Geography of the British Empire. By HEREFORD B. GEORGE, M.A., Fellow of New College, Oxford. Fifth Edition, Revised. With Map. Crown 8vo. 3s. 6d.

A Short History of Rome to the Death of Augustus. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps and 4 Plates. Thirteenth Edition. Crown 8vo. 3s. 6d.

A Junior History of Great Britain. By E. M. WILMOT-BUXTON, F.R.Hist.S. Second Edition. Crown 8vo. 2s.

A History of Great Britain. From the Coming of the Angles to the Year 1870. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 20 Maps. Fourth Edition. Crown 8vo. 3s. 6d.

The Industrial History of England. By H. DE B. GIBBINS, Litt.D., M.A. With Maps and Plans. Nineteenth Edition, Revised. Crown 8vo. 3s.

Makers of Europe. Outlines of European History for the Middle Forms of Schools. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 12 Maps. Thirteenth Edition. Crown 8vo. 3s. 6d.

Some Secrets of Nature. Short Studies in Field and Wood. Illustrated with Coloured Plates and Photographs from Nature. Crown 8vo. 1s. 6d.

The Romance of Nature. Studies of the Earth and its Life. With an Introduction by the Rev. ALFRED THORNLEY, M.A., Superintendent of Nature Study to the Nottingham and Leicestershire Education Committees; Lecturer on Nature Study in the Midland Agricultural and Dairy College, Kingston, Derby. Illustrated with Coloured Plates and Photographs from Nature. Crown 8vo. 2s.

IDOLA LINGUARUM.

MODERN LANGUAGES.

THE DIRECT METHOD: FOR.

By F. B. KIRKMAN.

IN defending the Direct Method against the arguments brought forward by Mr. Siepmann in order to justify his very complete conversion to the Anti-Direct view, I am faced by a serious initial difficulty. Who is to decide what is meant by the Direct Method as understood in this country? Is it those who have worked to introduce it into our schools, and have, year after year, proclaimed in print and on the platform what they hold its principles to be; or is it those who disregard what its advocates say, who make it mean something other than what they mean, and who often seem to have no other foundation for their statements than what they see of the misuse of the Method in not a few schools?

In the present article I propose to proceed on the assumption, which I think is a fair one, that those who preach a doctrine are entitled to determine its meaning. But here I am faced by another difficulty, of a personal nature. Though I have long been counted a "whole-hogger" advocate of the Direct Method, is my view of what it means to be taken as typical? Does it represent the views of others who have taken a part in introducing and spreading the Method in this country? I have reason to think that, where broad principles are concerned, it does. If, however, I make any statement from which others of my persuasion dissent, it is always open to them to express that dissent. One more remark on the personal question. The views I profess here are not of recent date; they have been professed for many years past, and will be found fully developed in a booklet called "The Teaching of Foreign Languages" (Clive, 1909), to which I

venture to allude, with all the apologies that modesty demands, because it is not possible in the limits of an article to do justice to my subject.

Let me begin by pointing out that the adjective "Direct" in "Direct Method" proclaims at least the main principle for which the advocates of the Method stand—namely, the necessity of creating the direct association of the foreign word and its content. Much misunderstanding would be avoided if the term Direct Method were used to denote the application of this principle and nothing else. As it is, it is made to cover an indefinite number of other things, according to the prejudices of the person using it, with the result that the Direct School is not infrequently credited with views it does not hold. For example, the view that "literary education, æsthetic culture, and the intellectual broadening of the mind," are unimportant. But to this point I shall return.

The principle of direct association is attacked by Mr. Siepmann in the latter part of the first of his chief objections to the Direct Method. He states that "the notion that a foreign tongue can be acquired at school by direct association with objects or pictures or concepts already connected with native expression is as fundamentally wrong as it is attractive at first sight."

In proof of this sweeping statement, we are told, first, that "it is utterly impossible to proceed by the Direct Method with things and thoughts which are already familiar to the pupil without the intervention of the mother tongue." Now I am not prepared, without very convincing experimental proof, to admit that it is "utterly impossible" to proceed without the intervention of the mother tongue. But let that pass. What I wish to insist upon is that no exponent of the Direct Method, as far as I am aware, ever even dreamt that mental translation is avoidable when the Direct Method is in use. Mental translation, no doubt, does occur, though to what extent is unknown. Mr. Siepmann to the contrary notwithstanding. And, as far as the formation of the direct association is concerned, mental translation is quite unimportant. Neither mental translation nor expressed translation hinders the direct association, provided, in the case of the expressed, that it is not insisted upon after it has served its purpose. Both fall away, as Mr. Siepmann himself admits in another part of his article. They perish from disuse. What hinders the direct association is *habitual* translation. The objections of the Direct School to habitual translation I shall come to presently.

The second proof of his statement is that "the spontaneous formation of correct grammatical forms and constructions cannot be brought about without its passing for a considerable time through the process of reflexion." I confess I have some difficulty in following this. I take it to mean that the ability to use without conscious effort any inflexion or construction in the required context is only to be obtained as the result of an initial stage of reflexion. Now, the ability to use constructions and inflexions without conscious effort implies a direct association between the context in which they occur and its meaning. Thus, if my interpretation be correct, Mr. Siepmann does not mean that the foreign tongue cannot be acquired by direct association with concepts already connected with native expression, but simply that such direct associations must be preceded by a stage of reflexion. I am quite prepared to accept this view, with reservations. I do not, for example, think that it is necessary for a boy to pass for a considerable time through a period of reflexion in order to form the spontaneous construction "Je le lui ai donné." But even if it be necessary, I fail utterly to see that that is an argument against the principle of direct association.

I will discuss, next, the third of Mr. Siepmann's chief objections to the Direct Method, for it is closely connected with the question of direct association. The objection is thus stated: "If translation is avoided, misconception and uncertainty will follow, and one of the best means of mental training be lost."

Let us take the first point, namely, that if translation be avoided, misconception and uncertainty will follow. What Mr. Siepmann has clearly to prove is that the avoidance of

translation to the extent of causing misconception and confusion is inherent in the Direct Method. And this is what he boldly sets out to do: "It would certainly be inconsistent with the whole spirit of the Direct Method if translation were admitted. . . . As soon as translation is admitted as a principle, one of the corner stones of the sanctuary is removed, and the whole structure falls to pieces." But does it? Not a bit, and it is Mr. Siepmann himself who says so. For between the two affirmations just quoted comes another which clearly implies that according to the view of the Direct School "the admission of the mother-tongue in any shape or form must be considered as an evil that should be avoided *as much as possible*." The italics are mine. Now Mr. Siepmann cannot have it both ways. Either he must stick to it that translation and the Direct Method are incompatible and prove it, or he must admit that they are not incompatible, in which case his charge falls to the ground. The latter view is, in fact, correct. The principle of the Direct School is to avoid translation as much as possible—that is, to avoid it as far as is consistent with the avoidance of misconception and uncertainty.

Mr. Siepmann goes on to observe that translation into the mother tongue is essential because it is "the only way in which the teacher can find out for certain whether a pupil properly understands what he has read in a foreign language." This, according to Mr. Siepmann, is "another blow which means death and destruction to the Direct Method." I venture, all the same, to think not; I venture even to suggest that it is a blow in the air. I affirm that it is no part of the principles of the Direct Method that translation should not be used as a test of understanding; the principle is to use it only when necessary. If it is necessary as a test, it must be used. In practice, the application of this principle will and must depend upon the teacher and the circumstances; and, if certain teachers misapply the principle, that is no argument against it as a principle.

The Direct Method permits of the use of translation both as a test and as one of the ways of making clear the meaning of foreign words. In certain cases translation is the best way of making clear the meaning of a word, and in others, again, it is the worst. What the Direct Method avoids, once more, is habitual translation; it avoids it because habitual translation tends to delay, quite unnecessarily, the formation of the direct association, and because the more the foreign language is used and heard in the classroom, and the less the native, the quicker will the foreign tongue be learnt. The Direct School uses other ways of making clear the meaning of words, not only in order to avoid the habitual translation, but also because translation is not the best way of impressing a word and its meaning upon certain types of memory. Into this point I have not space to enter, and must content myself with referring those interested to the book above mentioned (pages 48-63).

The second part of Mr. Siepmann's third objection above quoted is that to avoid translation is to lose what he calls a "most excellent instrument for training *all the faculties of the mind*" (italics mine). Mr. Siepmann probably does not mean quite all this—at least, I hope not. Be that as it may, I take it he will agree that there is only one kind of translation that is likely to give this discipline, and that is translation done for its own sake as a fine art, as an exercise in literary *expression*, and not merely as a method of interpretation. This means taking a passage and working through it carefully over and over again till an exact and finished rendering is found. No advocate of the Direct Method has ever denied the value of such an exercise. What has been questioned is, first, the extravagant claim made as to its value, and, secondly, the propriety of introducing it into the school course before the class has a very fair knowledge of both the languages involved. That the claims made on its behalf by Mr. Siepmann and others are excessive I am prepared at any time to maintain. With regard to the best time for introducing the exercise into the classroom I express no decided opinion. For the moment, my business is to show only that the neglect of translation as a fine art is no necessary part of the Direct Method.

Let me refer in passing to Mr. Siepmann's view that it is the business of the teacher of foreign languages and of every other subject to teach English. Is he not here confusing two things that are distinct? I agree, and so does everybody, that it is the business of the science teacher, the mathematical teacher, the French teacher, &c., to insist that what English is used as part of the teaching of his subject shall be correctly used. Nothing more important. But to insist that he shall deliberately drag in more English than he requires merely for the sake of teaching English instead of mathematics, &c., strikes me as a claim that Mr. Siepmann will find it extremely difficult to substantiate, if he is ever rash enough to make the attempt.

Let us now turn to another of Mr. Siepmann's chief objections to the Direct Method: the second. It is worded thus: "Grammar taught in a desultory manner and without introducing and practising its carefully graduated phenomena, one by one, leads to slipshod results."

What, once more, Mr. Siepmann has to prove is that neglect of grammar is an inherent defect in the Direct Method. And this is what, once more, he sets out boldly to do, thus: "Whatever the Direct Method teacher may do, this question of grammar remains a stumbling-block for him, because it does not properly fit into the method anywhere, and ought to be excluded, if the method were consistently carried to its logical conclusion, which is that the language should be learnt by observation and habit, as one learns one's mother-tongue." Mr. Siepmann, indeed, approaches the Direct School much in the spirit in which the wolf in the fable approached the lamb. He is determined to put us in the wrong. Says he in effect: "It is true you do teach grammar; but then you have no business to be teaching it. Therefore you are condemned all the same."

The only reply that I need make to Mr. Siepmann's statement is that he has yet to prove that the Direct Method necessarily involves teaching the language only "by observation and habit, as one learns one's mother-tongue"—in other words, leaving the grammar to take care of itself. Personally, I have always insisted in my theory and practice upon the necessity of the systematic teaching of grammar, and have found that all my Direct Method friends agreed with me. I may add that I have no doubt, as the result of many years' experience of examining, that the systematic and thorough practice of grammatical forms is neglected in our schools; but it is neglected by the anti-Direct teachers as well as by the Direct. I am prepared to maintain that the only way to avoid the slipshod grammar now far too prevalent is a thorough application of the oral Direct Method to the teaching of inflection and construction.

I now come to the first of Mr. Siepmann's chief objections: "The importance of the spoken language is exaggerated, and fluency cannot be acquired in the classroom." By fluency Mr. Siepmann means "fairly correct speaking" of the foreign tongue. This, Mr. Siepmann says, cannot be gained in the classroom, even given two hours a day, by the Direct Method, "if the pupil is to acquire his knowledge by the process of repetition and imitation until it becomes spontaneous." This is Mr. Siepmann's opinion, and, in the absence of careful experimental evidence, it can only be an opinion to be accepted or not. From what I have seen, I should be disposed to hold that an efficient use of the Direct Method, given two hours a day, would produce fluency in the sense given the word by Mr. Siepmann. But whether it would or not does not appear to me to affect the value of the Direct Method; and here we come to the other part of the objection—namely, that the importance of the spoken language is exaggerated by the Direct School.

I venture once more to suggest that Mr. Siepmann is confusing two things that are quite distinct: the spoken language as an object of instruction and the same as a method of instruction. The Direct School insists very strongly on the latter; I have still to learn that it attaches importance to the former.

As there is frequent misapprehension as to what are, according to the Direct School, the objects of foreign language

instruction, I venture here to quote my own views, not because they are mine, but because they are those of a typical "whole-hogger." I think they will probably come as a surprise to those who are accustomed to derive their notions of the Direct School from its opponents. These objects are "to give to our pupils (1) the ability and also the *desire* to enter into possession of the literary heritage of at least one nation beside their own; (2) a means of communication with foreigners, and also a means of access to information, scientific or other, that may prove indispensable in later life, it being understood, however, that it is the function of a general education to lay only the foundations upon which any such form of specialized linguistic instruction may afterwards rapidly and efficiently be built; (3) a knowledge of the character and achievements of one or two modern foreign nations ample and accurate enough, when aided by the personal influence of the teacher, to inspire not only feelings of respect and goodwill towards the particular nation in question, but a desire to be just, both in thought and act, towards any foreign nation whatever. To these there can be added a fourth, which may equally well be achieved through the medium of Latin and Greek: to give the literary discipline that is supplied by translation as a fine art" (*op. cit.* 12).

If we consider the kind of attainment these objects demand for their realization, in so far as that is possible under existing school conditions, it becomes at once apparent that ability to understand the written language is of paramount importance. Skill in writing the language is of less importance. Speaking the language and understanding it when spoken are of least importance—a fact which, of course, in no way detracts from the value of the spoken language used as a *method* of instruction.

In conclusion, let me point out that the Direct Method in our schools suffers from serious difficulties. It is a method that demands not only skill and freshness in teaching, but also high linguistic qualifications. These demands are by no means adequately satisfied, nor can they be until there is a marked improvement both in the conditions of instruction and in the remuneration awarded. And further: the Direct Method is a method in the making. It has to be perfected. For this, careful experiments under favourable conditions are necessary. Better conditions of instruction, better remuneration, experimental work: all these spell one word—Money.

THE PROGRESS OF SCIENCE IN PUBLIC SCHOOLS.*

I.—THE NEED OF INVESTIGATION.—THE CLAIMS OF SCIENCE.

By E. H. TRIPP, Ph.D., F.C.S.

THE last Report on Science Teaching in Public Schools, issued in 1909 by the Board of Education, was based on inquiries made by the Association of Public-school Science Masters in the previous year. This document contained a mass of interesting details, and was especially valuable because it not only drew attention to some of the many problems of science teaching awaiting solution, but also brought to light the diversity of methods of organization in vogue in different schools. It laboured, nevertheless, under two important defects: (1) the data were obtained from a relatively small number of schools (forty-six), and (2) it omitted expressions of opinion from those who tendered information, and failed to point out the lines upon which improvements might be effected.

That science teaching has progressed will be denied by none, but the ship is only just launched and we have still to

* Based on a Paper read before the Association of Public-school Science Masters at the Imperial College of Science and Technology, January 14, 1914.

take our bearings. It is no doubt pleasant at times to recollect that noses were made to bear spectacles, or that the foraminifera left their calcareous coats in Nature's cloak-room in order to make blackboard demonstrations possible; but such reflections carry us a very little way. The weight of evidence convinces us that all is not as it should be in the matter of scientific instruction. The position of science in our schools is still an inferior one; the world of industry is sorely in need of practical, brainy men to direct it. Hence the necessity of a new inquiry is imperative, and, in order to be effective, it must not confine itself to data furnished by schoolmasters, but should contain facts and expressions of opinion from external sources, such as employers of ex-public-school boys in scientific occupations and industries, professors and teachers in Universities and technical colleges, examining boards, and, if possible, from inspectors. As science masters by themselves have little power to effect changes, the co-operation of some of the learned scientific societies, of the British Science Guild, and, if possible, of the Board of Education, would add strength and prestige to the investigation. Any attempt to deal with some of the blemishes which still disfigure the scientific-scholastic escutcheon is open to the criticism that it is always far easier to be destructive than constructive. This is true, but new forms of matter can only be built up from the debris of the old, and, to erect a temple worthy of enshrining the new divinity, the trowel must be used to fashion the old bricks before they can be cemented together with the living lime of new ideas. The defects and deficiencies of scientific instruction may be traced either to (a) the character and training of the teacher and his method of instruction, or (b) the conditions under which his work is carried out. Of these, the latter is the more important at the present time.

As regards the character of the science master, it is difficult to predicate any general faults or failings which are not shared by his non-scientific colleagues. In one respect he starts with an advantage over them, inasmuch as he teaches a subject which is essentially *practical* in its nature, and as such appeals more strongly to the juvenile mind than do literary, linguistic, abstract-mathematical, and other purely bookish studies. It is gradually coming to be recognized that, if the way to the heart of a young boy is through his stomach, the way to his mind is through his fingers.

The failings of the science teacher are probably of a specific scientific nature. An alleged vulnerable spot in his armour is that he neglects to practise research on his own account. The value of scientific investigation is not only great from an objective, but also from a subjective, point of view. It sharpens a teacher's wits, it increases his interest in his subject, it stimulates his teaching, and so reacts beneficially on his pupils. But it may be doubted whether, under present conditions of school work, the advice to pursue research is not a counsel of perfection. A science master is not only a chemist, a physicist, or a biologist, he also claims to be a man and a citizen. He has a duty towards himself, and must devote some spare time to physical exercise and to general culture. He has, or should have, a wife and family to occupy some of his leisure hours, and he has, also, scholastic duties which are not confined to the classroom. The modern science master who has any survival of tribal conscience has little if any time to devote to systematic research. What does a man gain if he discovers an atrophied organ in a rare species of butterfly, or if he isolates an organic compound with a name as long as a Welsh village, if he loses his own health or neglects his own family in the process? Systematic research is excellent and imperative, but, save in exceptional cases, it is the function of the University man and of the man of means and leisure, and not that of the humble usher.

The defects of the science teacher are mainly those of method, which are usually traceable to defects in his own training. The day is happily fast drawing to a close when a man can qualify for a science degree, and hence for a scientific teaching career, by subjecting liquid hydrocarbon mixtures to incomplete combustion at night time, and by participating in a concentrated course of test tubing a few weeks prior to the

examination. A teacher who has learnt his science principally from textbooks, and who has graduated by committing their contents to paper, is not the right person to assist in the development of the man of the future—the practical, brainy man. Too much of our science teaching smacks of the lamp and of the textbook, and in consequence we fail in one essential of education, to impart to our pupils an aptitude for applying the knowledge they have gained. Character or personality is an asset of the greatest importance, but without the co-operation of properly trained intelligence it is comparatively futile.

Those who received their school scientific instruction some twenty years ago cannot fail to be struck by the vast improvements in method which have taken place. For much of this beneficial change the scholastic world owes a great debt of gratitude to the originator of the heuristic ideal. This method has had its prophets, its disciples, and its apostles; it has also had its critics, its detractors, and its denunciators; but it has made an indelible mark upon the history of science teaching in this country which the combined forces of conservatism and reaction have been and will be powerless to efface.

The story of the Duke of Wellington, although old, is always apposite. The Iron Duke loved to compete with those who attended him on his excursions in guessing what lay on the other side of eminences they approached. When some one remarked to him that his guesses were invariably more accurate than those of his companions he replied that all his life he had been engaged in finding out what lay on the other side of the hill. "All the business of war, and indeed all the business of life, is to use what you know to find out what you don't." Like the positive-catalyser of modern chemistry, which increases the velocity of a change, this research idea has greatly accelerated the changes taking place in the brains of both teachers and pupils. Present-day school conditions are usually adverse to the complete practice of the heuristic method, but, even if the teacher has to tackle single-handed a class of thirty-six beginners in practical work, or if it is his unpleasant duty to cram a set of boys for an archaic type of examination, he may yet follow the heuristic ideal, "faint yet pursuing." He will not succeed in transmuting his base scholastic material into the finer metal of juvenile philosophers; he will find it impossible to let his boys perform all the experiments for themselves; but he can always arrange them in a logical order and emphasize the reasoning which links them together. Comparatively few boys are able to initiate trains of thought or arguments, but the majority can follow them when once started, and even this kind of exercise is of considerable value. The employment of both inductive and deductive methods of reasoning and the careful balancing of probabilities—for very few of our so-called proofs can be strictly verified by elementary workers—all constitute an invaluable training for the world beyond the school, and it is doubtful if any other subjects of instruction can compare in this respect with experimental chemistry, physics, and biology. Pure mathematics is full of reasoning, chiefly deductive, but the fact that a statement is either quite right or quite wrong tends to foster a dogmatic, and hence an unscientific, habit of mind; and also, as Prof. Perry says, "it is a very exceptional mind, and not perhaps a very healthy one, which can learn things or train itself through abstract reasoning." The study of languages, particularly in translating from them, is to a very great extent a matter of memory, but here we are not dealing with physical facts, but with their signs and symbols.

To sum up, the teacher who uses the heuristic idea as a beacon fire to guide his pupils through the almost illimitable sea of the complex phenomena of Modern Science will, other things being equal, do far better than he whose method of instruction mainly develops the memory of his pupils, and who regards them as compliant mechanisms whose sole function is to know, and not to learn how to know. Great as are the educational advantages which accrue from the study and practice of scientific method, the intrinsic value of a knowledge of the main facts and principles of science is scarcely less important. When we consider the immense part which science

plays in modern civilized life, how in many cases the very conditions of our material existence have been revolutionized through its instrumentality, we are forced to the conclusion, which Huxley arrived at many years ago, that he who has no knowledge of natural science is at the best a half-educated man. A more modern thinker, who cannot be accused of partiality, Mr. Balfour, recently stated that one of the great conditions of human progress was our growing command over Nature, and that it was one of his foremost articles of social faith, that it is to the labour of the man of science that mankind will be most indebted as time goes on. Analysis of these revolutionary changes discloses the leading part which the engineer has played, and also that his contributions have been closely related to and rendered possible by discoveries in physics, chemistry, and biology. This is one justification of the choice of these subjects for schoolboys in preference to geology, astronomy, and applied science, like agriculture. Although the average English mechanic is superior to his Continental brothers as a practical worker, our trained and educated English engineers are considered to be behind the product of countries like Switzerland and Germany. Physics, and to a lesser extent chemistry, are of vital importance to engineering; hence the value of the science master's preliminary teaching is obvious. The scientific, as distinguished from the purely mechanical, rule-of-thumb engineer, shares with the schoolmaster the place of honour in being exclusively engaged in constructive work; however necessary the labours of other professional men may be, they are mainly preventive, destructive, or parasitic. Although the time may be far from ripe, the schoolmaster looks forward to the day when his labours will be adequately recognized by the State and by society, so that, instead of leading the backdoor existence he usually does to-day, he may obtain his due share of the material things of this world, the absence of which must inevitably handicap him in the struggle for life. It is, therefore, claimed that science has established her title to a far greater degree of recognition than has yet been accorded her.

The schoolmaster, and in particular the teacher of modern subjects, has too long been content to take a back seat, but the public is beginning to recognize his proper place in the social fabric, and the Government are even now taking the first step towards securing for him a living wage.

(To be continued.)

REVIEWS AND MINOR NOTICES.

In Defence of What might be. By EDMOND HOLMES.
(4s. 6d. net. Constable.)

Mr. Holmes has achieved a triumph that none of this generation since Matthew Arnold can boast of—he has written a book on education which is read by the non-professional public. This popularity he owes to various causes, some accidental, but most of them essential. In an unfortunate dispute between the Board of Education and the N.U.T. he was offered up as a sacrifice by the Board and banned by the N.U.T. as the embodiment of official snobbery. He was fortunate enough to discover a village Utopia—a school which went its own way, unconcerned with Codes and grants and Departmental regulations—and, by an idyllic presentation of this school, he both refuted in the best way possible the ridiculous charges of his slanderers and also excited curiosity. Was his Egeria a living schoolmistress or a myth? Some few of us, however, already knew Mr. Holmes as the author of "What is Poetry?"—a trifle which showed, however, by its clear thought, lively imagination, and power of exposition, that the writer was a new force in literature.

The present volume is a reply to the numerous criticisms that the treatise of 1911 provoked, but it is also "a fuller, deeper, and more illuminating exposition of the main ideas." It is, in fact, at once a personal apology and a philosophy of

education in the widest sense of the word, an *Erziehung der Menschen*, and we doubt whether the author has been well advised in combining a treatise of permanent value with a reply to critics, mostly anonymous or unknown, which can have only an ephemeral interest. Mr. Holmes may quote the "Lettres Provinciales," Newman's "Apologia," "Friendship's Garland" as precedents, but this is not a bow that any man can draw.

A review of the whole work would far exceed our limits and our powers. Education to Mr. Holmes is no water-tight compartment, but includes every aspect of life and civilization, religious, moral, political, and social. We must confine ourselves to the strictly pedagogical chapters. The first chapter is a trenchant attack on Herbart and his followers. That Herbart's psychology is antiquated, if not obsolete, that his experience of children and child nature was limited (to four children, including himself, as Mr. Holmes puts it), that he makes little or no provision for development of dramatic, artistic, or musical instincts, that he lived in pre-Darwinian days, and were he living now would not be a Herbartian—these are palpable hits. But we cannot help feeling that the desire to score off "Anthropos," whom he takes as his typical Herbartian, leads Mr. Holmes into exaggeration and unfairness. "The Science of Education" is something more than "a handbook for private tutors," and Herbartians are not among Mr. H. G. Wells's "old duffers who sit in their easy chairs and make a sort of tea of dry old words and think they are distilling the spirit of wisdom." "The Herbartian is imprisoned in a circle of burnt-out thought" is a cheap epigram. That the "plant theory" is as dead as nails slain by Herbart in 1804 was a foolish remark of "Anthropos," but Mr. Holmes seems to us to press the note when he attempts to show that a grain of wheat does not grow into a predetermined form, but is modified by soil, surroundings, and culture. Froebel, by the way, with whose name the plant theory is mainly associated, is dismissed with a sneer—he put the drill sergeant of the day into petticoats.

We are taken to task for ascribing to Mr. Holmes the dictum that the child is born perfectly good. We stand corrected. What he said, and says, is that child nature, like wheat nature, is intrinsically good, that the child's real tendencies are predestinately good, and that all he needs to become actually good is perfect freedom for self-development under favourable conditions. It is here that we differ fundamentally from Mr. Holmes. With him nurture is everything and nature, or heredity, a negligible factor. Analogies cannot be pressed, but for his field of wheat we should be inclined to substitute a field of mixed wheat and tares. We cannot pick our seeds, nor will Mr. Holmes allow us to medicate them like Virgil's husbandman; still less can we cross them, as in the Cambridge laboratory to which he refers; and some children come to us *naturaliter boni*: others with a parental taint of disease or vice which must be cured or eradicated. We skip the chapter on Original Sin, a word we should never employ, and a theological discussion with which we are not concerned. "The Value and Meaning of Freedom" is a vigorous protest against the deadening grind and suppressive discipline that still prevails, though to a less extent than Mr. Holmes imagines; but his "unchartered freedom," possible, perhaps, in a small school of infants, would be obviously impracticable in a larger school of boys and girls. Even in his ideal *Casa*, from the reports that have reached us, we doubt whether the ideal teacher has been found. "She will consider the idiosyncrasies of each of the thirty children in her charge, and give it the food, the guidance, the stimulus it will happen to need." Even Mr. Holmes admits that there must be limits. Freedom signifies "release from injurious restraint." Montessori teachers give their children "a reasonable amount of freedom." Are not these question-begging epithets? In the last book by a Montessorian we were told that the children were stopped from stoning the frogs they brought to school, but allowed to play at the jumping frog. Why? At a higher stage, is the boy who hates figures never to learn arithmetic, or (as happened to the present writer) is a boy who has a turn for puzzles to be allowed for a whole year to do nothing but solve algebraical

equations? The kingdom of heaven suffers violence, and we must needs compel them to come in. So, too, with external authorities. In his protest against external examinations we are at one with Mr. Holmes; but when he comes to practical reforms the sole remedy he can suggest is a strike of the Preparatory-school Masters against the Public Schools Entrance and Scholarship Examinations. Prof. Adams's forecast of the institutionalization of education fills him with dismay, and we are not careful to defend that particular scheme; but, if Mr. Holmes doubts whether any external control is necessary, he should recall his memories of Merchant Taylors School or re-read the Report of the Endowed Schools Commission to realize what schools were like when head masters were a law unto themselves.

One parting word. Mr. Holmes philosophizes, but he poses as the plain man, and he has achieved another book that plain men will read; but we think we are doing him no injustice in saying that in educational literature he is an *ὀψιμαθής*, and it is hardly fair, in criticizing other schoolmen, to plead that he has not read their works and cannot understand their jargon. Thus, in discussing "faculty," he evades the real issue: whether faculty can be transferred. He throws scorn on child study as at present conducted, but he shows no sign of any acquaintance with recent researches, and Mme Montessori is still to him *la Regina della Scientia*.

"The Loeb Classical Library."—*Horace: Odes and Epodes*. With an English Translation. By C. E. BENNETT, of Cornell University. (5s. net. Heinemann.)

The first question a reviewer asks himself when presented with a new translation is *cui bono*, both in the conventional and in the proper sense of the phrase: What is the good of it, and whom is it intended to serve? In the case of a prose translation of Horace's "Odes" it is not easy to suggest an answer. Not to mention French and German versions, there are in English two recent prose translations, both meritorious, if not brilliant—that of Lonsdale and Lee and that of Dean Wickham. Mr. Bennett's edition cannot be intended for scholars. They are not informed what text has been followed; various readings are rarely recorded, and then without distinction of MSS., and the notes are rare and superfluous. Even the Extensionist will have heard of the sword of Damocles and know the meaning of a *plectrum*. Nor will the layman ignorant of Latin be attracted to Horace by so wooden and unrhymical a version. Possibly the school-boy might find his account in a new and elegant Bohn, but for him the price is prohibitive.

We are bound to justify by instances the unfavourable impression. In the first ode there is much to be said for placing a full stop at the end of line 5 and for reading *te* in line 29. What will the plain man make of "the terms of an Attalus"? He will consult the "Index of Proper Names" and find only "King of Pergamus." In line 19 *est qui* is not "many a one there is," but "I know one" (probably Horace is hinting at himself), and in line 22 the epithets are misplaced; the rill is sacred, the source gently murmurs. In I, ii, 17, *nimum* qualifies *querenti*, not *ultorem*. In I, iv, 15, *nos* is misrendered "thy." In I, vi, the last stanza is marred by not attending to the Latin order, and "adamantine tunic" is not elegant. In I, viii, "patient of sun and dust" and "arms bruised by weapon practice" are no less inelegant, and so, in I, x, is "by setting up the grace-bestowing wrestling ground." In I, xi, "busy thyself with household tasks" is not an improvement on Horace's "strain clear the wine." In I, xiv, which is closer to Horace—prose or verse? "Do thou, who wert not long ago to me a source of worry and weariness, but art now my love and anxious care, avoid the seas that come between the glistening Cyclades."

A burden once and grievous care,
But now a tender lover's dream,
Of rocks and currents, oh, beware,
When bright the Cyclads gleam.

Circe vitrea is not "Circe of the glassy sea," nor *voltus*

lubricus aspici "face seductive to behold." In I, xx, 10, *bibes* is altered to *bibas* and translated "At thine own home thou mayest drink." *Bibis* would be simpler if we are to emend. Can a cup be "flavoured" with wine? I, xxiv, 11, *creditum* means "entrusted to the gods," not "to this mortal life." In I, xxvii, 16, "freeborn always is the object of thy weakness" is hardly English; "the bourne where Atlas has his stand" suggests a coster. In I, xxxvi, 11, "nor be there limits of devotion to the wine jar brought out" might serve as a whipping boy. Who would recognize Horace in "That corner of the world smiles to me before all others," in "'Tis actually of help to thee" (*expedit*), II, viii, 9, or in "Upon my word it does" (*inquam*, line 13)? He who "safely avoids the foulness of an ill-kept house and discreetly, too, avoids a hall exciting envy" does not hit "the golden mean" of translation. In II, xiii, for "the soldier dreads the arrows of the flying Parthian, and the Parthian the chains of the Roman dungeon," we have "the Parthians and their swift retreat" and "the chains and rugged strength of Italy." In II, xvii, *maturior vis* cannot mean "untimely blow," and "so dear as before" is meaningless. In II, xviii, how can a man "become unwittingly the owner of a palace"? "To build out the coast" is a strange phrase for "to thrust back the shore," and *trahere purpuras*, "to trail purple robes" is rightly pronounced by Orelli *mirifica interpretatio*. In III, iii, 7, *fractus orbis* is not "the falling vault of heaven," but "the world in ruins." In III, v, *unde vitam sumeret* is not "how to make his life secure," and why are *vis, vim, vires* rendered "force," "power," "might"? In III, vi, 22, *matura* is a standing crux, but it cannot possibly mean "early." In III, ix, 21, "fairer than the stars" seems a wilful blunder, and so does "lovers' pallor tinged with saffron" in the next ode. In III, xii, 2, for "or who lose heart" read "or else live in mortal terror." In III, xix, who, from the translation, could tell that three ladles of water to nine of wine or nine of water to three of wine is intended? In III, xxv, *vertere* means not "to uproot," but "to pull to the ground," as the Bacchae shows, and the god crowns his own temple, not those of the poet, with vine leaves. In III, xii, 6, *duellis* for *puellis* is a foolish emendation, and Bentley's *securisque* for *et arcus* is most improbable. In III, xxvii, 7, "him" for "her" is an obvious slip or misprint, but "I know what the sins of clear lapyx" needs itself a translation. "The infamous bullock" is a singularly inappropriate name for Jupiter under the circumstances, and "to feed the tigers" suggests the Zoo. We never read before, even in myth, of "purple swans" or of bees who "gather thyme." It may be as well that the boy will not understand the threat that "unexpected down shall come upon thy pride."

We had marked off as many more passages for censure, but we think that those given more than suffice to establish our indictment and are more, our readers will think, than such a performance deserves. Our apology must be that the "Loeb Classics" have won such a well deserved reputation that we should grieve to see any decline from the high standard of previous volumes. It is hard to believe that the two general editors of the series, both distinguished scholars and one of them an editor of Horace, can have given it their imprimatur.

History of Roman Private Law. Part II, Jurisprudence. In Two Volumes. By E. C. CLARK, LL.D., Regius Professor of Civil Law in the University of Cambridge, and of Lincoln's Inn, Barrister-at-Law. (21s. net. Cambridge University Press.)

Now that Dr. Clark has retired from the active duties of teaching, it is to be hoped that his "History of Roman Private Law" will proceed apace. Part I was a small volume, dealing with the Sources of Roman Law. Part II, after the lapse of eight years, is a couple of handy volumes, running to some eight hundred pages between them. But it is rather startling that they are labelled Jurisprudence, and consist mainly of Jurisprudence. Who could have anticipated that a couple of volumes on jurisprudence would be dumped into the middle of a history of Roman private law? The

subjects are, to be sure, closely allied; most of the nomenclature, and many of the illustrations of jurisprudence, are derived from Roman law, and Roman law cannot be taught without evolving principles of jurisprudence; but surely an exposition of the origin, progress, and development of the private law of Rome cannot reasonably be held to require, or to tolerate, the interjection of a critical treatise on jurisprudence. The explanation of the singular course that Dr. Clark has chosen may possibly be found in the fact that he has been in the habit of lecturing on both subjects and mixing them together; at any rate, throughout these volumes he always has his eye on the educational aspect.

Apart from the question of form, however, and in face of much difference of opinion, we welcome his detailed criticisms. In spite of a crude and repellent style, a vexatious habit of eternal reference and frequent worrying about the proper place for treating this or that, the sudden dropping of an argument inconclusively, the cloistered conservatism (tempered, indeed, by candour and reason), and so forth, there is always the precious quality of wide and exact scholarship, and the gift of a strict logic that bends only before occasional prejudices, which may be readily discounted. Probably Dr. Clark judged rightly when he refrained from a systematic and independent treatise, and confined himself to the assemblage of a mass of criticism in detail, with incidental positive suggestions.

The author's acknowledged revulsion against Austin and Bentham is very apparent. Yet, though he harries Austin in particular with great persistence and occasional success, he does often acknowledge his valuable qualities and services, and, on the whole, leaves the impression of a very fair and impersonal criticism. The work, indeed, is substantially a thoroughgoing and acute examination of Austinian doctrine. Unfortunately for Austin, his great book suffers severely from its incompleteness, want of revision, and frightful style. For all that, it forms a standing landmark, and Dr. Clark has not submerged it or battered it down. The first business of a critic is to realize the inherent difficulty of the task that Austin undertook. The materials of Jurisprudence are not amenable to mathematical formulae; and it is vastly easier to suggest defects than to create the thing alleged to be defective. Dr. Clark himself decidedly shies when he feels that his readers will expect him to substitute a sound plank for one of Austin's that he declares to be rotten. Like many another, he wrestles with Austin's definition of law, even backing strangely some arguments that have long been exploded. He "agrees that Law, the particular subject of Jurisprudence, is more generally and naturally apprehended as obtaining among members of a fully formed State." Then why worry about cases that look more or less like law that are found in circumstances where you can hardly affirm that there is yet a State? It is no question of the soil in which law grew up, or of the elements or nutriments of the fibres that developed eventually into Law: the chrysalis is not the butterfly. The line has to be drawn somewhere, and nobody has yet drawn it more decisively than Austin. Dr. Clark is willing to call "any rules of human conduct actually obtaining among any considerable number of human beings, in some manner associated together [not necessarily in a State, in spite of the general and natural apprehension already admitted], by virtue of *human sanctions*" [not necessarily by "signified command"], by the name of Positive Law. What is this but a recurrence to pre-Austinian chaos?

After discussing Morality and Law, Dr. Clark addresses himself at great length to Law and the State. Here he inevitably freshens the subject by a review of the enormous developments since Austin's time down to the Parliament Act and the proposed reconstitution of the House of Lords, the Referendum, and Trade Disputes. One cannot but feel that much of the matter, though good of its kind, is far more in place in a book upon constitutional law than in a work on jurisprudence, while the "History of Roman Private Law" is lost to recollection. The remainder of the first volume, however, is businesslike, treating elaborately of *ius* and *lex*, and then the Roman *ius scriptum* and the Roman and modern

ius non scriptum—the latter a somewhat academic thesis. The second volume involves a much larger proportion of Roman law than the first, though still the "History" is in the background. It deals mainly with definitions of technical terms and classifications of the matter, both in the original books and in view of general jurisprudence, with free discussion of modern as well as of ancient notions. One of the best chapters is the handling of the much-debated question of the *ius personarum*. The whole work is a mass of detailed controversy of a very technical character. Inevitably there will be not unfrequent dissent from Dr. Clark's conclusions; but what really matters is that the thorny questions should have been frankly and minutely handled with most competent scholarship and with remarkable acuteness and patience. And now we await with interest the resumption of the "History."

A First Book of Experimental Science for Girls. The House: Hydrostatics and Heat. By JESSIE WHITE, D.Sc. (1s. 6d. Black.)

To those who have studied the problem, it has for long been obvious that girls require a course in science quite different from that which it has been customary to provide for boys. When the best courses for girls have been discovered it may be found desirable to bend the traditional boys' courses somewhat in the same direction; but the present need is for a woman—it must be a woman—to invent and publish a course of lessons which shall really train girls to think scientifically about their environment. To do this is no easy task, as the author must have a critical and philosophical mind, a sympathy with young girls, and experience in science teaching under school conditions. In the present instance the author's reputation led us to open the little book before us with a considerable degree of hopefulness. We were not disappointed. The book is original both in choice of topics and in treatment, and the language combines simplicity with accuracy to a degree only too rare in elementary textbooks of science. Aiming to make the house a subject of scientific interest, Mrs. White has not only suggested experiments; she has also outlined much observational work for which the school and the home provide material, while the fact that occasional excursions are included will appear an advantage, except to those who are unable or unwilling to undertake a troublesome part of the teacher's duty. As regards the specific contents, the first section deals with the aspect of a house, the soil, and architect's plans. This is followed by sections dealing respectively with weighing and density, supplies of water and heat and effects of heat (partly quantitative). Sets of questions to be solved at home conclude a workmanlike volume.

Certain points might be revised when another edition is contemplated. The account of the heating of a greenhouse is not quite in accord with recent research; it is now known that the prevention of convection is a principal factor. The word "emissivity" needs to be used with caution, in view of the modern use of the term for electronic discharge. It is not true that "the flame of the Bunsen burner which is non-luminous is more heat-giving than the yellow flame of an ordinary burner." The fact is that the complete combustion of a cubic foot of gas evolves a fixed quantity of heat. The temperature of the yellow flame is lower, its volume larger, and the proportion of heat radiated is larger, than when the gas is burnt at the same rate in the Bunsen flame. An index should be provided.

One of the interesting features of the book is the extensive range of historical allusions which enrich the descriptive paragraphs. We hope this characteristic will be retained in the promised second volume, which will deal with the physics of ventilation, the chemistry of air, water, acids and alkalies, and will also treat briefly electric bells, meters, and lighting. We hope this book will meet with the success which it deserves.

Latin Quantity and Accent. By F. W. WESTAWAY. (3s. net. Cambridge University Press.)

The report of the Classical Association shows us here that

the reformed pronunciation of Latin is holding its ground and advancing; that the backslidings revealed at the Head Masters' Conference are local, and that Oxford and Eton are backwaters. Mr. Westaway has performed a useful task in expanding and supplementing Prof. Postgate's "How to pronounce Latin," with exercises and selected passages marked for reading. We cannot help suspecting him of laughing in his sleeve when he tells us that the book is not written for schoolmasters, but for those who feel that their acquired pronunciation needs overhauling. How few even of the reforming schoolmasters attend to the *liaison* on which Mr. Westaway insists, or read "Infandur regina yubes renouare dolore"? We doubt, however, whether Mr. Westaway will ever prevail on Wykhamists to sing "doolke dommoom" or on the layman to say "wike wersah." The chapter on Hidden Quantity will prove most useful to the teacher, giving simply rules perfectly intelligible to the pupil, which will remove half the difficulties. It is frankly acknowledged, however, that there are problems still to be solved before we can aspire to pronounce Latin as well as, let us say, the educated Englishman pronounces French. Thus we have not yet determined whether Latin accent was a matter of stress or pitch. But this is no reason why we should not attempt an approximation. It would be as reasonable to argue that we should not teach French pronunciation because few boys, if any, will attain to speaking French as a Frenchman. It would have added to the interest of the book if the author had indicated the evidence on which the Reformed pronunciation is based, but, as he tells us in a neat epigram, he makes his bow as a *libellus*, not a *liber*, and we add a *plaudite*.

The Oxford Survey of the British Empire. Vol. I: The British Isles and Mediterranean Possessions. Edited by A. J. HERBERTSON, M.A., Ph.D., and A. J. R. HOWARTH, M.A. (14s. net. Oxford University Press.)

The plan of presenting the historical muse as an orchestra of specialist performers, conducted by a Lord Acton or a M. Lavissee, is here applied to geography. This word, to be sure, must be taken in its widest sense, since the volume before us includes accounts of government and local administration, national defence, town and country life, with other articles, that make it almost an encyclopædia of our country's present state. It is not indeed quite full enough to explain to a foreigner all the anomalies, inconsistencies, local peculiarities, and overlapping divisions of style and authority which, through the free growth of our institutions, present such a puzzle for citizens whose map of life is officially ruled by more regular lines. There are in all some two dozen chapters, written by nearly as many experts, illustrated by photographs, instructive sketch maps, and solid tables of statistics. Beginning with physical features and geology, the articles deal with climate, botany, fauna, population, agriculture, and so on, concluding with a brief gazetteer of all towns in the United Kingdom distinguished for size or other title to importance. The smaller islands are taken as a kite-tail that extends to our Mediterranean stations.

The next four volumes will treat our possessions in other continents, the last being devoted to a general survey of Imperial topics. If carried out in the same manner as the first instalment, these volumes must make a valuable work of reference, recommendable to school libraries that can afford its price, £3. 10s. net. An edition in three volumes, on India paper, is to cost an extra pound.

Training the Girl. By WILLIAM A. MCKEEVER. (6s. 6d. net. Macmillan.)

Prof. McKeever's books on the education of boys and girls enjoy a wide popularity in the United States, where apparently there is a great and growing demand for pedagogical literature. We do not know if the present volume will greatly appeal to English teachers and parents. The author deals with his subject in such a minute fashion, and gives so many details, that only the most enthusiastic and unwearied educationist is likely to persevere to the end. Indeed, the very contents pages, with their innumerable divisions and subdivisions, are likely to frighten away many a

would-be reader. Yet if he will persevere he will find some very sensible ideas on the education of girls which are well worth a careful study. The author advocates domestic training as an integral part of a girl's education, and, though he insists that every girl should be able to earn her living, he sees in marriage and motherhood the possibility of realizing the best that is in woman. Altogether a sensible book, which would be of far greater use were it one-third the size.

Montessori Schools as seen in 1913. By JESSIE WHITE. (1s. net. Oxford University Press.)

This is an account of visits of inspection paid in the spring of 1913 to thirteen schools conducted, more or less closely, on Montessori principles. The book is not easy reading. It presupposes a knowledge of Montessori Method and of the "Didactic Material," for the photograph at the end (apparently an advertisement) is of little assistance. It is, in fact, the diary that Mrs. White kept from day to day, rough notes of what she saw and heard, with no attempt at order or composition, and its value consists in this artlessness. The reader is left to form his own conclusions. The only moral drawn by the author is that we need in England something analogous to the Case dei Bambini for children under five, provided by the State or Municipality. Agreed, but the impression left by this diary is that the English Kindergarten is greatly preferable to the Italian Casa as a model. We will not repeat our reasons for this preference, but may add one suggested by this volume. The instruction, such as there is, and the discipline are wholly in the hands of the *Directrice*, for the *Assistente* seems no better than a pupil-teacher, and the teaching is wholly individual. It seems to us no more possible for one teacher than for one nurse to attend to the wants of thirty or forty infants. The cost of a properly staffed infant school run on Montessori principles with patent didactic materials would be prohibitive. In a Kindergarten we lately visited the mistress had bought for a song a cartload of wooden blocks, the odds and ends left over from some wood-paving in the neighbourhood, and these, she informed us, served her turn better than a dozen sets of Broad Stairs and Long Stairs, Insets and Towers.

A Path to Freedom in the School. By NORMAN MACMUNN, B.A. (G. Bell.)

'Tis, indeed, a strange world wherein we dwell! Here is Mr. Norman MacMunn writing as if Rousseau, Froebel, Pestalozzi had never been; as if until the coming of Mme Montessori—to whom all true educators owe a debt of gratitude—the psychology of the child had never been studied, and as if the harsh methods and the dogmatic ideals of the schoolmen were still universally in force. If Mr. MacMunn were less of an egotist, less amazed at his own stupendous cleverness and his amazing pedagogical discoveries, if he had studied the history of education as every training college student is bidden to study it, he might have produced a really valuable little book descriptive of his very interesting experiment in teaching. As it is, his exaggerated statements, his huge generalizations, and his evident ignorance of what is being done to-day in our best schools vex the thoughtful reader and incline him to give less attention to the many sensible and suggestive ideas that are to be found in this volume. Mr. MacMunn is clearly a very thoughtful educationist; he is dissatisfied with the old ideas of discipline, and believes that, by making boys discipline themselves and one another (as is done in the Little Commonwealth and the schools conducted on Montessori lines) the greatest problem in education is satisfactorily solved. And not only do his boys maintain their own discipline, but in the French classes which Mr. MacMunn conducts they teach each other. In Part II of his little book he tells us of his new method of "partnership," whereby the class works in sets of twos, the two partners alternately asking each other questions. In this way the whole class is actively working; there is no keeping back the clever boys to the lower level of the duller lads, or, as so often happens, neglecting the latter for the former. Mr. MacMunn has proved by experience that under this "partnership" system the "slacker" disappears and the whole class works with extraordinary keenness. It is impossible to explain Mr. MacMunn's methods here; they presuppose a highly intelligent teacher and a willing class of a limited number. Such a teacher will take an apparently far less direct share in the teaching, and he must study very carefully each member of his class. The second part of the book should be carefully read by all teachers, and especially by those who recognize that they have not been able to get into real touch with their pupils. It is full of suggestiveness.

University Tutorial Classes. By A. MANSBRIDGE. (2s. 6d. net. Longmans.)

The rosy glow of the beginnings and aspirations of University Tutorial Classes for working men and women lingers throughout these pages, and it is pleasant to know that after six years the

author retains his faith in their efficacy. Mr. Mansbridge believes that "the desire for education, as a way of life rather than as a means of livelihood or a mere intellectual exercise, is instinctive among English people and ready to reveal itself under favourable conditions at any moment." The classes came into being in response to the demands of the Workers' Educational Association, after a Conference at Oxford in 1907. The speech of Mr. J. M. Mactavish gave the right attitude with its independence and spirit of idealism, and well merits its place in the appendix. "I claim for my class all the best of all that Oxford has to give. . . . What is the true function of a University? Is it to train its best men or to sell its gifts to the rich? . . . I believe one of the reasons, if not the great reason, why our University Extension lectures have not been successful is due to the fact that the average University Extension lecturer is decidedly middle and upper class in his outlook." There are accounts of the complete class of the students and tutors, and of some existing classes. Difficulties in connexion with the working of classes are discussed; one of the chief of these appears to be the question of working men's overtime. It is interesting in connexion with this book to recall the Memorandum issued by the Education Committee of the L.C.C. last winter on Non-vocational Institutes, with suggestions for the treatment of some non-vocational subjects. Here is another sign that education for life as distinct, and complementary to, education for livelihood is beginning to be within the reach of all.

Women in the Medical, Nursing, and Allied Professions.

(1s. post free. Women Employment Publishing Co.)

We can strongly recommend this Section of the *Fingerpost* now published in pamphlet form. It contains thirty articles, each by an expert in her particular branch of the profession and gives information that we should not know where else to look for.

Proceedings of the Classical Association. January 1914. Vol. XI. (2s. 6d. net. Murray.)

The chief contents of this volume were noticed by us in reporting the January meeting of the Association, but we would call attention to the pregnant article by Mr. R. W. Livingstone on "The Teaching of the Classics as Literature," Prof. Ridgeway's learned paper on "The Origin of Greek Tragedy," and Miss Stawell's monograph on "The Scamander Ford in the 'Iliad.'" Mr. W. L. Paine appears as the Robespierre of the New Method. He maintained that "even one month of learning Latin on the Direct Method leaves the child a changed, a developed, an educated person," and that "one minute a week of the Direct Method would be better than twenty-four hours of the traditional method." The Report of the Committee to inquire into the position of Classics in the Universities of the Empire (twenty-two, including Colleges of University rank) shows that in none is Greek compulsory, except for an Honours degree in Classics, and that Latin up to a Matriculation or Intermediate standard is generally required for students in Arts, Law, Medicine, and Theology.

François le Champi. By GEORGE SAND. Edited by COLBERT SEARLES. (3s. net. Oxford University Press.)

We cannot recommend this exquisite village idyll as a school reader. It may be prudish to object to the story of François and La Sévère (a variation on Joseph and Potiphar's wife) as unfitted for *la jeune personne*, but the semi-patois in which it is written is not adapted for learners. Attention is, indeed, called to gross violations of literary French, but the instances are endless where an educated man would have expressed himself differently. The very title calls for a note: "champi (Latin *campilis*) = enfant trouvé." St. Christopher and Twelfth Night cake do not call for elaborate comment, but even some teachers might be puzzled by "le jour de la Chandeleur" and "il serra les chevilles des pieds." At the end of each chapter is a "translation," a résumé in English which "gathers up the most colloquial and usable phrases." Short sentences, we think, would better serve the purpose. The renderings are not idiomatic: "he was, so to speak, buried in his musings," "it would be no use to quibble and worry the inheritance," "Frank pecked at her till she was all on fire."

Prinz Friedrich von Homburg. Von HEINRICH VON KLEIST. Edited by G. F. BRIDGE. (2s. 6d. Macmillan.)

Mr. Bridge has here broken new ground and edited a play that is less known in England than Kleist's "Kätchen von Heilbronn." It is interesting as a dramatic embodiment of "Preussentum" and also as bearing on a question of current politics, the conflicting duties of the soldier and the citizen. There is a well written life of Kleist, and in the notes the departure from history and the inconsistencies of the characters are well discussed. A drama in verse does not lend itself to reproduction so well as a prose narrative. The author's peculiarities of vocabulary and syntax are duly noted, but the ordinary prose equivalents might have been more frequently given.

Researches in Magneto-optics. By P. ZEEMAN, Sc.D., Ph.D., D.Sc. (6s. net. Macmillan.)

This, the latest member of the now well known series of science monographs published by Macmillan, admirably fulfils the object of the series, which is the expression of modern scientific work as it has developed under the skilful hands of the greatest workers of to-day. Prof. Zeeman deals with the fascinating researches which have arisen from his fundamental discovery in 1896 of the resolution of the spectrum lines of a source of light when under the influence of a strong magnetic field. In the first chapter a clear and illuminating account of modern spectroscopes is given, and the distinction between resolving power and dispersion is admirably explained. The eminent author proceeds to tell, in vivid and enthusiastic terms, the story of the interrelations between magnetism and light—a remarkable story of the way in which experiment and theory, observation and deduction have proceeded unerringly hand in hand. One very interesting chapter deals with an inverse application of the subject-matter, whereby the magnetic fields of the sun have been explored. Finally, the whole array of brilliantly conducted researches is marshalled in criticism of the various conceptions of atoms which have been based on the recent advances in our knowledge of matter. The book has passed in its proof stage through the able hands of Prof. Fowler and is a valuable and stimulating account of the vague borderland where matter and ether meet. A complete bibliography is given and a number of excellent plates illustrate some of the beautiful optical phenomena described in the text. Prof. Zeeman's book is indispensable to all students of physics.

A Laboratory Manual in Physics. By N. HENRY BLACK. (1s. 8d. Macmillan.)

This selection of fifty exercises ranges through mechanics, heat, electricity and magnetism, and optics. Necessarily the treatment is scrappy, and it is probable that better educational results would be obtained in schools by treating half this range with twice the thoroughness. If it is necessary thus to rush the subject, the book may be recommended, as the selection of topics and the method of presentation are meritorious.

A Textbook of Elementary Statics. By R. S. HEATH, M.A., D.Sc. (4s. 6d. Clarendon Press.)

In spite of the large number of books dealing with this subject which have already been written and published, the Professor of Mathematics at Birmingham has issued yet another. It is important, therefore, that we should indicate in what respects the book differs from others. Time, space, and mass are generally accepted as fundamentals in the teaching of mechanics, and the idea of force is often synthesized as a dynamical conception of mass-acceleration. To Prof. Heath, as to many modern teachers, this course does not commend itself. In his book he has based his treatment of statics on the intuitive idea of force which arises personally in lifting any object, and experimentally in using a spring balance. There is a considerable advantage in teaching students the fundamental operations of resolving forces, and of analysing actions and reactions, before commencing the more difficult problems offered by dynamics. The book deals with statics as fully and completely as can be done without the introduction of the calculus. Geometrical and analytical methods are discussed, and the examples are by no means confined to two dimensions. The author has been at great pains to bring his subject into relation with everyday life, and the problems which are solved in the text relate to practical machines such as bicycles and steam-engines and to jointed frames and stiff beams, the treatment of the latter affording a valuable introduction to methods of structural engineering. A numerous collection of exercises is appended to each chapter. The book is suitable for Matriculation and Inter. B.Sc. students, to whom we can sincerely recommend it.

Analytical Geometry and Principles of Algebra. By A. ZIWET and L. A. HOPKINS. (7s. Macmillan.)

As its title indicates, this book is by no means confined to analytical geometry; it includes other branches of mathematics that may be read with advantage at the same time. Thus, the intersection of straight lines involves the solution of simultaneous equations of the first degree. This leads naturally to the subject of determinants, and accordingly determinants are discussed at considerable length. The study of the circle, again, depends on the theory of quadratic equations. This in its turn requires a knowledge of complex quantity, and thus the chapter on the circle is succeeded by one on complex numbers. Such diversions are both useful and interesting, though a reader may naturally object to nearly one-fourth of the book being occupied by material which he possesses in other textbooks. The conic sections, of course, provide the principal part of the subject, and they are treated fully, though at less length than is customary in English textbooks.

Other curves follow, such as the conicoid, the limaçon, the cissoid, the lemniscate oval, and the cycloid and associated curves. The equations of all these curves are obtained from the geometrical properties given. The book concludes with a short course of analytic geometry of three dimensions. The treatment throughout is more geometrical than we are used to, and the examples are simpler; but for those who wish for an acquaintance with the methods of analytical geometry both text and examples leave little to be desired.

The Jews of To-Day. By Dr. RUPPIN, translated by MARGERY BENTWICH. (6s. net. G. Bell.)

Miss Bentwich has given us a faithful translation of the second and revised edition of Dr. Ruppín's masterly treatise. It raises questions of historical, anthropological, linguistic, and religious interest, on which no one can fail to speculate, though few of us have the data for forming even a probable conclusion. What has made and keeps the Jews a peculiar people? Is it likely and is it desirable that they should so remain? If it is, which of the several schemes proposed is most likely to arrest the process of disintegration and absorption? Dr. Ruppín is himself a Zionist, and he has shown his faith in this solution by himself residing for a number of years in Palestine. He has not convinced Mr. Joseph Jacobs, who contributes a valuable Introduction, and that remarkable Swedish novel "Jerusalem" inclines us, too, to scepticism. But the statistics of Jewish births, deaths, marriages and intermarriages, occupations, &c., that the author has collected from all countries where there is a Jewish population show no signs of *parti pris*. We have noticed one strange omission in Dr. Ruppín's account, the predominance of the modern Jew in *Weltpolitik* as the proprietor of the most influential and widely read newspapers in England, Germany, and the United States.

The Layman's Old Testament. Edited by Canon M. G. GLAZEBROOK. (4s. 6d., or, in two parts, 2s. 6d. each. Oxford University Press.)

This gives the major part of the Old Testament, omitting five books—Leviticus, Chronicles, Esther, Lamentations, and the Song of Solomon. The First Book of Maccabees is added to fill the gap between the Books of Kings and Ezra, and from the Apocrypha Ecclesiasticus and the Wisdom of Solomon. The text is that of the Revised Version, but the marginal renderings have, in a number of cases, been adopted. Further, the post-exilic portion of Isaiah has been separated and placed with the apocalyptic writings of Daniel and the minor prophets. The brief foot-notes are confined mainly to explanations of Hebrew names, alternative renderings, and indications of corruptions in the text. We wish that Canon Glazebrook would give us a companion volume, expanding the notes and the suggestions thrown out in the introduction. The layman needs something more than a chronologically arranged text and maps to read the Old Testament with understanding.

Widsith. A Study in Old English Heroic Legend. By

R. W. CHAMBERS. (10s. net. Cambridge University Press.)

It seems a pity in a volume where, both directly and indirectly, the importance of the poem under discussion is pleaded with so much eloquence and learning, that the printed text of the poem should have had such scant justice done to it. Instead of being placed in the forefront of the volume it does not appear till the end of Mr. Chambers's long study upon it, and then accompanied by such voluminous notes, that it can only find a precarious foothold at the top of the page, sometimes for a single line. We are not criticizing the presence of the notes, which are all very much to the point, but the 143 lines of the poem make such a small demand on space that they might perhaps have been allowed the privilege of a few pages to themselves, and in so enterprising a publication one might perhaps have hoped for a page or two in facsimile. We have no criticism to make on Mr. Chambers's study, which is conceived in a most liberal spirit by a scholar who is also an enthusiastic student of the wider issues of his subject. After a short introductory chapter on the German heroic age in its relation to "Widsith" he has two lengthy and illuminating chapters on the tales known to "Widsith" of Gothic and Burgundian heroes, of the seafolk and of the Franks and Lombards. Then follow three shorter chapters on "Widsith" and the critics, the geography of the poem, its language and metre, concluding with a short and excellent summary. After the text comes a very full bibliography, and numerous appendixes and maps complete the volume. Mr. Chambers's study of "Widsith" and all that pertains to it must certainly rank among the most valuable studies on the Germanic heroic poems. His concluding words will indicate the finely historic spirit in which he approaches his subject. Commenting on Sir Thomas Browne's "Diuturnity is a dream and folly of expectation," he says: "Yet in the old heroic poetry we get a glimpse of the thoughts of those men whose unrecorded lives and deaths have done more towards the building up of Europe

than have the intrigues and quarrels of their lords. This should render sacred not only every recorded line of the old poems, but every paraphrase and every allusion."

Selections from William Hazlitt. Edited, with Introduction and Notes, by WILL DAVID HOWE. (5s. Ginn.)

This is a book that was well worth doing and has been done well. In spite of the almost unanimous testimony of all competent critics, if we except a few contemporaries who were prejudiced by personal or party animosities to Hazlitt's pre-eminence as an essayist and a master of English prose, Hazlitt is not studied to-day in schools or colleges as are essayists of far narrower range—Bacon, Steele, and Addison. The Introduction deals fully and sympathetically with Hazlitt the man, his friends and his foes; his literary activities as a critic of art, the stage, and *belles-lettres*. The miserable "Liber Amoris" is not ignored, but is reduced to its proper proportions. His imperfect sympathies with contemporary genius are noted no less than his wonderful literary *flair*. To annotate Hazlitt and track all his quotations in their distorted and mutilated forms is no light task, and it has been well performed.

(1) *Harrap's Dramatic History Reader.* Book V. By F. E. MELTON. (1s. 6d.) (2) *Plays by Boys of the Battersea Polytechnic Day School.* (1s. Published at the School.)

Teaching history by making children act is coming rapidly into vogue, and it may be permissible therefore to suggest to writers of historical plays two or three principles which must be observed if their work is to be of any value. First, the scenes must be genuine and correct history, not history distorted to suit their own purpose; they must be teachers of the truth first, and artists afterwards. Secondly, their plays must have colour, and their *dramatis personae* must have character. Mr. Melton's work does not show much of these qualities. Turning to the scenes of the Petition of Right we find the King making a speech in the House of Commons, a debate carried on in his presence, and Cromwell playing a leading part. The language is generally flat, and Cromwell talks just like Coke. In the "Capture of Gibraltar" Rorke is represented as opposed to the enterprise and yielding only to the suasion of Shovel, a view for which we should be glad to know Mr. Melton's authority. We prefer the efforts of the Battersea boys. But it was quite unjustifiable of the authors of "The Nine-days' Queen" to make Mary put the Dudleys to death immediately after the repression of Northumberland's attempt, and the little one-act piece, "Two's Company," which shows originality, humour, and a genuine turn for dramatic construction, contains only a pinch of history. Mr. Arnold Smith, the head master of the school, contributes a foreword, in which he upholds the doctrine that "children, like their elders, learn by doing." The phrase is becoming a catchword, and the limitations of its truth must be recognized. There is a learning without doing as well as a learning by doing, and the genuine student seeks knowledge as an end in itself. Still, of the value to themselves of the work of these boys there can be no question. They had a lesson in how to acquire information, and they did a literary exercise which taught them something about dramatic construction, versification, and choice of language. The little book is published rather to encourage others than for the intrinsic value of its contents, and we hope it will serve that end.

A History of England and the British Empire. In four volumes. By ARTHUR D. INNES. Vols. I and II. (6s. net. Rivingtons.)

Nothing but unqualified praise can be given to the orderly arrangement of facts, the logical division into periods, and the extreme clearness of thought and expression which are to be found in Mr. Innes's History of England and the Empire. If it were not that there are already so many histories of a somewhat similar kind in the field we should certainly say that these volumes should find a place in every teachers' or students' library. But our memory recalls to us Gardiner's delightful history in three volumes—not nearly so well arranged, be it admitted, as Mr. Innes's—and Ransome's larger volume, not to mention various series of small textbooks written by eminent authorities. Probably, owing to the rapid growth of schools in this country and to the quickened interest in history among elder students, there is room for Mr. Innes's sound and scholarly work in which we are glad to see far more attention paid to economic and industrial questions than is usual in books of this kind. The chapter in Volume II on "Expansion under Stuart Kings" contains an extraordinary amount of valuable information (within a very narrow compass) that will give the young student much food for thought. On the other hand, it must be regretted that more attention has not been given to literature and to the social life of the times. To the present writer it has always seemed a great pity that J. R. Green's influence has not been stronger both on the teachers of history and on the makers of history textbooks.

London in English Literature. By PERCY H. BOYNTON. (8s. Chicago University Press and Cambridge University Press.)

London has never held in English literature quite the same place that Paris has held in French literature, and, as we recall the names of our greatest, not more than half of them have more than a casual connexion with London. Against Chaucer, Shakespeare, and Milton, we may set Wordsworth, Shelley, Tennyson, and Browning, and so on. As it is, Mr. Boynton realizes that he has far more material than he can deal with, and has only attempted by a selection "to give an idea of London atmosphere in the various literary periods," and to supply references for further research. An appendix gives a list of illustrative novels, with references to the chapters which illustrate particular localities. Reproductions of old charts and prints add greatly to the value of the volume. The author has forestalled any complaints of omissions, but we do miss under "Drury Lane" any reference to the Fire or "Rejected Addresses," though under "Horace Smith" we find "Brambletye House"; or to "Duelling" under "Lincoln's Inn Fields" or elsewhere. The style is easy and unaffected, and it is just the book for a leisure hour.

"Representative English Comedies."—Edited by CHARLES MILLS GAYLEY. Vol. II: *The Later Contemporaries of Shakespeare.* (8s. 6d. Macmillan.)

This volume gives the three best comedies of Ben Jonson, "Everyman in his Humour," "The Silent Woman," and "The Alchemist," besides "Eastward Hoe," in the composition of which Jonson had some share, how much is an unsolved question, and the anonymous "Merry Devil of Edmonton." To each play is prefixed a critical essay, and the editor contributes "A general view of the fellows and followers of Shakespeare." It is a thorough, scholarly work. For the text the various editions have been collated. Among the essays we would signal out for special commendation Prof. Herford's brief but masterly critique of Ben Jonson.

Tudor England. By ADA RUSSELL. (1s. 6d. Harrap.)

This is a narrative rather of the Tudor dynasty than of Tudor England. Of Elizabethan literature we hear little. There is a full analysis of More's "Utopia," but Spenser, Shakespeare, and Bacon are polished off in a few lines. Voyages and discoveries and the Reformation are treated at length, but of the English people we learn little. The illustrations in black and white are plentiful, but somewhat crude.

The Vision of Piers the Plowman. Translated into English Prose with an Introduction by KATE M. WARREN. (2s. 6d. E. Arnold.)

This is the second revision of Miss Warren's version, first published in 1895 and long out of print. Langland's alliterative verse suffers less than most poetry by a prose rendering, and Miss Warren's rhythmical prose preserves most of the simple beauty of the original. A sentence from the Prologue known to all will serve as a sample. "On a May morning on the Malvern Hill a marvellous thing befell me; methought it was of faery. I was out-wearied with wandering, and went to rest down by a broad bank beside a burn, and as I lay there leaning, and looked in the water, it sounded so merrily that I slipped into a slumber." There is a summary of the controversy as to authorship as it stands at present. Miss Warren's conclusion is that no decision can be reached till all the MSS. has been collated and the second part (never yet translated in full) more thoroughly investigated.

Essays of Elia. Edited by A. HAMILTON THOMPSON. First Series. (2s. 6d. Cambridge University Press.)

Lamb is as full of quotations and allusions as Burton or Hazlitt, and needs, no less than they, a painful annotator. Mr. Thompson, with the aid of his precursor Mr. E. V. Lucas, to whom he expresses his obligations, has done the work thoroughly. Our only fear is that schoolboys will get up the notes, and then think that they have mastered the "Essays." The allusions, like the brother's oaths in Dean Ramsay's story, "add a grace to the conversation"; but a plain man can relish the plain text with small Latin and no Greek, and though he is unable to fill in one of the initials and blanks.

Now and Then: Chronicles of Half-text History. By ASCOTT R. HOPE. (3s. 6d. Black.)

This is the third edition of the six school stories published in 1897. It shows, we hope, that Mr. Moncrieff was mistaken when, in his recent "Book about Authors," he classed himself as a boys' novelist among the "Thens."

Tales from "The Earthly Paradise." Selected and arranged by W. J. GLOVER. Illustrated by ISOBEL BONUS. (6s. Black.)

The Prologues and twelve of the Tales have been translated into prose and retold in language suitable for children. Morris suffers less than most poets in the process. Like Chaucer, and *longo*

intervallo Clough, he has the rare gift of the story-teller, but his verse flows on in an even current, with few of magic words or phrases that defy paraphrase. Mr. Glover has done his task well, and the illustrations are well drawn and graceful, though they all represent still life, never action or motion.

"Bell's English Classics."—MACAULAY'S *War of the Succession in Spain.* Edited by A. W. READY. (1s.)

The Notes are brief and to the point. Some of them, e.g., on the list of parsons and squires on page 63, needed research or wide knowledge of literature. Explanations of common English words—"obsolete," "perspicuous"—are superfluous. On the other hand there are some desiderata. What was Lord Mahon's first book (page 1)? What was the annual revenue in Elizabeth's reign (page 4). It was Byron who imitated the metre of Frere, not *vice versa*.

Stories of Elizabethan Heroes. By EDWARD GILLIAT. (2s. 6d. Seeley.)

The Heroes in this volume, a marvel of cheapness with its full page illustrations, are taken from Mr. Gilliat's larger work "Heroes of the Elizabethan Age."

An Anthology of English Prose from Bede to R.L.S.

By J. L. EDWARDS. (1s. Dent.)

Of verse anthologies we have a superabundance, but prose anthologies at a reasonable price are rare. Here we have specimens of ninety-two authors, and though we mark omissions (thus, among the poets, Ben Jonson and Shelley surely deserve a place as prose writers), yet there are few, if any, of the specimens that we would willingly spare. It would have been wiser to omit living writers. No one will grudge the compliment paid to Thomas Hardy, Austin Dobson, and Lady Ritchie, yet no one would have selected these three as the greatest or most representative. A few notes giving the context, or indicating, where necessary, the scope of the work from which the extract is taken, would be a welcome addition.

Blackie's New Systematic English Readers.

By ELEANOR I. CHAMBERS.

This new series of infant readers is a delight to the eye—a large page with large, well spaced type, and attractive pictures in colour. It begins with "The First Phonic Primer." "Phonic" seems to us a misnomer. The common alphabet is used throughout, and there are no diacritical signs. It is phonic only in so far as the letters are classified and anomalies eliminated. But in the very first sentence, "Pat is in a pit," *a* has two sounds. To compose under these conditions in monosyllables a reader that shall interest infants is a puzzle for which *Pearson's Weekly* might safely offer one of their thousand guinea prizes. As it is, we get this sort of mock story: "1. Jap has a red cap on. 2. He has a cup. The cup has a lip. 3. Let me sip out of the cup, and cut the bit of cod." Our experience is that a child learns to read faster if he is given a story he really wants to read, and is told, or allowed to guess at, the hard words. This objection does not apply to "The First Infant Reader." Some of the stories are quite interesting, but children should not be led to expect that they will see on the banks of the Penn Ponds "a tribe of king fishers." The illustrations to "The Second Infant Reader" are charming, but why should "Three Blind Mice" be bowdlerized thus: "each picked up his tail and ran for his life"?

The Bankside Costume Book for Children. By MELICENT STONE. (2s. 6d. Wells Gardner.)

To teachers who get up dramatic entertainments this will be a very useful manual. Costumes of all periods are described, and clear detailed directions with diagrams are given for making them. Each period is divided into men's dress and women's dress; and the costumes of the nobility, citizens, and peasants are treated separately. Some typical garments are massed together—e.g., a particular hood is suitable for the Greeks, or for the thirteenth century in England. Miss Stone has supplied a long-felt want, and her little book will save much searching in fashion books or illustrated histories.

A Glossary of Tudor and Stuart Words, especially from the Dramatists. Collected by WALTER W. SKEAT. Edited, with Additions, by A. L. MAYHEW. (5s. net. Clarendon Press.)

This posthumous work has been brought out under the happiest auspices. Mr. Mayhew, his friend of forty years, met Skeat on a holiday in Wales two years before his death, and found him, for relaxation, engaged in what to most men would have been a serious task—reading, pencil in hand, the Elizabethan dramatists, and jotting down on slips words and phrases that need explanation. These slips at his death amounted to some seven thousand, and to Mr. Mayhew was entrusted the task of preparing them for the press. The vocabulary has not been to any extent enlarged, yet to put what are modestly called the finishing touches has taken nearly a year's continuous work, and the result is a glossary that will both

satisfy the professed philologist and provide the student of Elizabethan and Jacobean literature with a companion he sorely needs. The list of books referred to, occupying ten pages of small print, will give some notion of the labour involved, and the name of Mr. Henry Bradley, who has read the whole in proof, is a guarantee for philological accuracy. Perhaps it would have been better to omit Shakespeare, for whom we have a choice of glossaries, except in illustration. As it is, we find "miching malleco" and "mobbled queen" (the plausible emendation "mob led" is not noticed), but not "pioned and twilled brims."

Routledge's New English Dictionary. Edited by CECIL WEATHERLY. (3s. 6d.)

An excellent intermediate dictionary, halfway between Webster and the numerous small lexicons ranging in price from 1s. to 2s. 6d. Full advantage has been taken of the great Oxford Dictionary, and the pronunciations and derivations are consequently trustworthy. We have tested it pretty widely for neologisms—technical, scientific, and colloquial—and only once or twice found it at fault. In cricket there is a curious mistake. "Wicket" is defined as "one of the three wooden stumps" and "stump" as "one of the wickets."

Four Plays for Children. By ETHEL SIDGWICK. (2s. net. Sidgwick & Jackson.)

To write a play for children is not the simple task it would seem to the many amateur playwrights who have recently attempted it. To the dramatic sense must be added the rare gift that R. L. Stevenson and Mrs. Ewing possessed of reviving childish memories and becoming for the nonce as little children. This power Miss Sidgwick, as she has already shown in her works, possesses in a high degree, and the one original play of the four—"The Goody Witch"—is a genuine fairy tale which will lay hold of the juvenile actors, while the simple songs will please the audience of elders. "The Rose and the Ring" is hardly for the kindergarten—some fifty pages of libretto and most of it prose—but it is just the thing for a Christmas family party, and, with the accompanying directions, there should be no difficulty about scenery and stage properties. For the information of the nursery Thackeray's name should have been mentioned.

Bacon's Selected Essays. Edited by A. F. WATT and A. J. F. COLLINS. (1s. 6d. Clive.)

These are the essays set for the "Certificate Examination, 1905" (of the Joint Board, we suppose). The essays have been so thoroughly worked by scholars that little is left for a new annotator but to glean. Among those named Aldis Wright as one of the earliest and best deserved mention; yet, to judge by the notes on the first essay, they leave something to desire. In "Livia, while you live forget not our union, and farewell," where is the compliment? *Adeste* is not "be ready," but "be quick about it." The allusion to Vespasian should have been explained or omitted. The Stoics are blamed not for their theatrical deaths, but for their excessive meditations on death. Had the quotation from Horace been looked up, *idem* would not have been translated "again." "A sentence" and "in dispatch" need a word of comment.

MATHEMATICS.

The Teaching of Arithmetic. By DAVID EUGENE SMITH. (4s. 6d. Ginn.)

In this book Prof. Smith writes for teachers of some experience, in that he treats, for the most part, only of the wide and general problems of arithmetical teaching. As may be expected from such a well known authority, the book is stimulating and interesting in its breadth of view and deserves to be widely read. In the light of modern needs and modern views on psychology, the reasons for teaching arithmetic and the consequent choice of matter and methods are fully discussed. This leads to the consideration of oral and written work, the textbook, the nature of problems, subjects for experiment, and number games. The last part of the book is concerned with the arithmetic syllabus of an ordinary American school. It is noticeable that the ground covered is certainly less than that which we usually expect to cover in the English primary school. Prof. Smith accounts for this in various ways—among others for the reason that American teachers "are not, on the average, so well prepared as those of Europe, nor do they form so permanent a body," and also that "our professional educators have not the scholarship that is found in the holders of similar positions in Germany, for example, and their educational ideals are not so high." Though we find ourselves in agreement with most of the general principles of the book, we cannot help feeling that Prof. Smith overstates his case when he says of the fundamental operations that, though explanation should be given, yet "the important matter is never the explanation, and particularly true does this statement seem after the technique has been learned.

The operation, accurately and rapidly performed, is the desideratum, the check being of great importance in securing the essential accuracy." It would seem a sorry result of our teaching that the only residuum in the child's mind is that the operations were "rational," though he has no power of substantiating this impression. The fact of the matter surely is that "once" explained is not "always" explained. These fundamental operations must be reviewed in the higher grades just as much as any other part of the work, and at this later stage we may expect children to get more complete understanding of the operations as the scope of the operations becomes more and more extended. We cannot agree with Prof. Smith that "the problem of teaching arithmetic is not a particularly complex one." It is just because it is a complex one that we need such books as his and others mentioned in his ample bibliography.

"Longmans' Modern Mathematical Series."—*The Groundwork of Arithmetic.* By M. PUNNETT. (3s. 6d.)

Of a very different type from Prof. Smith's book is Miss Punnett's "Groundwork of Arithmetic," which deals with number-work for children between the ages of six and eleven. One great merit of the book is that it is in no sense dogmatic, though it gives a very detailed account of those methods which have proved best in the writer's experience. Disputable points are recognized as such by the writer. These points are discussed, and the grounds of the author's decision fully stated. The definite planning of the work in parallel courses, to develop "group imagination" and the "measuring" idea, is a wise plan. So also is that of giving typical exercises. Throughout the book much sound psychology finds explicit expression. As a general criticism we would say that we do not think Miss Punnett has quite solved the problem "of presenting the same number-facts to children in the greatest possible variety of interesting ways." We should like to see more number games suggested, for these most suitably relieve the monotony of the necessary "drill." We also feel that the discursiveness which, for example, makes a child's mind range from fingers to buttons, books, nuts, puppies, and pence is both undesirable and not really interesting. Lessons with more continuity of purpose and interest are both possible and preferable. It is impossible in a short space to treat of more than a few points in the details of method. We do not think the case for adding and subtracting tens before units in the early stages is made good; the trouble of subsequent change is serious. As to division, children certainly want to "share" before they want to "measure," and "measuring" is a difficult operation when the immediate application of the multiplication table fails, while sharing is a simple one. Further, we do not think the method suggested on page 142 the simplest possible. We doubt if fractions of such a small unit as an inch form the best introduction to the work, and we deprecate the advice to use qualitative units such as cakes, buns, or apples in this connexion. The geometrical work with circles seems to have little connexion with the rest of the number-work. The brief page on "one-one correlation"—or, as it is more usually termed, "one to one correspondence"—will hardly satisfy those who take it as fundamental in the development of number ideas. Three books of exercises are written to accompany this textbook.

Mathematics. By C. A. LAISANT. (2s. net. Constable.)

We cannot help wondering if this is really meant as a serious preliminary course of instruction for the child to see if he has a fancy for mathematics. The foreword seems to say that it is both for the man in the street—the ignorant adult—and the child; the final remarks point to the child. In either case we cannot regard this collection of tit-bits as an educational book. It may pass the time for the grown-up, but it is not food for babes—it is too rich and highly spiced.

The School Algebra. By A. G. CRACKNELL, M.A., B.Sc. (5s. University Tutorial Press.)

Of the numerous Algebras that flood the market this deserves to be singled out. The book is compiled in accordance with the latest views on the teaching of algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter. The book is literally "tutorial," in that an intelligent pupil could go through it unaided. Without pandering to examinations, the book covers thoroughly all that is required by examinations up to and including the Binomial Theorem for a positive integral index.

(1) *A Textbook of Plane Trigonometry.* By R. S. HEATH, M.A., D.Sc. (3s. 6d. Clarendon Press.) (2) *Trigonometry.* By A. M. KENYON and L. INGOLD. (6s. Macmillan.)

(1) The ground has been traversed so often and traversed so well that it is difficult for a writer of a new work on trigonometry to be original either in material or method. Prof. Heath, in his useful textbook, thus adds little, if anything, that is novel in either respect. He abandons the term "trigonometrical ratio" in favour of "circular function," and the older definitions from the parts of a right-angled triangle for others based on Cartesian co-ordinates.

But he is still in some ways bound by the old shackles. In a recent textbook we hardly expect to see any description of the obsolete centesimal method of measuring angles. Still stranger is it to find references here and there to the propositions of Euclid. In other respects the author is also opposed to the modern treatment of the subject. The harder trigonometrical identities are now usually omitted from the beginning stages, and the general solution of triangles with its applications to the problems of surveying is allotted an earlier place than in the concluding chapters. Some teachers, however, may regard these as advantages, and all, we think, will agree as to the value of many of the sections, especially those on the solution of trigonometrical equations in Chapters III and VI, the sum of the sines and cosines of angles in arithmetical progression in Chapter VII, the properties of triangles and quadrilaterals in Chapter VIII, and the applications to solid geometry in Chapter XI.

(2) The main object of elementary trigonometry being the solution of triangles, the authors lose no time in attaining it. In the first five pages they show how triangles may be solved graphically. In the next twenty they define the trigonometrical ratios, and proceed at once to the solution of right-angled triangles and its applications. In little more than the same space they cover the solution of oblique-angled triangles, and consider applications to problems in surveying, geometry, and mechanics. Not till this is done do they touch on compound and multiple angles, and the course of plane trigonometry is nearly ended before a single identity is proved. The last chapter contains a brief course on the solution of spherical triangles. The second half of the book consists of the usual tables to five places of decimals. For a volume of 272 pages the price seems high, but teachers who desire such a course will find it an accurate, clear, and well arranged textbook.

COLONIAL AND FOREIGN NOTES.

FRANCE.

A writer in the *Revue Universitaire* (XXIII, 6) deplors and explains the scarcity, and the decline in quality, of women teachers in higher schools. Candidates for the *agrégation* are falling off. The women who succeed are treated less well than the men: an *agrégé* may depend on obtaining at once a post in a *lycée* and a salary of 4,200 francs; an *agrégée* does not always begin in a *lycée*, and may have to be content with 2,500 francs in a *collège* or 1,800 francs as mistress of a secondary course, whilst, if after a year or two she reaches a *lycée*, she receives only 3,500 francs—700 francs less than a man. The maximum number of hours of service in the week is for an *agrégé* fifteen; for an *agrégée*, sixteen. The *agrégé* has a "chair"; that is to say, he gives instruction in the subject that he professes. The *agrégée* must teach what the head mistress bids. The woman teacher, in general, has worse prospects than her equals outside of the profession. Hence girls hesitate to prepare themselves for it, or, having entered it, make haste to escape its thralldom. And, in the matter of preparation, there is only one place where training for the women's *agrégation* and for women's higher certificates is organized by the State—the Ecole Normale Supérieure de Sèvres. To prepare higher teachers for boys there is paternal solicitude all over France.

The education of boys France is still minded to connect with the defence of the nation. With the approval of the Ministers of War and Public Instruction a Committee, consisting of higher officers and representatives of Public Secondary Education, has been formed at Paris to promote in *lycées* and *collèges* organizations having military training as an object, and to strengthen in the pupils of such schools a sense of the duties imposed by a regard for the dignity and independence of the country. As practical measures to further its ends, the Committee proposes the formation of "Sociétés scolaires" for shooting, marching, and gymnastics, the delivery of military lectures to boys fit to hear them with advantage, and visits to battle-fields, war monuments, and entrenched camps. It is expected that at Paris, after the long holidays, all the secondary schools will be in a condition to initiate their pupils in *préparation militaire*.

Vocationalism, in spite of the old tag that civilization travels westward, is moving eastward. Your loyal Frenchman is prone to believe that civilization originated in Paris and is radiated thence. Yet

he not deaf to the voices from the West, and Vocationalism is making its influence felt. That excellent quarterly *L'Education* begins (VI, 2) a series of articles on "The Careers of our Sons," in which various agricultural, industrial, commercial, administrative, and financial vocations will be considered, and the great schools that prepare for them will be described. The series opens with an account of L'Ecole libre des Sciences politiques, founded by M. Émile Boutmy in 1871 to make administrators, financiers, or simply good citizens. On entering the school a pupil may inscribe himself in one of five sections: *administrative*; *économique et financière* (subdivided into *finances publiques* and *finances privées*); *économique et sociale*; *diplomatique*; *générale*. The ordinary period of study is two years. Those who contemplate a business career are trained for it in the subsection *finances privées*. But the most important section is *administrative*, in which candidates are prepared for public competitions (employment in the Conseil d'Etat, the principal Ministerial offices, and the Préfecture de la Seine et de la ville de Paris). In its regular courses are studied such subjects as Politics and Administration in France and Abroad, Political Economy, the Constitutional History of Europe and of France, whilst optional courses are offered on Comparative Law, Mussulman Law, Algeria, Tunis and Morocco, and Colonial Questions.

With the *Entente cordiale* and cheap excursions Neuilly-sur-Seine is becoming as well known to Londoners as Putney. Why do we mention it? It is to have a new secondary school, called the Lycée Pasteur, and resembling, so far as the payment of teachers is concerned, the *lycées* of Paris. Only day boys and half-boarders will be admitted. To illustrate the scale of charges in a French day school we give, keeping the French terms, the table of fees as fixed by the Government. We call attention to the progressive increase of fees as a boy rises through the school, the maximum reached in the case of an ordinary day boy being £19.

GERMANY.

Nowadays few honorary degrees come to England from Germany. German degrees used by Englishmen are either genuine, having been gained by examination, or got from some fraudulent vendor of worthless diplomas. Not many of these rascals are now in business, but they may be met with occasionally. *Hochschul-Nachrichten* (XXIV, 8) throws its light on a dealer in academic distinctions. Not long ago there appeared in a widely read journal an advertisement headed (we will translate) "Opportunity to gain the *Venia docendi*," readers being referred for particulars to Dr. Freytag, Magdeburg, Ludolfsstr. 111. In March he offered his advertisement to *Hochschul-Nachrichten*, which, with a nice sense of fitness, assigned it to the waste-paper basket. A reader of the journal in Graz, Austria, wrote to the address in Magdeburg and received in answer a circular abounding with misprints. Dr. Freytag—himself, it would seem, an honorary Doctor—describes himself in his circular as formerly "Assistant, *Privatdozent*, Professor of Various Subjects, and Member of Academy." He offers, for 6s., information how to get a Doctor's degree. For £1. 5s. he will negotiate for you *immatriculatio* at a foreign University. His price for a Doctor's diploma is from £15 to £21. 5s., although a very neat article in this line could once be got for £10. It is a great attraction that you may graduate *brieflich*; that is to say, it can all be done by correspondence. Lastly, the *Ehrenlaureat* of an academy can be had for £5; it carries with it the right to wear the "Cross of the Academy," costing 10s. to £1, "according to the Institution." Our readers will recall the epigram contrasting modern times with the days when they put thieves on the cross.

At the German *Lehrerversammlung* (Teachers' Meeting) at Kiel a resolution was passed unanimously in favour of the *Einheitsschule*—a single national school, organized as pedagogic needs compel.

but discarding all social and religious differences, and presupposing only one class of teachers. Since there is a like demand in France and in other parts of Europe, we will endeavour to give precision to the idea by means of the principles laid down at Kiel by Oberstudienrat Dr. Kerchensteiner, of München, in recommending it to the teachers assembled there. It is contrary, he holds, to the spirit of the *Rechts- und Kulturstaat* (State based on Law and aiming at Culture) to maintain, parallel to the obligatory schools, other schools, professing to offer a wider education and opening their doors to the richer classes upon the payment of special fees. Every differentiation of the public school for economic or social considerations is an outrage upon the *Rechts- und Kulturstaat*. But differentiation is necessary for psychological and pedagogic reasons: children ripen at different rates, are variously endowed, and must be trained by divers methods to divers ends. Education by formal instruction should not begin before childhood is over—not, in general, before the end of the sixth year of life. The first differentiation of the public school should take place when a parting of the speculative from the practical interests becomes clearly perceptible; the second, when there is a marked development of definite vocational interests, determined by natural aptitudes. As a rule, the time of the first stage will be not before the tenth, that of the second not before the fourteenth, year of life. But, side by side with these successive differentiations, a simultaneous differentiation is necessary, provision being required for backward and for highly gifted children, and to accord with the subjects and vocations for which preference is shown. There must, however, be *unity in diversity*—one public school, organized in departments but animated by one spirit, locally administered but responsible to the State.

For us at the present moment the stages form the most interesting feature in this scheme of an *Einheitsschule*. Pedagogues seem to be reaching an agreement that fourteen is the age at which definite, or specialized, vocational instruction should begin. To turn for a moment to another subject, not everything in Germany is perfect, as we are vainly supposed to believe. A Hessian woman teacher has been condemned by the final Imperial Court of Appeal to make good to a pupil the full damage resulting from the loss of an eye, destroyed by her during a chemical experiment. Although it was established that she had never received special instruction in chemistry, but was self-taught, the judges, nevertheless, convicted her of negligence (§ 276, B.G.B.). You put an untrained teacher to give instruction in chemistry, then punish her for blowing the children's eyes out. What of putting an untrained theologian to give instruction in religion?

UNITED STATES.

Reading the biographies of notable Americans, one is often surprised at the numerous and diverse positions that the subjects have filled. Tenure of office is an uncertain thing in the United States. The *Journal of Education* (LXXIX, 24), considering the field of education, looks to a point of time twenty-eight years back. There is but one State Normal School principal in active service in the principalship of the same school as then. There is not one President of a University or important College who has survived the twenty-eight years. There is no State Superintendent or County Superintendent, and scarcely a City Superintendent, who has survived. Boston has had five Superintendents, Philadelphia four, Chicago five, Washington seven, and so over all the country. Most State Normal Schools have had from three to five different principals. The same rapidity of change has prevailed in most Universities and Colleges.

Oral composition is attracting much attention in the United States. It is claimed for it that it conduces to clear thinking and fluency of speech, besides preparing the way for written exercises. Relevant to the subject is the able article on "The College Teaching of Rhetoric," to which the place of honour is assigned in the *Educational Review* for June. An exposition of the method as employed with young children will be found in a paper in the *English Journal* (III, 5), "Oral Composition as a Basis for Written."

CEYLON.

The Report (to December 31, 1913) bears little local colour and is largely statistical, but its figures are of the reassuring kind. In the total number of pupils returned as attending schools an increase of 14,669—from 359,657 to 374,328—occurred; whilst the number of Government schools rose by 23, of Grant-in-aid schools by 32,

and of Unaided schools by 33. The Royal College has been transferred to new buildings. As to girls, there were 110,877 under instruction, or about 37 per cent. of those of the school age. The recommendation of the Education Committee that a school of cookery and of housewifery should be established for them has not yet been carried out. In all Government schools drill is taught, and in Grant-in-aid schools it is encouraged by the payment of a bonus to the instructor. The Cadet Battalion was 2,040 strong, whilst the "passed cadets" numbered 516. In the field of hygiene, courses of instruction were held for teachers, and the prophylactic administration of quinine in schools was continued during the two fever seasons in the time under review, the number of schools in which the administration took place being raised to 700. The net cost to Government on account of education was Rs. 1,826,944—an expenditure that might be increased with advantage to Ceylon.

ST. VINCENT AND GRENADA.

The Imperial Education Conference of 1911 resolved on the preparation of papers dealing with certain special aspects of the educational systems of the various States of the Empire. In the case of Colonies not having responsible government, general accounts are being issued. Although the papers are marked "For Official Use," we are doubtless free to publish information from them. We look to see how primary teachers are being paid in the outlying parts of the Empire. In St. Vincent the remuneration of the teacher is made up of (a) a fixed salary according to the grade of the school in which he is employed, and (b) a grant dependent on the class of certificate that he holds. The salary attached to a school of the First Grade is £40 a year; of the Second Grade, £30; of the Third, £20. The grant for a First Class certificate is £25; for a Second Class, £20; and for a Third Class, £10. Thus, the maximum salary of a full teacher is £65! An assistant teacher receives £10, plus the certificate grant, so that he may earn as little as £20 a year. In Grenada the salaries of head teachers and assistant teachers, paid wholly by Government are: in Infant Schools, £20 a year; in Lower Division Schools, £50; in Combined Schools, from £50 to £130, according to the grade of the school and the certificate of the teacher; and from £15 to £33 for assistant teachers. We set the figures down—not without sadness. These poor men and women are, in a humble way, Empire makers.

UNIVERSITIES AND SCHOOLS.

LONDON.

ROYAL HOLLOWAY COLLEGE.—The following awards of Entrance Scholarships are announced:—£60 for three years, to Miss N. E. Callebaut, Mathematics (County Secondary School, Fulham); Miss M. E. Farrer, Mathematics (Clapham High School); Miss A. E. M. Nock, French and German (Portsmouth High School). £50 for three years, to Miss M. E. Dodwell, Mathematics (Aske's Haberdashers' School, West Acton); Miss G. E. Evans, Classics (Grey Coat Hospital); Miss M. Freeborough, Botany with credit for Chemistry and Physics (Central Secondary Girls' School, Sheffield); Miss M. A. I. Gill, German and French (Portsmouth High School); Miss A. W. Graham, English with credit for French (Barr's Hill Secondary School, Coventry); Miss A. S. Henschel, History (North London Collegiate School); Miss M. T. Marrack, Biology with credit for Chemistry (Aske's Haberdashers' School, Hatcham); Miss R. W. Thornton, History (Clapham High School). £40 for three years, to Miss E. Watts, History (Coborn School and Bedford College).

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE.—Hutchinson Medals for research have been awarded to Mr. Charles Kenneth Hobson for his thesis on "The Export of Capital"; to Mr. William Kennedy for his thesis on "The Principles embodied in the Tax System of England since the Restoration"; and to Mr. Edward Carnegie Cleveland-Stevens for his thesis on "Railway Amalgamations." Mr. T. M. E. Armstrong, Manager and Secretary of the Ocean, Accident, and Guarantee Corporation, Ltd., has been elected a governor of the London School of Economics and Political Science.

KING'S COLLEGE FOR WOMEN.—Miss F. Rosamond Shields, M.A. London (Philosophy), Lecturer at Bedford College, has been appointed Warden of the Household and Social Science Department, King's College for Women. Miss Shields took her undergraduate course at Westfield College, and was also for two terms at Somers-

ville College, Oxford. Before going to Bedford College she held the post of Lecturer in the Theory and History of Education in the Secondary Training Department at Clapham High School. Her published work includes articles in the "Encyclopædia of Religion and Ethics."

WESTFIELD COLLEGE.—On the results of a recent examination the following scholarships have been awarded:—Arts—Esther Archibald (Tunbridge Wells High School), Drapers' Scholarship of £50; Beatrice M. Ascott (Monmouth High School), College Scholarship of £50; Winifred Galbraith (Sydenham High School), Drapers' Scholarship of £50; Iris D. Thornton (St. Paul's Girls' School), Amy Sanders Stephens Scholarship of £50; Alice M. White (Southlands School, Exmouth), Mary Booth Scholarship of £50. Science—Marjorie Bentham (Modern School, Exeter), Mary Booth Scholarship of £50. All these scholarships are tenable for three years.

UNIVERSITY COLLEGE, READING.

The following scholarships have been awarded:—Major Open of £69 per annum, to Evelyn E. Riding (Woolwich Polytechnic), for Science; Wantage of £40 per annum, to Brian Mead (Municipal College, Bournemouth), for Science; St. Andrew's Hall of £40 per annum, to Doris E. Underwood (County High School, Wellingborough), for Arts; Minor Open of £20 per annum, to Gladys Bride (Middlesbrough High School), for Arts; County Borough of Reading Minor of £10 10s. per annum, to Florence Maggs (University College, Reading), for Fine Art; Music of £21 per annum each, to Norman Nash (Christ's Hospital, West Horsham), and Florence E. Smith (Malvern House School, Reading).

VICTORIA UNIVERSITY OF MANCHESTER.

The Council of Ashburne Hall has made the following awards:—Research Studentship (value 50 guineas) to Agnes Moncrieff Sandys, St. Hilda's Hall, Oxford; the Old Friends' Travelling Scholarship (value £50) to Kathleen L. Lambley, Montcliffe House, Norwich; the Katharine Romilly Scholarship (£50 a year for three years) to Winifred Maude Manners, Jarrow Secondary School; two Sir William Mather Scholarships (£25 a year for three years) to Katherine Elizabeth Schippers, Secondary School for Girls, Brighouse, and Nancy Maud Lowe, County Secondary School, Fulham.

LIVERPOOL.

The resources of the women students of the University of Liverpool have been greatly enriched by the addition of a new wing to University Hall, their hall of residence. The building is the gift of a member of the Committee; and other generous friends of women's education in Liverpool have provided funds to enable the Committee to furnish it in a way that amply satisfies the demands of usefulness and aspirations after beautiful surroundings. The most attractive feature is a large room on the ground floor suitable for meetings or social functions; for ordinary use it is divided by movable oak screens, thus providing a delightful reading room for students, with French windows opening on to the garden, and also a dancing room to beguile their lighter moments. Above are three floors of study-bedrooms, increasing the accommodation of the hall from thirty to fifty students' rooms.

The building was opened formally on Tuesday, May 26. The Committee had hoped to have the honour of welcoming the Right Hon. J. A. Pease, who had promised to perform the ceremony, but he was, unfortunately, prevented from coming. Mrs. MacCunn charmed her hearers by a delightful opening address, in which she blessed the new home of the studious life, welcoming wistfully the future generations of students who should there achieve—as thoroughly trained and efficient women—not only freedom from the fear of economic pressure but also a deeper understanding to meet with simplicity the great commonplaces of life.

WALES.

This Report, which has just been issued by the Welsh Department, deals with several matters of interest in the domain of secondary education and therefore it should be carefully perused by all who are concerned with higher education in Wales. It refers only incidentally to schools outside the Welsh Intermediate Education Act, as they have been included already in the general report of the Board of Education. The remarks of the Board on their relationship to the intermediate school are, however, instructive, because they tend to show how very sympathetically the Welsh Department regards the municipal secondary schools. In the opinion of the Board the exis-

tence of these schools, so far from being a detriment to the intermediate schools, is proving rather the reverse; but we fail to see why the Board in a report on the intermediate system of education should go out of its way to state that the municipal secondary schools are more "democratic in their government than the intermediate schools," show "less academic bias," and have more "freedom from examination burdens." Besides, we do not believe that there is any justification whatever for these statements, because, in the first place, the intermediate-school system is essentially Welsh in its origin and character, whereas the secondary schools have nothing distinctively Welsh in their organization or methods. And we also doubt whether they are "more free from examination burdens," as they are practically all compelled to prepare for such external examinations as the Locals, while the Central Welsh Board Examinations are internal and have a definite relationship to the ordinary work of the intermediate schools. The report deals very suggestively with the function of a school library and its proper organization. It makes the interesting suggestion that the National Library might be utilized to supplement the local collection of books, on the lines of the Central Libraries which have been established in the West Riding of Yorkshire and in Warwickshire. We doubt, however, whether the National Library will contain many books suitable for the ordinary schoolboy's reading. The staff, of course, might benefit greatly if allowed free access to the reference books which the Library should contain.

In a short paragraph on Examinations the Department persists in its old policy of labelling the Central Welsh Board examinations as "external," which seems to us to vitiate a good deal of its criticisms on the examination problem in Wales. Presumably it is a sufficient condemnation of the system to describe it as "external"; but we must protest against this adjective (in its generally accepted meaning) being applied to our examinations. For we have always understood that this "opprobrious" term can only properly be applied to such examinations as the various preliminaries which have no special relationship to the work of the schools. Among the improvements which the Board suggests is the discontinuance of the Junior Certificate Examination, and its replacement by a system of school records. The Consultative Committee, of course, made a similar suggestion, but it will be recalled that it has been strongly condemned by the Head Masters' Association. At present opinion in Wales is equally decisive against its adoption.

The remainder of the report deals concisely and suggestively with such matters as travelling arrangements, mid-day meals, pupils' health, &c. And it concludes by stating "that the schools seem to be undergoing two gradual changes: they are adapting themselves more completely to their neighbourhoods without sacrificing any of the details of a good general education, and they are developing a stronger corporate unity."

Though we have ventured to criticize rather mildly one or two paragraphs in the report, we feel that the report as a whole is just and fair to the schools, and contains a great mass of most useful and valuable recommendation.

Sir Herbert Roberts presided over a meeting of this Board on July 9, when an encouraging report of its work was presented. The Secretary (Mr. Silyn Roberts) states that through the intermediary of the Board, several graduates of the University of Wales have succeeded in obtaining important positions in India in the railway and agricultural services. Home railways have also shown a willingness to consider favourably applications submitted through the Board.

Manufacturers are also interesting themselves in its work, and several of the most important works have already engaged the chemists, &c., recommended to them. The number of men and women on the register is increasing, and during the first half of the present year at least sixty-two had secured appointments with the assistance of the Appointments Board.

The report does not specifically state how far it has been in a position to solve the problem of employment of pupils leaving the secondary schools. This should become a very important feature of its work as the Board develops.

The Carnarvonshire Education Committee are inquiring into the relationship of the Central Schools which have been established in the county, to the existing intermediate schools. These Central Schools are the result of the recommendations of Mr. Smith, the Scotch Inspector, who reported recently on the Carnarvon schools. The pupils from the highest standards in the elementary schools are taught together there, and a special curriculum has been drawn up for them. Fears were expressed at the time of their foundation that they would react detrimentally on the existing intermediate schools, but the county have all along been confident that there was room for the two types of school even though the localities selected for the experiment were

**Annual Report
of the Board
of Education.**

thinly populated. It appears from the result of the present inquiry that at Bethesda, at all events, the effect on the intermediate school has been most serious, and that the numbers are rapidly dwindling. So serious is the decline that the head master in his evidence stated that if it continues the school will have to be closed. As a remedy it is now proposed by one section of the Committee to amalgamate the two schools, but local opinion seems strangely divided on the question. We trust that the expert Committee will take a firm line and support the amalgamation scheme, as it appears to be the proper solution of the difficulty. There is a similar case of overlapping at Portmadoc. There is no room in these thinly-populated districts for any overlapping, however partial it may be; and the sooner it is ended the better for educational efficiency.

A special congregation of the University was held at the Bangor University College, for the conferment of degrees. **University of Wales.** There were no honorary degrees conferred on this occasion. The Senior Deputy-Chancellor, Lord Kenyon, informed the Court that His Majesty King George intends at an early date to resign the Chancellorship of the University. It is extremely probable that the Prince of Wales will be appointed as his successor, and that His Majesty the King will accept the office of Protector of the University in accordance with the precedent set by the late King Edward VII. The acceptance of the office of Chancellor by the Prince of Wales would be enthusiastically received in the Principality.

We are informed in the Press that at an early date a new scheme for the control of intermediate education in the Principality will be submitted for the approval of Parliament; but no details are available. At present everything is very mysterious and indefinite—even the very existence of the scheme is very problematical. The Central Welsh Board does not propose to wait for any parliamentary action, as it intends to summon a special meeting, probably early in August, to consider all the questions arising from the recent action in the Assizes against three of its clerks. The whole question of the financial administration of the Board will be thoroughly discussed then. A scheme of reconstruction has already been formulated, which will place the new Clerk of the Board in complete control of the administrative staff, which cannot be utilized by the Chief Inspector, except through the supervision of the Clerk. This scheme awaits confirmation at the special meeting.

The Executive Committee is formulating a scheme of office administration by which the new clerk, to be appointed, will have perfectly clearly defined functions with regard to the Board's finances. His relationship to the Chief Inspector and the Inspectorial Staff will also be made quite clear. This scheme will be submitted for the approval of the special meeting of the Board.

SCOTLAND.

The revival of the regulations as to preliminary examinations has been under the consideration of the Universities for several years. Numerous conferences have been held, and the general lines of revision have been submitted to the individual Universities and approved by them. A new Ordinance has now been drafted and has been issued for consideration by the Courts, Senates, and General Councils. Under the present regulations the examinations are conducted by a Joint Board of Examiners, appointed by the University Courts. This Board is continually changing, as the examiners become members of it in rotation. It has no permanent secretary, and it meets at each of the Universities in rotation, the Secretary of Court of the University at which it meets being Secretary of the Board. Its powers are strictly limited; it meets only twice a year; and it is not in any important sense representative of the Universities. The new Ordinance institutes, in place of the Joint Board, a Scottish Universities Entrance Board consisting of sixteen members, of whom four are appointed by each of the University Courts. Two at least of the members appointed by each University must be professors or lecturers who conduct courses qualifying for graduation in arts. Each member holds office for four years and may be reappointed or not as his University decides. The Board must appoint a permanent secretary, with the necessary clerical assistance, and it must provide a convenient central office. The University Courts, as at present, will appoint the examiners in the main subjects of examination; but in other matters the Entrance Board is entrusted with very wide duties and powers, including the appointment of Examination Committees, the adjustment of results, determining the conditions, if any, under which greater proficiency in some subjects of examination may be allowed to compensate for less proficiency in others, the decision as to exemptions, the verification and alteration of exemption certificates, and the performance of such other functions as

may be assigned to the Board by a joint resolution of the four University Courts. The Board is also empowered to confer on matters relating to preliminary examinations with the Education Department, Scottish Associations of teachers, and University and other Educational Authorities outside Scotland, to enter into negotiations with the Education Department for the purpose of framing an agreement for co-operation in respect of the conduct or correlation of the Preliminary and Leaving Certificate Examinations, subject to confirmation of any such agreement by the four University Courts, and "generally to determine all matters having reference to Preliminary Examinations which are not already determined by the general regulations contained in, or made pursuant to, the Ordinances for the time being in force." Power is also given to the Board, in the case of a candidate of not less than twenty-one years of age, to grant exemption in whole or in part from the requirements of the Preliminary Examination, provided the candidate satisfies the Board that he has had a good general education and is fitted to enter upon the curriculum for a degree. The Board is also entrusted with power to modify the regulations for the Preliminary Examination, subject to the approval of each of the Universities.

The only change which the Ordinance makes in the subjects prescribed for the Preliminary Examinations in Arts, Science, Medicine, and Law, is the omission of Dynamics for Arts and Science and the inclusion of Physical Science and Natural Science. But as regards the number of subjects to be taken by any candidate and the standards on which they are to be passed, a considerable change is made in the Arts and Science Examinations. Every candidate must pass either (a) in three subjects (one of which must be English on the higher standard and one subject on the lower standard, or (b) in two subjects (one of which must be English) on the higher standard and three subjects on the lower. In Science a candidate who chooses alternative (a) must pass mathematics on the higher standard, and in Engineering Science every candidate must pass on the higher standard in mathematics. The old Ordinance provided that, in addition to passing the Preliminary Examination in general, every student who desired to attend a qualifying class in any language or in mathematics or physics must pass the Preliminary Examination on the higher standard in the subject of that class. The new Ordinance omits this requirement and substitutes for it the more general provision that "in each University the Senatus shall have power to determine with respect to any particular class the conditions under which attendance thereon shall qualify for graduation," the conditions to be reported to the University Court. Under the present Ordinance for degrees in Engineering and Agriculture, candidates are allowed to enter on their curriculum before passing the Preliminary Examination, provided they pass it before they present themselves for any part of the First Science Examination for the degree. This relaxation, which has caused a great deal of trouble, is abolished by the new Ordinance. There are other alterations of less importance, and the Ordinance as a whole, though it will not satisfy everybody, introduces most valuable reforms. Not least of these is the freedom it gives to the Universities, acting jointly through the Entrance Board, to make such future changes in the regulations as may be generally approved, without the necessity of the slow and cumbersome process by Ordinance.

The General Council, at its June meeting, received the report of a Conference of representatives of the four General Councils on the question of the administration of the Carnegie Trust. The Conference resolved unanimously that the payment of the fees of all students irrespective of their necessities is injurious to the interests of the poorer students and that the Carnegie Trust should be asked to introduce some method of ensuring that the beneficiaries are restricted to the class originally intended to be benefited. The Conference also suggested such methods as requiring from parents or guardians a declaration that the assistance of the Trust is necessary to enable applicants to attend a University, and inquiring into the circumstances of applicants in any special cases. The General Council remitted the report to a Committee for consideration. The University Court has appointed Mr. Charles Dunbar Broad, M.A., to be Lecturer in Logic and Psychology at University College, Dundee. Mr. Broad is a graduate of Cambridge and has for two years been assistant to Prof. Stout at St. Andrews.

Under the Will of the late Mr. W. B. Faulds, who died in 1897, a legacy of over £20,000 has been made to the University for the purpose of founding four Fellowships, one in each of the Faculties of Arts, Medicine, Divinity, and Law. The Fellowships will each be tenable for three years, and the candidates must be graduates who have just completed their course. The regulations are to be framed by the Senate. Mr. Hector J. W. Hetherington, M.A., Lecturer in Moral Philosophy at Glasgow University, has been appointed Lecturer in Philosophy at the University of Sheffield.

Lord Elgin was installed as Chancellor of the University on July 8, and he afterwards conferred degrees at the Summer Graduation. The Rector, Mr. Andrew Carnegie, was in the chair at the installation, and in the evening the Chancellor was entertained to dinner by the University. Mr. Frederick Soddy, F.R.S., Lecturer in Physical Chemistry at Glasgow University, has been appointed by the University to the Chair of Chemistry at Aberdeen University, in succession to Prof. Japp. Prof. Soddy has had a most distinguished career, both in teaching and research, and he has made important contributions to the literature of his subject. There have been negotiations between the University Court and the Technical College for the joint institution of a course of instruction leading to the degree of B.Sc. in Engineering. The Court has approved a scheme of study and examination; but it is of opinion that, in order to meet the requirements for teaching, not less than two properly qualified lecturers are necessary, one in Civil Engineering and one in Marine Engineering. Consideration of the scheme has in the meantime been deferred. The University Court has appointed Mr. John P. Kinloch, M.D. Glasgow, to the new Lectureship in Public Health.

During the month there have been three appointments to professorships. Mr. Thomas J. Jehu, M.D., F.G.S., Lecturer in Geology at St. Andrews University, has been appointed by the Crown to the Chair of Geology and Mineralogy, in succession to Prof. James Geikie. Prof. Jehu is a graduate of Edinburgh and Cambridge, and he has held the St. Andrews Lectureship since 1903. The University Court has appointed Mr. Donald F. Tovey, M.A., Englefield Green, Surrey, to the Reid Chair of Music, in succession to Prof. Miecks. Mr. Tovey was the first holder of the Lewis Nettleship Memorial Scholarship at Balliol College, Oxford, and he is well known as a musician and composer. The Curators of Patronage have appointed Mr. W. F. Watson, LL.D., Rector of the Royal High School, Edinburgh, to the Chair of Celtic Language and Literature, in succession to Prof. Donald Mackinnon. He studied Old Gaelic at Oxford under Sir John Rhys. The Rectorial Election is to take place on October 29. Owing to an increase in the funds for the endowment of the Vans Dunlop Scholarships, the University Court has been enabled to institute two new scholarships of £100 a year, tenable for three years, one in pathological bacteriology and the other in modern languages. Mr. T. B. Johnston, M.B., Ch.B., Lecturer in Anatomy at Edinburgh University, has been appointed Lecturer and Demonstrator in Anatomy at University College, London. Dr. W. E. Carnegie Dickson, Lecturer in Applied Bacteriology at Edinburgh, has been appointed Director of the new Pathological Department of the Royal Hospital for Diseases of the Chest, London. Dr. Sydney P. Smith, Assistant to the Professor of Forensic Medicine, has been appointed by the New Zealand Government to be Medical Officer of Health for the district of Otago.

The Committee has agreed to sell the Chambers Institute, Chambers Street, Edinburgh, formerly used as the Church of Scotland Training College, to the University for £5,500. With reference to a letter from the Education Department regarding the admission of students to training, the Chairman of the Committee, Prof. Darroch, said at a recent meeting that it was impossible to run efficiently a system of training colleges on grants for students. The solution of the whole matter was payment by direct Treasury grant.

A deputation representing the School Boards Association of Scotland recently submitted to the Secretary for Scotland a proposal that the sum of £71,000, promised to Scotland for education under this year's Budget, should be spent one-half in additional grants per scholar for average attendances, and the other half for the same purpose, but so divided as to give relief to districts where the expense of education was high and the rateable ability low. The Secretary for Scotland expressed a preference that the money should be distributed in the same way as the ordinary grants for this year; but he suggested that next year there would be more money at his disposal, and it would be then more convenient to make a change.

IRELAND.

The first holder of the Lecky Professorship of Modern History in Dublin University, founded in memory of the historian, is to be Mr. Walter Alison Philips. Mr. Philips, who is an Oxford man, is known as a historian by his "Modern Europe," his "Confederation of Europe," recently published, and his contributions to the "Encyclopædia Britannica" and the "Cambridge Modern History."

A meeting for conferring degrees was held in the Examination Hall of Trinity College, on the last day of June, at which honorary

degrees were bestowed on the following recipients:—Sir John Purser Griffith, a well known Irish engineer (M.A.I.); Robert William Rogers, the eminent American Hebrew scholar, and Sir Charles Waldstein (Litt.D.); Emil Alphonse Werner, University Professor of Organic Chemistry (Sc.D.); James Sinclair Baxter, Regius Professor of Feudal and English Law; the Hon. Joseph Nunan, who has been a successful administrator in Central and East Africa and British Guiana; the Right Hon. Christopher Palles, Lord Chief Baron; the Rev. Samuel Prenter, a leading divine of the Irish Presbyterian Church; and the Right Hon. Mr. Justice Ross (LL.D.).

Queen's University, Belfast, held a graduation ceremony on July 9, when degrees *honoris causa* were conferred on Prof. Maurice Fitzgerald (D.Sc.) and Captain James Sleeman, former Adjutant of the University Officers' Training Corps (M.A.). At the recent June Matriculation Examinations a larger number of candidates entered the University than at any previous entrance examination in its career either as the Queen's University or as Queen's College.

On July 19 the Vice-Chancellor of the National University, Sir Christopher Nixon, died at his residence near Dublin. Sir Christopher Nixon was one of the leading physicians in Dublin and at one time President of the Royal College of Physicians, and held the Chair of Medicine in University College, Dublin, at the time of his death.

More recently, University College, Galway, has sustained a loss through the death, on July 24, of Dr. Richard J. Anderson, M.A., who was Professor of Natural History, Geology, and Mineralogy in the College since 1883.

The Rev. Dr. Evans, one of the Commissioners of National Education, made a statement at the Methodist Conference in Belfast on June 24, outlining the policy which had been decided on by the Commissioners at a meeting held in Dublin the previous day to consider the recommendations of the Viceregal Committee of Inquiry. According to Dr. Evans, the Commissioners approved generally of the findings of the Committee, and in consequence they had resolved to appoint four Divisional Inspectors, one to be attached permanently to each of the four provinces, the initial cost of these appointments being estimated at £2,000, and the ultimate cost at £4,200 per annum. They had also decided on a system of automatic annual increments for teachers, which would involve an initial annual outlay of £26,000, mounting in course of time to something like £100,000. No provision for this increase of expenditure was made in the financial clauses of the Home Rule Bill. Dr. Evans also invited his audience to consider the probable position of Ulster candidates for National-school teacherships under "exclusion." At present a large contingent of the students in the Marlborough Street Training College in Dublin, which is under the Presbyterian Church, hails from Belfast; according to Dr. Evans, if Ulster stands out of the new arrangement of things, these will have to look for their training elsewhere.

The following day an official letter from the Board of National Education appeared in the public press, in which Dr. Evans's statements were characterized as "premature, unauthorized, and inaccurate," and it was stated that the Commissioners had not yet completed their consideration of the recommendations of the Viceregal Committee.

The National Catholic Total Abstinence Congress, held in the Mansion House in Dublin at the close of last month, devoted a session to educational work, at which Miss Catherine Mahon, ex-President of the National Teachers' Association, read a paper on "Temperance Teaching in Primary Schools." She described the work done in that line in the schools of the United States, and pointed out the growing need for something similar in Ireland. At present the National-school curriculum is so crowded that there does not seem much room left for temperance lessons, and, as Miss Mahon showed, economic conditions and the food of the people are responsible for much Irish intemperance; but no doubt something could be done in the schools towards promoting a reform.

Last August the Commissioners decided to introduce folk-dancing into National schools as a part of the regular physical training, and a course was given for teachers by Miss Burchenal, the leader of the school folk-dancing movement in the United States. As an outcome of this experiment, a successful folk-dancing fête was held in Phoenix Park, on July 11, under the patronage of the Lord-Lieutenant and Lady Aberdeen, at which some 1,200 children, drawn from schools in and about Dublin, performed a variety of folk-dances, Irish and other, with great enjoyment to themselves and the spectators. This is a departure in National education which deserves to succeed.

The Association of Secondary Teachers held its annual general meeting in the Mansion House on July 10, mainly to consider the present status of the £40,000 grant.

The Chairman, Mr. G. A. Watson, said that the teachers had agreed to the conditions set forth by Mr. Birrell in the White Paper issued last April, but under protest, rather than place

obstacles in the way of settlement. On one point they had insisted—three months' notice, exclusive of vacation. One of the speakers at the meeting referred to a school which employs on an average eight lay teachers, and where in the past three years there had been twenty-seven dismissals.

Alexandra College held its biennial "Commemoration Day" on the afternoon of June 31. Mr. Justice Madden presided, and the Lord-Lieutenant and Lady Aberdeen were present; and Dr. Starkie, the Resident Commissioner, made one of his usual brilliant and pessimistic addresses on education—but held out some hopes for the work done by the institution in which he was speaking.

The modern idea of a holiday appears to be an interval for self-improvement, and summer schools and summer courses are a feature of the age. We have our share of them in Ireland. The Department of Agriculture and Technical Instruction is this month holding summer courses in mathematics, mechanics, manual instruction, domestic economy, and art, at the Royal College of Science and the Metropolitan School of Art; 534 teachers from different parts of Ireland are in attendance, and there are also centres in Belfast and elsewhere, making a total of 712 students. A Summer School of Civics, under the direction of Prof. Patrick Geddes, is being held in connexion with the Civic Exhibition at present open in the Linenhall in Dublin. "Civics," it appears, embraces such subjects as physiology and hygiene in relation to city life, and the duties and ideals of citizenship. The School of Irish Learning in St. Stephen's Green has arranged for a course of lectures on Irish Bardic Poetry to be given by Prof. Osborn Bergin, from August 10-28. Besides these, the numerous Irish colleges and summer schools in the Irish-speaking districts are all in full work, including a new one which has been started on Rathlin Island off the Antrim coast. In most of these there are two sessions, one covering the first three or four weeks of July, the second in August; the interval, July 26-31, is given up to the Oireachtas, which is this year being held in Killarney. The Earl of Kenmare has granted the use of his demesne for dancing and other competitions, and all the open-air proceedings of the festival.

SCHOOLS.

CAMBERWELL, MARY DACHELOR GIRLS' SCHOOL.—Alice Boys, the head girl, has been awarded by the Clothworkers' Co., Governors of the School, a Hitchens Scholarship of £50 a year for three years

to aid her in going to one of the Universities. Esther Wooley has obtained an open scholarship of £40 a year for three years, tenable at the East London College. Gladys Percy has passed the Cambridge Higher Local Examination with First Class Honours in History and French and a Pass in Logic, and has received a Prize of Two Guineas. Ida Wills has taken First Class Honours with two distinctions in English in the same examination. The annual Prize Day was held on July 16. The prizes were distributed by Lady Beachcroft, and the chair was taken by Sir Melville Beachcroft, Master of the Clothworkers' Company. There was a crowded audience. Viscount Bryce delivered a most interesting and inspiring address to the girls. The Head Mistress's Report testifies not only to the present satisfactory condition of the School but to the good work done by girls after leaving the School, as evidenced by their successes at various University colleges. In the Datchelor Training College Miss Dorothy Mercer has obtained a double distinction (theory and practice) in the Examination for the Teaching Diploma of the University of London.

DULWICH COLLEGE.—Mr. George Smith has been appointed to the Head Mastership in succession to Mr. Gilkes. Mr. Smith was educated at Ayr Academy, graduated M.A. at Edinburgh University, and entered Trinity College, Oxford as a scholar. He took a First in Classical Moderations in 1889 and a First in Classical Greats in 1891. For the next seven years he was an Assistant Master at Rugby, and since 1898 has been Head Master of Merchiston Castle School, Edinburgh. Merchiston Castle has prospered in his reign and numbers now 240 boys—140 boarders and 100 day boys.

EPSOM COLLEGE.—Prize Day was held on July 25, and the prizes were distributed by Lord Rosebery. He began his address by paying a well merited tribute to the Rev. T. N. H. Smith-Pearse, who is retiring after twenty-five years' service. He then addressed the boys on Character, which he defined as the individuality of the individual. He urged them to make their manners worthy of their characters and their characters worthy of their manners. He had desired to give an annual prize for character, but he found that he had been anticipated, and the Rosebery Prize must go to some other school.

HAILEYBURY COLLEGE.—The following prizes have been awarded:—Latin Prose, Greek Verse, and English Literature, J. M. Ellis; Recitation, R. C. G. Dartford; Greek Prose and Latin Verse, P. J.

BLACK'S REFORM FRENCH

Written and Edited by F. B. KIRKMAN, B.A.,

Examiner and Inspector to Oxford and Cambridge Joint Board, &c.

LA PREMIÈRE ANNÉE DE FRANÇAIS

A DAY IN PARIS.

Written and Edited by F. B. KIRKMAN, B.A. Oxon., Inspector and Examiner to the Oxford and Cambridge Joint Board, &c.

FIFTH EDITION.

Completing 40,000 Copies.

Price 2s. Fully Illustrated.

The text describes, in the form of a continuous narrative with dialogues, a day passed by an English boy in Paris, and teaches incidentally some knowledge of life in France.

FRENCH LESSON NOTES,

giving detailed Notes of Lessons to accompany the above, sent gratis to teachers using the book on application to the publishers.

COLOURED WALL PICTURES.

(To accompany the above.)

No. I.—*La Famille Pascal à Table.* A Domestic Scene.

„ II.—*La Porte Saint-Martin à Paris.* A Street Scene.

Both drawn from French Models and Photographs.

45 x 35 inches.

Unmounted. 3s. net. On linen, 5s. net. On rollers, 7s. 6d. net.

ADAM & CHARLES BLACK, 4, 5, & 6 SOHO SQUARE, LONDON, W.

LA PREMIÈRE ANNÉE DE FRANÇAIS

Première Partie. Phonetic Script.

Transcribed by D. L. SAYORY, M.A.

THIRD EDITION. Price 6d. Limp Cloth.

This is a phonetic transcript of the first thirty-four chapters of "Première Année."

LESSON NOTES

to accompany this Phonetic Edition sent gratis to teachers using the book on application to the publishers.

LA DEUXIÈME ANNÉE DE FRANÇAIS

Fully Illustrated from Photographs, &c.

SECOND EDITION. With or without Vocabulary.

Price 2s. 6d.

This takes the learner to the country and seaside in the form of a tour through Brittany and Normandy.

PREMIÈRES LECTURES.

THIRD EDITION, REVISED AND ENLARGED.

Containing New Exercises. Price 1s.

FIRST FRENCH SONG BOOK.

AIRS AND TONIC SOL-FA.

By R. B. MORGAN.

NEW EDITION. Containing 10 additional Songs in Phonetic Script. Price 6d.

Graduates and men of experience who can produce **first-class** testimonials and **recent** references are invited to write fully to **Messrs. J. & J. PATON.**

Juniors with good references should forward full particulars.
(There is no preliminary fee.)

ASSISTANT MASTERS

Messrs. J. & J. PATON introduce only Masters whose **references** are **recent** and have been **verified**, and whose **testimonials** are **first-class.**

J. & J. PATON,

143 CANNON STREET, LONDON, E.C.

Application Form for an Assistant Master.

Ram; Mathematics, W. E. H. Banks; French (Classical Side), M. N. P. S. Coghill (Modern Side), H. D. Hancock; English Essay, H. D. Hancock; Chemistry and Physics Prizes, H. C. L. Heywood. Three of the senior masters retire at the end of the summer term—J. D. Whyte, Esq., A. F. Hoare, Esq., C.B., and F. W. Headley, Esq. Mr. Whyte came to the School as senior modern language master in 1878, and has been Head of the Modern Side since 1903. Mr. Hoare was one of the chief organizers of the School Rifle Corps in 1887, and is well known in connexion with the O.T.C. To Mr. Headley is due the great development of the School's Natural Science Society, of which he has been President for many years; he has been in charge of Lawrence House since 1894, when he succeeded Mr. Hoare; Mr. Whyte's retirement leaves Hailey House vacant. Speech Day was on June 27; it was the occasion of the opening, by Lord Sydenham, O.H., of the New Big School, which, with some additional rooms for masters and boys, has been built on the site of the old one. An unusual number of parents and other friends of the School were present.

MACCLESFIELD, HIGH SCHOOL FOR GIRLS.—The School has gained two Junior, three Intermediate C.C. Scholarships, seven bursaries, and one Scholarship of £50 for Domestic Science.

CORRESPONDENCE.

THE DIRECT METHOD.

To the Editor of The Journal of Education.

SIR,—Whilst I am, on the whole, in entire agreement with Mr. Siepmann in his article on the Direct Method, yet I should like to utter a mild protest as to the way in which he and others persistently ignore the English phoneticians. He refers to the study of phonetics being "taken up seriously by Sievers, Wautmann, Lechner, Viëtor, and others." But why should A. M. Bell and Sweet—in many ways the greatest of all phoneticians—be relegated to the etceteras? It may be a small matter, but when we in England have somebody to be proud of, I think we might proclaim it.—Yours truly,

A. HARGREAVES.

PRIZE COMPETITIONS.

The Translation Prize for July is awarded to "Curiosity."

The winner of the Translation Prize for June is H. C. Stewart, Esq., Lenno, Tonbridge.

Einst da ich bitter Thränen vergoss, da in Schmerz aufgelöst
meine Hoffnung zerrann, und ich einsam stand am dürrn Hügel,
der im engen, dunkeln Raum die Gestalt meines Lebens barg;
einsam, wie noch kein Einsamer war, von unsäglich Angst ge-
trieben, kraftlos, nur ein Gedanke des Elends noch:—wie ich da
nach Hülfe umherschaut, vorwärts nicht konnte und rückwärts
nicht, und am fliehenden verloschnen Leben mit unendlicher Seh-
sucht hing:—da kam aus blauen Fernen, von den Höhen meiner
alten Seligkeit ein Dämmerungsschauer, und mit einemmale riss
das Band der Geburt des Lichtes Fessel. Hin floh die irdische
Herrlichkeit, und meine Trauer mit ihr, zusammen floss die Weh-
muth in eine neue, unergründliche Welt; du Nachtbegeisterung,
Schlummer des Himmels kamst über mich: die Gegend hob sich
sacht empor, über der Gegend schwebte mein entbundener, neuge-
borner Geist. Zur Staubwolke wurde der Hügel, durch die Wolke
sah ich die verklärten Züge der Geliebten. In ihren Augen ruhte
die Ewigkeit; ich fasste ihre Hände, und die Thränen wurden ein
funkelndes, unzerreissliches Band. Jahrtausende zogen abwärts
in die Ferne, wie Ungewitter. An ihrem Halse weint' ich dem neuen
Leben entzückende Thränen.—Es war der erste, einzige Traum,
und erst seitdem fühl' ich ewigen, unwandelbaren Glauben an den
Himmel der Nacht und sein Licht, die Geliebte.

By "CURIOSITY."

Once, when my hopes had vanished, extinguished in pain, I stood,
shedding bitter tears, on the desolate mound which, in its narrow
and gloomy vault, held that which had been the reality of my life
—alone as no forsaken one has ever been alone, harried by un-
speakable anguish, helpless, with no thought but misery. As
I stood there, looking round me for aid, powerless either to go
forward or back, clinging with inexpressible longing to the life fast
receding into oblivion, there came from out of the blue distance
and down from the summits of my lost happiness a shudder of
dawn, and in a moment the tide of a new birth burst the fetters

(Continued on page 586.)

A NEW "IDOLA" SERIES

IDOLA LINGUARUM

THE JOURNAL OF EDUCATION will publish during 1914

A SERIES OF ARTICLES ON LANGUAGE TEACHING

Already published:

February 1914.	INTRODUCTORY ARTICLE. By Professor JOHN ADAMS.
March 1914.	ENGLISH GRAMMAR. By Professor ADAMSON.
April 1914.	GREEK. By Professor GILBERT MURRAY.
May 1914.	FRENCH. By CLOUDESLEY BRERETON.
June, July 1914.	THE REFORMED METHOD: Against. By OTTO SIEPMANN.
July 1914.	ENGLISH COMPOSITION. By G. E. S. COXHEAD.
August 1914.	THE REFORMED METHOD: For. By F. B. KIRKMAN.

The following other subjects will be treated in the course of the year:—

ENGLISH LITERATURE AND LANGUAGE. By Miss LILIAN FAITHFULL.	GERMAN. By Professor SCHÜDDEKOPF.
LATIN. By Professor CAMPAGNAC.	MODERN LANGUAGES v. CLASSICS. By THE EDITOR.

NOTE.—The Fifteen Numbers containing the previous series (IDOLA PULPITORUM) can still be obtained, price 23s. the set

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs.

GABBITAS, THRING & CO.

36 SAOKVILLE STREET,
LONDON, W.,

have a Department for SECURING
APPOINTMENTS as MISTRESSES
or MATRONS in Schools, and as
GOVERNESSES in Private Families.

They invite applications from qualified
ladies who are looking for posts in the
teaching profession.

The Agency, which is under distinguished
patronage, has been established 40 years.

Prospectus will be forwarded gratis on
application.

NO CHARGE FOR REGISTRATION.

No fee of any kind is due unless an
appointment be obtained through the
Agency.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS

Messrs. GABBITAS, THRING & CO. have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. **TRANSFER** or **PARTNERSHIP**, with or 5,335. without a view to succession to, old-established upper middle-class Boarding and Day School, with Kindergarten Department, at **NORTH-EAST SEASIDE TOWN**. About 40 Weekly Boarders and Day Pupils. Prospectus fees for full Boarders 48 to 54 guineas, and for Day Pupils 4½ to 19½ guineas respectively. Gross Receipts about £850. **GOOD HOUSE AND GROUNDS**. Goodwill £100 or **CAPITATION FEE**.

No. **TRANSFER** of School for **BOARDERS** 5,333. **ONLY**, at **SOUTH COAST HEALTH RESORT**. Containing 30 Pupils at Prospectus fees of £60 to £75. Gross Receipts of last year nearly £4,000, showing **CONSIDERABLE INCREASE**. Profit about £700. Goodwill £1,000.

No. **TRANSFER** of **HOME FINISHING** 5,332. **SCHOOL IN CONTINENTAL UNIVERSITY CITY**. Vendor retiring, having married. Contains about 12 or 14 Boarders. Prospectus fees £120 per annum. Gross Receipts about £2,008, and Profits about £300. Goodwill £600. Locality very beautiful and healthy.

No. **TRANSFER** of successful School for 5,327. **BOARDERS ONLY**, at a well-known **INLAND EDUCATIONAL CENTRE**. 25 Boarders. Prospectus fees from 45 to 51 guineas. Gross Receipts nearly £2,000, and net profits nearly £500. **EXCELLENT PREMISES**. Capital required in the first instance £2,500.

Others. Introduction free. Established 1881.

which bound the light. The glory of earth fled, and my grief with it; my pain melted into a new, unfathomable world. Thou, heavenly Slumber, inspiration of the night, overcamest me; round me a landscape rose with gentle slopes, and over it my spirit hovered, freed, new born: the mound dissolved in mist, through the mist I saw the face of my dear one, glorified, in her eyes the calm of eternity! I took her hands, and our tears formed a glittering bond between us, never to be broken. The centuries rushed past us into nothingness, like thunderclouds. On her neck I wept tears of joy to the new life. It was the first, the only dream, and only since then have I known an unalterable, unwavering faith in the heaven of night, and its star, my beloved.

We classify the 68 versions as follows:—

First Class.—Hardenberg, Orient, Firefly, H.E.D.A.G., Allobroge, Chingleput, Mac, Cairngorm, Curiosity.

Second Class.—Hammonia, Nibbidard, T.J., Puck, Kandersteg, J.H.R., W.F.B., Menevia, Dum Spiro Spero, Dane, Sita, Buff Orpington, Nessko, Adoxa, Exspes, C.F., M.J.R., Amateur, Iva Roggenfeld, Wiccamicus, Menhir, A bell, Foxglove, Romance.

Third Class.—H.J., Chislehurst, Kreuz, W.H.S., A.M.N., Culex, Cyclamen, Simplicissimus, Fortune le veut, Misurina, L.D.M., Bandello, Menhir (small paper), Vienna, Maiblümchen, Coull.

Fourth Class.—Heidenröslein, Gramaile, B.T.D., Cupidon, Ellis, Argyle, Aiglon, S.M.M., Crokorriensis.

Fifth Class.—M.B., Sat, Mehr Licht, Nam, I.O.U., Schuler, Salovan, Q.E.D., Non, Nulle.

A competitor has kindly pointed out that the passage from Novalis will be found translated by Carlyle ("Miscellanies," Vol. II). An excellent translation it is—his own loose, disjointed style well matched with the original, and the substitution of "sun" for "light" in the last sentence—"In the Heaven of Night and its Sun, my Beloved"—is a master stroke. There are flaws in it. For "my hope had melted away and I stood solitary by the grave that in its dark space concealed the form of my life," read "was melting away . . . by the bare hillock where in its narrow chamber lay buried the form that was my life." *Dämmerungsschauer* was the chief rock of offence, many confusing *schauer* with "shower"—"shiver of twilight," or, better still, Carlyle's "chill breath of

dusk." *Riss das Band*: "It tore asunder the birth cord, the fetters that bound me to Light." So we interpret a dark saying, Here light is darkness and darkness light, and consequently the metaphor is most obscure; but those who took *das Band* as the subject have an arguable case. *Dem neuen Leben*: "I greeted the new life with rapturous tears" best expresses the dative.

HOLIDAY COMPETITIONS.

Prizes to the amount of Ten Guineas are offered for the following competitions:—

DRAWING.

1. A black-and-white illustration of any ballad.
2. A landscape in water-colours, with motto "Divini otia ruris."

PHOTOGRAPHS.

1. A set of five kodaks representing "Our Village" or "A Day in the Country."
2. A group of children.

LITERARY.

1. Critical notes on Gray's "Elegy." Limit, 250 words.
2. "An overworked Assistant Mistress has been ordered by her doctor rest and change. If some kind lady will supply the means for a month's travel on the Continent (say £30) she will in return furnish her benefactress with a series of racy letters describing her adventures."—[Advt.] A specimen letter. Limit, 400 words.
3. A dialogue between a Froebelian and a Montessorist. Limit, 400 words.
4. A translation into English of five (or fewer) epigrams in Greek, Latin, French, or German. Limit for the whole, 50 lines.
5. A recipe for "A Faultless Dominie." (The well known recipe for "A Blameless Prig," ending "Keep in a cool barge for future use," may serve as a model.)
6. A motto for London.

All competitions must reach the Office not later than September 16. Photographs, except of prize winners, and drawings will be returned if accompanied by a stamped and addressed envelope or wrapper.

for a STAFF TEACHER OF HOUSECRAFT, holding First Class Diplomas in Cookery, Laundry, and Housewifery, for employment mainly in Technical and Evening Schools. Duties to commence 1st September, 1914. Preference will be given to candidates who have had at least three years' teaching experience.

The commencing salary approved by the Committee is based upon an initial salary of £50 per annum, increasing by £5 a year to £110. In fixing the commencing salary, allowance will be made for not more than 5 years' previous service at not exceeding £5 per year.

The Committee may also take into consideration the question of increased remuneration to teachers holding four First Class Diplomas, or to teachers who have received special training in Science such as to enable them to co-ordinate the work in Housecraft subjects thoroughly with that of the Science Teacher, and who are specially approved by the Committee for such work.

Further particulars and Form of Application (which must be completed and returned so as to reach the County Hall not later than 9 a.m. on the 10th August) may be obtained from the Education Department (Technical Branch), County Hall, Wakefield.

STUDENT-TEACHERS.

Messrs. TRUMAN & KNIGHTLEY always have on their books a large number of Vacancies for **Student-Teachers** on mutual terms or at moderate premiums.

LADY MATRONS AND HOUSE MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials.

NO CHARGE OF ANY KIND is made to applicants unless an engagement be secured through this Agency, when the terms are reasonable. Prospectus, terms, &c., will be forwarded on application.

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

DUSMO

The Dustless Sweeping Powder

By Appointment

to H.M. The King

**AN OFFICIAL TRIAL,
in any School throughout the Empire, for one month, free
of cost or obligation to purchase, will be granted.**

DUSMO COMPANY, LTD.,

11 QUEEN VICTORIA STREET,
LONDON, E.C.

THE illustration shows the method of using "Dusmo"—8 ozs. of the powder is sufficient to sweep an area of floor 4 feet wide and from 40 to 120 feet long, and the same powder can be used over again.

The Photograph was taken in a building where Dusmo has been used daily for 18 months—there is now a marked absence of that stuffy dusty smell—the stock is protected from damage, and the floors have become wonderfully clean and improved in surface by the gentle scouring action of Dusmo.

FOR RESIDENT AND DAY STUDENTS.

MICHAELMAS TERM BEGINS THURSDAY, OCTOBER 8th.

LECTURES are given in preparation for all Examinations of the University of London in Arts, Science, and Preliminary Medicine; for the Teacher's Diploma, London; the Teacher's Certificate, Cambridge; and for the Cambridge Higher Local Examination.

There are special courses of Scientific Instruction in Hygiene (designed to furnish training for Women Factory and Sanitary Inspectors and Teachers of Hygiene) and in Horticultural Botany.

A single course in any subject may be attended. There are Boating, Swimming, and Hockey Clubs; the College gardens, with lawn tennis courts, hard court, and net ball ground, are available for the use of Students.

ENTRANCE SCHOLARSHIPS in Arts and Science will be offered for competition in June next. A few residence bursaries are given under special conditions.

SECONDARY TRAINING DEPARTMENT.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Students are admitted to the course in October and in January.

One Free Place (value £26 5s.), one Scholarship of the value of £20, and a limited number of grants of £10 are offered for the Course beginning in January, 1915. They will be awarded to the best candidates holding a degree or its equivalent in Arts or Science.

Applications for Scholarships or Grants should be sent in on or before December 1st.

For further conditions apply to the HEAD OF THE DEPARTMENT.

**MADAME
BERGMAN ÖSTERBERG'S
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT,
FOR RESIDENT STUDENTS.**

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnasium Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.
For particulars apply—THE SECRETARY.

**MADAME
BERGMAN ÖSTERBERG'S
UNION OF TRAINED GYMNASTIC TEACHERS.
Ling's Swedish System.**

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:
Admiral Lord CHARLES BERESFORD, K.C.B., M.P.
Principals:
A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS

Messrs. GABBITAS, THRING & CO. have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. 5,344. **TRANSFER**, owing to **ILLNESS OF THE PRINCIPAL**, of upper middle-class School, chiefly for Day Pupils, in a Northern Residential Suburb of London, giving a **THOROUGHLY GOOD ADVANCED EDUCATION**. Good detached house. Gymnasium. One acre of grounds. Now 50 Day Pupils. Prospectus fees for Boarders 60 to 70 guineas, Day Pupils 4½ to 15 guineas. Gross Receipts last year nearly £1,500, and profit about £300. **EASY TERMS** to suitable and prompt purchaser.

No. 5,340. **TRANSFER** of Nucleus of old-established, upper middle-class Boarding and Day School, at South Coast Resort, owing to owner's illness. At present 4 Boarders and 10 Day Pupils. Prospectus fees from 45 to 60 and from 9 guineas per annum upwards. Gross receipts nearly £500. Reasonable offers considered.

No. 5,335. **TRANSFER** or **PARTNERSHIP**, with or without a view to succession to, old-established upper middle-class Boarding and Day School, with Kindergarten Department, at **NORTHERN SEASIDE TOWN**. About 40 Weekly Boarders and Day Pupils. Prospectus fees for full Boarders 48 to 54 guineas, and for Day Pupils 4½ to 19½ guineas respectively. Gross Receipts about £850. **GOOD HOUSE AND GROUNDS**. Goodwill £100 or **CAPITATION FEE**.

No. 5,327. **TRANSFER** of successful School for **BOARDERS ONLY**, at a well-known **INLAND EDUCATIONAL CENTRE**. 25 Boarders. Prospectus fees from 45 to 51 guineas. Gross Receipts nearly £2,000, and net profits nearly £500. **EXCELLENT PREMISES**. Capital required in the first instance £2,500.

No. 5,317. **TRANSFER** of **BOARDING AND DAY SCHOOL WITH KINDERGARTEN DEPARTMENT**, in **SUBURB OF AN INLAND MANUFACTURING CITY**, containing about 20 Boarders and 50 Day Pupils. Prospectus fees 60 guineas, and from 3 to 15 guineas respectively. Gross receipts of last 12 months nearly £1,500. Profits about £630. **GOODWILL** £500.

No. 5,287. **TRANSFER** of good-class **BOARDING AND DAY SCHOOL** in a residential District near a **SEAPORT TOWN** in the South. Containing nearly 20 Boarders and 40 Day Pupils. Prospectus fees 45 to 75 guineas and 12 to 18 guineas respectively. Gross Receipts about £1,800. Profits about £300. Goodwill £900.

No. 5,283. **PARTNERSHIP**, in a very successful and **HIGH-CLASS** School for **BOARDERS ONLY**, in a London Residential District. About 16 or 18 Pupils. Prospectus fees £96 to £114, with considerable extras. Gross receipts over £2,500. Profits about £250. Price for Goodwill of half share £480.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

Messrs. RIVINGTONS' LIST

A HISTORY OF ENGLAND AND THE BRITISH EMPIRE.

By ARTHUR D. INNES, Author of "An Outline of British History." &c.
In Four Volumes. Crown 8vo. With Maps and Plans. 6s. each net.

Vol. I. Before the English came, to 1485. } Published.
Vol. II. 1485-1603.
Vol. III. 1603-1802.
Vol. IV. 1802-1914. In January, 1915.

Also a Library Edition in demy 8vo. 10s. 6d. net each volume.

A SHORT BRITISH HISTORY.

By W. S. ROBINSON, M.A. Crown 8vo. With Illustrations, Maps, and Plans.
One Vol., 2s. 6d. Or in Two Periods:—

Period I. To Elizabeth, 1603. 1s. 4d.
Period II. To George V. 1s. 4d.

[In September.
[In preparation.

ENGLISH GRAMMAR AND COMPOSITION.

Part I. First Year Course. 1s.

Part II. Second Year Course. 1s. 6d.

Part III. Middle School English Composition. 2s. 6d. [In Sept.

By G. A. TWENTYMAN, B.A., Assistant Master at Manchester Grammar School.

An attempt is made to provide such material in Grammar and Composition as is suitable for the foundation of a satisfactory prose style. As the ultimate aim of the Course is to enable boys to write English, the illustrative examples and the matter of the exercises are taken almost entirely from prose authors. The use of grammatical terms is reduced as far as possible.

MATERIAL FOR PRÉCIS WRITING.

Compiled by H. A. TREBLE, M.A., Senior English Master of the Borough School for Boys, Croydon. Crown 8vo. 3s. 6d. [Just Published.

The exercises in the first part of this book will be found suitable for candidates preparing for the London Matriculation and the Central Welsh Board Examinations. They may be used in general as preparatory to the more difficult exercises contained in the second part, and several of them can be used as Exercises in Indexing.

A COURSE OF GEOMETRY—THEORETICAL AND PRACTICAL.

Particularly meeting the requirements of the Civil Service Examination for Apprentices and Artificers.

By A. H. BELL, B.Sc., Director of the Technical Institute, Sherrness.
Crown 8vo. With numerous Diagrams. 2s. 6d. [In September.

THE STORY OF ENGLAND.

A History for Junior Forms.

By W. S. ROBINSON, M.A.

With numerous Illustrations, Maps, and Plans.

Part I. From Early Times to 1272. 2s.

Part II. 1272 to 1603. 2s.

Parts I and II in One Volume. 3s. 6d.

Part III. 1603 to 1760. 2s.

Part IV. 1760 to 1910. 2s. 6d.

Parts III and IV in One Volume. 4s.

AN ILLUSTRATED HISTORY OF ENGLAND. For Middle Forms of Schools.

By W. S. ROBINSON, M.A.

One Vol., 3s. 6d. Or in Two Periods:—

Period I. To End of Commonwealth, 1660. 2s.

Period II. To Edward VII, 1910. 2s.

BRITISH HISTORY. From the Earliest

Times to the Present Day. With a History of the Overseas Dominions.

By L. CECIL SMITH, M.A., Modern History Master at St. Paul's School, assisted by

R. L. GIVEN, M.A., Master at Colet Court, and F. W. BEWSHER, B.A., Master at St. Paul's School. One Vol., 5s. Or in Two Periods:—

Period I. To Richard III, 1485. 2s. 6d.

Period II. To George V, 1912. 3s. 6d.

A JUNIOR BRITISH HISTORY.

By R. L. GIVEN, M.A., and F. W. BEWSHER, B.A. One Vol., 3s. Or in Two Parts, 1s. 6d. each.

Part I, to 1603. Part II, 1603-1910.

SINGLE TERM FRENCH READERS.

Six cheap Elementary books of graduated difficulty. With full vocabularies, special and general vocabularies, grammar headings, French-English and English-French. Suitable for a full term's work, allowing time for revision and examination. The books are carefully graduated and short stories are introduced by degrees.

By B. MINSEN, M. ès A., Assistant Master at Harrow School.

TERM I, 9d. and TERM II, 1s.

TERM III, 1s. This contains a continuous story re-written for beginners, mainly founded on part of *Bertrand du Guesclin* by Emile de Bonnechose.

TERM IV, 1s. This also contains a continuous story re-written for beginners. [Just Published.

LE FRANCAIS PAR L'EXEMPLE ET LES TEXTES.

En Six Volumes. Par C. L. ALBERT BONNE, Professeur certifié de langues vivantes (Ministère de l'Instruction Publique), Senior French Master at Bradford Grammar School.

Vol. I, 1s. 4d. Leçons préparatoires de Français (Pronunciation, Lecture, Grammaire, Thème, Version, Conversation) à l'usage des commençants. [Just Published.

Vol. II. Consisteront de passages en prose et en vers spécialement écrits ou adaptés pour montrer l'application des règles de grammaire. Le plan suivi sera même que celui adopté dans le premier livre. [In the press.

Vol. III, in the press. Vols. IV-VI, in preparation.

By A. R. FLORIAN, M.A.

JUNIOR PASSAGES FOR TRANSLATION INTO FRENCH. 1s. 6d. [Nearly ready.

SENIOR PASSAGES. [In the Press.

A TEACHER'S KEY TO EACH COURSE. [In the Press.

JUNIOR FRENCH UNSEENS. 1s. 4d.

SENIOR FRENCH UNSEENS. 1s. 6d.

RIVINGTONS' GRADED FIRST LATIN BOOKS.

A new and modern set of six cheap books for beginners in Latin. Containing Latin into English and English into Latin Lessons, with Grammar, and Accidence and a Latin-English and an English-Latin Vocabulary.

Books I and II. 1s. each. [Published.

Book III. 1s. Ready shortly.

Books IV, V, and VI. In preparation.

FLORIAN'S FRENCH

GRAMMATICAL READERS.

Series A. With Vocabularies, 1s. 6d. each.

LE BLOCUS. Par ERCKMANN-CHATRIAN.

L'ÉVASION D'EDMOND DANTÈS.

Par ALEXANDRE DUMAS.

L'HOMME À L'OREILLE CASSEE.

Par EDMOND ABOUT.

Series B: Without Vocabularies, 1s. 6d. each; or with Vocabularies, 2s. each.

NOUVELLES GÉNÉVOISES.*

Par RODOLPHE TOFFER.

LE CAPITAINE PAMPHILE.*

Par ALEXANDRE DUMAS.

CONTES CHOISIS.*

* Vocabulary to each now ready, but the Three Vols. will be supplied without Vocabularies unless otherwise ordered.

FIRST FRENCH COURSE.

By A. R. FLORIAN, M.A., Head Master of the Priory County School, Shrewsbury. With Illustrations. 2s. 6d.

SECOND FRENCH COURSE.

The text consists of extracts from "Les Mousquetaires," specially adapted and forming a complete narrative. With *Questionnaires*, Grammar, Exercises, and a complete Grammatical Section and Vocabulary.

By A. R. FLORIAN, M.A. 2s. 6d.

A FRENCH COMPOSITION BOOK ACCORDING TO THE NEW OR DIRECT METHOD.

By E. VICTOR MASSARD, Author of "An Elementary French Composition" (2s. 6d.). Crown 8vo, 2s. 6d.

A KEY. 5s. net, postage 2d., direct from the Publishers only to Teachers.

A SHORT OLD TESTAMENT

HISTORY. A continuous narrative from the Creation to the time of Christ.

By the Rev. A. R. WHITHAM, M.A., Principal of Cullham College. With Maps and Plans. 2s. 6d., or in Two Parts, 1s. 3d. each. [Just Published.

Part I. The Creation to Samuel and Saul.
Part II. Saul and David to the Time of Christ.

FIRST LATIN TRANSLATION BOOK.

Containing 173 Latin Passages, with Preparations, Notes, and a Latin-English Vocabulary; and English Exercises for Re-translation, with an English-Latin Vocabulary.

By A. H. THOMAS, M.A. 1s. 6d.

ELEMENTARY LATIN PROSE EXERCISES.

Designed as an Introduction to North and Hillard's Latin Prose Composition, and may be used from the time when Latin is begun.

By the Rev. A. E. HILLARD, D.D., High Master of St. Paul's School, London, and C. G. BOTTING, M.A., Assistant Master at St. Paul's School. 2s. 6d.

A LATIN VERSION. 3s. 6d. post free, direct from the Publishers only to Teachers.

LATIN PROSE COMPOSITION.

For the Middle Forms of Schools.

By M. A. NORTH, M.A., and the Rev. A. E. HILLARD, D.D. 3s. 6d.

A LATIN VERSION. 6s. 2d. net post free, direct from the Publishers only to Teachers.

FIRST LESSONS IN LATIN GRAMMAR AND TRANSLATION.

By W. GREENSTOCK, Assistant Master at Malvern College. 2s. 6d.

This book contains 115 exercises with Latin-English and some English-Latin sentences illustrating graduated lessons of Accidence and Syntax, forming an introduction to continuous narratives.

OCCASIONAL NOTES.

THE War which, through no seeking of our own, has come upon us, will be a test of much. It will test our power of organization, our capacity for endurance, our national fibre. It will probe, too, the soundness of our system of education. Croakers have warned us that education has been helping to make the nation soft. We shall see. This is the first great trial of fortitude which the generation educated in our national schools has had to bear and the first great struggle into which the democracy, since its advent to power, has had to enter. An educated democracy has to show that it can carry on that struggle with the same unflinching purpose, the same stubbornness and "bull-dog grip" with which an aristocracy resisted Napoleon. We have no fear of the result of such a test.

The War.

EDUCATION must needs suffer, and Lord Haldane's great scheme of reform must needs wait till his scheme for a Territorial Army has been perfected and carried out by Lord Kitchener; yet we hope that the existing system will not be interfered with more than is absolutely necessary—that schools and colleges, for instance, will not be taken for hospitals, except in the last resort. However tremendous is the call upon our resources, we must not forget the rising generation. We may learn a lesson in this matter from the most redoubtable of our foes, who founded the University of Berlin and set about educational reform in the time of sorest stress, when the enemy was actually in occupation of their country.

Business as usual.

SINCE the above note was written we have had an opportunity of seeing a Circular of the Board of Education issued after communication with the Army Medical Department, which states that, in the opinion of that Department, no emergency is likely to arise in the near future which will require the occupation of school buildings other than those which have been already requisitioned. So far as we have heard, these are not at present numerous. The Board, very properly, deprecate interference with school buildings at the present stage, and further make it plain that applications for their use from unauthorized busybodies should be refused. The Army Council has informed the Scotch Education Department that schools must not be used for billeting without the consent of the Education Authorities, and must be evacuated when required by the latter.

THE Provision of Meals Act has been passed just in time to help the Local Authorities with the feeding of the children during the war. The Act, which comes into force at once, has three important provisions. It enables the authorities to supply meals during the holidays, it abrogates the halfpenny rate limit, and it removes the necessity of obtaining the sanction of the Board of Education to expenditure on food out of rates. In a word, it confers upon the authorities plenary powers to do whatever they think necessary in the way of providing meals. The Board of Education have already sent out a circular on the subject, which, amongst other things, states that grants on as favourable a basis as possible will be forthcoming to assist expenditure incurred in this financial year. The circular, be it noted, is dated August 7, three days after the declaration of war. The Act comes indeed at the right moment. It can hardly be doubted that next winter there will be much unemployment and consequent privation, and in times of stress the children ought to be the last to suffer.

IT is now nearly three years since the Report of the Consultative Committee on Examinations was published, and, as a result of much conferring with University Examining bodies, Local Authorities, and others, the Board of Education have embodied in a circular a set of proposals on which they invite criticism and suggestion. A good deal of it will meet with general approval. The plan of the two Examinations, one for boys and girls of sixteen and the other for those of eighteen, is adopted. The principle of no external test for school-children under sixteen is, broadly speaking, accepted, "preliminary" examinations for grant-earning schools being forbidden altogether and the right to prohibit any particular school from taking a "Junior" being reserved. No other interference with the present University examinations is contemplated, nor do the Board—and herein they are, we think, wise—propose to erect any examination system of their own. Their functions will be confined to bringing the various examining bodies into line and getting them to agree upon the minimum standard. This will be no light task, and we foresee a long period of diplomatic negotiation. We are glad to note that the principle of easy papers and a high standard of marking is advocated, at least for the first

The Board's Circular on Examinations.

examination, which should be such that every pupil of average intelligence and industry can pass it. There need be no difficulty in exacting a higher standard for the purposes of Matriculation and entrance to the professions.

THE weak point of the Board's proposals is, in our view, the insufficient recognition of the school course. The certificates, which will still be granted by the Examining Bodies, will not be School Leaving Certificates, nor will they be called by that name. It will be open to any boy or girl to obtain one, in whatever way he or she has been educated. All that is proposed is that, in the case of a scholar coming from a school on the Board's "efficient" list, a brief record of his school career shall be appended to the certificate. Now this is not enough. If we believe that education in a good school is the really important thing, and regard the passing of an examination, as we ought to do, merely as a proof that the scholar has not been lazy and is not a dunce, we ought to discriminate more emphatically between the boys and girls who have spent three years in an efficient school and those who have not. The former should receive a Leaving Certificate in which the school record, signed by the head master or mistress, comes first and the testamur of the examiners second. The latter should receive something of a wholly different nature, which cannot be confused with the other parchment. Only by some such means can the public be educated into understanding that it is the school course that really matters, and that the examination pass is merely the seal upon the teacher's work.

IN these columns last month we remarked that original political genius seems during the last century to have sprung from anywhere rather than from the public schools. Since then a writer in the *Morning Post* who signs himself "C. H. P. M.," taking a wider sweep than we did, has been investigating the upbringing of a large number of the leading men of the day, and this is what he finds. Political leaders are evenly divided; about half are public-school men. In diplomacy, as we should expect, the schools have it all their own way, for diplomacy is still an aristocratic preserve. But the Church, as in the middle ages, is the most democratic of the professions, and only ten out of thirty bishops were educated at the great boarding schools, as were only five out of sixteen judges. The numbers will probably surprise many people, and will be regarded as not very creditable to the schools mentioned. Still, we must be fair to those schools. They educate now only a small proportion of the youth of the upper and middle classes, and we must not expect them to turn out more than their due share of bishops and judges. The article, however, indicates a profitable line of research. It would be interesting, for instance, to know how the great day schools compare with the great boarding schools in the output of talent, and whether there is any marked difference in the kind of ability they produce.

IN the Conference on the Teaching of English at Stratford-on-Avon there was the usual chorus of denunciation of pedantry, instruction in grammar and

Teaching of English Literature.

philology, the Clarendon Press editions of Shakespeare, and the examination system. It was a beautiful summer's day, and the Conference was part of a "festival" of drama managed by actors. Under such circumstances how could the speakers be expected to deny themselves the luxury of denouncing all solid work and demanding that the reading of literature should be nothing but unmitigated enjoyment? It was left for Mr. J. H. Fowler, of Clifton College, to point out that the invectives were really a little out of date, and that, in the reaction from burying great authors under a cloud of notes, we ran some risk of substituting shallow impressionism for serious study. We are quite sure that Mr. Fowler's warning is needed. Enjoyment ought not to be the sole end of reading, nor the stimulation of feeling the sole aim of the teacher. The intellect and brain must be called into play as well as the heart and the imagination. Dr. Rouse inveighed against the Clarendon Press editions. We wonder how many schools he knows of where these editions are used.

CANON MASTERMAN, in his address to the Letchworth Congress, made some useful suggestions about the teaching of civics. Such teaching, he thought, could not be effectively done in the elementary schools, with their crowded curriculum. The better course would be to give instruction of that kind in continuation schools, and his ideal was that boys and girls leaving school at fifteen should attend a class in citizenship on one afternoon a week for two years. There is much to be said for such a plan. The children in elementary schools have not reached the age at which they can appreciate teaching about the way they are governed, and their own share in such government. Civics, like cooking and hygiene, is a practical matter, a thing about which children need to hear when they are approaching the age at which they will be confronted in actual life with the problems which the teacher discusses. Canon Masterman's dream of the time when the future citizen will after due training be ceremoniously invested with citizenship, like a medieval knight who has won his spurs, will touch a sympathetic chord in many hearts. It is a remark of Mr. Sidney Low's in his "Governance of England" that the drabness and colourlessness of the act of voting is a real loss to the young working men. The President of the Teachers' Guild makes the same remark about the process of registration.

THE *Schoolmaster* has been discussing the title by which teachers in elementary schools other than heads should be called, and urges them to plump for "assistant master or mistress" as against "class teacher." We sympathize with its view that the nomenclature of teachers should be the same from Eton and Harrow down to village schools, for identity in nomenclature would be the natural outward sign of that unity of the teaching profession for which we are striving and of which the Register is the embodiment. But why should the term "assistant" be used? There is, of course, nothing derogatory about it, but it is meaningless, and gives, especially where secondary schools are concerned, a wrong impression of the spheres of work of the chief and his subordinates. The teachers in

The Output of the Public Schools.

Morning Post who signs himself "C. H. P. M.," taking a wider sweep than we did, has been investigating the

A Question of Titles.

plump for "assistant master or mistress" as against "class teacher."

a secondary school do not "assist" the principal in his or her work; in most cases they are doing work of a different character, which the latter cannot do and does not profess to be able to do. To call the science masters of a public school "assistant masters" is as absurd as it would be to call the engineers of a steamship "assistant captains." They should be called simply "masters," and the use of the prefix "head" would quite sufficiently discriminate their commanding officer. In elementary schools, such as those in London, where functions of the head masters and mistresses are almost purely administrative (and clerical), "assistant" would be a complete misnomer.

SIR HENRY HIBBERT'S speech on the Education Vote was just too late for us to refer to it in our August number. It contained some interesting facts about education in Lancashire. Only half the cost of secondary education, he stated, was met by Government grants, and he contended that the proposed increase was quite inadequate. In the North, far more than in the middle and South of England, elementary and secondary education are one, and increased facilities for the latter mean to a great extent more schooling for working class children. In Lancashire 87 per cent. of the scholars in the higher schools came from the lower schools, and 35 per cent. of the places in the former are free. Sir Henry further stated that 50 per cent. of the looms in Lancashire are owned by men who were operatives only a few years ago, and that it is to this constant inflow from the artisan class that the commercial predominance of Lancashire and Yorkshire is due. The hard-headed Northerner is evidently convinced that education is a "business proposition." Sir Henry spoke in favour of Continuation Schools, but is against compulsion, holding that we should get the right class of boys and girls into the schools under a voluntary system.

WE regret to notice the weakening of the Board of Education on the subject of the size of playgrounds. The new rules will permit playgrounds which give only 16 square feet per head in the case of infants, and 20 square feet in the case of seniors. The figure has hitherto been 30 square feet for all. It is right to say that this is the size which will be demanded where no other playing space is available; the present ratio for the older children will be retained in other cases. Much will, therefore, depend on what the Board regard as "other provision for games." If a park a mile away is to be accepted, the proposed playground will be altogether too small. As Mr. G. L. Bruce points out in a letter to the *Times*, an acre of playground is demanded for every hundred children in a secondary school; while an elementary school for a thousand, playground included, may be built on the same area. The difference is far greater than it ought to be.

"HOW not to get run over"; "Only cross a busy street where there is a policeman"; "Don't hold on to any vehicle . . . especially to a Motor-Bus." These pretty specimens of English are not the product of a Fourth Standard boy. They are taken from notices issued by the London County Council and put

up conspicuously in every elementary school. Now the London Education Committee makes a great deal of the teaching of English. Composition is one of the two subjects in which candidates for Junior Scholarships are examined; yet it allows monstrosities of this kind to stare children in the face in every school. Two of them occur in a placard signed by the Education Officer. We greatly fear that if Sir Robert Blair sat for a Junior Scholarship he would be ploughed in English.

LOCAL AUTHORITIES.

THE terrible reality of war must affect, directly and indirectly, the work of all Local Education Authorities. In many parts of the country school buildings have been requisitioned for military purposes, and

The War.

with much less reason philanthropic ladies, with excellent but ill-founded intentions, desire to transform them into hospitals. Anticipating that distress will soon become acute and general, the Board of Education are encouraging Authorities to provide meals for school children, and, although it is doubtful whether any need has yet arisen which cannot be promptly and adequately dealt with by local relief committees, it is advisable to be prepared for emergencies. Authorities will be confronted, of course, by the difficulty of increased prices for building materials and school requisites, but it is hoped that no necessary work that can be done will be suspended. It is also, as the Board of Education suggest, "very undesirable that the unrest to which the present crisis in the affairs of the nation naturally gives rise should be intensified by any avoidable interruption or dislocation of the public educational service of the country."

THE statistics of recognized "intending teachers" for elementary

Supply of Teachers.

schools, issued by the Board of Education, are of considerable value, and are also moderately reassuring. It is now possible to obtain some reliable information as to the Authorities who are contributing a satisfactory proportion to the supply and those who are failing to do so. The number of posts in England available for certificated and uncertificated teachers on January 31, 1913, was 99,042 of the former and 39,800 of the latter. It has been suggested in this column that to maintain the supply, intending teachers in the proportion of something like 5 per cent. of these totals must be enrolled annually. The actual proportion of bursars, pupil-teachers, and student-teachers who had not been bursars, recognized for the first time during the year is 3.30 per cent. The administrative counties (excluding London) produce the average supply: the County Borough Councils, 3.79 per cent.; the Borough Councils, 3.23; Urban Councils, 2.71; and London, 2.35 per cent.

THE Kent Education Committee has for some time given consideration to certain questions regarding the salaries of teachers, and in particular those of uncertificated assistants and the head teachers in

Kent.

small schools. The position of uncertificated assistants is to be somewhat improved and, in future, the salaries of all head teachers in schools with an average attendance of 150 or less will be the same—viz. men, £115 to £145; women, £90 to £115. The Committee has also felt that dissatisfaction has been caused in the past by the practice of putting a school in a lower grade and in reducing the salary of the head teacher in consequence of a fall in average attendance. In future, in the case of new appointments, the grade of a school will remain the same as that at which it was fixed when applications were invited so long as the head teacher in question holds the position, subject to reconsideration only if and when a substantial increase has occurred in the average attendance. This appears to be a very reasonable and satisfactory provision.

IN the county of Kent, according to the Eleventh Annual Report, there was an increase of £11,882 in the expenditure out of revenue account during the year ended March 31, 1914, as compared with the previous year. Nearly 50 per cent. of the increase is due to teachers' salaries, this charge having advanced from £1. 18s. 3d.

Expenditure.

per head in 1903-4 to £2. 19s. 8d. in 1913-14. The total maintenance cost per head was £3. 14s. 3d., as compared with an average of £3. 8s. 1d. for the five preceding years. As regards receipts, the grants from the Board of Education, it appears, continue to show a reduction. During the year the amount received in respect of aid, annual and fee grants, was less by an amount of £3,353 than the sum received in the previous year. The contribution per scholar in average attendance, including the grant for medical inspection, was £2. 1s. 3d., as compared with £2. 2s. 9d. in 1906-7. In discussing the position of affairs, the Committee repeats to the Council what it has reported from time to time—namely, that, unless substantial additional assistance is received from Government, a further increase in rates must be anticipated. "No further assistance," it is pointed out, "will be received during the year 1914-15, but there is good reason to hope that something may be obtained in the following year, although the suggestion that increased grant should, if the Board of Education see fit, be accompanied by the abolition of special rates, indicates that the relief is not likely to be very general."

School Attendance. THE difficulty of dealing with problems of school attendance in an administrative area are considerable, and it is sometimes believed that magistrates do not sufficiently support the Local Education Authority, and are unduly lenient in dealing with parents who fail to observe the by-laws. In consequence of representations made to it, the Kent Education Committee arranged conferences with the Chairmen of the various Petty Sessional divisions in their area. It was pointed out by the justices that they must apply the law to the circumstances of each case as in their discretion they think best, and that their decision must largely depend upon the way in which a case is presented to them. In some instances, it was suggested, the attendance officers did not bring to the notice of the court in a satisfactory manner the facts upon which they relied in bringing the prosecution. The justices also expressed the opinion that the Committee's policy of taking cases into court only as a last resort is a mistaken one. That is to say, the mere fact that the parents have several months' indulgence induces the magistrates to suppose that leniency is desired.

Berkshire. THE Report of the Berkshire Education Committee, presented to the County Council at their last meeting, contains some useful observations by Mr. W. C. F. Anderson, the Secretary, on the progress of the work. The main development recently has been in the provision of practical instruction. In 1908-9 the number of scholars who were taught cookery, laundrywork, handicraft, and gardening was 519; last year the total was approximately 3,838. In Berkshire the number of small schools is considerable, and Mr. Anderson points out that "Gardening" as a school subject can now be more easily introduced into the curriculum, as girls are permitted to join the class. It has been found to be undesirable, however, where there are only two adult teachers, for the head teacher to leave the schoolroom to take a small class for gardening, and this no doubt, to some extent, limits development.

SCIENCE NOTES.

British Association in Australia. OUR readers will have seen in the daily Press that the British Association program has been carried out so far as Melbourne and Sydney are concerned. We understand that the Brisbane visit will take place, but that the New Zealand trip has been abandoned. The usual volume containing addresses by the President of the Association and the Presidents of the Sections will, we hope, be obtainable from Burlington House. It was intended to develop the Sectional Reports and to issue them in large numbers, and if this has been carried out it will not be difficult to get a complete abstract of the official proceedings, as these were prepared before the war. Unfortunately the social and personal intercourse, which is so important a feature of these conferences, must have suffered somewhat in fruitfulness as regards scientific discussion. It is to be hoped that the sense of brotherhood among savants of different nations may have been deepened rather than injured.

Prof. Bateman's Address. THE Inaugural Address of the President followed the lines anticipated, and was a powerful statement of the views of modern followers of Mendel. There were several instances of the employment of homely

simile to give point to arguments which were unavoidably rather long and abstruse for the uninitiated, of which instances we will quote one: "We should be greatly helped by some indication as to whether the origin of life has been single or multiple. Modern opinion is, perhaps, inclining to the multiple theory, but we have no real evidence. . . . When we hear the spontaneous formation of formaldehyde mentioned as a possible first step in the origin of life, we think of Harry Lauder in the character of a Glasgow schoolboy pulling out his treasures from his pocket: 'That's a wassher—for makkin' motor cars.'"

The Sun a Variable Star. MANY of the official expeditions to observe the total solar eclipse were interfered with, but some were entirely successful. The partial eclipse was seen in England in favourable weather, but, since the maximum phase was less than two-thirds, it is not probable that much new information was obtained. Among the papers presented to Section A of the British Association was one by C. G. Abbot, Director of the Smithsonian Astrophysical Observatory at Mount Wilson. Measurements of the solar radiation at Mount Wilson in California, and at Bassour in Algeria, show close agreement, and lead to the conclusion that the sun is a variable star, the variability being irregular in period and in amplitude, but may range from 5 per cent. above to as much below the average within the lapse of a week.

The Thinking Hand. MR. J. G. LEGGE has done a service to education by his book, "The Thinking Hand; or, Practical Education in the Elementary School." There are more than four hundred illustrations, which give a rapid demonstration of the instruction now provided. There is much to admire, yet we hope that a few years will see a vast improvement. For example, the models made are frequently copies of obsolete pieces of apparatus, or pieces of apparatus which ought to be obsolete. Cannot the resourceful science teacher show a better way? Cannot he influence the manual training so that boys and girls may make things which will actually work, and do on a small scale the operations which on a large scale are the groundwork of commercial and social activities? Consider such matters as water-supply, production of electrical energy from heat, signalling, surveying.

Glass-tubing: a Caution. MORE than usual care should be taken to avoid waste of glass tubing. Most of our present supply has come from Germany, and a shortage of this material is a possibility to be reckoned with.

The common Gnat. FEW insects are easier to obtain and watch than the common gnat, *Culex pipiens*. Its life-history is full of interest, and a magnifying glass is sufficient to show many interesting points of its anatomy. The enormous influence of the mosquito, man's chief competitor on this planet, might well be brought before older pupils, but the younger ones can find enough interest in the common gnat. Every teacher of Nature study is doubtless acquainted with some of the life-story of *Culex*. Nevertheless, we think several will be glad to know of a beautifully illustrated account given by W. H. S. Cheavin in the August number of *Knowledge*. Lantern slides on the subject are sold by dealers, but, in our opinion, are much less effective than the real thing, their teaching function being to supplement—not to supplant.

CONFERENCE ON FURTHER EDUCATION.

A GARDEN CITY SUCCESS.

THE PROBLEM OF THE FOURTEEN-YEAR-OLD CHILD.

BY OUR SPECIAL CORRESPONDENT.

WIDESPREAD interest was manifested in an educational conference at Letchworth (Garden City) from July 25 to 31. Promoted by the Teachers' Guild of Great Britain and Ireland, the Workers' Educational Association, and the Letchworth "1914" Celebration Committee (a body arranging various festivities to celebrate the tenth anniversary of the commencement of the Garden City), the Conference was of far-reaching importance, the subject being "The Further Education of Children over the Age of Fourteen." The officials of

the Conference were: President, the Marquis of Salisbury; Vice-Presidents, Miss N. Alder, Sir Robert Blair, Lord Robert Cecil, M.P., Mr. Ebenezer Howard, Mr. M. R. James, Litt.D. (Vice-Chancellor of Cambridge University), Miss Margaret McMillan, Dr. Norman Macfadyen (Chairman, Letchworth Parish Council), the Rev. W. Temple, Mr. Aneurin Williams, M.P., and Mr. E. N. Wix, M.A.; Chairman of Joint Committee, the Rev. Canon J. Howard B. Masterman, M.A.; Chairman of the Local Committee, Mr. Douglas Cockerell; Secretary, Mr. Frank Fairman, M.A.; Hon. Secretary Exhibition Sub-Committee, Mr. T. Armitage Hewitt; Hon. Secretary Social Committee, Mr. J. W. Redfern; General Local Secretary, Mr. Edgar Wing. Delegates from all parts of Great Britain and the Continent attended the various sittings of the Conference, and the interest never flagged.

It was made plain, perhaps for the first time, that the problem of the fourteen-year-old child is the question of the day. Many schemes have been suggested to solve it. When once it is realized that the education of the average boy or girl ends at the age of thirteen or fourteen, elementary education is seen to be a failure. The total inhibition of child labour under the age of thirteen would be a step in the right direction, and when assured of a healthy life for school children further education might be profitably considered. In the words of Mr. J. H. Reynolds (late Director Manchester Technical School) at the first session of the Conference, "Education is the remedy for the ills of the nation."

The formal opening of the Conference on Saturday, July 25, was a good presage for the week's activities. Lord Salisbury, in his opening address, advocated better conditions of housing and home life as an indispensable preliminary to reforms in school training. The present system of elementary education was the most uneconomical arrangement they could conceive, because at the age of fourteen the impression made on the mind of the child was not sufficient to leave any permanent mark unless it were continued and deepened. If the right of the needy parents to call upon their children to aid them was recognized, then the co-operation of the employers must be gained for their further education. State compulsion after the age of fourteen was not, in his opinion, feasible, and we must look to voluntary efforts. Education, he said, had two sides: the development of the child's character and its mental development. The former was best effected, he thought, not by the teachers, but by the Boy Scout and similar organizations. This movement appealed to the elemental virtues of the boy, controlled by the principles of morality and religion. It was a magnificent system and was further education of the highest and best kind.

Hearty greetings were offered to the Congress by prominent residents, including Mr. Ebenezer Howard, the pioneer of the Garden City movement.

At the opening of the Conference on Monday morning Further Education in England was considered, Mr. J. H. Reynolds opening the discussion, in the absence of Lord Henry Bentinck, M.P. Mr. Reynolds deplored the low standard of education in the ranks of the British Army, and, in addition to advocating the abolition of child labour, suggested that continued education should be extended to the age of seventeen within the ordinary working hours.

Mr. C. K. Ogden, B.A. (joint author of "The Problem of the Continuation School"), advocated a four and a-half days' working week, the rest to be spent under educational influences, six to eight hours being so spent in the following way: two hours' practical or laboratory work, two hours' theoretical instruction bearing on such work, one hour drawing, one hour mathematics, one hour essay or composition, and one hour general social knowledge.

In the course of the afternoon session Mr. J. C. Smail (Organizer of Trade Schools, L.C.C.), speaking on "Further Education in London," said that both low and high grade workers must be provided for on a compulsory system. A Royal Commission on Juvenile Labour was needed to formulate a national policy, in regard to the work, training, and education of our young people.

Miss F. H. Dunham (Organizer of Women's Technical Classes, L.C.C.) said that further education was carried on only at the cost of considerable self-sacrifice on the part of the parents. Until there was a general reduction of working hours, and compulsion replaced voluntary attendance, the efforts of educationists would never be wholly successful, and further education would continue to be beyond the scope of the majority of our young people.

Mr. Shadrach Hicks (Principal of the Shoreditch Technical Institute) insisted on a treatment of the problem apart from creed, caste, or party politics. The nation should devote, he suggested, £500,000 every year for a period of ten or fifteen years to establish, maintain, and develop such a system of further education as would form the crown of our present system and allow our young people to make use of their special abilities in the varying channels of commercial and industrial activities, thereby maintaining and strengthening our civil, industrial, and national life.

Tuesday's session was devoted to a consideration of Further Education in Scotland and America, and the speakers were: Dr. Crowley, who

read a paper prepared by Mr. J. Clark, M.A. (Clerk to the Glasgow School Board), Mr. D. McNally (Head of Continuation Work, Edinburgh School Board), and Miss Winefrid Jevons (author of a special report issued by the Board of Education on "The Relation of School to Employment in the United States"). Mr. Clark's suggestions for the future were enlarged educational areas, the gradual establishment of day continuation classes on compulsory lines, special regard for employment or future employment, the raising of the day school age, and a more real continuity of education. Its object must be to make men, not workmen. Mr. McNally's outstanding statement was that the future of continuation schools was bound up with the reconstruction of the apprenticeship system, and the classes must supplement this system. Miss Jevons said the problem of the fourteen-year-old child faced America as well as England. The compulsory system was operative in several of the States.

On Wednesday morning Dr. Kobelt, Organizer of Rural Continuation Schools in Germany, read a paper describing methods of Further Education in that country. He suggested that children should commence their education at elementary schools in the seventh year and prolong the age limit by a year or two, which would be a means of improving their physical condition. That would be more hygienic than forcing children of five into benches and rooms where their organism was exposed to dangers of infection and where they were liable to develop curvature. Mr. T. R. Hawes (Head Master, Castleford Secondary School, Yorks) also read a paper describing educational facilities in Germany.

Mr. J. W. Willis Buid, Chairman of the Worcester Education Committee, read a paper on "Non-vocational Training." In the afternoon the delegates were entertained with a pianoforte lecture recital by Mr. Dalhousie Young.

The principal speaker at Thursday's session was Mr. W. P. Donald (Town Clerk of Barnsley), who, in a discussion on Vocational Education, read a paper entitled "A Plea for Further Experiment in Vocational Education." Parliament should, he thought, pass a one-clause measure for a conference in 1916 to determine in what direction experiments should be made in Further Education, and that then no further Conference should be held for five years. Mr. R. W. Ferguson (Educational Organizer to the Bournville Works) gave an interesting outline of the methods pursued and the curriculum at Messrs. Cadbury's Works, and Mr. W. Trevor H. Walsh (Assistant Secretary, Higher Education, Kent County Council) spoke on vocational work with reference to agricultural districts. In the evening a Workers' Educational Association meeting was held, when the objects of this movement were explained by Mr. W. A. Nicholls. The Association has now 173 branches, with 11,430 members.

The morning of the last day of the Conference (Friday) was devoted to the consideration of two subjects: "The Teaching of Domestic Subjects" and "The Teaching of Civics." The former was spoken to by Miss Kempson (Head of the Domestic Department, South-Western Polytechnic) and Mrs. J. E. Matthews (read on behalf of Mrs. McKillop, King's College for Women), and the latter by Canon J. H. B. Masterman.

Canon Masterman asked, "Could citizenship be taught in a system of national education?" Many said "No!" But, remembering how successfully it was taught in other countries, he thought the attempt should be made in England. His dream was that when a child left school at sixteen it should attend a special class one afternoon a week. After explaining his method of teaching civics, the speaker went on to say that he did not care if the withdrawal of children of sixteen from the industrial life for an afternoon a week was considered impractical—he believed it would have to be done. The future citizens of our country should learn their civic duty side by side. He did not anticipate much help from the politicians in the work of educating men for citizenship. He lamented that no report had been made on methods adopted in other countries for the training of citizens. Patriotism was the outcome of imagination, and imagination was knowledge interpreted by affection.

The closing session fittingly dealt with the provision and training of teachers for Further Education, and papers were read by Miss K. L. Johnston (Maria Grey Training College) and Prof. Foster Watson (late Professor of Education, University College, Aberystwyth). Canon Masterman, who presided, said it took two things to make a teacher: natural ability and a proper training. They were trusting far too much to a body of overworked people, who could not be expected to do justice to the tutorial studies they had undertaken.

Miss Johnston said she believed teachers were born and not made. The paper outlined the duties of the teacher and the training she should receive to equip her properly for her work.

Prof. Watson did not think anything could be done with the question of Further Education until such education was made compulsory. But the system could not be made compulsory before it was in a fair way to become efficient. As teachers in Further Education schools they wanted men and women of the right personality.

A conversazione, at which Mr. McNally, of Edinburgh, expressed

the thanks of the visitors, concluded a most enjoyable and profitable Conference.

An official report of all the proceedings in book form is promised shortly.

BOOKS OF THE MONTH.

Classics.

An Introduction to Latin. By J. C. Kirtland and G. B. Rogers. *Macmillan*, 5s.

Caesar: Gallic War, Book II. Edited by L. M. Penn, M.A. *Clive*, 1s.

Virgil: Aeneid, Book IX. Edited by J. F. Richards, M.A. *Clive*, 1s. 6d.

Divinity.

Murby's Smaller Scripture Manuals.—The Acts of the Apostles, with Introduction, Map, and Explanatory Notes. By Charles Knapp, D.D. Vol. I, Chapters I-XVI. 1s.

Notes on the Gospel according to St. Matthew. By C. R. Gilbert, M.A. *Mills & Boon*, 1s.

Classbook of Old Testament History. By G. Hodges. *Macmillan*, 4s. 6d. net.

English.

The Early Life of Thomas De Quincey, from his own Writings. Edited by Arthur Burrell. *Dent*, 6d.

The Children's Cameos of Poetry and Prose. Eight Books. Books I to IV, paper covers 3d., cloth 4d. each; Books V to VIII, paper covers 4d., cloth 5d. each. *Philip*.

The Wanderings of Rama, Prince of India. Edited by Wallace Gandy. *Macmillan*, 1s.

Material for Précis-Writing. Compiled by H. A. Treble, M.A. *Livingtons*, 3s. 6d.

Oral Composition. By Cornelia C. Ward, A.M. *Macmillan*, 4s. 6d. net.

Fiction.

Evan Harrington. By George Meredith. Standard Edition. *Constable*, 6s.

Sandra Belloni. By George Meredith. Standard Edition. *Constable*, 6s.

Geography.

Cambridge County Geographies.—Durham, by W. J. Weston, M.A.; Glamorganshire, by J. H. Wade, M.A. Each 1s. 6d., with Maps, Diagrams, and Illustrations. *Cambridge University Press*.

West Indies and Guiana. Six Lectures prepared for the Visual Instruction Committee of the Colonial Office. By Algernon E. Aspinall. *Philip*, 8d. net.

A Little Book on Map Projection. By Mary Adams. *Philip*, 2s. net.

Gift Books.

A Garden of Girls; or, Famous Schoolgirls of Former Days. By Thomas Concannon, M.A. *Longmans*, 3s. 6d.

History.

English History in Contemporary Poetry.—No. 5: The Eighteenth Century. By Miss C. L. Thomson. *Bell*, 1s. net.

Outlines of Ancient History, from the Earliest Times to the Fall of the Roman Empire in the West, A.D. 476. By H. Mattingly, M.A. *Cambridge University Press*, 10s. 6d. net.

Greek History for Schools. By C. D. Edmonds, M.A. Maps and Illustrations. *Cambridge University Press*, 5s. net.

Elementary Household Chemistry. By Prof. J. F. Snell. *Macmillan*, 5s. 6d. net.

The Story of Plant Life in the British Isles. Vol. II. By A. R. Horwood, F.L.S. *Churchill*, 6s. 6d. net.

Thresholds of Science.—Astronomy. By Camille Flammarion. Illustrated. *Constable*, 2s. net.

A First School Botany. By Ethel M. Goddard, B.Sc. *Mills & Boon*, 2s. 6d.

Technics.

The Cambridge Technical Series.—A Manual of Mechanical Drawing. By J. H. Dales. *Cambridge University Press*, 3s. net.

Preliminary Machine Drawing Course. By C. E. Handy. *Longmans*, 1s.

EDUCATION IN THE PERIODICAL PRESS.

Books and the Child: the Mother Tongue. By M. A. Gilliland. *Daily Telegraph*, July 30.

The writer is Head Mistress of Haberdashers' Aske's School, Acton.

Breaking Up: a Prize Day Impression. By Master Swithers. Communicated to William Maas. *Daily Chronicle*, July 31.

Elementary-school children's holidays.

Children's Freedom: Youngsters at Play. *Daily Telegraph*, July 25.

Church Schools of the Seventeenth Century. By Rev. J. C. V. Durell, Rector of Rotherhithe. *Church Times*, July 24.

An historical and descriptive account of the Parish School, Rotherhithe.

Examinations: the Board's Outline Scheme for Secondary Schools. *Times*, August 4.

Fathers and School Holidays. *Spectator*, August 1.

Harvard University. By W. A. M. *Academy*, August 1.

Neglected Point in Singing and its Teaching. By R. J. Pitcher. *Music Student*, August.

The importance of diction and expression.

Notes on Modern Universities. By Prof. Herbert Strong. *Academy*, July 25.

Pianoforte Teaching, Pieces and Studies: a Graded List. By C. Egerton Lowe. *Music Student*, August.

School Masters and School Mistresses. *Spectator*, August 8.

"The real fathers of the boys are lawyers, clergymen, doctors.

... They stoop benevolently towards their children at intervals—intervals very often of three months. A schoolmaster has nothing to think of but boys."

Secondary School Examinations. *Women's Employment*, Aug. 21.

State Inspection of Secondary Schools. By H. R. Beasley. *Daily Telegraph*, July 30.

Truth and Tradition in Relation to Schools. By Mrs. Kate C. House. *Contemporary Review*, August.

(Continued on page 616.)

CASSELL'S

'MODERN SCHOOL' SERIES GEOGRAPHY — HISTORY — LITERATURE

The volumes in each section of this splendid series will be found to be fully abreast of the most recent educational requirements. They are beautifully printed and illustrated and strongly bound. Prices from 10d. to 1s. 8d.

CASSELL'S NEW LIST ALSO INCLUDES

CASSELL'S LANGUAGE BOOKS

French	6d. to 3s. 6d.
German	1s. 6d. to 3s. 6d.
Latin	1s. to 3s. 6d.

CASSELL'S GEOGRAPHY BOOKS

"Modern School" Series.				
5 Books...	10d. to 1s. 6d.
Round the Empire	1s. 6d.
This World of Ours	2s. 6d.
The Children's England	1s. 6d.
A Practical Method of Teaching Geography	6d. each.

CASSELL'S HISTORY BOOKS

Complete	...	1s. 6d. to 6s. 6d.
Periodic	...	9d. to 1s. 8d.
Dramatised History	...	4d.

CASSELL'S NATURE BOOKS

"Eyes and No Eyes."	6 Books.	4d. to 6d.
The Fairyland of Living Things.		1s. 6d.
Object Lessons from Nature.		1s. 6d. ea.
Nature Study and Brush Drawing.		3s. 6d.
How to Find and Name Wild Flowers.		2s.

CASSELL'S UNRIVALLED DICTIONARIES CASSELL'S SUPPLEMENTARY READERS CASSELL'S POETRY BOOKS

— May we send you our Complete Catalogue of Educational Books? —

CASSELL & CO., LTD., EDUCATIONAL DEPT., LA BELLE SAUVAGE, LONDON

A DIRECTORY OF EDUCATIONAL ASSOCIATIONS

will be found in the MARCH issue of "THE JOURNAL OF EDUCATION," price sixpence, post free eightpence, a paper "indispensable to all school and college reading-rooms in these islands."—*Westminster Gazette*.

This "DIRECTORY," which extends over fifteen columns of the paper, has been corrected to date by responsible officials. It includes (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

BELL'S NEW BOOKS.

Mathematics.

BELL'S MATHEMATICAL SERIES

For Schools and Colleges.

General Editor: WILLIAM P. MILNE, M.A., D.Sc., *Clifton College*.

ARITHMETIC. By H. FREEMAN, M.A., sometime Scholar at Christ's College, Cambridge; Mathematical Master at the Haberdashers' Aske's School. With or without Answers. 2s. 6d. Answers, 6d. net.

Written to meet the needs of teachers who wish a large and varied collection of practical arithmetical questions dealing with subjects within the pupils' sphere of knowledge, and covering the whole range of the secondary school curriculum. The moderate price has been rendered possible by the rigorous exclusion of all "padding."

PROBLEM PAPERS IN ARITHMETIC FOR PREPARATORY SCHOOLS. By T. COOPER SMITH, M.A., late Scholar of University College, Oxford; Mathematical Master, St. Peter's Court, Broadstairs. 1s. 6d.

A varied collection of original and simple problems, specially designed to enlist the interest of pupils, through being selected from phenomena within their experience.

STATICS. Part I. By R. C. FAWDRY, M.A., B.Sc., sometime Scholar of Corpus Christi College, Cambridge; Head of the Military and Engineering Side, Clifton College. 2s. 6d.

Written to meet the needs of schools which teach Statics as an essential part of a general liberal education. The experiments on which the fundamental principles are based require only the simplest apparatus, and are specially adapted for classroom demonstration. There is a large collection of examples.

THE ELEMENTS OF NON-EUCLIDEAN GEOMETRY. By D. M. Y. SOMMERVILLE, M.A., D.Sc., Lecturer in Mathematics, University of St. Andrews. 5s.

This volume is intended for students who are interested in one of the most important branches of modern geometrical thought. The position of Playfair's Axiom in a coherent scheme of geometry is discussed historically and critically, while the work of Lobachevsky and Bolyai is dealt with in considerable detail.

Other Volumes to follow.

MATHEMATICAL PROBLEM PAPERS FOR SECONDARY SCHOOLS. By C. DAVISON, M.A., Sc.D., Mathematical Master at King Edward's School, Birmingham. 2s. 6d.

ARITHMETIC. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. In Two Parts. 2s. each. With Answers Perforated.

EXAMPLES IN ARITHMETIC. By the same Authors. 2s.

English.

BELL'S SIXPENNY ENGLISH TEXTS.

Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. Fcap. 8vo. With Biographical and Critical Introductions, and Glossaries where necessary. Strongly bound in cloth, 6d.

A new series of well-printed texts designed to stand wear and tear, and published at a price which makes it possible to change them frequently.

NEW VOLUMES.

Gibbon's Decline and Fall, Chapter III.; Plutarch's Lives of Themistokles, Perikles, and Alkibiades; Irving's Sketch Book (Selected).

For Younger Pupils.

Longfellow's Evangeline and other Poems, Selections from Hawthorne's Wonder Book and Tanglewood Tales, Selections from Bunyan's Pilgrim's Progress, Keary's Heroes of Asgard.

MACAULAY'S HISTORY OF ENGLAND:

Chapter III. Edited, with Introduction and Notes, by S. E. WINBOLT, M.A. 1s. (Suitable for Cambridge Locals)

A COURSE OF PRACTICAL ENGLISH.

By E. J. BALLEY, B.A., Whitgift School, Croydon. Second and Revised Edition. 1s. 6d.

"Practical knowledge is to be recognized in every page of this excellent manual, and theory as such finds a back seat."—*Educational News*.

Latin.

A LATIN PROSE GRAMMAR. By E. L.

CHURCHILL, B.A., and E. V. SLATER, M.A., of Eton College. Demy 8vo. 3s. 6d.

This grammar has been compiled chiefly with a view to Latin Prose Composition. The object of the writers has been to present the necessary grammatical groundwork for the purpose in a clear and accessible form. The knowledge of grammar is looked on as a means and not an end.

PONS TIRONUM. A First Latin Reader.

Illustrated. With Summary of Grammar Exercises and Latin Vocabulary. By R. B. APPLETON, M.A., and W. H. S. JONES, M.A., both of Perse School, Cambridge. 1s.

This is a fourth-term book on the Direct Method, the object of which is to teach the regular Latin syntax by means of a very simple narrative.

FABULAE. A Second Latin Reader. By R. B.

APPLETON, Perse School, Cambridge. Crown 8vo. Illustrated. 2s.

OLIM. A Book of Easy Latin Plays.

By EFFIE RYLE, Assistant Lecturer at Bedford College for Women, London. 1s.

"Olim" is a small book of Latin plays and dialogues, written in the hope that it may help to make Roman "Antiquity" real, and may be used as a supplementary reading book for the second or third year of Latin.

DE DUCIBUS. Selections from Cornelius Nepos.

By W. G. BUTLER, M.A., Christ's Hospital. With numerous Illustrations and brief Grammatical Notes. 1s. 6d.

This book is intended for pupils who are not yet quite proficient enough to translate Caesar and Livy. It gives a few of the most interesting incidents in the lives of Miltiades, Cimon, Epaminondas, Pelopidas, Agesilaus, and Hannibal. Difficult or unusual constructions in the text have been excluded, and every effort has been made to sustain the interest of pupils in the narrative itself.

THE SHORTER AENEID. Selected and

Arranged with Brief Notes by H. H. HARDY, M.A., Rugby School. With a Preface and Introduction by Professor H. E. BUTLER. Crown 8vo. 2s. 6d.

A CLASS BOOK OF COMMERCIAL

KNOWLEDGE. By E. J. BALLEY, B.A., Whitgift School, Croydon. With numerous Facsimile Reproductions from Commercial Documents. 1s. 6d.

This volume has been prepared with a hope that it may combine two points—education and practical preparation for commercial life. The author considers Book-keeping as a subject by itself and has here avoided it.

PHYSIOLOGY AND HYGIENE FOR

GIRLS. By Dr. ELIZABETH SLOAN CHESSEY, Author of "Perfect Health for Women and Children," &c. Illustrated. 2s. net.

The importance of hygiene as a school and college subject is universally recognized by educational authorities. This book deals from the dual point of view of the doctor and the housewife with such subjects as Home Hygiene, Physical Training, Personal Hygiene, Dietetics, &c.

AN INTRODUCTION TO THE STUDY

OF PLANTS. By F. E. FRITSCH, D.Sc., Ph.D., F.L.S., Professor of Botany, East London College, University of London; and E. J. SALISBURY, D.Sc., F.L.S., Lecturer in Botany, East London College, University of London. Profusely illustrated by over 220 Figures and Photographs, comprising 500 Drawings, carefully prepared from the living plant, and specially drawn for this volume. Demy 8vo. 4s. 6d. net.

READING ALOUD, AND LITERARY AP-

PRECIATION. By HARDRESS O'GRADY, Lecturer in English and Modern Languages at Goldsmiths' College. 2s. net.

"His chapters on pronunciation and phonetics are an exceedingly good blend of science and common sense, and his attitude to his whole subject is at once infectious and reasonable."—*Manchester Guardian*.

BELL'S NEW BOOKS.

French.

GRAMMAIRE FRANÇAISE MODERNE.

By M. DESHUMBERT, late Professor at the Staff College, Camberley, and at the Royal Military College, Sandhurst; and MARC CEPPI, Whitgift School, Croydon. *Issued in Two Volumes; one with the Rules in French and the other with the Rules in English.* Crown 8vo. 2s. 6d. either volume.

BELL'S SIXPENNY FRENCH TEXTS.

Edited by MARC CEPPI. Designed for rapid reading. Each with short Introduction and brief Notes. Price 6d.

FIRST LIST OF VOLUMES:

LE CAPITAINE PAMPHILE. Par ALEXANDRE DUMAS. Avec une Introduction et des Notes par A. H. SMITH, M.A., Docteur de l'Université de Paris.

CONTES FANTASTIQUES. Par EDGAR ALLAN POE. Traduction Française par CHARLES BAUDELAIRE. Avec une Introduction et des Notes par H. D. C. LEE, D.Litt. (Rennes).

LA ROSE ROUGE ET LE OURÉ DE BOULOGNE. Par ALEXANDRE DUMAS. Avec une Introduction et des Notes par MARK P. MAYO, B.A.

QUATRE CONTES PAR JEAN MACÉ. Avec une Introduction et des Notes par H. N. ADAIR, M.A.

BELL'S STANDARD FRENCH TEXTS.

Edited by MARC CEPPI. Crown 8vo. Each with brief Biographical Sketch, Notes, Questionnaire, Specimen Phonetic Transcript, and Partial Vocabulary.

This series is issued in two forms—I. For the Direct Method, with the Notes, Life, and Vocabulary in French. II. With English Notes, Life, and French-English Vocabulary.

MÉRIMÉE'S COLOMBA. Edited by A. H. SMITH, M.A., Docteur de l'Université de Paris. 2s.

MOREAU'S LA SOURIS BLANCHE. Edited by M. CEPPI, Whitgift School, Croydon. 1s.

DAUDET'S LETTRES DE MON MOULIN. Edited by M. CEPPI. 1s. 6d.

ERCKMANN-CHATRIAN'S WATERLOO. Edited by F. DAMIENS, Officier d'Académie, Senior Instructor in French at the Royal Military College, Sandhurst. With a Map. 2s. 6d.

ABOUT'S LE ROI DES MONTAGNES. Edited by A. S. TRÈVES, County High School, Ilford. 2s.

LA OANNE DE JONO. By ALFRED DE VIGNY. Edited, with Introduction and Notes, by T. KEEN, Glasgow High School. 1s.

German.

BELL'S SIMPLIFIED GERMAN TEXTS.

Edited by FRANK WILSON, Ph.D. (Leipzig), Assistant Master at Clifton College. With or without Vocabulary and Retranslation Sentences. Crown 8vo. 1s.

SECTION A.—Each with 12 Illustrations by GERTRUDE LINDSAY.

A new series of carefully selected and Simplified Texts for pupils of thirteen to fifteen years, with Notes, Exercises, and Questionnaire based on the Illustrations.

1. ZWEI GESCHICHTE FÜR DIE JUGEND. (Die Schilfinsel und die Wurzel-prinzessin.) R. REINICK.

2. DIE GESCHICHTE VON KALIF STOROH (HAUFF) und Zwei Geschichten von Rübezahl.

3. FRAU LUNA (OTTILIE WILDERMUTH).

SECTION B.—Mainly intended for pupils who begin German at fifteen or later.

1. BILDER AUS DER NEUEREN DEUTSCHEN GESCHICHTE (Biographien, Schilderungen und Anekdoten aus der Zeit Friedrichs des Grossen, der Befreiungskriege und Wilhelms I.). With Maps.

Other Volumes to follow.

THE ADVENTURES OF BARON

MÜNCHHAUSEN. Edited by W. H. ANSTIE, Royal Naval College, Dartmouth. Crown 8vo. Fully Illustrated. With Vocabulary (perforated), Questionnaire, and Notes. 2s.

History and Geography.

AN IDEAL COURSE FOR SECONDARY SCHOOLS.

A HISTORICAL COURSE FOR MIDDLE FORMS. By B. L. K. HENDERSON, M.A., D.Litt., and P. MEADOWS, M.A., Assistant Masters at Haberdashers' Aske's School. In Four Volumes. Crown 8vo. 2s. each.

CORRESPONDENCE.

FOREIGN DOCTORATES.

To the Editor of *The Journal of Education*.

SIR,—The article of "A. B." in the last number of *The Journal of Education* is calculated, it seems to me, to give a quite inaccurate idea of the French *Doctorat d'Université*. It is in strange contrast with the article on "How to Obtain a French Degree" which appeared in the *Times Educational Supplement* of June last. It is curious, too, that it should immediately follow a paragraph in *The Journal* which notes that a lady who holds a research studentship from Girton College has been awarded a doctorate at the Sorbonne for her thesis on "La Formation Philosophique d'Ernest Renan."

The article in the *Times* indicates in detail the requirements for the *Doctorat d'Université* and points out, what "A. B." does not, that the candidate, after having completed his thesis, must submit it to the *professeur* under whom he has worked, and the latter will, after he has read it, report to the Dean of the Faculty on it. If his report is entirely favourable, the candidate receives the *permission d'imprimer*. Assuming this is the case, the candidate has his work printed, and 125 copies must be presented to the University. At Lille the procedure is slightly different. Here "La thèse sera examinée par un ou plusieurs professeurs de la Faculté des Lettres, qui la signeront après s'être assurés que le travail mérite d'être présenté à la soutenance publique. Le Doyen soumettra ensuite le manuscrit au Recteur avec un rapport où seront exposés les qualités et les défauts du travail. La thèse sera imprimée et 110 exemplaires en seront déposés au secrétariat de la Faculté des Lettres. La thèse portera le nom des rapporteurs qui auront proposé l'impression."

A date is then fixed for the *soutenance* of the thesis, together with an examination on the *questions supplémentaires* offered by the candidate. It should be noted that the *soutenance*, which usually lasts about three hours, is conducted in French and in public, after due notice has been posted up at the University.

In the report of our Board of Education, Vol. II of *Special Reports on Educational Subjects*, on "Les Universités Françaises," M. Louis Liard, Directeur de l'Enseignement Supérieur au Ministère de l'Instruction publique, explains the reasons for the institution of the *Doctorat d'Université*. He there says (page 590): "Les Universités de l'Etat décernent des grades d'Etat qui donnent accès aux fonctions et professions. Mais, corps scientifiques, enseignant la science universelle, laquelle n'entre dans aucun cadre de programme ou d'examen, elles offrent l'initiation à la vie scientifique, sans distinction d'âge ni de nationalité, à tous ceux qui veulent étudier pour étudier. Quiconque est capable de recherches de critique, d'invention, de vérité doit pouvoir être étudiant d'université et participer aux honneurs que l'université décerne." The functions and professions here referred to are open only to Frenchmen. I believe it is a fact that no practising rights are conferred on foreigners in France, even if they obtain the State degrees.

In the same report appears a letter from M. Berthon, Taylorian Teacher of French in the University of Oxford, in which he says, "The *Doctorat* will, it is hoped, be of special value to teachers and students of modern languages and philology, and be sought by them as a fitting crown to their English University career." There is evidence that the *Doctorat* is realizing this end. A distinguished Inspector of the Board of Education is a *Docteur d'Université*, and

amongst the names of professors and lecturers of some of our English Universities—London, Birmingham, and Leeds occur to me at the moment of writing—appear holders of the *Doctorat d'Université*. As an example of an excellent piece of research work I commend to "A. B." the study on "Chaucer and the French Influences on his Work," a substantial volume, presented by Miss C. Spurgeon, University Professor of English at Bedford College, as her thesis for the *Doctorat*. The volume is published, I think, by Hachette.

Your correspondent's statement that candidates need not possess any previous degrees is not correct. This is true only in the case of Rennes, Montpellier, Grenoble, Dijon, and Poitiers. At Lille and at Paris, I believe, the B.A. Honours degree has hitherto been demanded from English postulants for the *Doctorat*. I have no direct knowledge of the requirements for the German Ph.D. degree. I would only point out that some of the most eminent of our University professors have considered it worth their while to qualify for it. Are these included in "A. B.'s" "Ab uno disce omnes!"

While "A. B." is undoubtedly performing a necessary service in pointing out the distinction between the two *Doctorats*, he is, I think, doing a disservice to the development of the study of French and German in England by his exaggerated statements, and by his not distinguishing between those French and German Universities which demand genuine effort and a high standard from their foreign students and those whose standard is below what it should be. In conclusion, I would point out that the *Doctorat d'Université* is conferred by the French Universities under the authority of Le Ministre de l'Instruction publique.—I enclose my card.

Z.

SIMPLIFIED SPELLING: A SUGGESTION.

To the Editor of *The Journal of Education*.

SIR,—Some simplification of English spelling seems to me, as a teacher, inevitable. The scheme of the Simplified Spelling Society appears the best yet suggested to meet at once the demands of science and convention. But although most considerations, e.g. those of phonetics and those involved in making the minimum divergence from the present spelling, have been carefully weighed, yet it seems to me that the psychological aspect has been somewhat neglected. I propose to criticize the scheme in two respects.

The first point relates to the letter *k*, which is excluded from the alphabet of the Simplified system in favour of *c*. The chief reason given is the fact that *c* occurs more frequently than *k* in the present spelling, and hence if *c* is retained it will follow that fewer changes will have to be made. Yet is this the only or the best reason to follow in such a case? Zeitler's experimental work tends to show that many readers move over the page catching characteristic groups of letters as landmarks. These are clues from which they gather words and their meanings. "With less familiar words, even the practised reader may establish for himself that the simultaneous reading exists only for the extent of a dominating complex" (Huey, "Psychology of Reading," page 89).

Messmer has to some extent confirmed the conclusions of Zeitler. He has found that the projection of letters above the line and their geometric form are factors which contribute most to give words their distinctive features. He also showed that there are two classes of readers. One of these—the subjective—gathers meanings from the general word-form; whilst the other—the objective—seizes chiefly the dominating parts. It is to be noted that in either case peculiar and characteristic letters are important.

Again, Huey himself has shown, by using mutilated type, that the upper half of a word contributes most to the ease of reading, and that letters with projecting up-strokes are particularly important ("Psychology of Reading," page 99). The letter *c* does not project above the line. Its form, moreover, has the disadvantage of rendering it liable to be easily confused with *o*; *k*, on the contrary, does project above the line. And, in addition, the oblique strokes, by which its lower part

A NEW "IDOLA" SERIES

IDOLA LINGUARUM

THE JOURNAL OF EDUCATION will publish during 1914

A SERIES OF ARTICLES ON LANGUAGE TEACHING

Already published:

February 1914.	INTRODUCTORY ARTICLE. By Professor JOHN ADAMS.
March 1914.	ENGLISH GRAMMAR. By Professor ADAMSON.
April 1914.	GREEK. By Professor GILBERT MURRAY.
May 1914.	FRENCH. By CLOUDESLEY BRERETON.
June, July 1914.	THE REFORMED METHOD: Against. By OTTO SIEPMANN.
July 1914.	ENGLISH COMPOSITION. By G. E. S. COXHEAD.
August 1914.	THE REFORMED METHOD: For. By F. B. KIRKMAN.

The following other subjects will be treated in the course of the year:—

ENGLISH LITERATURE AND LANGUAGE. By Miss LILIAN FAITHFULL.	GERMAN. By Professor SCHÜDDEKOPF.
LATIN. By Professor CAMPAGNAC.	MODERN LANGUAGES v. CLASSICS. By THE EDITOR.

NOTE.—The Fifteen Numbers containing the previous series (**IDOLA PULPITORUM**) can still be obtained, price 23s. the set

LONDON: WILLIAM RICE, 3 BROADWAY, E.C.

is made, are geometrically characteristic. Psychologically, therefore, *k* has great advantages over the letter *c*, and helps by providing these landmarks which aid the processes of perception and apperception. Surely these are great reasons for retaining *k* and omitting *c*.

In order to illustrate this, compare below the list of words given in the Society's handbook to support their use of *c*. In the first series *k* is used, and in the second series the same words are printed with *c*. The characteristic form of the first is apparent at a glance:

kaktus, kart, kaukus, klaret, kronik, kis
cactus, cart, caucus, claret, cronic, cis.

My next point refers to homonyms. Prof. Munsterberg ("Psychology and the Teacher," page 283) says: "Those odd and queer ways of spelling are landmarks which help the recognition and apperception of the words in every line. To simplify the spelling completely would mean to make reading more difficult. *If 'to' and 'two' and 'too' were written alike, the spelling teacher would save less than the English teacher would lose.*" The italics are mine. If Prof. Munsterberg's statement be a fact, then the existing spelling of homonyms should be retained in the Simplified scheme, even though it would entail a certain amount of memorizing on the part of the child. The learning of such words could come gradually, or be transferred to a relatively late stage in the process of learning to read. It seems to me that mere argument is incompetent to settle this point, and that appeal should be made to experiment.

Upon these grounds I would suggest that, before the Simplified system is accepted in its entirety, that it should be rigorously tested by psychological and, above all, by pedagogical experiment. The promoters quite wisely put forward their scheme tentatively as regards details. No doubt but that it is in the main on thorough and sound lines; but, whilst the movement is spreading, it would be well to

commence experimental work off-hand, in order that when the time is ripe for its adoption it may have passed through the fiery furnace and be quite fitted for its work.—Yours, &c..

W. ALFRED RICHARDSON, B.Sc.

SEXLESS SCIENCE.

To the Editor of the Journal of Education.

DEAR SIR,—The review in your August number of Mrs. White's "First Book of Experimental Science for Girls" begins with the words, "To those who have studied the problem, it has for long been obvious that girls require a course in science quite different from that which it has been customary to provide for boys." Such a statement will not be allowed to pass unchallenged because Miss Freund is dead. It is true that the reviewer proceeds to add that "when the best courses for girls have been discovered it *may* be found desirable to bend the traditional boys' courses *somewhat in the same direction*" (the italics are mine). I am not concerned to defend the traditional courses nor to criticize Mrs. White's book—all I wish most emphatically to say is that some, and I believe a majority, of "those who have studied the problem" believe that whatever course is best for the one sex is best for the other.

The untenability of the "science for girls" position is perhaps best shown by reference to any other subject of school study. Does anyone advocate "mathematics for girls," "history for girls," "French for girls," &c.? Of course not; we teach these subjects after the best methods we have been able to evolve, trusting that our pupils when they leave school will be able to apply their knowledge in any career which lies before them—which career is by no means decided by sex alone.

Is science, then, so different from other subjects? Not, I

HARRAP'S LATEST PUBLICATIONS

Just Ready.

A Practical Course in Intermediate English

By EDWARD ALBERT, M.A., George Watson's College, Edinburgh. Crown 8vo, 272 pages, **2s.**

This course is designed as an introduction to "A Practical Course in Secondary English," of which Mr. Albert was joint author.

A Practical Course in Secondary English

By GEORGE OGILVIE, M.A., Broughton Junior Student Centre, and EDWARD ALBERT, M.A., George Watson's College, Edinburgh. With Complete Index. Crown 8vo, 500 pages, **4s. 6d.**

Also in Three Parts:—

Part I.—**Style.** 184 pages, **1s. 6d.**

Part II.—**Form.** 176 pages, **1s. 6d.**

Part III.—**History of the English Language.** 160 pages, **1s. 6d.**

Also Parts I and II in One Volume. 350 pages, **3s.**

"The book has a distinct value; the exercises are abundant and well chosen, the section on the history of the language is very good indeed, and grammar is treated as the living tutor of expression."—*The School World*.

Complete Course Now Ready.

Lessons in Speaking and Writing English

A Six-Book Course. By JOHN M. MANLY, University of Chicago, and ELIZA R. BAILEY. Edited for English Schools by HERBERT LEATHER.

Book I. 56 pages. Sewed, 4d.; limp cloth, 5d.

Book II. 80 pages. Sewed, 5d.; limp cloth, 6d.

Book III. 80 pages. Sewed, 5d.; limp cloth, 6d.

Book IV. 108 pages. Sewed, 6d.; limp cloth, 8d.

Book V. 128 pages. Limp cloth, 8d.; cloth boards, 10d.

Book VI. 160 pages. Limp cloth, 10d.; cloth boards, 1s.

Section I.—Containing Books I to IV., 296 pages, **2s.**

Section II.—Containing Books V and VI., 296 pages, **2s.**

Teachers' Books to accompany the above, in two volumes:—

Volume I, 320 pages, **3s. 6d.** net.

Volume II, 320 pages, **3s. 6d.** net.

The highly comprehensive nature of the scheme set forth in these books and the methods by means of which the purposes of the authors are attained, indicate a mastery of treatment seldom found in school textbooks on English.

The order of treatment is educational, simple, and logical, no formal grammar being introduced until the later stages.

Nearly Ready.

Practical English Composition

By C. M. GERRISH, B.A., and M. CUNNINGHAM. Adapted and edited for English Schools by E. W. EDMUNDS, M.A., Luton Modern School. Large Crown 8vo, about 360 pages, **2s. 6d.** Also in two parts, **1s. 6d.** each.

This book is on new lines. The freshness and interest of the material, the clearness and details of its analysis, the excellent practice work and lists for reading which it contains will all help to make it such a book as English teachers have long been looking for.

A Brief History of English Literature

By E. M. TAPPAN, Ph.D., author of "In Feudal Times," &c. With many Portraits and other Illustrations, and with Full Index. Crown 8vo, 320 pages, **2s. 6d.**

This interesting volume includes an account of all authors likely to be read in Schools, and forms an excellent introduction to more extended study.

The Threshold of History

By H. R. HALL, author of "Days Before History." With nearly Fifty Illustrations by NANCY SMITH. Crown 8vo, 160 pages, **1s.**

This volume follows the same author's "Days Before History," and deals with the Bronze Age in the same interesting and realistic manner as secured such a great success for the earlier book.

Picture History and Composition

By G. H. REED, M.A., Parmiters School. With 54 Full-page Plates and 56 pages of Letterpress. Crown 8vo, limp cloth, **10d.** Teachers' Edition, **1s. 6d.** net.

The plates in this volume cover the whole of English History, and the book is designed as a classroom text.

TWO NEW VOLUMES JUST READY.

The New Outlook Geography

A new series of Geographies on the most modern principles. Profusely Illustrated in Line and Half-tone. By W. C. BROWN, M.A., F.C.P., F.R.G.S., and P. H. JOHNSON, B.A., L.C.P.

Book II.—**THE HOME OF MAN.**

Supplying the pupil with a good grounding in physical and general Geography. The scientific principles forming the basis of geographical research are investigated as required.

Part III.—**AMERICA.** 288 pages, profusely illustrated, **1s. 9d.**

North and Central America can also be obtained separately, **1s. 3d.**

Part IV.—**ASIA.** 192 pages, profusely illustrated, **1s. 3d.**

A New Series. Fifty Titles in Active Preparation.

Heroes of all Time

An Important Series of Books for Young Readers, well written and suitably illustrated.

This series will eventually include all the great men and women who have made a real mark upon the history of mankind. The aim of the authors is to present each hero in proper relation to his environment and the circumstances of his time: to exhibit him as typifying the great movements in the march of civilisation of which he was in a measure the expression. The books will therefore record in an interesting manner the life and achievement of the central subject in each case, and will also give a vivid picture of the age. Whilst primarily designed for young people, the volumes will also appeal to the general reader.

All the qualities of careful editing, good illustrations, good paper and attractive binding which have made the *Told Through the Ages* Series so successful will be found to characterise this new undertaking.

Each volume contains 192 pages, with Eight Full-Page Illustrations. **1s.**

FIRST VOLUMES:

MOHAMMED. By EDITH HOLLAND.

ALEXANDER THE GREAT. By ADA RUSSELL, M.A.

AUGUSTUS. By RENÉ FRANCIS, B.A.

ALFRED THE GREAT. By A. E. MCKILLIAM, M.A.

WILLIAM THE SILENT. By A. M. MIALL.

MARIE ANTOINETTE. By ALICE BIRKHEAD, B.A.

JEANNE D'ARC. By E. M. WILMOT-BUXTON, F.R.Hist.S.

SIR WALTER RALEIGH. By BEATRICE MARSHALL.

THOMAS BECKET. By SUSAN CUNNINGTON.

BOYS WHO BECAME FAMOUS. By F. J. SNELL.

Heath's Modern French Grammar

By W. H. FRASER, B.A., and J. SCAIR, B.A., authors of "Heath's Practical French Grammar." Crown 8vo, 350 pages, **3s.**

A KEY (for Teachers only), **5s. 3d.** net, post free.

A book which resembles in method Part I of "Heath's Practical French Grammar," but is somewhat easier and covers all the essentials of French grammar.

Essentials of French Grammar

By C. W. BELL, M.A., King's School, Canterbury. With Exercises, Vocabulary, and Complete Index. Crown 8vo, 184 pages, **2s.**

This volume will prove useful to more advanced students who have been through an extended elementary course. Although small in size, the volume is comprehensive.

Intermediate Exercises in French Composition

By C. W. BELL, M.A., King's School, Canterbury. With Vocabulary Crown 8vo, 108 pages, limp cloth, **9d.**; cloth boards, **1s.**

This volume is specially designed to accompany the editor's "Essentials of French Grammar," but will prove equally useful with any other textbook.

French Composition Tests

For Intermediate Pupils. By J. M. MILNE, M.A., D. ès L., North Kelvin-side H. G. School, Glasgow. Small crown 8vo, 64 pages, stiff paper cover, **6d.**

Ninette. Par E. MELANDRI.

Edited by C. W. BELL, M.A., King's School, Canterbury. Crown 8vo, 146 pages, **1s. 3d.**

This delightful text is here edited for the first time for English Schools. The story deals with the adventurous times of the sixteenth century.

Fabliaux et Contes du Moyen-Âge

Selected and edited by J. E. MANSION, B. ès L. With 30 Illustrations by G. ROBIDA. With Vocabulary and Notes. 176 pages, **1s. 6d.**

Contes de la France Contemporaine

Seize contes tirés des meilleurs auteurs. Edited, with Introduction, Notes and Vocabulary, by W. M. DANIELS, M.A., D. ès L., Westminster City School. 256 pages, small crown 8vo, **2s.** Also without Notes and Vocabulary, **1s. 6d.**

Eugénie Grandet. Par HONORÉ DE BALZAC.

Abridged and edited with Introduction, Notes, and Vocabulary by A. G. H. SPIERS, Ph.D. Small crown 8vo, 256 pages, **2s.**

N.B.—The Publishers will be glad to forward to any address their Special New Descriptive List of Works on Modern Languages, comprising more than 400 volumes: Prospectus of above and many other Books and Series on New and Interesting Lines.

London: GEORGE G. HARRAP & CO. 2 and 3 Portsmouth St. Kingsway W.C.

think, in itself, only in being more recently introduced into the curriculum. Is there not a phrase occurring in old books and newspapers—that people should be taught to “read, write, and cast accounts”? Nowadays we teach the science of arithmetic, and leave people to apply it to accounts, statistics, physics, or anything else in which it may be useful; but some of us, it appears, are still in the stage of thinking that other sciences must be applied at once.

Let it not be supposed that I am contending that the teaching of science should be entirely divorced from practical life; on the contrary, I think it is quite true that it is too much so at present, and that our experimental work in the school laboratory would gain by being more closely connected with the ordinary things of the home—with which boys and girls should be equally familiar—but the point is that the *object* of the experimental work is to further the pupil's progress in science, and that it is premature, at any rate till the latest stages of the school course, to expect either him or her to be prepared to apply the just-won knowledge and training to the often highly complicated phenomena which surround us.

There is, however, a stage at which technical training is undertaken, with some hope of success, if based on an all-round liberal education, which must, of course, include science; but at this stage the pupil, boy or girl, has chosen a career, and there is no more reason that all girls should choose the same than that all boys should do so. Really, some people seem to think that, while there are dozens of types of men, there is only one type of woman—the domestic. Suppose a girl wishes to pursue her science studies at the University, or to become a doctor, how is she to be expected to stand on the same footing as her brother, if he has been properly trained from the beginning, while she has been put off with snippets of “home science”?

The fact is, these problems do not arise if we simply recognize that there is no such thing as “home science” or “domestic science” or “science for girls,” but that *science is science*,

and should be taught by whatever methods we find most effective, quite irrespective of the sex of our pupils.—Yours truly,
ISABEL C. FORTEY.

“ENGLISH: A MODERN GRAMMAR.”

To the Editor of *The Journal of Education*.

SIR,—Without in the least wishing to dispute *The Journal's* criticism of our book—indeed, we are glad of support in the fight for the proper naming of clauses—we ask to be allowed to explain a principle underlying our choice of examples which we do not seem to have made clear.

We are accused of indulgence towards slipshod colloquialisms. Our contention is that those who use a language set the standard. Consequently, when we meet with a construction that is common, though not “classic,” we do not pass judgment, but “nous constatons et passons outre,” as do Frenchmen with the “tolérations.” Thus, when speaking of the “incorrect” “whom” after “than,” we record an instance of an incorrect accusative: “He is many years younger than me”; even of an incorrect nominative: “To no man more than he is due its marvellous English and melodious style” (from an article in a well known weekly of repute).

We also instance: “One half of the world are (not “is”) ignorant how the other half lives” (page 119). “The public is naturally much impressed . . . and do not make the necessary allowance” (from a Report of the Board of Education) as a modern usage, not necessarily sanctioned. Similarly the incorrect use of “none” with a plural verb is only instanced as an example of the influence of a plural noun on the verb. Gladstone wrote: “None of our actions end by doing them.” Such an attitude seems essential if we deal with language as a living, ever-changing phenomenon. With this principle before us we quote (page 120) “Either you or I are invited,” but add, “it is best to avoid such constructions.”

In support of our contention that “there” is an accusative in “Let there be no discussion about that,” we refer to Jespersen, “Progress in Language,” page 92.—Yours truly,

G. H. CLARKE.
G. T. UNGOED.

[We would pass “it's me,” but bar what are obviously slips of the pen or tongue.—ED.]

PITMAN'S SHORTHAND TEACHERS' JOINT EXAMINING BOARD.

President—ALFRED PITMAN, Esq.

EXAMINATIONS for the Shorthand Teacher's Diploma of this BOARD are held in the principal cities of the United Kingdom throughout the year. The Diploma is recognized by County Councils and other important Educational Authorities as the highest possible testimony to a Teacher's ability and its possession is, therefore, of the utmost value to Teachers seeking appointments. The Diploma is specified as a qualification by the Department of Technical Instruction for Ireland. Full particulars of the examination, together with a copy of “HINTS TO CANDIDATES,” may be had, post free, from the
EXAMINATIONS SECRETARY, PHONETIC INSTITUTE, BATH.

The Associated Board holds Examinations throughout the United Kingdom, and in the Colonies, in both Theoretical and Practical Music.

The Examinations are as follows:—

- (1) **Local Centre Examinations**, including Intermediate and Advanced Grades, conducted by two Examiners. Theory Examinations are held in March and November at all Centres in Great Britain and Ireland. In Practical Subjects they are held in March–April at all Centres, and in the London district and certain Provincial Centres in November–December as well as in March–April.
Entries for the November–December Examinations close Wednesday, October 14th, 1914.
Full particulars will be found in Syllabus A, which will be sent on application to the Secretary.
- (2) **School Examinations**, including Higher, Lower, Elementary, and Primary Divisions. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a School.
The School Examinations are held throughout the British Isles at three periods, viz., October–November, March–April, and June–July. They are conducted by one Examiner.
Entries for the October–November Examinations close Wednesday, October 7th, 1914.
Full particulars of the School Examinations, including the **General School Examination** and the **Class-Singing Examination**, will be found in Syllabus B, which will be sent on application to the Secretary.

These Examinations are of graduated difficulty, so as to provide a complete series of tests from the Primary Division School to the Advanced Grade Local Centre Examination, suited to Candidates of all degrees of proficiency. The subjects for Examination are as follows:—

GRAMMAR OF MUSIC.

RUDIMENTS OF MUSIC.

HARMONY.

COUNTERPOINT.

PIANOFORTE.

ORGAN.

VIOLIN.

VIOLA.

VIOLONCELLO.

DOUBLE BASS.

HARP.

WIND INSTRUMENTS.

SINGING.

EAR TRAINING AND

SIGHT SINGING.

The Board offers annually **Six Exhibitions**, tenable for two or three years at the R.A.M. or R.C.M. These Exhibitions are limited to Candidates in the Local Centre Examinations who are under twenty years of age, and who fulfil certain conditions set forth in each Syllabus.

Forms of Entry, Theory Papers set in previous years, and all information can be obtained from the Central Office, 15 Bedford Square, London, W.C.

Syllabuses A and B for 1914 or for 1915, the Syllabus in Ear Training and Sight Singing, Entry Forms and any further information can be obtained on application to the Central Office.

METHUEN'S NEW BOOKS.

ANCIENT AND MEDIEVAL ART: A Short History. By MARGARET H. BULLEY. With 40 Illustrations and a Chart. Crown 8vo. 5s. net.

This book, which is the first of its kind, contains thirteen lessons on ancient, classic, and medieval art; an introduction which discusses the methods and the necessity of teaching the history of art in schools and homes; and a chart illustrating the great art periods of the world.

PRACTICAL APPLIED PHYSICS. By H. STANLEY, B.Sc., F.I.C., Lecturer in the Merchant Venturers' Technical College, Bristol, Author of "Practical Science for Engineering Students." With many Diagrams. Crown 8vo. 3s.

This book is for the use of engineering students and others who are doing laboratory work beyond the elementary stages, particularly in heat, mechanics, and electricity.

PRELIMINARY PRACTICAL SCIENCE. By H. STANLEY, B.Sc., F.I.C., Author of "Practical Applied Physics." With 120 Diagrams. Crown 8vo. 1s. 6d.

This little handbook is intended for use in the lower forms in trades Schools and for technology students.

A TEXTBOOK OF ELEMENTARY BUILDING CONSTRUCTION. By ARTHUR R. SAGE, Chief Lecturer in Building Construction and Mechanics of Building, L.C.C. School of Building, and WILLIAM E. FRETWELL, Chief Lecturer in Plumbers' Work, Sanitary Engineering, and Heating and Ventilating, L.C.C. School of Building. With many Diagrams. Crown 8vo. 3s. 6d. net.

A THIRD-YEAR COURSE OF ORGANIC CHEMISTRY. By T. P. HILDITCH, D.Sc. (Lond.), F.I.C., Author of "A Concise History of Chemistry." With many Diagrams. Crown 8vo. 6s.

A SELECTION FROM METHUEN'S LIST.

ENGLISH.

A Junior English Grammar. By W. WILLIAMSON, B.A. With numerous passages for Parsing and Analysis, and a chapter on Essay Writing. Fifth Edition. Crown 8vo. 2s. [Junior School Books.]

Junior English. By F. J. RAHTZ, M.A., B.Sc., Senior Lecturer at Merchant Venturers' Technical College, Bristol. Ninth Edition. Crown 8vo. 1s. 6d.

Higher English. By F. J. RAHTZ, M.A., B.Sc. Eighth Edition. Crown 8vo. 3s. 6d.

English Composition. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo. 1s. 6d.

A Class-Book of Easy Dictation and Spelling. Selected by W. WILLIAMSON, B.A. Tenth Edition. Fcap. 8vo. 1s. [Beginners' Books.]

A Class-Book of Dictation Passages. Selected by W. WILLIAMSON, B.A. Eighteenth Edition. Crown 8vo. 1s. 6d. [Junior School Books.]

English Literature. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo. 2s. 6d.

Selections from English Literature. Vol. I (1350-1700). By F. J. RAHTZ, M.A., B.Sc. Crown 8vo. 2s.

Selections from English Literature. Vol. II (1700-1900). By H. N. ASMAN, M.A., B.D., Second Master of Owen's School, Islington. Crown 8vo. 2s.

Tommy Smith's Animals. By EDMUND SELOUS. With 8 Illustrations by G. W. ORD. Twelfth Edition. Fcap. 8vo. 1s. 6d.

Tommy Smith's Other Animals. By EDMUND SELOUS. With 12 Illustrations by AUGUSTA GUEST. Sixth Edition. Fcap. 8vo. 1s. 6d.

Health Readings for Elementary Schools. By C. J. THOMAS, M.B., B.Sc., D.P.H., University Scholar in Medicine, Member of the Examining Board of the Royal Sanitary Institute. Second Edition. Crown 8vo. 1s. 6d.

FRENCH.

A Junior French Grammar. By L. A. SORNET and M. J. ACATOS, Modern Language Masters at King Edward's School, Birmingham. Fourth Edition. Crown 8vo. 2s. [Junior School Books.]

Nouvelle Grammaire Française, à l'usage des écoles Anglaises. By J. G. ANDERSON, B.A., Examiner to London University. Crown 8vo. 2s.

Exercices de Grammaire Française. By J. G. ANDERSON, B.A. Crown 8vo. 1s. 6d.

A Junior French Prose. By R. R. N. BARON, M.A., Modern Language Master at Cheltenham Grammar School. Sixth Edition. Crown 8vo. 2s. [Junior School Books.]

French Prose Composition. By R. R. N. BARON, M.A. Fifth Edition. Crown 8vo. 2s. 6d. Key (Second Edition). 3s. net.

First French Lessons. By A. M. M. STEDMAN. Eleventh Edition. Crown 8vo. 1s.

French Vocabularies for Repetition: Arranged according to Subjects. By A. M. M. STEDMAN. Fifteenth Edition. Fcap. 8vo. 1s.

French Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN. Sixteenth Edition. Crown 8vo. 2s. 6d. Key (Sixth Edition), issued to Tutors and Private Students only, 6s. net.

GEOGRAPHY.

A Systematic Geography of the British Isles. By G. W. WEBB. With 13 Diagrams and Maps. Second Edition. Crown 8vo. 1s.

A Systematic Geography of Europe. By G. W. WEBB. With 5 Diagrams and Maps. Crown 8vo. 1s.

A Systematic Geography of Asia. By G. W. WEBB. With 8 Diagrams and Maps. Crown 8vo. 1s.

A Systematic Geography of America. With 10 Maps and Diagrams. Crown 8vo. 1s.

A Systematic Geography of Africa and Australasia. By G. W. WEBB. With Maps and Diagrams. Crown 8vo. 1s.

By Road and River. A Descriptive Geography of the British Isles. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 12 Illustrations and 12 Maps. Crown 8vo. 2s.

A Historical Geography of the British Empire. By HERFORD B. GEORGE, M.A., Fellow of New College, Oxford. Fifth Edition. With Map. Crown 8vo. 3s. 6d.

GREEK.

Passages for Unseen Translation. By A. M. COOK, M.A., Assistant Master at St. Paul's School, and E. C. MARCHANT, M.A., Tutor of Lincoln College, Oxford. Selected from Latin and Greek Literature. Sixth Edition. Crown 8vo. 3s. 6d.

A Shorter Greek Primer. By A. M. M. STEDMAN. Revised by C. G. BOTTING, M.A. Fifth Edition. Crown 8vo. 1s. 6d.

Greek Vocabularies for Repetition. By A. M. M. STEDMAN. Revised by C. G. BOTTING, M.A. Fifth Edition. Fcap. 8vo. 1s. 6d.

Greek Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN. Eleventh Edition. Crown 8vo. 2s. 6d. Key (Fourth Edition), issued to Tutors and Private Students only, 6s. net. [School Examination Series.]

HISTORY.

Stories from Ancient History. By E. BOWYER, B.A., B.Sc., Assistant Master, Owen's School, Islington. With 2 Maps. Crown 8vo. 1s. 6d. [New Historical Series.]

Stories from Roman History. By E. M. WILMOT-BUXTON, F.R.Hist.S. Third Edition. Crown 8vo. 1s. 6d. [Beginners' Books.]

A Short History of Rome to the Death of Augustus. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps and 4 Plates. Thirteenth Edition. Crown 8vo. 3s. 6d.

Easy Stories from English History. By E. M. WILMOT-BUXTON, F.R.Hist.S. Seventh Edition. Crown 8vo. 1s. [Beginners' Books.]

A Junior History of Great Britain. By E. M. WILMOT-BUXTON, F.R.Hist.S. Second Edition. Crown 8vo. 2s.

A History of Great Britain. From the Coming of the Angles to the Year 1870. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 20 Maps. Fourth Edition. Crown 8vo. 3s. 6d.

The Pageant of British History. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 2 Plates in Colour and 8 other Illustrations. Crown 8vo. 1s. 6d.

The Romance of British History; or, Britain's Rise from Savagery to Civilization. By JOSIAH TURNER. With a Frontispiece in Colour and 8 other Illustrations. Crown 8vo. 1s. 6d.

The Growth of Modern Britain. An Outline History of the British People from 1830 to 1910. By B. H. SUTTON. With a Frontispiece in Colour and 8 other Illustrations. Crown 8vo. 2s.

A Short History of Early England. To 1485. By H. J. CAPE, M.A., B.A., B.Sc., F.R.Hist.S., Head Master of the Mathematical School, Rochester. With 6 Maps. Crown 8vo. 2s. 6d.

A Short History of Modern England. 1714-1910. By ERNEST BOWYER, B.A., B.Sc. With 7 Maps and Genealogical Tables. Crown 8vo. 2s. 6d.

The Industrial History of England. By H. DE B. GIBBINS, Litt.D., M.A. With Maps and Plans. Nineteenth Edition, Revised. Crown 8vo. 3s.

The Dawn of Medieval Europe, 476-918. By J. H. B. MASTERMAN, M.A., Professor of History in the University of Birmingham. With 12 Maps. Second Edition. Crown 8vo. 2s. 6d.

The Central Period of the Middle Age, 918-1273. By B. A. LEEF, Resident History Tutor, Somerville College, Oxford. With 10 Maps. Second Edition. Crown 8vo. 2s. 6d.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

ENGLAND AND THE WAR.

MOST of our readers have memories more or less vivid of the Boer War, and a few veterans can remember the Crimean War, but both of these, momentous as they seemed at the time, were, compared with the present war, remote, and interludes in our national history. Moreover, in neither of them was the nation fighting as one man, and, as it were, with its back to the wall. In the earlier conflict saner heads felt, what a Prime Minister afterwards openly expressed, that we had "put our money on the wrong horse," and the magnificent epilogue to Maud scarcely atoned for the vulgar abuse of Quakers and the Manchester School in the prologue. In the later there was a small but intellectually important party, nicknamed Pro-Boers, who refused to accept the Ministerial plea that the war was inevitable, and who could point in justification of their view to the reprobation that the action of England excited in parts of the Continent.

Now the war is at our own gates, and for the first time for more than a century England is threatened with invasion. This war, moreover, so far as it can be said of any war, is absolutely just. Ever since the apple of discord was thrown down in the Balkans England has played the part of peacemaker, and it was only when, in violation of international law and her own solemn pledges, Germany wantonly attacked a neutral power that England, as in honour and duty bound, reluctantly and disinterestedly drew the sword. In this quarrel, as far as England is concerned, there is no *altera pars*. To remove any possible doubts, it is only necessary to read first the White book laid before Parliament on the last day of the Session and then the German "Memorandum and Documents concerning the War," issued by the Imperial Press, Berlin, or the speech of the Imperial Chancellor to the Reichstag on August 4. Acts as immoral as the German invasion of Belgium may be found in comparatively recent European history, but for a parallel to the naked and unblushing avowal of such an

act by Herr Bethmann-Hollweg we must go back to "Il Principe" of Machiavelli.

All this has been said before, and doubtless better said, but it needs to be repeated in every pulpit and classroom if we are to preserve that unanimity of sentiment, that stern resolution and calmness of temper, that we have hitherto shown. Already we have suffered in a greater or less degree, and we schoolmasters not least. Business and professional men have some choice as to when they will take their yearly outing, but for teachers August is *par excellence* the holiday month, and for many an overworked man and woman it has been worse than a disappointment or inconvenience to find long-laid plans upset and holiday courses cancelled; to be turned back from the station, or, still worse, from a foreign frontier, or, as in the case of elementary teachers, to be docked altogether of half their holiday. All must have known such sufferers, if they have been fortunate enough to escape themselves, yet we have not heard or read one word of complaint. We rejoice to see that educational authorities are acting on the recommendations issued from head-quarters to civilians generally to pursue their ordinary occupations and make as little change as possible in their way of living. The Vice-Chancellors of Oxford, Cambridge, and London Universities have announced that the autumn session will begin at the appointed date, and there is a similar announcement from the Head Masters' Conference.

At Oxford and Cambridge nearly half of the undergraduates will be absent in the field, and in schools there will be many gaps in the staff, but, though the teaching may suffer, we need have no fears as to discipline. Ragging or rioting would be universally condemned as "bad form." The homely advice of Sir Baden-Powell to his Boy Scouts was excellent: "Don't go about wagging flags and shouting; any ass can do that. Find out what service you can do, and do it."

A harder lesson that it will behove teachers to impress on their pupils is not to confound individual Germans with the German Government. If men have been so idiotic as to cut out all German compositions from their concerts, boys may be excused for declining to pronounce those "beastly German gutturals"; but we trust an English boy will not need to be warned against the cowardice of bullying or chaffing a comrade with a German name or German accent. In resisting and denouncing the dominant aspect of German thought and politics, the aggressive militarism and unscrupulous *Faustrecht* of a Bismarck, we shall look on this as a passing phase, and remind our pupils that Germany in the past has stood for intellectual and religious freedom, that it was the first of modern nations to proclaim and practise *Lernfreiheit* and *Lehrfreiheit*, that it is the land of Luther and Lessing, of Kant and Hegel, of Froebel and Herbart, of Schiller and Goethe.

THE TEACHERS OF ENGLISH AT STRATFORD-ON-AVON.

By S. P. B. MAIS.

HOW I should have liked to make attendance at this Conference compulsory for all mathematical and classical masters at public schools! "The Importance of Being English" is writ large on the brow of every man you meet in the street these days. That is patriotism; it makes for greatness, unity, and strength in time of war; but the equally poignant strategic value in peace time of "The Importance of Knowing English" has not even yet dawned on the minds of the majority even of schoolmasters, to judge from schedules, time-tables, and common-room conversations.

We go plodding along with one hour a week at "English book," an agony of "As We Don't Like It," with voluminous notes, and another hour devoted to what is called "Essay," one of the longest and most profitless periods in the week, wherein we analyse and paraphrase and talk of weak and strong verbs,

and sometimes fill up two sheets of paper full of thoughts culled from "The Daily Mail Yearbook" on a subject about which we know and care nothing. What a change to hear of people who really believe that the teaching of English is important, and have ideas beyond those prevalent in our own boyhood about method and matter! And not only so, but all this to be heard in that town of all towns where we fain would live, Stratford the clean, Stratford the beautiful; for, apart from any literary associations, this vale of Warwickshire is as typical a bit of purely English country as man could wish—healthy, green, river-fed, with undulating hills and pleasant woods, a vision of loveliness to the jaded Londoner, where he may listen and argue in a room reeking of the spacious days of great Elizabeth in the morning and give himself up to æsthetic pleasure of another sort on the river in the afternoon.

How obvious it is, then, that we should have looked forward to this first Conference months ahead with all the tingling of a schoolboy about to return to favourite haunts at the end of term. There was one grave disadvantage, however, which needs ventilating: I must have been one only out of hundreds who had to give up (what we do not willingly forgo) the pleasures of camp. I wonder how many O.T.C. officers found themselves torn between two desires, two duties, and how they decided. That is the great argument against a repetition of this meeting during the first fortnight in August.

A slight disappointment greeted us at the beginning: Stratford, the ever sunny, for once belied its reputation on the 1st and 2nd of August, for the rain came down in sheets, and utterly depressed many strangers from far away, who saw nothing during Saturday and Sunday to cause them any joy in their surroundings except the unfailing courtesy of the residents, led by the Mayor and Mayoress.

Monday, the first day of the lectures, was infinitely blacker, owing to the sudden dread news of the "blasphemous tragedy" which loomed overwhelmingly awful on the near horizon. Sir Sidney Lee, in the inaugural address, commented very fitly on this, and tried to make us realize what was especially hard at the moment, that our Conference was not the less important because of the shadow that lay on as at the present time. He gave us a most apt motto as a guide for the session, culled from John Brinsley, the Elizabethan pedagogue: "The purity and elegance of our own language is to be esteemed chief part of the honour of our nation, which we all ought to advance as much as in us lieth." Mr. J. H. Fowler, of Clifton College, read the first paper on "The Study of Shakespeare in Schools," in the course of which he stated, as many other lecturers did later, that the cause of the lack of appreciation of Shakespeare and other geniuses of our native tongue among the general public was due to wrong methods of teaching. The master up to now had been too much disposed to stand between Shakespeare and the infant mind, like a dull commentary, instead of just smoothing away those difficulties that prevent great literature from making its own way to the hearts of the young. I was glad to hear him repeat the much needed advice that all plays must first be read, as Dr. Johnson said, in their entirety before any detailed study or criticism can be attempted. Miss McCroben read the second paper of the morning, and added her testimony to that of all the modern educationists, that nothing matters in comparison with the personality of the master; she advocated the enlarging of all school libraries to contain at least every species of sound Shakespearean criticism.

A discussion followed, led by Dr. Rouse, who amusingly denounced the Clarendon Press editions (why the Oxford Press alone? surely the Cambridge "Verity" are at least as offensive), overloaded with notes, introduction, and appendices. On Tuesday Sir Edward Cooke presided, and Prof. Clark, of Chicago, enchanted a vast audience with by far the most inspiring discourse of the fortnight. He has all the qualifications of the great speaker—sympathy, ecstasy, a fine voice, an enthusiasm for his subject only too rare in grown-up people. What a joy it must be to sit at his feet in Chicago! His subject was "The Music of Poetry." He began by comparing poetry and prose, and showed how identical they are in all

ways except one—poetry boasts a music which prose lacks. "The setting of poetic ideas to music makes poetry. Songs are not improvements, nor is musically accompanied recitation, and in this connexion I marvel at the effrontery of certain musicians who bring their own cribbed, cabined, and confined art to bear upon, and inevitably to confuse, the natural music of the poet." With what joy did I hear that smashing denunciation of all that I have secretly loathed while sitting prisoned in a drawing-room condemned to hear the most glorious poems in the language ruined by some dastardly pseudo-song-writer! A poet, he continued, could not put all his heart into words, and so he made use of music to arouse imagination and emotion. In all poetry there must be these fundamental constituents—first, melody, a melody that comes from the author's placement of his emphatic syllables, tunes that were an inevitable result of the sense, exquisite, illuminating. How often fine music was spoilt by ignorance and carelessness; in "Macbeth" the witches were not seldom portrayed as common scolds, and when they were we missed entirely the melodic climax in the most lyrical of the tragedies. Secondly, there must be "tone colour," or "instrumentation." He cited Arnold's "The moonlit solitude mild of the midmost ocean." To show the undefined and yet absolute effect of atmosphere here, it did not imitate peace—rather it brought peace with its very sound. Lastly, there must be rhythm, the soul and spirit of poetry. Omit rhythm and the poetry was gone, only the skeleton remained. To conclude a lecture of true eloquence, the Professor declaimed passages from Shakespeare, Browning, Kipling, Wordsworth, and Tennyson so brilliantly as to make them live in an entirely new sense in the minds of the audience, all of whom captured some of the glowing enthusiasm that characterized the whole speech.

He was followed by two of our ablest poets, Mr. Lascelles Abercrombie, on "Poetry, the Education of Consciousness," and Mr. John Drinkwater, on "The Value of Poetry in Education." The latter attributed all the failures of the present generation to rise from the slough of materialism, to the inability of the teachers in the past to teach children the fundamental principle of life, the meaning of beauty. An admirable lecture reminiscent of Ruskin and Morris, much needed, thoughtful, and eminently sane. As a means to repair some of the evil, he proposed that innumerable companies of Shakespeare players be formed to tour all the villages. He was convinced that the next generation would prove how efficacious such treatment would be towards the improvement of the moral standpoint of the nation.

The audience dispersed on Tuesday absolutely at one in its conviction that by poetry, and by poetry alone, a gigantic improvement could be and will be made in the education of the near future.

On Wednesday Mr. William Archer took the chair, and an interesting speech on "Co-ordinative Speech Training" was made by Miss Elsie Fogerty, which was followed by Prof. Jones on "The Use of Phonetics" and Miss Laura Smithson on "Voice Production and the Methods of Teaching Poetry." One particularly valuable suggestion of Miss Smithson was to make all children tell in their own words the story of any poem they were about to learn.

Dr. Rouse took the chair on Thursday, when Prof. J. M. Thomas, of Minnesota, read a paper on "Oral Composition," a subject for which we public-school masters, as a rule, have no time outside the debating society hours. The lecturer apparently knew how little attention we pay as yet to this important branch of English teaching, for he introduced his subject by a long defence of its value in the curriculum, the most interesting of his arguments being that oral composition held the advantage over written work because it kept before the pupil the illusion of reality. The essay was too often written for the waste-paper basket, the speech connoted an audience. The cultivation of order and coherence should be developed by the encouragement of notes; sensitive speakers should even be allowed to read from manuscript. The impromptu speech would come in time. To acquire a vocabulary the Professor advocated the learning by heart of

prose as well as poetry. Physical self-consciousness could be overcome by allowing the student to use the blackboard; elocution should assiduously be practised by reading aloud the works of great writers.

Mr. Cloudesley Brereton commented on the value of storytelling among children, and the importance of keeping written and oral composition close together.

On Friday Miss H. M. White presided, and Miss Amice Macdonell described her experiences with child actors, and pointed out how much the character of the young was moulded by the scenes and plays in which they took part in their early days.

Mr. F. R. Benson took the chair on Saturday for Mr. Rundle Milliken's delightful paper on "Shakespeare's Historical Plays in Schools," in which he tried to show how all Shakespeare was "historical" in the sense that he inspired the romance of history in the minds of schoolboys if treated seriously; æsthetically, of course, youth would fail to appreciate "Richard II" or "King John," but as an educational medium, whereby pupils should derive all that was best out of history, Shakespeare stood alone.

The American teachers present at the end of the first week drew up a formal document of appreciation of the immense benefits the Conference conferred on English teachers, and hoped that it might become an annual meeting.

The second week opened with a discussion on "The Interpretation of Drama," by Mr. Justin McCarthy and Miss Pagan. Lady Isabel Margesson read a paper on Tuesday on "The Drama of Childhood," in which she pleaded for the freedom of the young—freedom to make mistakes and so gain experience. She quoted Ebenezer Cooke's theory, that a child must be given the colour it likes, that it must be allowed to have round it what it loves, that it must be a savage, otherwise it will never healthily develop a keen eye and a fine taste.

On Wednesday Prof. W. F. Trench, of Dublin, presided, and Mr. Lascelles Abercrombie read a paper on "Word Values," followed by Miss C. L. Thomson, who gave a delightful discourse on "The Appreciation of Poetry," in which she echoed the opinions of other speakers of the week before in her opinion that it was the fault of the teacher that poetry was not appreciated at its true value in England to-day. She laid it down as an axiom that every real teacher of English must have something of the poet, something of the critic, and something of the musician in him; he must be an omnivorous and enthusiastic reader of all that is best, possess a good voice, and set the faculties of the pupil in motion, rather than appear to teach in the ordinary sense of the word. A keen debate followed her speech, in which the value of paraphrase and the advisability of reading Stevenson with young children were discussed.

It is hardly necessary to point the moral of so varied and interesting a series of papers as were read and debated during this fortnight; that great praise is due to those who sacrificed the greater part of a year, notably Miss Macardle, in order to ensure the success of the enterprise goes without saying. There seems to be no doubt in the minds of all who attended the Conference that an incalculable fillip has been given to the teaching of English by this first meeting, and that succeeding years will show how splendid a reform has been worked in our schools in this most essential and yet most neglected of all subjects in a true education.

Miss Laura Smithson, as a teacher of voice production, laid down some practical rules in a negative form: (1) Don't allow simultaneous recitation; (2) Don't choose for children lengthy passages; (3) or passages which are beyond their own range of experience and sentiment; (4) Don't make children memorize first, and teach them afterwards to put in the expression and sentiment.

THE Officers of the National Union of Teachers have decided to allocate to the Prince of Wales's National Relief Fund £1,000 as a first contribution.

JOTTINGS.

DR. ADDISON, who succeeds Mr. Trevelyan as Parliamentary Secretary to the Board of Education, is well known to teachers at the East End of London, where he and Mrs. Addison have taken an active interest in school children and their health and welfare. He is an authority on the Insurance Act, and has been constantly consulted by the Government both as to its interpretation and the contemplated amendments. In administering the Act for the feeding of school children the Board will need the services of an expert. We part with regret from Mr. Trevelyan, who, unlike some previous Secretaries, has thrown his whole heart into the work, and fought the battle of the teachers against the economist, though he has not had time or opportunity to develop any educational policy of his own.

THE Cambridge University Board of Military Studies announces that the following numbers of nominations and applications for commissions had been forwarded to the War Office up to August 15: Regular Army 245, Special Reserve 348, Territorial Forces 457; total, 1,050. The War Office of the same day issues a list of 115 candidates nominated by the Universities for commissions in the Regular Army. Of these 57 are from Cambridge, 44 from Oxford, 12 from Durham, and 2 from Edinburgh.

THE London Chamber of Commerce, with the approval of the Admiralty, has organized a service of news for the Fleet. No words are needed to commend this patriotic undertaking. Newspapers and periodicals should be sent to the L.C.C., Oxford Court, Cannon Street, E.C., and subscriptions are invited to cover the outlay, which will be considerable.

THE Scotch Education Department goes a step farther than the Circular of the English Board of Education, noticed in another column, and approves schemes which will include the feeding of children not yet in attendance at schools, and in exceptional cases of adults also, separate accounts being kept for each class of free-mealers. Some English prejudices will be shocked by the suggestion that it will be possible to secure churches as feeding centres.

THE N.U.T. came gallantly to the relief of a party of 132 Russian teachers who found themselves on August 8 stranded in London. They were escorted by Mr. James, the Assistant Secretary, to Newcastle, and berths were secured on a boat leaving for Bergen at midnight on Sunday. A further difficulty arose, as the shipping company refused to accept the Union's cheque without the guarantee of some person of position in Newcastle. This, however, was obtained, the party were embarked, and arrangements were made with the Captain, whereby they would receive £2 a head, the fare to Stockholm, in Norwegian money, at Bergen.

A TOURIST sends us the following gem from a Guide to the Lakes: "If Windermere is the Venus of the Lakes, Derwentwater is the Apollo Belvedere; but they have this in common, that both of them are unique."

REVIEWS AND MINOR NOTICES.

The Corner-stone of Education. An Essay on the Home Training of Children. By EDWARD LYTTLETON, D.D. (5s. net. G. P. Putnam.)

A more suitable second title would be "Sermons to Parents." That education in its highest sense is the training of character; that the training must be begun in the home, and that unless a sound foundation has been laid there no subsequent discipline or teaching can supply the defect, and that the one corner-stone is the Christian faith—such is the thesis elaborated in nine chapters, Dr. Lyttelton's response to a request that he should write on the special subject of the "moral" temptations of boyhood. The answer, to put it crudely, is that if from his birth the child has been trained in a home where religion has not only been taught but practised, temptations will not arise, or, rather, the boy will have been provided with a prophylactic enabling him to resist all tempta-

tion. Even if we accept the author's postulate that there can be no moral training that is not founded on religion, the question still arises at what age the religious sense is developed in the child and what are the first steps to be taken for evoking it. The motto is taken from Wordsworth's Ode, but Dr. Lyttelton's conception of the child is poles asunder from Wordsworth's. Wordsworth's child is an ideal of heavenly innocence; Dr. Lyttelton's child is a sinful creature, to be redeemed by grace from the consequences of the Fall. We need not discuss which view is nearer the truth, and need only observe that for the first three or four years God to the child is a wholly meaningless word, and his parents are and must be *in loco dei*. To appeal at an earlier age to a supernatural sanction seems to us a grave psychological error, and Dr. Lyttelton frankly acknowledges that "spiritual and moral training is practically never a following of nature."

Intellectual and æsthetic education are wholly excluded from the purview, but we doubt whether it is possible thus to separate sacred and profane, and to discuss religious training as a thing apart. Of a child even more than of a man it is true that *qui laborat orat*, and we should add the caution, *nec deus intersit*. Thus the old question of interest v. discipline is discussed, and the conclusion reached that both schools are wrong. The avoidance of difficulties ends by spoiling the child. The disciplinarians forget to plant the lasting and indispensable motive, and expect the conquest of self to be acquired without the knowledge of God. Will this help the mother who is debating whether she shall teach Tommy the multiplication table or purchase a set of Montessori toys?

Again, how is greediness, the besetting sin of childhood, to be combated? To give a child lollipops because he has been good is denounced as a lowering of duty to God to the level of coarse gratification of the senses. But in consistency the same principle should be applied to the tuck shop and rewards and punishments at school. Science, we are told, knows very little about the physical effects of food, and diet must be regulated by spiritual considerations. The parent's aim should be "to dominate the desire by the power of a mighty motive." Science, it is true, has not said its last word, but it has told us enough of the physical nature of the child to enable us so to regulate the diet as to remove the temptation to overeating, or the rejection of wholesome food. *Cessante causa cessat effectus*. Is not this the better way?

The subject is not pursued beyond the home, and the impression left, if not conveyed in so many words, is that the making or marring of a character is effected in the first ten years of home life. Against the influences of a non-religious or irreligious home the public school is powerless. "There are, of course, a few very exceptional cases on record in which lasting influence of the idealistic kind is ascribed to some strong personality like Thring, Arnold, or Temple among schoolmasters, but it is best not to reckon on any such uplifting power from this quarter." We summon in memory a cloud of witnesses to protest against this depreciation of the schoolmaster's office and abnegation of his responsibilities—worthies who would gladly own that the turning point in their lives has been the influence of a head master, still more often of a house master. The turning point in most lives comes in adolescence, not in childhood, and it is a sad conclusion to reach that a school built on "the corner-stone"—a school in which religious principles, as expounded by Dr. Lyttelton, are strictly maintained—is an impossibility, that it would not be tolerated by the British parent.

Hoole's Art of Teaching Schoole. Edited by E. T.

CAMPAGNAC. (7s. 6d. net. Constable.)

Hoole, as the editor in his introductory note observes, has hitherto been virtually inaccessible, and consequently often referred to and quoted, but rarely read. Yet, as one of the few practitioners who not only has theories of his own, but also sets down in detail his methods and experience, he is well worth studying, and we owe a debt of gratitude, first to Prof. Campagnac for his scholarly edition and next to the Com-

mittee of the University Press of Liverpool for undertaking the publication.

The text is reproduced from the edition of 1660 in the Bodleian Library. The Editor's work has been to compile what he modestly calls "A Bibliographical Note," a full and complete account of all the authors mentioned in the "Art" and their works. A pretty careful examination of it has revealed a few trifling omissions and errors. The "Art" itself and later editions (one we know of published by Trübner in 1888) are not recorded. Titles, as Ascham's "Scholemaster," should not be modernized or curtailed, as "The Feminine Monarchie" [or a Treatise concerning Bees.] "Poesos" for "Poeseos" and *εἰκὼν* for *εἰκὼν* are misprints.

We are tempted to cull at random one or two specimens, in order to show what entertainment the reader will find in Hoole's book. "Children more industriously willing to thrive may advantage themselves much by perusal of Gerard's 'Meditations,' Thomas de Kempis, Augustine's 'Soliloquies,' or his 'Meditations,' which they may buy both in English and Latine, and continually bear about in their pockets to read at spare times." Where, save possibly at the Perse School, are such youthful Samuels now to be found? The Hebraists of the Sixth Form may profit themselves by translating the "Janua Linguarum" into that tongue. If further advanced, they may make use of Dr. Walton's "Lexicon," "made of purpose to explicate the words of the Bible according to their several languages, viz. Hebrew, Chaldic, Samaritane, Syriack, Arabick, Persian, Ethiopick, Armenian, and Coptick, which is a kinde of Ægyptian Tongue." This caps Milton. Hoole must have had among his scholars some budding Mezzofantis.

The maintenance of Hoole's ideal school should be so liberal that both master and usher may think their places to be preferment sufficient, and not be enforced to look for further elsewhere, or to direct their spare hours' studies towards other callings. The master should have a constant salary of at least £100, while the six ushers are graduated by £10 from £80 to £30, a fairer proportionment of salaries than that which now obtains.

Lastly, we will give an amusing instance of the dominie. In a Latin version of Aesop's Fables Hoole found, "*Singularis agrestis super quadam sedens arbore dentes acuebat.*" He makes fun of the ignorant translator who mistook *μονός* for *μονός*, and the illustrator who prettily devised a Rhinocerate whetting his teeth against a tree, and proceeds to emend. He was unaware of the late Latin *singularis* preserved in the French *sangler*.

"The Making of the Nations."—*France*. By CECIL HEADLAM, M.A. (7s. 6d. net. Black.)

We welcome the second volume of this new series of histories, the object of which is to put into readable form the growth and development of different people. The series naturally challenges comparison with the long-established "Story of the Nations" volumes; it is, however, clearly conceived from a totally different point of view, and, that being so, there is, one imagines, a public for both. Mr. Headlam's volume is essentially a history as distinguished from a story, and within the limits of 400 pages he manages to give an extraordinarily accurate description of France. He arranges his vast material with the skill of the experienced craftsman; and, though the book is full of facts, it cannot be said that these in any way obscure tendencies and ideas. The volume must be judged as a textbook for students in the upper forms of public schools and at the University, and as such may be heartily recommended as an introduction to Michelet, Martin, Lavissee, and to the original documents.

Mr. Headlam, in spite of his limited space, has managed to give here and there some admirable "portraits" of the great men and women who dominated France at various periods. Specially notable is his picture of Charlemagne, of St. Louis, and of Louis XI; while his description of the terrible condition of the country during the reign of Louis XV prepares the reader in vivid and striking fashion for the horrors of the Revolution. This last-mentioned event is, however, treated somewhat summarily—the information, indeed, being so con-

centrated that the young reader would have some difficulty in grasping the principles and the consequences of that cataclysm, which has probably affected Europe and our own country more radically than any other fact in modern history. This is the only criticism we desire to make on an excellent history, which it is to be regretted concludes with the year 1871. We hope that Mr. Headlam will soon give us a sequel dealing with the last forty years, which are so full of interest to all who want to understand France of to-day, and on which so little has been written that is accessible to the young student.

The Future of Education. By F. CLEMENT C. EGERTON. (Bell.)

A man with a theory really ought not to say nasty things about theorizers. Mr. Egerton says they are often "like a dog with a bone: they run away with some side issue into a corner, and there they sit and snarl at everyone else." Now this is no bad description of Mr. Egerton, as he appears from his book, except that he howls and yelps rather than snarls. No doubt he has been singularly unfortunate in his experiences of school life. The head masters he knows are in the habit of entering classrooms, watch in hand, one second after the hour has gone, in order to see if any assistant has gone on too long. Drunken chiefs, assistants who go to sleep while the children go to bathe, classrooms which are the scenes of unending free fights, and teachers who talk nastily to the senior girls were apparently quite common in his parts. After seeing such things, what could Mr. Egerton do better than read all the books in the Board of Education Library denouncing contemporary education, take a strenuous course of Montessorism, mostly, if not all, at second hand, and thus armed at all points, rush into the fray? Education has now no problems for him. The question of the choice of studies, for instance, is extremely simple: you merely note what a boy likes and let him do it. Useless, says Mr. Egerton, to compel a child to learn geometry, if he would prefer to learn German. How glad we are that we were not brought up by Mr. Egerton, for we value highly the little scrap of geometry which a benighted schoolmaster made us learn, much against our will. The question of co-education is settled in a single page. Human nature is an extremely simple thing: "the child is naturally good and not naturally bad." What a pity that Mr. Egerton in writing his book so completely forgot the doctrine he laid down near the beginning of it: "A more complex question than that of education it would be impossible to imagine."

An English Primary School. By A. K. PRITCHARD and F. ASHFORD. (1s. 6d. Harrap.)

This is a delightful and breezy account of how two friends set about the work of educating the small children in a village school in the North of England. Mr. Holmes has made us all acquainted with his adorable Egeria, who proved to the world that the Code was not such a bed of Procrustes as its enemies alleged. In the pages of this slender volume two wise, humane, and devoted ladies, possessed of a keen sense of humour, show once again that, in an ordinary village school under ordinary conditions, little children may be given a true education, and may be taught to use their hands, to express themselves in simple English, and to enjoy the beauties of the English countryside as few country-born children, alas! ever do enjoy it. They tried to carry out the Froebelian principle of learning by doing, and we find the small pupils hammering in nails, planting seeds, keeping shop, and thereby learning in delightful, interesting fashion the practical things of life. "Where is your time-table?" asked our first Inspector. "We have none," we replied calmly, and proceeded to explain that we had a general plan of work which was governed by the interests and activities of the children, and subject to seasonal changes. We thought children from five to seven years of age were better without time-tables. If we were favoured with a sunny day (this was not frequent, for we were in the cold grey North) we took the children out to enjoy the sunshine, to watch the field work, to learn the names and habits of birds and wayside plants. . . . If it was cold . . . we had a sudden access of energy with regard to Morris dancing and Old English games. We did a carpenter's job. . . . We sat round the fire and told the old fairy tales from Grimm and Hans Andersen or some of the Norse legends." We need not despair of education in this country when the Code may be so liberally interpreted. Such a little book as this is one of the most hopeful signs of the day, and should be in the hands of all infant teachers throughout the country. The authors are to be congratulated on the admirable work they are doing and on the interesting record they have given to the public.

Educational Aims and Civic Needs. By J. H. BAKER. (3s. 6d. net. Longmans.)

A series of addresses given by the President of the University of

Colorado are here gathered into book form, and the spirit animating them makes them well worthy of preservation. The first of the series gives the title to the volume, but they all deal with the same general subject—education and its relation to the State. A wide philosophic view is taken, as Dr. Baker thinks that the history of education can only be fully studied in connexion with the history of civilization, and he traces the purpose and dominant character of the education given in various eras: "The Hebrew training was religious; the Athenians aimed at harmonious development in accord with the spirit of their philosophy and life; the Spartan and Roman instruction was practical; the English University education has been adapted to the aristocratic organization of society; the American college emphasizes general power and intelligent citizenship as preparation for life in a democracy." Elsewhere he attributes the cause of the grandeur of Greece to "appreciation," and indeed that faculty is one of the needs of the age, though he does not enumerate it as one of the demands of the time that must be consciously made the aim of education; these are "efficiency, the business ideal, real culture, and responsible character." A comprehensive view of real culture is taken, and the passages defining it are among the most eloquent. The whole series of lectures is admirable in tone, and the speaker realized that criticism of America was "frank and timely, and confirms some of our own judgments." However, an academic atmosphere pervades the book, and it does not sufficiently realize democratic needs, which are too often regarded as needs of the intellect alone; but there is a material basis to the intellect and imagination which must be taken into account before the Universities have completed their work. Real culture must be built on firm foundations, and these lectures ignore the foundations.

School and Life: a Brief Record of the Life and Work of Mary Elizabeth Findlay. By Various Writers. (2s. 6d. net. Philip.)

This memoir will be of interest not only to those who knew Miss Findlay personally, but also to the many Froebelian who watched with interest her original work. It consists of a biographical sketch, three papers written by Miss Findlay, and an account of Mayland Mill School, over which she had been placed in charge by Mr. Joseph Fels at the colony in Essex which he founded. The testimonies of students to her work and character give a picture of a personality eminently sincere and sympathetic, who endeavoured to further educational reforms and who possessed a wide knowledge and experience of educational theories and methods in America as well as in England. She belonged to the class of Miss Beale and Miss Buss, and takes a worthy place in the history of education in England.

Essays on Social and Political Questions. By J. H. WHITEHOUSE. (3s. net. Cambridge University Press.)

Mr. Whitehouse has gathered together various articles contributed to the *Nineteenth Century* and the *Contemporary Review*. They deal with Bulgaria and Serbia, Britain and Germany, Ruskin, social experiments, and kindred subjects. The best is an appreciation of Canon Barnett and his work at Toynbee Hall, and all are of general interest, though one or two savour of mere journalism.

The Progress of Eugenics. By C. W. SALEEBY. (5s. net. Cassell.)

Eugenics is a science that will grow in importance as the years progress, and it behoves those who have the care of young minds and characters to know something of the subject which deals with the material basis on which those minds and characters are built, as well as with the factors that influence them. Dr. Saleeby states clearly the aims and hopes of eugenics and also warns us against extravagant expectations. The author's definition of eugenics includes nurture or environment, as well as nature or heredity, and in dealing with the principles of the subject he includes such aspects as the rights of mothers. "Its expectant motherhood should and must be the first charge upon the resources of any nation," he says, without agreeing with State endowment of motherhood, as that proposes to "serve motherhood by discharging fatherhood from its duties." The care of infancy, adolescence, the housing problem, and education are all dealt with from a eugenic point of view. There are chapters on positive eugenics and the encouragement of worthy parenthood, and on negative eugenics and the discouragement of unworthy parenthood; but the author is careful to distinguish between the right to live and the right to be parents, as well as between marriage and parenthood. The growth of the science is sketched throughout, and in conclusion a chapter entitled "The Eastward Window" contains prophecies of what our race may become when guided by eugenics, for "the child is the growing point of the future. It is the present incarnation, more than a symbol, of the future," and eugenics concerns itself mainly with the production and development of children.

American Citizenship. By CHARLES A. BEARD and MARY KELLER BEARD. (4s. 6d. net. Macmillan.)

Among the many books issued on the government of the United States, this is one of the most lively and interesting. It is so nearly up to date that it contains a summary of the new Banking Law of December 1913. It is well supplied with questions on the text, research questions, and illustrations of the social activities of the different branches of government in the United States. So strong, however, are the Socialistic sympathies of the authors with a wide extension of State powers that some of their roseate statements must be taken with much caution. While this book, of course, has little practical value for English teachers, the reading of it will be of much value to the ordinary citizen in his study of the burning questions of the day in England. Many of the most sincere opponents of Home Rule as a long step to separation are led astray because they do not understand the difference between a unitary and a federated State. They have failed to realize that in the United States, Canada, and Australia it is a truism that citizens of federated States can be just as loyal and devoted to the national Government as those in a unitary State. The United States has shown this for nearly a century and a half.

The Government of Man. By G. S. BRETT. (3s. 6d. net. Bell.)

The author states that this book has been written to give an introductory account of the conditions under which ideals have been formed and of the forces which have produced the most prominent theories. He has certainly done this, but not in a manner that will induce many to proceed beyond his introduction, for the sparkle of life is missing from his pages. Philosophical remarks mingle with dull platitudes, and throughout the long journey from the ancient world through the middle ages to early modern times little is done that has not already been accomplished. The effects of the growth of trade and merchant ideals on the chivalry of Europe is traced well—in fact, the conditions of medieval times are treated the best. The chronological tables and the bibliography are the most useful parts of the work, and they can be of great value to the student.

The Fire of Love and the Mending of Life. By RICHARD ROLLE. (3s. 6d. net. Methuen.)

Those interested in the history and phenomena of mysticism in England will welcome this edition of the writings of one of the great English mystics of the fourteenth century. Richard Rolle, the hermit of Hampole, wrote in Latin; Richard Misyn translated his "Incendium Amoris" and "De Emendatione Vitae" in the fifteenth century; Miss Frances Comper has edited this translation, and issues it in modern English, with an introduction by Miss Evelyn Underhill. In a long explanatory preface Miss Comper very ably deals with the life and characteristics of the mystic, and explains the purpose of her modernization, in which she retains the simplicity and charm of the original while revealing the sturdiness of the Yorkshireman's common sense. "And yet," she agrees with Miss Underhill, "he joins hands across the century with the poet of love and poverty who preached to the birds."

Les Poètes Français du XIXe Siècle, 1800-1885. Par AUGUSTE AUZAS. (3s. 6d. Oxford University Press.)

M. Auzas, French Lecturer in the Goldsmiths' College, has composed this volume as an introduction to French prosody and literary criticism. He writes with full knowledge and appreciation of his native poetry, and the bibliographies attached to each author, with a general one on nineteenth-century poetry, furnish a valuable guide for advanced students. We know not what is the French standard attained at the Goldsmiths' College, but it must be far higher than that of any English public school with which we are acquainted if his pupils are capable of answering half of the test questions proposed. We quote at random: "La querelle des classiques et des romantiques ne rappelle-t-elle pas par certains côtés celle des anciens et des modernes au XVIIe siècle? Les comparer l'une à l'autre, en indiquant en quoi elles se ressemblent et en quoi elles diffèrent." A treatise on the elements of versification occupies the first fifty pages. The rules are clearly given with examples, but it would have been better to begin with the normal and comparatively simple classical alexandrine, and rules for the fluctuating cæsure in verses of eight syllables or less might well have been omitted. On the other hand, the scansion of quasi-diphthongs like *rien, dieu, viens* is inadequately treated. The poets chosen are ranged under three groups—Attardés et Précurseurs, Les Romantiques, and Les Parnassiens. The first group is simply chronological and does not bear out the general editor's statement that the classification is strictly according to *leurs tendances*. What is the common tendency of Delille, Chénier, Béranger, and Delavigne? Victor Hugo, de Musset, Gautier, and Leconte de Lisle are well represented. We could have spared

(Continued on page 632.)

MACMILLAN & CO.'S LATEST LIST.

ENGLISH.

If— By Rudyard Kipling. Pott 8vo., sewed. 1s. net per dozen. Also on Card, 3d. net each.

The Children's (Christina) Rossetti. Illustrated. **Junior.** Nursery Rhymes, &c. Sewed, 4d. Cloth, 5d. **Intermediate.** Nature Poems for all the Year and Poems for some Holy Days. Sewed, 5d. Cloth, 6d. **Senior.** Selected Poems Lyric and Narrative. Sewed, 6d. Cloth, 7d.

THE SCHOOLMISTRESS.—"A selection of beautiful poems by Christina Rossetti arranged in three books. . . Teachers seeking new poetry books, should send for these, which the children are sure to enjoy."

The Wanderings of Rama Prince of India. With Introduction, Notes, &c., by WALLACE GANDY, Author of "A Persian Hero," &c. 1s. [English Literature for Secondary Schools.]

A First Book of English History. By F. J. C. HEARNSHAW, M.A., LL.D., Professor of History in King's College, University of London. Illustrated. 1s. 6d. [First Books of History.]

A.M.A. CIRCULAR.—"Professor Hearnshaw gives, in easy, readable English, a clear and interesting statement of the great movements in English History to the triumph of democracy, and the dawn of a new age with the Twentieth Century."

Irish History for Young Readers. By Rev. H. KINGSMILL MOORE, D.D. Illustrated. 1s. 6d.

SCHOOLMASTER.—"In this work on the little understood country of Ireland, the writer has admirably succeeded in being at once brief and interesting, impartial and sympathetic."

A First Book of English Literature. By GEORGE SAINTSBURY, M.A., D.Litt., LL.D., &c., &c. 1s. 6d. [First Books of Literature.]

THE JOURNAL OF EDUCATION.—"We welcome a new and independent primer of English Literature, not even an abridgment of the author's 'Short History,' by a Professor who has devoted a long life to the subject."

FRENCH.

Histoire d'un Consorit de 1818. Par ERCKMANN-CHATRIAN. With a Selection of Poems on Napoleon I.

Adapted and edited by OTTO SIEPMANN, Head of the Modern Language Department at Clifton College. 2s. 6d. Word and Phrase Book, sewed, 6d. Key, 2s. 6d. net. [Siepmann's Advanced French Series.]

EDUCATION.

The Thinking Hand, or Practical Education in the Elementary School. By J. G. LEGGE, Director of Education in the City of Liverpool. Illustrated. 8s. 6d. net.

EDUCATION.—"It is impossible to give any adequate idea of all the good and helpful things in this book, and whether we study what Mr. Legge has to tell us or whether we consider the photographs, we are equally certain to derive both pleasure and profit from it."

THE STATE IN ITS RELATION TO EDUCATION. By SIR HENRY CRAIK, K.C.B., M.P., formerly Secretary to the Scotch Education Department. Third edition, thoroughly revised. 3s. 6d. [English Citizen Series.]

THE TIMES.—"We heartily commend this instructive book to those who do not know it, and hardly less to those who have studied the former editions of it."

GEOGRAPHY.

The Continent of Europe. By LIONEL W. LYDE, M.A., F.R.G.S., Professor of Economic Geography in University College, London. With Maps. 7s. 6d.

"This standard work (published 1913) contains chapters on Belgium, France, Germany, Russia, and Austria, with full particulars of physical features, fortifications, and other matters bearing on the operations of war."

A Junior Geography of the World. By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S., &c. With Coloured Maps and Illustrations. 2s. 6d. [Macmillan's Practical Modern Geographies.]

EDUCATIONAL NEWS.—"We can commend this book to the careful consideration of teachers, as it will certainly find a prominent place among school books."

The Pupils' Class-Book of Geography. By ED. J. S. LAY, Author of Constructive Work, &c.

England and Wales. With 20 Maps and over 200 Exercises. Sewed, 4d. Cloth, 5d.

The British Isles. With 32 Maps and over 300 Exercises. Sewed, 6d. Cloth, 7d.

THE SCHOOLMASTER.—"We advise every teacher of geography to obtain this book; the questions will be most helpful."

MATHEMATICS AND SCIENCE.

Exercises in Mathematics. By DAVID BEVERIDGE MAIR, M.A., sometime Fellow of Christ's College, Cambridge.

With Answers and Hints. 4s. 6d.; also without Answers and Hints. 3s. 6d.

JOURNAL OF EDUCATION.—"This will be found a very useful book, especially in revision work. The ground of the ordinary mathematical course is covered."

Practical Mathematics for Technical Students. Part I. By T. S. USHERWOOD, B.Sc. (Lond.),

A.M.I. Mech. E., and C. J. A. TRIMBLE, B.A. 3s. 6d.

SCHOOL WORLD.—"We heartily commend this book to all teachers of practical mathematics."

Test Papers in Elementary Algebra. By CLEMENT V. DURELL, M.A., Assistant Master at Winchester College. 3s. 6d.

THE MATHEMATICAL GAZETTE.—"This collection of 200 Test Papers should prove of good service. Though of the usual school and examination type in general, some of the questions are distinctly original, and should give even the best boys food for thought."

A Treatise on Differential Equations. By A. R. FORSYTH, Sc.D., LL.D., Math.D. Fourth Edition, thoroughly revised. 14s. net.

A First Book of Chemistry. By W. A. WHITTON, M.Sc. Illustrated. 1s. 6d. [First Books of Science.]

A Manual of Practical Physical Chemistry. By FRANCIS W. GRAY, M.A., D.Sc., Lecturer in charge of the Physical Chemistry Department, Aberdeen University. 4s. 6d.

SCHOOL WORLD.—"The book opens with an admirable chapter on experimental error, limits of accuracy, and the various methods to be adopted in securing the most trustworthy representation of the various measurements which are undertaken in physical chemistry. . . Many useful tables are provided, and, in short, the book is one which can be most heartily recommended."

SECOND EDITION. COMPLETELY REVISED AND ENLARGED.

Principles of Metallurgy. By ARTHUR H. HIORNS, late Head of Metallurgy Department, Birmingham Municipal Technical School. Second Edition, completely revised and enlarged. 6s.

MACMILLAN & CO., Ltd., ST. MARTIN'S STREET, LONDON, W.C.

DENT'S NEW LIST

INCLUDING THE SPECIAL SUBJECTS FOR

ENGLISH.

DENT'S ENGLISH LITERATURE FOR SCHOOLS.

A Freshly Chosen Collection of English Masterpieces.

Edited by A. BURRELL, M.A.

128 pages each, printed in special clear type, well and tastefully bound in cloth boards.

Price 6d. each.

NOW READY.

Prose.

Parkman's Pontiac. Bible Stories.

Aldine House, Bedford Street, W.C.

some of Baudelaire's hothouse exotics in favour of Sully Prudhomme and Hérédia. We never understood "Le Roi d'Yvetot" as a satire on Napoleon, who, whatever his defects, was not a King Log, and we can see nothing in common between "On parlera de sa Gloire" and Southey's "Battle of Blenheim."

Racine's Andromaque. Edited by COLBERT SEARLES.
(2s. Ginn.)

In this edition special attention is paid to the characters of the tragedy, their psychology as conceived by Racine and developed in the plot, and the critiques of Robert and Lemaitre are quoted *in extenso*. The Introduction skilfully combines a life of Racine and an account of his chief plays. We should think twice before subscribing to the dictum, "Shakespeare's method is diffusive and analytic: Racine's concentrated and synthetic"; and another dictum, "No one has ever handled the Alexandrine verse with more perfect mastery," must be qualified by an epithet—the classical Alexandrine. Racine is a Paganini who plays on a single-stringed instrument. Surely pupils capable of profiting by an edition so replete with the higher criticism do not need a vocabulary. We do not understand the note on line 33. "Sparte is a town, and therefore takes *à*, and masculine as well as feminine names of countries take *en*, unless used with the definite article."

"Collection Gallia."—(1) LOUIS VEUILLON'S *Odeurs de Paris*.
(2) EMILE GEBHART'S *Autour d'une Tiare*. (1s. net each. Dent.)

Whether intentionally or not, these two volumes form a pendant showing two sides of Catholicism. M. Gebhart, in a brief historical novel, gives us a vivid portrait of Pope Gregory VII, with a charming idyll of lovers in the background. The title, if not the plot, was suggested by a Pontifical escutcheon he saw at Rome in which, between the crossed keys, a swarm of bees had nested.

Kleist's Prinz Friedrich von Homburg. Edited by G. MERRICK BAKER. (3s. net. Oxford University Press.)

The editor holds that Kleist's masterpiece deserves a place as a standard text in schools beside "Wilhelm Tell" and "Minna von Barnhelm." We should not rate the play so high; but it is well worth studying. In the title-rôle the author has presented his own personality—the morbid visionary compelled to act in times that are out of joint—and the ending turns what should be a tragedy into a melodrama; but the historical background is finely conceived, and the character of the Elector is convincing. The Introduction gives a good account of Kleist's life and works, and discusses the historical setting. The manner of his death—how, as agreed upon, he first shot Henrietta Vogel and then blew out his own brains—is too characteristic a trait to have been omitted. To each act is prefixed a useful synopsis of the plot.

Astronomy: a Popular Handbook. By HAROLD JACOBY.
(10s. 6d. net. Macmillan.)

"Popular" handbook is the right description for this pleasantly written and well illustrated volume, and only the appendix deals with such matters as are suitable for the more advanced student. There are chapters which connect astronomical science with Navigation, Time, the Calendar, &c., and practical directions are given for making sundials, recognizing stars, and calculating dates. The arguments concerning the habitability of Mars are lucid, and the author concludes that "neither by visual nor by photographic evidence has the existence of an artificial network of markings been proven, or even rendered highly probable. Therefore the time has not yet come when we shall have to inquire whether geometric lines indicate the presence of intelligent inhabitants. . . ." But we are surprised to note the absence of Prof. Bickerton's name among the theories discussed regarding the origin of universes, especially so as the author claims that the book presents "the present state of astronomic science." However the work forms a very useful handbook.

Minerals and the Microscope. By H. G. SMITH.
(3s. 6d. net. Murby.)

This useful little volume requires no apology for its existence. The gap in mineralogical literature which it admirably fills has been evident to all teachers and students of microscopical mineralogy and petrology. There are several large treatises dealing with the optical properties of minerals and the systematic description of the rock-forming minerals, so important as an introduction to petrology, but hitherto no small elementary and accurate book has been available. The subject is at most colleges made amenable to the beginner by a course of lectures; but generally this proves to be insufficient, and reference to a reliable book is found to be necessary if the early difficulties are to be satisfactorily smoothed over. For this purpose Mr. Smith's book is wholly adequate, and it therefore deserves a welcome from all

those—students of mineralogy, geology, metallurgy, and mining—who meet with this difficult, but fascinating and economically valuable, subject. The book is divided into two main parts, dealing respectively with the optical properties of minerals and the description of the chief rock-forming minerals as they appear in thin sections under the microscope. There are in addition further sections devoted to rapid methods for the determination of refractive index and to an introduction to the study of rocks. A large number of plates illustrating the minerals described and a beautiful reproduction of Newton's scale of colours as exemplified by a quartz wedge add to the practical value of the book. All of these have been specially prepared by the author, who is to be congratulated both on his success as a photomicrographist and on his choice of material. Altogether we have nothing but praise for a book which we most heartily commend.

Elementary Biology, Animal and Human. By PEABODY and HUNT. (4s. 6d. Macmillan.)

The aim of this book is to present the subject to students of high-school age (in the United States) so as to emphasize the relations of biology to human welfare. This idea dominates every chapter. To our prejudiced English view it appears that the authors sermonize too much. However, the suitability of the book depends on the character of the pupils, and we advise teachers who wish to treat biology as merely instrumental to a knowledge of the body and how to use it, to obtain a copy of the book and judge therefrom whether they can wisely adopt it as a textbook. It would not suit the boys at, say, Harrow.

The Ring of Nature. By G. G. DESMOND. (5s. net. Methuen.)

From the dedication to the editor we surmise that the twenty-four chapters which compose the "Ring" (two to each month) have appeared in the pages of the *Daily News*, though we do not happen to have seen them. At any rate, they are good specimens of "middles"—pleasantly written gossips on what a naturalist sees and hears in his walks abroad. We infer that he must reside in some southern county and in the midst of woods and streams, but it would add to our interest if the habitat were revealed. He is an acute observer of the ways of beasts, birds, and insects, and, what some readers will count a merit, there is nothing scientific or educational about the book.

The Earth: Shown to the Children. ELLISON HAWKS.
(2s. 6d. net. Jack.)

Mr. Hawks has written a readable little handbook for young people on the story of the earth's formation and the changes at present going on. He is not content with recounting facts, but first arouses the desire to know the causes of the various phenomena with which he deals. The historical elements in his pages are particularly good, for they detail some of the processes of thought and discovery which indicate not only the difficulty, but the interest, of scientific research. Geology and all akin to it are touched on, and, from fossils, the author leads on to the present animals and man, and ends with an idea of evolution as exemplified by the horse's hoof. There are numerous sketches and illustrations from photographs.

Hannibal Once More. By D. W. FRESHFIELD.
(5s. net. Edward Arnold.)

In various periodicals Mr. Douglas Freshfield has written much on the famous march of Hannibal over the Alps, and in this book he expresses his matured opinion, after discussing the various arguments for the different passes. He has arrived at a tentative solution of his own that is new, and has reached it by his knowledge of local facts and what he calls his "alpine and geographical sense." After a warning not to attribute to ancient writers—Polybius, Livy, Varro, &c.—the knowledge we now possess of the Alps, the author proceeds to discuss the evidences in the classical texts and to trace the course *in situ*. He believes that Hannibal took the Vars-Argentiére route leading across the upper waters of the Durance to the Stura Valley. This seems to have as much evidence to support it as any other conclusion, and the only proof that could be brought would be the one yielded by the results of excavation. But Mr. Freshfield does not claim certainty. He says: "After carefully considering all these fresh contributions, I still hold that as between the Mont Genèvre and the Col de l'Argentiére, the evidence, setting aside Pompey and Varro, is very closely balanced, but the scale inclines in favour of the southern pass. . . . Yet, while I protest with a most positive conviction against all the northern passes, I cannot work myself into an absolute belief in the Argentiére. My mind is still open to consider any plausible substitute south of the Mont Genèvre." The volume is of interest to Latin students and Alpine climbers alike, especially as there is no exhibition of pedantry nor element of cocksureness in the pleasantly written pages.

FRENCH BY THE DIRECT METHOD

A Translation and Adaptation of the German Work of
ROSSMANN and SCHMIDT

Second English Edition Twentieth German Edition

Adopted by the Prussian Board of Education, and by many of the
Leading Secondary Schools in the British Empire

First Year's Course

Part I. 160 pp., with coloured Frontispiece
and many black and white Illustrations - 1s. 6d.

Second Year's Course

Part II. 191 pp., with four coloured and
many black and white Illustrations - 1s. 8d.

Third Year's Course

Part III. 264 pp., with the four coloured
Illustrations—repeated for revision—and
many black and white Illustrations - 2s. 6d.

Fourth Year's Course

- (1) Part IV. LIVRE D'EXERCICES. 292 pp.,
with many Illustrations - 2s. 0d.
- (2) LIVRE DE LECTURE. Being a beautiful
illustrated History of France, French Literature,
and Geography. By H. VIVIER.
178 pp. - 2s. 0d.
- (3) GRAMMAIRE FRANÇAISE EN FRANÇAIS.
By H. VIVIER - 10d.

N.B.—*It is recommended that (2) be used as a supplement to each of the Yearly Courses.*

THE

INTERNATIONAL FRENCH - ENGLISH AND ENGLISH - FRENCH DICTIONARY

The first of the
UNIFORM INTERNATIONAL DICTIONARIES
OF ALL SUBJECTS IN ALL LANGUAGES,
with Pronunciations shown in Phonetic Script.

By **PAUL PASSY** and **GEORGE HEMPL**

1250 pp., 4to. Cloth, **7s. 6d.**

Should be in every Teacher's Library.

General Readers for the Preparatory School

THE

CHISHOLM READERS

ARRANGED BY THE EDITOR OF THE
"TOLD TO THE CHILDREN" SERIES
AND OF THE "GOLDEN STAIRCASE,"

consist of Four Books. Book I comprises
144 pages; Book II, 176 pages; Book III,
208 pages; and Book IV, 240 pages. Each
Book contains eight Plates in colour and a
variety of black and white Illustrations by
artists eminent in the illustrating of Children's
Books.

PRICES:

Book I, **10d.**; Book II, **1s.**;
,, III, **1s. 3d.**; ,, IV, **1s. 4d.**

The Report on the Influence of School
Books on Eyesight, issued by the British
Association (1912), has been very carefully
considered. The style of type and character
of paper therein advocated has been adopted.
Line blocks are used throughout in deference
to the Association's dictum: "line blocks
from pen and ink drawings are preferable to
half-tone blocks." The size of type suitable
for different ages has also been regulated as
far as possible in accordance with the findings
of the Report.

Irish History for Young Readers. By H. KINGSMILL MOORE.
(1s. 6d. net. Macmillan.)

The ignorance of Irish history, even in secondary schools, is deplorable, for that country comes to be regarded as suddenly emerging at certain periods in England's story, and, when its effect on English affairs is completed, suddenly sinking into nothingness. Hence any attempt at giving a consecutive account of Ireland's sorrows and braveries can be welcomed. This little book is intended to tell the story "simply and impartially," and, to a great extent, it has been accomplished within the limits of space. But we wish the ordinary reading-book style had been avoided as being now out of date, and a more living manner of recounting had been adopted. A picture having the sense of reality does not present itself to children by the mere narration of facts; but a teacher may cull what he needs here for simple lessons, and a class with his help will prove the book of use. The illustrations are suitable and of interest.

Old Time Stories and Old World Customs. By A. GERTRUDE CATON. (1s. 9d. Macmillan.)

A medley of legends, myths, history, and customs are arranged heterogeneously in this volume, and we deprecate the general effect. There is no sense of proportion, and it would have been far better to issue Part I, dealing with the Ancient Peoples of the World, separately. That section is well done, and gives a picture not often acceptable to young children. The Story of Britain also is of interest, and the chapter on the People at Work in Anglo-Saxon Days is realistic. But Part III, on the Middle Ages—and Beyond, is a jumble of incongruous elements. A section dealing with Captain Oates is followed by one on the Gunpowder Plot, while a discourse on Bells comes after an account of the Great Plague. Such collections of information, arranged in such a method, offend a sense of order, and it is difficult to see what aim was intended.

Heroes of Welsh History. By D. W. OATES. (9d. Harrap.)

It is well that young people should become acquainted with the history of such close neighbours as the Welsh, and, though this little book is primarily intended for the school children of Wales, it is equally good for those of England, and will widen their conception of English history. It is a fact little alluded to, for instance, that Llywelyn the Great figured prominently in the gaining of Magna Carta. The stories deal with great epochs in Welsh history by means of the biographies of the heroes of the time, and it is an excellent point that the author has chosen not only warriors, but has included bards and priests. Some chapters lack the dramatic interest necessary to arouse children's imaginations, but the three most important figures—St. David, Llywelyn the Last, and Owain Glyndwr—are excellently treated.

Stories from Dutch History. By ARTHUR H. DAWSON.
(3s. 6d. net. Harrap.)

This handsome and well illustrated volume would be better entitled "A History of the Netherlands," and, whether stories or a history, we do not see why it should end with the landing of William III at Torbay. Religious wars, assassinations, and the Inquisition loom large and make somewhat gruesome reading. The author acknowledges his indebtedness to Motley, and he could not have consulted a better authority, but he would have done well to make use of the byways of history—Erasmus's "Letters," Goethe's "Egmont," Taylor's "Philip van Artevelde," and even "The Cloister and the Hearth."

The French Revolution. By H. PACKWOOD ADAMS, M.A.
(3s. 6d. net. Methuen.)

A palate educated to the appreciation of Carlyle is a little fastidious in its demands upon writers who take for their theme the French Revolution. The present volume does not pretend to be more than an elementary outline of the subject, and as such it will, we think, fulfil its purpose. It purports to be based mainly upon Acton, Sorel, Aulard, Kropotkin, Belloc, and the writers of "The Cambridge Modern History." One would gather from an enumeration of these sources that such a person as Thomas Carlyle had never approached the subject of the French Revolution. Judged by the standard of reality, such a work was bound to fail of anything more than that partial success which alone is possible in the case of histories written upon conventional lines. In these pages men such as Mirabeau, Danton, Robespierre, and Lafayette are merely events; they are not men. Now, above all other happenings in the world, the French Revolution called for the pen of a Carlyle. It is a history of uncommon events brought about by uncommon men. It needed an uncommon man for chronicler; and in Thomas Carlyle it found such a man; in his hands that history became an actuality. We see and hear men and things. The horror of it all is not the mere comfortable horror of the easy

(Continued on page 636.)

Works by JOHN CARROLL,

ART MASTER AND EXAMINER IN DRAWING.

Approved by the Science and Art Department of the Board of Education.

Practical Geometry for Art Students.

A New Edition, in which lessons and exercises on Areas are included, together with the Projection of simple solids and objects. Strongly bound in cloth, **1s. 6d.**

"No private student needs a better book, and no teacher could place a more trustworthy textbook in the hands of his pupils."—*Practical Teacher.*

A Key to Carroll's Geometry.

Consisting of Solutions to all the Exercises in Solid Geometry of Objects of Simple Form, for the use of Students of Geometrical Drawing (Art). New Edition. Cloth, **1s. 6d.**

Drawing from Models and Objects.

A Handbook for Teachers and Students in Training.

Crown 8vo, cloth, **2s. 6d.**

"It may be confidently recommended either as a drawing master's note-book or as 'A Handbook for Students in Training.' It is well arranged, the directions are clear, and the illustrations are numerous and good."—*School Guardian.*

Pattern Drawing and Design.

An application of Practical Geometry to the Construction of Ornament. Strongly bound in cloth, **1s. 6d.**

"The teacher of design has in this book an excellent guide, which can be used in all stages of a pupil's progress. The examples are ingenious and well printed. They are, in a good many cases, quite new to us in books of this character."—*Schoolmaster.*

Freehand Drawing of Ornament.

Consisting of Twenty-four Photographic Reproductions of Examples of Ornament, and Sixty-eight Analytical Diagrams of Construction, Designed and Arranged in Graduated Order, with Directions to the Student. 11 in. by 8 in., in stiff wrapper, price **1s. 6d.**

"Excellent examples, beautifully and clearly printed, are the distinguishing features of this book. In addition to the finished examples, three progressive stages are given showing the gradual development of the ornament. No student can need a better book."—*Practical Teachers' Art Monthly.*

Drawing of Foliage, Flowers, and Fruit, and Foliated Design.

Consisting of Twenty-four Reproductions of Photographs from Nature by WM. J. CARROLL. With Directions to the Student, and Forty Examples of FOLIATED DESIGN by JOHN CARROLL. New and Enlarged Edition, 11 in. by 8 in., in stiff wrapper, **2s. 6d.**

"Can be recommended to designers as well as to students of drawing and painting."—*Architect.*

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. Catalogue with specimen pages, &c., of new books post free.

THE MERCHANT OF VENICE.

With revised Text, Questions, Notes, and Appendices. By G. H. BALL, M.A., Head Master of King Edward School, Camp Hill, Birmingham; and H. G. SMITH, B.A., English Master at the same School. 1s. Text only, 6d. net.

This edition has been based on the recommendations of the Board of Education, and will be found suitable for students preparing for the Oxford and Cambridge Local Examinations.

NOTES ON THE GOSPEL ACCORDING TO ST. MATTHEW.

With Questions and Concordance for the Use of Schools. By the Rev. C. R. GILBERT, M.A. With 3 Maps and an Illustration. Crown 8vo. 1s.

FIRST SCHOOL BOTANY.

By E. M. GODDARD, B.Sc., Science Mistress, Girls' Secondary School, Colchester. With 207 Diagrams. Crown 8vo, 2s. 6d.

The book covers the syllabus of the Oxford and Cambridge Junior Local Examinations.

MEISTER MARTIN.

Edited, with Introduction and Reform Method Notes, by L. HIRSCH, Ph.D., German Master, Alleyn's School, Dulwich. 1s. 6d.

A REFORM FIRST GERMAN BOOK.

By J. STUART WALTERS, D. ès L., Modern Language Master at Wilson's Grammar School, London, S.E. With 5 Pictures by Hölzel in colour and 2 in monotone. 3s.

A REFORM FIRST FRENCH BOOK.

Especially written for the use of Adult Students. By J. STUART WALTERS, D. ès L. With 4 photographs. 1s.

DIRECT METHOD FRENCH TEXTS.

Edited by R. R. N. BARON, M.A.

TAMANGO and JOSE MARIA LE BRIQUAND. By PROSPER MÉRIMÉE. Second Edition. 1s.

PIERRILLE. By JULES CLARETIE. Second Edition. 1s. 6d.

BUG JARJAL. By VICTOR HUGO. 2s.

LABELLE NIVERNAISE. By ALPHONSE DAUDET. 1s. 6d.

POETRY FOR BOYS.

By S. MAXWELL, M.A., Head Master of Manor House School, Clapham Common. 1s. 6d.

A collection of poems of established literary merit and of such a kind as will naturally appeal to boys. Printed in large type to meet the requirements of the British Association Report.

EXAMPLES AND TEST PAPERS IN ALGEBRA.

By W. J. WALKER, M.A., Head Master of Woodhouse Grove School, Apperley Bridge, Bradford. With Answers, or without Answers, 2s. 6d.; and in two volumes each 1s. 6d. with Answers, or 1s. 3d. without Answers.

OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 Diagrams. 2s. 6d.

This book is intended as a companion to a lecture course, and contains a resumé of the leading principles of physical Science, omitting purely descriptive work. Worked Examples, varying in standard from Upper School to Intermediate degree work, are given throughout; a set of questions is appended to each chapter, and a collection of over 300 miscellaneous Examples is added at the end of the volume. Answers are supplied.

chair. Even Mr. Adams, though he never mentions Carlyle's name, seems to have felt that something was wanting, if his little volume were to convey an adequate idea of his subject-matter, for he is constrained ever and anon to depart from the formality of a bald narrative and to add touches, such as "A pistol shot rang out and Robespierre's jaw was shattered." Such touches only serve to emphasize the vastness of the gulf which separates Thomas Carlyle from the ruck of ordinary historians.

Macaulay's History of England. Illustrated Edition. Vol. II. Edited by Prof. C. H. FIRTH. (10s. 6d. net. Macmillan.)

The second volume is even of more varied interest than the first, and the portraits have more individuality. The full-page plates in colour, of which there are eight, are most successful reproductions—the famous Van Dyke of Charles I and his children, two of Monmouth and James II by Lely, two by Kneller, James II and the Duke of Shrewsbury, William III by Cornelius Jansen, Mary of Modena by Wissing, Sunderland by Maratti, and John Dryden by Maubert. With the boy William III, a fine specimen of Jansen's work, should be compared the mezzotint after Schlenk. The child is unmistakably father of the man. A pendant to Mary of Modena, the haughty Italian, is the bold-faced hussy Catharine Sedley, and there is a striking portrait of Monmouth after death attributed to Kneller. The bench of Bishops is fully represented. The glorious seven are twice given together in an engraving, and most of them separately. Lloyd of St. Asaph has a beautiful face. Often the portraits fail to reveal the character as we know it. There is nothing in Judge Jeffreys' to suggest his epithet, except, perhaps, a slightly cynical smile. Bossuet has a mild, self-satisfied air, and there is nothing attractive about Pascal. The facsimiles of letters, proclamations, broadsides, maps and plans are as abundant and as well chosen as in the first volume. No history teacher should be satisfied till the book is ordered for the school library.

"Murby's Smaller Scripture Manuals."—*The Acts of the Apostles.* With Introduction, Map, and Explanatory Notes. By CHARLES KNAPP, D.D. Vol. I: Chapters I–XVI. (1s.)

Dr. Knapp has added another to the admirable series of manuals, the merits of which we have already more than once brought before the notice of our readers. The present little book well maintains the high level of its predecessors. The introduction is parti-

cularly useful. It is admirably arranged for its purpose, and is the work of a sound and well equipped scholar. The text of Chapters I–XVI of the Acts is clearly printed, with good notes arranged in double-column beneath. There is an excellent map. The manual is exactly suited to meet the requirements of those who are reading for the Junior and Preliminary Oxford and Cambridge Local Examinations, and may safely be recommended for such requirements.

In Eastern Wonderland. By CHARLOTTE GIBSON. (1s. 3d. Harrap.)

Mrs. Gibson has brought the right spirit to her task of picturing some countries of the East for children; but the view she gives is a superficial one that will tend to cause the young reader to regard the inhabitants of the East somewhat in the light of curious specimens. A journey is described from America to Japan, China, India, and Egypt, with legends and history interspersed. The style of writing is natural and lively, but true descriptive power is lacking—the account of sunrise over Mount Everest is a paragraph giving no sense of beauty. Too wide an area has been covered to leave a definite impression, for one country only could well take up the whole volume. However, this method of teaching geography is the right one, and the book before us is preferable to the ordinary textbook of facts.

Fairy Tales and Folk Stories. Newly told by J. B. MARSHALL. (1s. 6d. net. E. J. Arnold.)

Andrew Lang's "gilt-edged" series has made us fastidious as to the get-up of fairy tales, but there was room for a cheap and workaday edition of the "Classics of the Nursery." To know the story of "Jack and the Beanstalk," "The Tin Soldier," and "Aladdin" is part of a liberal education, and we hope that this well chosen reader will be largely used in elementary schools.

Messrs. J. & J. Paton, of 143 Cannon Street, E.C., have sent us the seventeenth edition of their well-known *List of Schools*. This reliable guide will be of great assistance to parents and guardians who are now prevented from sending pupils to the Continent. Messrs. Paton announce that since the book was printed many principals of schools have informed them that they are willing to reduce their fees for the children of officers, and of those whose incomes have been considerably diminished owing to the war. This annual of upwards of twelve hundred pages is published at the nominal price of two shillings.

YOUR KING AND COUNTRY NEED YOU.

A CALL TO ARMS.

An addition of another 100,000 men to His Majesty's Regular Army is immediately necessary in the present grave National Emergency.

Lord Kitchener is confident that this appeal will be at once responded to by all those who have the safety of our Empire at heart.

TERMS OF SERVICE.

General Service for the period of the war only. Any men so enlisting will be discharged with all convenient speed as soon as the war is over.

Age of enlistment between 19 and 35, ex-soldiers up to 45.

HOW TO JOIN.

Full information can be obtained at any Post Office or Labour Exchange in the Kingdom or at any Military Barrack.

God Save the King.

Messrs. TRUMAN & KNIGHTLEY, Ltd.,

Scholastic Agents.

MANAGING DIRECTORS:

S. A. TRUMAN. JAMES HEARD, B.A.
(Westminster and Trinity College, Cambridge).

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Public and Private Schools.

ASSISTANT MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Mistresses and Teachers of Special Subjects to Secondary, Public, and Private Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

ASSISTANT MASTERS AND TUTORS.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Masters and Tutors to Schools and Private Families. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

LADY MATRONS AND HOUSEKEEPERS.

Messrs. TRUMAN & KNIGHTLEY introduce well qualified and experienced Lady Matrons and Housekeepers to Boys' and Girls' Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

TRANSFER OF SCHOOLS AND PARTNERSHIPS.

COLONIAL AND FOREIGN NOTES.

GERMANY.

It was scarce courteous—the way they at once bade us clear out in twenty-four hours and stayed the trains by which we had hoped to depart. Some women teachers educating themselves by travel got a lesson that they will long remember. But the atmosphere of war is never gracious and national safety is a supreme consideration. Of the issue of the strife it is not for us to prophesy. We report, however, an opinion pronounced in Germany. At the moment when the news came that Germany had declared war against Russia, we asked a German of knowledge and some insight, what he thought of the prospects. "We are very hopeful," he replied; "*the continuation schools have been doing their work.*" Revile Germany as you will, she has always understood that man-making is a subject with which true Statesmanship must concern itself. But on such a theme it is not now a proper moment for us to dwell. As events are moving fast, we add that this paragraph was written on August 3. Much has changed since then. Let no one think we are not true to country and to a righteous cause.

We turn from war to describe one of the organisms that make for peace. Nations should know one another and so learn to know themselves. It was this thought that suggested the exchange of professors between the United States and Germany—an exchange which has begotten an institution of a permanent sort. From the seminary exercises on higher education in Germany and America, conducted at the University of Berlin by Dr. Benjamin Ide Wheeler, President of the University of California, in 1909-10, has sprung the Wheeler Society. Its seat is at Berlin and its purpose is to study German and foreign, but particularly American, higher education. Hitherto the Exchange Professors have been the chief speakers at the meetings. These are held seven times a year and the proceedings at them are reported in a *Jahresbericht*. Owing to the liberality of some well known German-Americans, and especially of the late Adolphus Busch, the Society is enabled to publish a series of mono-

graphs, of which the first will be the dissertation of Roosevelt-Professor Dr. W. H. Sloane on "The Political Education of the Young American," and the second a treatise by Oberlehrer Dr. P. Ziertmann, "Of Pedagogy as a Science and of Professorships of Pedagogy." The *Leitmotive* of all the studies, says *Hochschul-Nachrichten* (xxiv, 9) is "how through a knowledge of foreign scholastic systems to understand the German system better and—to improve it."

The Deutsche Lehrer-Zeitung (xxvii, 53) relates a story received from Switzerland. At one of the Universities a student of the Germanic languages—a Germanist, as we say—produced for his doctor's examination a successful dissertation on "German Literature in the judgment of England"—*Die deutsche Literatur im Urteile Englands*. Before the final printing of the tract the candidate submitted, in the prescribed way, the proof of the title-page to the Dean of the Faculty of Philosophy, who handed it on to the Professors. The Professor of German Literature deemed the *e* in the dative *Urteile* wrong and crossed it out. Afterwards the Professor of English received the proof, and he, to indicate that he held the form *Urteile* to be the correct one, set dots under the condemned *e*. The printer, of course, put *Urteile*, with which on the title-page the obligatory two hundred copies were deposited at the Office of the University. The Professor of German now refused his approval of the dissertation and required the candidate to have it reprinted. It seems that the case has been referred to the Faculty of Philosophy for decision, with civil war as a possible result.

Activity in the world of education is manifested by the establishment of new journals. The *Zentralblatt für Psychologie und psychologische Pädagogik* is to be published in Würzburg and edited by a *Privatdozent* of the Würzburg University. Its aim will be to give in short form the results of all new investigations in its field. The *Zeitschrift für Individualpsychologie* will contain studies in psychotherapy, psychology, and pedagogy. The publisher is Reinhardt, of München.

A NEW GEOMETRY for SCHOOLS.

By GEORGE LAWSON, RECTOR, WAID ACADEMY, ANSTRUTHER.

Book I (Triangles and Parallelograms). 9d. net.

Book II (Areas) and Book III. (Circles). 9d. net.

Book IV (Ratios). 9d. net.

Books I-IV (Corresponding to Euclid's "Elements" I-VI). 280 pages. 2s. net.

Books I-III (Corresponding to Euclid's "Elements" I-IV). 192 pages. 1s. 6d. net.

The book presents the ordinary modern school course in Plane Geometry.

The introductory work on Concepts and Definitions, and the section at the end of Book I on Constructions, use of squared paper, heights and distances, field work, and on parallels in Geography and Astronomy, make up a practical course, to precede or to accompany the theoretical course.

The difficulties of the learner are kept in view throughout. A notable feature of the volume is its admirable collection of riders and deductions.

The book suggests two changes:—The first is a new proof of the 3-side congruence, simpler than the ordinary proof. The second change is that new proofs, easier than the ordinary ones, are given of the fundamental theorems in ratios of lines, angles, and areas.

38 Soho Sq., LONDON, W. **CHAMBERS** 339 High St., EDINBURGH.

THE PUBLIC SCHOOL SPELLING CARD.

Sixtieth Thousand. Price 6d. (3d. net to purchasers of 100 Cards).
Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than twenty years), with Rules.

Also, in Book Form.

HOW TO SPELL AND SPEAK ENGLISH.

Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

By H. R. LADELL, M.A.

(late Head Master of the London International College, Isleworth).

FRENCH ESSENTIALS AND FRENCH CONVERSATION SENTENCES.

Fourth Edition. Price 2s., cloth. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*The Journal of Education*.

"The sentences are a useful addition."—*Bookman*.

SHORT FRENCH EXAMINATION PAPERS (110).

Each containing Six Idiomatic Sentences to render into French.
Very Useful for Oral Work. Second Edition. Price 2s. 6d. cloth.
By the same Author.

"A very useful set of questions."—*Modern Language Quarterly*.

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*The Journal of Education*.

A KEY (with a list of errata), issued to Teachers and Private Students only, can be obtained from the Publishers, 6s. net. (Half-price to purchasers of a dozen copies of the Examination Papers.)

6 Charterhouse Buildings, Aldersgate, London, E.C.

**Increase of
Women Students.**

together some interesting figures in reference to women students at the Universities. Let us look backward some fifteen years. In 1900 the number of French *étudiantes* was 624; in 1905 it was 1,148; and in 1914 it is 2,547, or more than four times as many as in 1900. Figures are barren unless you fertilize them with reflection; the increase indicates a changed attitude of the French woman in regard to life. Examining, in particular, the years 1912, 1913, and 1914, we find that the number of French *étudiantes* rose from 2,114 to 2,315, and then to 2,547. Whilst the French women at the Universities were multiplied thus, the lists showed fewer foreign; not because France had lost her attractiveness, but because improved provision for the higher education of women was being made elsewhere. To what subjects are French women applying themselves? In the present year 88 of them are studying law; 613, medicine; 508, science; 1,288, letters; and 50, pharmacy. It is only in the last-mentioned Faculty that the number has fallen.

In Paris, and not solely in Paris, the thirst for modern languages grows. The July number of *Langues Modernes* publishes some interesting statistics of the number of students in the provincial Faculties of Letters for the period 1912-1914.

	1911-12	1912-13	1913-14
Philosophie	320	296	322
Histoire	337	407	426
Lettres	304	332	315
Langues vivantes.....	825	920	933

UNITED STATES.

Head masters, in choosing their assistants, seldom inquire into an important matter—whether the candidate can speak distinctly and impressively. Yet in modern education skill in oral discourse is of as much account as strength to wield the ferrule was of old. The new pedagogy is persuasive, and your teacher should be in some degree an orator. In the United States they are beginning to realize this. We have before us the new Circular (or, as the English say, Calendar) of the Johns Hopkins University. In the Undergraduate Course of English Composition, which is the same for embryo teachers as

for future publicists, are embraced "The Forms of Public Address," about which instruction is offered in alternate years. Practice in exposition and argument is imposed, and the undergraduates have their attention directed to the history of American oratory and to the critical study of great American debates. We quote what the Circular tells us of further Undergraduate Courses in "Public Speaking." "1. *Reading and Platform Speaking*.—In this course attention is paid to correct habits of breathing and to enunciation and expression. The work of the second half-year includes the study and practice of speeches adapted to various special occasions. The course is prescribed during the second year. 2. *Public Speaking*.—The principles of argumentation; practice in argumentative writing and in debates; parliamentary procedure. This course is prescribed during the third year."

Reading "war news" calls up the thought that this is a lying world. The Spirit of Mendacity is abroad; you can hear the beating of its wings. In evidence of its work in the field of education we translate a paragraph from a French journal. There has been in existence in the United States, says the journal, since 1901 an ingenious piece of mechanism called the *Castigateur orthomatique*, which, regulated with the utmost precision, administers a promised flogging to a bad boy. At the same time a phonograph utters in his ear exhortations and moral precepts. Teachers and parents express themselves as delighted with the instrument. (Testimonials from the actual sufferers have apparently not been solicited.) A father wrote: "I am completely satisfied now with Tom's progress, and I attribute it solely to your *Castigateur orthomatique*. Be good enough to set him in it every Saturday morning, or oftener if it seems expedient."

INDIA.

Indian Education (XII, 12) contains an interesting account of the Scout system as in the Sardars' High School, Belgaum. The English system is modified to suit the climate and customs of India, but not in such a way as to impair its intrinsic value. The chief aim is to inculcate a spirit of practical morality and, the Indian boy being somewhat apathetic, to call forth keenness in work and play.

Dusmo has been used at University College for
about two years, and has proved, when properly applied, to
be most satisfactory.

H. WESLEY VOYSEY,
Superintendent of Buildings.

Again, masters and boys are brought into closer touch through Scouting: for the head master is *ex officio* Chief Scout, and those of the masters who choose to take the vow become at once Major Scouts. Moreover, since to obtain promotion in the corps a high percentage of marks for school work is required, the classroom is connected with the out-of-door exercises. A detail illustrates the difficulty of education in India. The vow of the Scout includes a pledge to avoid "sin." But how is "sin" to be interpreted? What is sin to a Brahmin would in many cases be considered no sin by a Maratha, or a Mohammedan, or an Englishman. Sin, then, is defined to be a form of wrongdoing, such as dishonesty or impurity, that would be condemned by all castes.

Bengal is desirous of having a public school on the English model. A proposal to this effect emanated from some leading members of the High Court Bar and other influential persons, and it has been favourably received by the Government. As yet the scheme is not fully developed, but the main features are that the principal and some of the assistant masters will be brought out by the Government, which will maintain control. It is proposed that boys shall remain in the school up to the age of eighteen or nineteen, and that the teaching shall be sufficient to enable them to go from there straight to an English University, or to begin study for any of the learned professions. Those who desire to take the degrees of the Indian Universities will also have ample facilities afforded to them for attaining their object. But the promoters attach importance, above all, to the effect of sodality as a discipline and in the formation of character. The community life of an English public school is believed to be an incomparable remedy for some Indian weaknesses.

Wanted—a Public School.

A cheerless picture is drawn of the prospects of the secondary teacher in India. He will begin with a salary of Rs. 40—till lately it was only Rs. 30. For two years, being only provisionally employed, he cannot expect promotion. He can become a permanent teacher only when he obtains, after a year's study at the Secondary Teachers' Training College, Bombay, a diploma. This he can do only if he is deputed by the Department, which, again, is impossible unless he is recommended by the Educational Inspector on the satisfactory nature of his work, or on the initiative of the Head Master. The Training College admits but a very limited number each year. The teacher has therefore to wait at least two years on Rs. 40 before he can enter its portals. He continues to draw Rs. 40 during his year of study there. He then becomes a stamped, genuine coin and may look to go farther. It is estimated that a teacher takes from twelve to fifteen years to reach a salary of Rs. 100. The view may be pessimistic; we give it in the form that it has reached us.

CAPE OF GOOD HOPE.

The Report of Some Details of Progress.

The Superintendent-General relating to the year ended September 30, 1912, indicates a substantial increase in the number of schools under the Education Department—from 4,157 to 4,334—many of the new schools being in country places previously unprovided for. The enrolment has risen from 201,802 to 216,803, whilst the average daily attendance has also increased, the improvement being from 175,511 to 187,389. As regards attainment, there is a pleasing growth in the number of white children continuing their education beyond the compulsory limit—namely, Standard IV; the growth in the upper Standards in native and coloured schools is less satisfactory, whilst three-fifths of the pupils in these schools are to be found below Standard I. The "Special Subjects of Instruction," Music, Needlework, Woodwork, Drawing, Domestic Science, Nature Study, and Drilling, are more generally pursued, and are coming to be regarded as essential parts of the school curriculum. As to teachers, their qualifications show a slight improvement. Fair progress has been made with the provision of school buildings, and the new scheme for supplying portable structures seems likely to be successful.

Application and Effect of Compulsion.

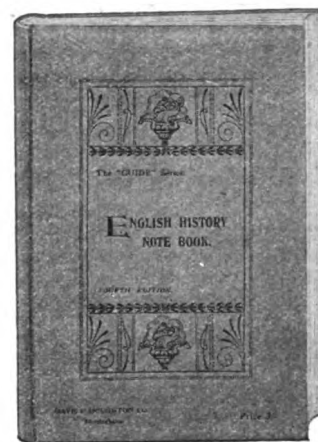

The most important sections of the Report deal with the application of the School Board Act (1905), which requires the attendance of the children in a circle of three miles radius round a public school. The compulsory clauses are now in operation in 114 out of 118 School Board areas. There has been an increase of 15,282 in the enrolment during the last three years: that is, of nearly 20 per cent. But, whilst compulsion has been effective, the increase has been due in part to natural growth and in part to the improved financial condition of the province. The three-mile limit leaves a large region outside of the operation of the law. Accordingly the

The envelope containing this coupon need not be stamped.

Act empowered School Boards to make arrangements for the conveyance to school of children outside the circumscribed area. The cheapest form of transport is by donkeys or donkey carts. But in some cases it is urged that the children cannot manage the animals, or the donkey, kept on unfenced land, wanders so far that the quest of it involves a longer walk than attendance at school. An Inspector writes of landowners who refuse to give school children a right-of-way over their ground, and of others who are unwilling to allow schools for the children of their dependents to be erected on their farms.

CANADA.

Dean Galbraith of the University of Toronto died suddenly on July 22 at his summer residence, Go Home Bay, Muskoka. His career began on his graduation in the Faculty of Arts at the Provincial University in 1868, with honours in pure mathematics. He chose engineering for his work in life, and studied several branches of it—mechanical engineering, railway engineering, civil engineering as well as land surveying. Fitly when the Ontario Government established a School of Practical Science he was appointed its first President. On the merging of that institution in the University of Toronto, he received the title and office of Dean of Applied Science. In this capacity he did good service to the University and the Province—labouring on when he might have rested.

UNIVERSITIES AND SCHOOLS.

BEDFORD COLLEGE FOR WOMEN.

The Council of Bedford College have made the following appointments:—Assistant Lecturer in Mathematics—Mr. C. Glemmow, B.A. Cambridge (Assistant Lecturer in Mathematics at the University of Manchester). Assistant Lecturer in English Literature—Mr. A. MacDougall, B.A. Oxford (Assistant to the Professor of English at Queen's University, Belfast). Assistant Lecturers in the Training

Department—Miss J. McWilliam; Miss Ryle, Somerville College, Oxford (Aigburth Vale High School, Liverpool). Assistant in History—Miss D. Hughes, M.A. London (Bedford College). Demonstrators in Physiology—Miss G. Hartwell, B.Sc. Hons. London (Bedford College); Miss N. Tweedy, B.Sc. Pass London (Bedford College). Demonstrators in Chemistry—Miss E. Field, B.Sc. Hons. London (Junior Demonstrator at Goldsmiths' College); Miss B. M. Paterson, B.Sc. Hons. (Laboratory Demonstrator at St. Andrews, Carnegie Research Fellow). Demonstrator in Geology—Miss I. Lowe, B.Sc. Hons. (Bedford College). Secretary to the Principal—Miss E. M. Haydon, B.A. London (Bedford College). Assistant Librarian—Miss Jean Ramsay (Library Training School, Cheltenham). The Reid Fellowship for the Session 1914-15 has been awarded to Miss A. J. Davey, B.Sc. (Demonstrator in Botany).

Results of Entrance Scholarships Examination: Clift-Courtauld Scholarship in Arts—Miss F. M. Warren (North Middlesex School for Girls, Enfield). Recommended for the Reid Trustees' Scholarship in Arts—Miss J. L. D. Waller (County Secondary School, Sydenham). Pfeiffer Scholarship in Science—Miss E. M. Blackburn Brown (High School, Manchester). Arnott Scholarship in Science—Miss D. P. Clapham (Dame Alice Owen's Girls' School).

Scholarships and Bursaries in the Training Department have been awarded as follows: Gilchrist (£30)—Miss D. L. Poole, M.A. Adelaide, Med. Mod. Lang. Tripos Camb. Free Place (£26 5s.)—Miss M. Muncaster, B.A. Manchester, Eng. Hons., Class I. Bursaries (£10)—Miss M. M. Lee, Classical Tripos, Class II; Miss W. Ayres, B.A. Manchester, Eng. Hons., Class II; and Miss V. L. Edminson, Med. Mod. Lang. Tripos, Class III.

WALES.

By the death of Sir Edward Anwyl, the Principality has lost one of its most prominent and distinguished public men. Sir Edward, who was only forty-eight years of age, was born at Chester and educated at the King's School in the same city. He gained a classical scholarship at Oriel College, Oxford, and graduated with First Class in Moderations and Second Class in Literae Humaniores; and afterwards continued his studies at Mansfield College. In 1892 he was appointed Professor of Welsh at the University College

(Continued on page 646.)

RALPH, HOLLAND, & CO.

RECENT PUBLICATIONS.

ENGLISH COMPOSITION.

A SYSTEMATIC COURSE FOR SCHOOL USE.

By HARRY PINE, with an Introduction by F. H. HAYWARD, D.Litt., M.A., B.Sc. In two parts for pupil's use, containing 80 and 76 pages respectively. Crown 8vo. Price 6d. each.

Complete in one volume, together with additional matter for the teacher. Crown 8vo. Cloth. Price 1s. 6d.

This work is intended for class use, and aims at the direct teaching of composition on a definite plan by means of a series of carefully arranged and progressive exercises. These are designed to correct the faults most frequently found in children's composition, both oral and written.

It forms the basis for the teaching of children of all ages, and yet leaves plenty of scope for originality on the part of the teacher.

ENVIRONMENT: A Natural Geography.

By G. R. SWAINE, F.R.Met.S.,
Geography Master at the Manchester Warehousemen and Clerks' Schools.
Crown 8vo. Cloth. 224 pp. Price 1s. 9d.

The World in Natural Regions treated under the following sections:—

I. The Polar Regions. III. The Warm Temperate Regions.
II. The Cool Temperate Regions. IV. The Hot Lands.

The aim of the book is to show the intimate connexion between man and his geographical environment, and special attention is paid to the climatology, structure, and general physical conditions of each region. The origin and development of towns is fully dealt with, and the influence of environment on plant and animal life is made a special feature. Original maps, illustrative sketches, and photographic plates are frequently interspersed.

A REGIONAL GEOGRAPHY OF THE SIX CONTINENTS.

By ELLIS W. HEATON, B.Sc., F.G.S.

Book I.—EUROPE. Crown 8vo. Cloth. 135 pp. With 45 Maps and Diagrams. Price 1s.
Book II.—ASIA. Cloth. 94 pp. With 21 Maps and Diagrams, and 6 Photographic Plates. Price 9d.
The other Continents will be published in due course.

A DIGEST OF BRITISH HISTORY.

By S. H. MCGRADY, B.A., with an introduction by OSCAR BROWNING.

Crown 8vo. Cloth. 341 pp. Price 2s. 6d.

Also obtainable in three parts as follows:—Part I, B.C. to 1485; Part II, 1485 to 1789; Part III, 1789 to 1912. Price 1s. each.

Mr. OSCAR BROWNING says:—"I can conscientiously recommend it, both to teachers and learners. The first will find it an excellent syllabus for oral teaching, without which no efficient instruction in history can be given, and the second will find it useful in revising what they have been taught, and in breaking new ground for themselves. For these reasons I venture to predict for it a wide circulation."

A COMPARATIVE GEOGRAPHY OF THE SIX CONTINENTS.

By ELLIS W. HEATON, B.Sc., F.G.S.

Crown 8vo. Cloth. 219 pp. Price 1s. 9d.

Containing 119 Maps and Diagrams, all new and specially drawn for this work, and 10 Full-page Photographic Plates. Treated under two main divisions—(a) The Three Northern Continents; (b) The Three Southern Continents.

BOOK WAYS.

An Introduction to the Study of English Literature.

By EDITH KIMPTON, M.A., A.K.C. (Author of "The Story Thread").

New edition with a prefatory letter by the late THEODORE WATTS-DUNTON.

Crown 8vo. Cloth. 296 pp. Price 2s.

This book has been written in response to inquiries for a work similar to "The Story Thread," but of a more advanced character. Overlapping has, therefore, been avoided wherever possible. The book is so designed that it may be used either as a textbook or as a reader, but it does not profess to be exhaustive. "Book Ways" is, daringly perhaps, brought up to present times.

"A really delightful and enticing entrance into the realms of literature."—*The Head Teachers' Review.*

Vol. II (Chapters XVII to XXVIII). Cloth, **1s.** [In preparation]

THOMAS MURBY & CO., 6 BOUVERIE STREET, E.C.

Price Sixpence.

POULTRY TYPES

A TINY BOOK OF VERSE.

By WILLIAM RICE,

Vice-President of the Poultry Club, and Secretary of its Essex County Branch, &c.

Poultry says: "Worth buying and reading."

The Bazaar, The Exchange and Mart says: "Every poultry-keeper should read them."

Feathered Life says: "It is a rattling little collection of verse, and, if it does touch weak spots in fancy folk, the touch is light and forgotten in the laugh."

Monthly Hints on Poultry says: "The poems are terse, witty, and to the point."

The Feathered World says: "All are neatly hit off in a few terse lines."

The Practical Teacher says: "The weaknesses and frailties of the fraternity are very aptly put into verse."

The Farmers' Gazette (Dublin) says: "This amusing little book."

Irish Farming World says: "Will be scanned with amusement."

Pigeons says: "They are very amusing, and many of them are as applicable to the Pigeon Fancy as to the Poultry Fancy."

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

of Wales, Aberystwyth; but so great was his versatility that he combined with the Welsh professorship a lectureship in comparative philology and also helped with the work in Latin and Greek. He has made many valuable contributions towards Celtic scholarship and research, some of them being regarded by scholars as standard. His papers on Neolithic and Palæolithic man in Wales, in the *Cambrian Archaeological Magazine*, are of special interest to Wales, and they give evidence of a very exhaustive inquiry into the problem. But Sir Edward was very far from confining his activities to mere dry-as-dust subjects. On the contrary, he was one of the most prominent of our public men. He was President of the Theological Board of the University, and in this capacity he had a great share in fixing the high standard which the University requires from its B.D. candidates. But it is probable that it is as the Chairman of the Central Welsh Board that he will be more especially remembered in Wales. He regarded the work of the Board with real affection, and his devotion to it immediately impressed everyone who knew him. Though his time was fully occupied with other duties, yet he never missed a meeting of the Board or its Executive Committee; and, however, complicated a question might appear to be to the members, Sir Edward had a firm grasp of it, and seemed able to give them a clear guidance as to the best policy to pursue. Wales, indeed, owes him a very deep debt of gratitude for his work, for it is difficult to overestimate the ability and whole-hearted sincerity with which he has presided over the deliberations of the Board during the last years. Those of us who knew him personally will remember him for his charm of manner and his strong and sterling personal character. He had recently resigned his professorship at Aberystwyth and had been appointed Principal of the Caerleon Training College. He was knighted on the occasion of the Royal Visit to Bangor in 1911, an acknowledgment of his work for secondary education as well as of his contributions to Welsh Scholarship.

Mr. E. Derry Evans, from the Towyn County School, has been appointed Head Master of the Holyhead County School in succession to Mr. R. Pugh Jones.

Principal Roberts, the Vice-Chancellor of the University, has sent a letter to the Press to state that those students of the University who are required to attend to their duties in the Territorial Force will not be placed under any disadvantage as regards the keeping of the necessary number of terms for their degrees.

PRIZE COMPETITIONS.

HOLIDAY COMPETITIONS.

Prizes to the amount of Ten Guineas are offered for the following competitions:—

DRAWING.

1. A black-and-white illustration of any ballad.
2. A landscape in water-colours, with motto "Divini otia ruris."

PHOTOGRAPHS.

1. A set of five kodaks representing "Our Village" or "A Day in the Country."
2. A group of children.

LITERARY.

1. Critical notes on Gray's "Elegy." Limit, 250 words.
2. "An overworked Assistant Mistress has been ordered by her doctor rest and change. If some kind lady will supply the means for a month's travel on the Continent (say £30) she will in return furnish her benefactress with a series of racy letters describing her adventures."—[Advt.] A specimen letter. Limit, 400 words.
3. A dialogue between a Froebelian and a Montessorist. Limit, 400 words.
4. A translation into English of five (or fewer) epigrams in Greek, Latin, French, or German. Limit for the whole, 50 lines.
5. A recipe for "A Faultless Dominie." (The well known recipe for "A Blameless Prig," ending "Keep in a cool barge for future use," may serve as a model.)
6. A motto for London.

All competitions must reach the Office not later than September 16. Photographs, except of prize winners, and drawings will be returned if accompanied by a stamped and addressed envelope or wrapper.

COUNTY OF LONDON.

THE LONDON COUNTY COUNCIL.

invites applications for the position of WOMAN LIBRARIAN of its Education Library. The salary will be £120 a year, rising by annual increments of £10 to a maximum of £200, and the person appointed will be required to give her whole time to the duties of the office. Preference will be given to candidates who have had teaching experience. It is desirable that candidates should have some knowledge of English and Foreign Literature, and be able to speak and write both French and German. It is also desirable that they should have some acquaintance with reports on educational subjects published at home and abroad. The successful applicant will be required to undertake the organisation of the routine work of the Library, and to give assistance to teachers and others who make use of it.

Applications should be made on a form to be obtained from the EDUCATION OFFICER, London County Council, Education Offices, Victoria Embankment, W.C., to whom they must be returned not later than Monday, 28th September, 1914, accompanied by copies of three testimonials of recent date. All communications must be marked "Librarian," and a stamped addressed foolscap envelope must be enclosed.

Canvassing, either directly or indirectly, will disqualify an applicant.

LAURENCE GOMME,

Clerk of the London County Council.

Education Offices,
Victoria Embankment, W.C.
7th July, 1914.

COUNTY OF LONDON.

GUIDE DEMONSTRATOR AT HORNIMAN MUSEUM.

THE LONDON COUNTY COUNCIL.

invites applications for the position of part time GUIDE DEMONSTRATOR at the Horniman Museum, Forest Hill, to give lectures to teachers and to explain the exhibits to visitors. The Museum is divided into Ethnological and Zoological departments, and it is desirable that candidates should be qualified in both these subjects and should have had experience in teaching or lecturing. Attendance will be required on three half-days a week to be determined by the Council: the salary will be £50 a year. Applications must be on forms to be obtained by sending a stamped addressed foolscap envelope to the Clerk of the Council, County Hall, Spring Gardens, S.W., to whom they must be returned by 11 a.m. on Wednesday, 30th September, 1914. Every communication must be marked "Guide Demonstrator" on the envelope. Canvassing, either directly or indirectly, will disqualify an applicant.

LAURENCE GOMME,

Clerk to the London County Council.

County Hall,
Spring Gardens, S.W.

WANTED.—A YOUNG LADY

in small Boarding School. German in exchange for English. Apply—Fräulein CAROLUS, Augustenstrasse 6, Rostock, Mecklenburg, Germany.

COUNTY OF LONDON.

THE LONDON COUNTY COUNCIL.

invites applications for the undermentioned positions of ASSISTANT MISTRESSES, vacant in January, 1915, on the staff of the County Secondary School, Fulham:—

Salary £120 to £170, according to previous experience, rising to £220 by yearly increments of £10.

- (a) ASSISTANT MISTRESS to teach English or History and Scripture.
- (b) ASSISTANT MISTRESS to teach English, with French, including phonetics, as a subsidiary subject.

Both Mistresses must have passed the Final Examination for a Degree held by a recognized University, and in the case of the second post must have taken Honours in such an Examination. Musical qualifications will be an additional recommendation for the first position. Both Mistresses will be required to take charge of a Form, and should have had good Secondary School experience.

Applications must be on forms to be obtained, with particulars of the appointment, by sending a stamped addressed foolscap envelope to the EDUCATION OFFICER, London County Council, Education Offices, Victoria Embankment, W.C., to whom they must be returned by 11 a.m. on Saturday, 10th October, 1914. Every communication must be marked "H 4" on the envelope.

Canvassing, either directly or indirectly, will disqualify for appointment. No relative of a member of the Advisory Sub-Committee of the School is eligible.

LAURENCE GOMME,

Clerk of the London County Council.

Education Offices, Victoria Embankment, W.C.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.

Supplement to THE JOURNAL OF EDUCATION.

No. 542.

SEPTEMBER 1, 1914.

BOOKS FOR THE NEW TERM.

The Mother Tongue Series.

THE PRACTICE OF ENGLISH.

(Being Book II of the English edition of
"THE MOTHER TONGUE.")

Edited by J. W. ADAMSON, Professor of Education in the University of London, and A. A. COCK, Lecturer in Education in King's College, London.

363 pages. Price 2s. 6d.

A sequel to the well-known Book I, English edition, of "The Mother Tongue" prepared for the use of Secondary Schools and for the senior classes of elementary schools; it is available in one volume or in three separate parts. This revision is based on Books II and III of the original work.

The new volume contains a complete course in composition and such grammar as is necessary for the more advanced practice of the mother tongue. A special feature is the adoption of the principal recommendations of the recent Report on Grammatical Terminology, published through the English Association.

The exercises in composition are also designed to serve as an introduction to literary appreciation and criticism. For the purposes of these exercises the book is well provided with examples of standard prose and poetry.

A New Algebra.

ELEMENTS OF ALGEBRA.

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., LL.D., Professor of Mathematics in Teachers College, Columbia University.

Part I. Now Ready. 346 pages. Price 3s.

In placing this book on the market the publishers have every confidence that it will meet with real success. The authors, whose work is too well known to need any further comment, are both *specialists*, and their aim has been to write a book containing all the work needed in an ordinary school course not leading to any specific examination. They have tried to retain those features which have conduced to the success of textbooks in the past, at the same time incorporating such modern methods as now appear likely to stand the test of experience. Part I of the "Elements of Algebra" may therefore be described as **modern, progressive, and sane**, and, as the authors have given of their best to write a book of real merit, so have the publishers endeavoured to bring it out in a form worthy of the matter.

Books suitable for the University Local Examinations, 1915.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

THE WAR AND THE SCHOOLS.

The first effects of the War are likely to be serious on many English Schools, but we are anxious to do our utmost to enable our clients to keep up their numbers.

It is, we think, generally recognized that a reduction in fees will be necessary, not only for the children of officers in the Army and Navy, but also for those whose finances have been seriously affected. We would ask our clients to notify us of the reductions they are willing to make. Of course there is a limit beyond which fees cannot be reduced.

As many children will not be able to return to schools on the Continent for some considerable time, they will have to enter establishments in this country, and preferably those which give special facilities for the study of French and German. Several of our clients have already notified us that they have native resident teachers on their staff.

Principals of some of the smaller schools may find it advisable to amalgamate, and we shall be glad to place our services at their disposal for this purpose.

Judicious advertising should be very helpful at this time, and, being experts in the matter of educational publicity, we shall be glad to advise as to the form of advertisement and media to be used to ensure the best possible return. Nervous economy just now in the matter of advertising is very unwise, and may prove most costly.

Head Masters wishing to replace Assistants who have been called up for service are invited to communicate with us, as in addition to ordinary Form Masters we have a number of capable Language Masters now available.

SOME RECENT CLASS BOOKS IN ENGLISH, HISTORY, & GEOGRAPHY.

English Course, Preliminary. Including Grammar and Composition. By A. M. WALMSLEY, M.A., late Senior Master at Middlesbrough Boys' High School. 1s. 6d.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded, and the author has kept in view the real aim of grammar, namely, the production of good English."—*Athenæum*.

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s. 6d.

"Excellent devised and arranged."—*School World*.
"A useful handbook . . . lucid and thoughtful."—*Cambridge Review*.

English Composition, Junior Course of. By E. W. EDMUNDS, M.A., B.Sc. 1s. 6d.

"A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education*.

English Grammar, with Parsing and Analysis, Junior. By A. M. WALMSLEY, M.A. 1s. 6d.

"A simple and satisfactory grammar which avoids most of the superfluity of naughtiness of the old grammarians."—*The Journal of Education*.

English Grammar and Composition, Junior. In One Volume. 2s. 6d.

History of England, The Tutorial. By C. S. FEAREN-SIDE, M.A. 4s. 6d.

"An excellent textbook for the upper forms of a school."—*The Journal of Education*.

History, Groundwork of English. By M. E. CARTER, Honour School of Modern History, Oxford. 2s.

"Any student in search of the best bird's-eye view of English History will here find his reward."—*School Guardian*.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three Parts as follows:—I, To 1603; II, 1485 to 1714; and III, 1660 to 1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

History of England, Preliminary. By M. K. ELLIOTT (Honours in the Historical Tripos, Cambridge) and M. S. ELLIOTT, B.A. 2s.

This book is intended for the use of learners of the ages of ten to thirteen, and in addition to political history deals fully, though in an elementary way, with those social and economic questions to which modern history teaching now rightly attaches such importance.

Geography, Text-book of. By G. C. FRY, M.Sc. With Coloured Maps. *Second Edition, Revised.* 4s. 6d.

"Those who need a comprehensive textbook of Geography for upper forms can do no better than adopt Mr. Fry's work."—*Secondary Education*.

Geography, Junior. By G. C. FRY, M.Sc. 2s. 6d. An Elementary Textbook of Physical and Descriptive Geography.

"The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education*.

Geography, Preliminary. By E. G. HODGKISON, B.A., Assistant Master County Secondary School, Crewe. 1s. 6d.

"This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils."—*Teacher's Times*.

OLD-FASHIONED ACADEMIES FOR YOUNG LADIES AND GENTLEMEN.

By ALICE PATERSON.

IN these days, when all printed matter, though it be no more deserving of the name of literature than a play-bill or a calling-card, if it but belong to another age than our own, is looked upon as grist to the mill of the student of life and manners, a special interest attaches to old-fashioned children's books. While all such books are valuable aids in reconstructing the social life of the period to which they belong, one section of them is particularly illuminating in the study of educational history—those in which school life is itself depicted. Two stories of boarding-school life are now before us—"The Governess; or, the Little Female Academy," written in 1749 by Sarah Fielding, author of "David Simple" and sister of the novelist, and "The Academy; or, a Picture of Youth," published anonymously in 1808. Both books are, it is true, first and foremost moral tales, and for that reason cannot be taken quite literally. Their purpose is primarily to instruct while entertaining, not to give a realistic picture of school life. Yet, in spite of artificialities in both books, it is easy by means of them to trace in its broad outlines a picture of the small boarding school—for boys and for girls—as it existed throughout the eighteenth century and well on into the nineteenth.

The Little Female Academy is situated "in the northern parts of England." Mrs. Teachum, its head mistress, is the widow of a clergyman "with whom she had lived nine years in all the harmony and concord which form the only satisfactory happiness in the married state." Deprived of both her children within a year of her husband's death, "by a violent fever that then raged in the country," and left penniless "by the unforeseen breaking of a banker, in whose hands almost all her fortune was just then placed," she decides to undertake "what she was so well qualified for, namely, the education of children." Having no desire to make a large fortune she limits the number of her pupils to nine, and so highly is her personal care for each valued by their parents, that "it was looked upon as a great favour when she would take any girl." A lifelike portrait is drawn for us of this excellent Georgian schoolmistress. "Mrs. Teachum was about forty years old, tall and genteel in her person, though somewhat inclined to fat. She had a lively and commanding eye, insomuch that she naturally created an awe in all her little scholars, except when she condescended to smile and talk familiarly to them, and then she had something perfectly kind and tender in her manner." She is a schoolmistress of the comfortable, motherly type—a kinswoman of kindly Mrs. Goddard, in Jane Austen's "Emma," who in winter used to dress her pupils' chilblains "with her own hands," rather than of Thackeray's Miss Pinkerton, of the Roman nose and turban.

The names of the nine little scholars suggest their characters with an aptness worthy of Bunyan—Miss Jenny Peace, Miss Sukey Jennett, Miss Dolly Friendly, Miss Lucy Sly, Miss Patty Lockit, Miss Nanny Spruce, Miss Betty Ford, Miss Henny Fret, and Miss Polly Suckling. Most of them are not yet twelve years old; the eldest, Miss Jenny Peace, is fourteen and leaves school at that age. As in Mrs. Goddard's school, there is no pretence of combining "liberal acquirements with elegant morality upon new principles and new systems." On the other hand our little Academy would never, we feel sure, have been honoured, as was Miss Pinkerton's establishment, "by the presence of the Great Lexicographer or the patronage of the admirable Mrs. Chapone." For, true to eighteenth-century traditions, the curriculum is a modest one, embracing only instruction in "Reading, Writing, and Working, and in all proper forms of behaviour."

It is not difficult to reconstruct the school day of the happy nine. It is begun early with "public prayers" read by Mrs. Teachum and a walk in "the pleasant garden surrounding the house," while breakfast is being prepared.

Morning and afternoon are given up to lessons, but in the cool of the evening the children assemble again in the garden or in the arbour. On Saturdays all the young ladies are engaged in writing letters to their parents in the period between morning school and dinner. On Sundays "our little society rose very early, and were all dressed with neatness and elegance to go to church. Mrs. Teachum put Miss Polly Suckling (the youngest) before her, and the rest followed, two and two, with perfect regularity." On half-holidays a walk is proposed—it may be to the dairy-house to eat curds and cream. Mrs. Teachum accompanies the children, who run in the fields and gather flowers, and beguile the way with talking and singing. After a meal of "cream, strawberries, brown bread and sugar" they visit the garden and orchard till it is time to return home.

Such a simple out-of-door life made for health in the little pupils, and, if Miss Jenny Peace be not an exception, for beauty as well. The portrait of Miss Jenny is given in detail. "She was turned of fourteen and could be called neither tall nor short of her age, but her whole person was the most agreeable that can be imagined. She had an exceedingly fine complexion, with as much colour in her cheeks as is the natural effect of perfect health. Her hair was light brown, and curled in so regular and easy a manner as never to want any assistance from art. . . . She had fine teeth, and a mouth answering to the most correct rules of beauty, and when she spoke (though you were at too great a distance to hear what she said) there appeared so much sweetness, mildness, and good nature that you found yourself filled more with pleasure than admiration in beholding her."

But discord will enter even into a paradise of children, and there follows close upon this picture of love and amity "an account of a fray begun and carried on for the sake of an apple, in which are shown the sad effects of rage and anger." It is the famous Battle in the Churchyard of "Tom Jones," brought down to the nursery level, and it happens thus: One summer's evening, when the young ladies are diverting themselves in the garden, their governess brings out a basket of apples intending to share them equally among them. She is suddenly called away, and is obliged to leave the fruit with Miss Jenny Peace, with strict injunctions to divide it equally. Unfortunately one apple is somewhat larger than the rest, and each of the young ladies makes up her mind that she must have it. "Each gave her reasons why she had the best title to it: the youngest pleaded her youth, and the eldest her age, one insisted on her goodness, another from her meekness claimed a title to preference: and one in confidence of her strength, said positively, she would have it." Miss Jenny, unable to pacify them, finally throws the apple over the hedge into another garden.

Thereupon ensues chaos, and in reading what follows one feels that good Dr. Watts, inditing his "Let dogs delight" for the prim eighteenth-century child, knew better what he was about than would at first sight appear. Alas! for "all proper forms of behaviour"! "They fell to pulling of capes, tearing of hair, and dragging the cloathes off one another's backs though they did not so much strike as endeavour to scratch and pinch their enemies." One young lady hits out with such force that she fells "her enemy to the ground." By the time Mrs. Teachum reappears the fray is over, but "each of the misses held in her right hand, fast clenched, some marks of victory, for they beat and were beaten by turns. One of them held a little lock of hair, tore from the head of her enemy, another grasped a piece of a cap, which, in aiming at her rival's hair, had deceived her hand, and was all the spoil she could gain: a third clenched a piece of an apron; a fourth, of a frock. In short, everyone unfortunately held in her hand a proof of having been engaged in the battle, and the ground was spread with rags and tatters, torn from the backs of the little inveterate combatants." Miss Jenny Peace, who alone has not shared in the strife, is called upon to explain. The culprits excuse themselves sobbing, but to no purpose. "Mrs. Teachum's method of punishing," discreetly remarks our author, "I

never could find out. But this is certain, the most severe punishment she had ever inflicted on any misses since she had kept a school was now laid on these wicked girls who had been thus fighting and pulling one another to pieces, for a sorry apple." She finishes by bidding the girls embrace one another and promise to be good friends in future. Complete reconciliation is effected by Miss Jenny Peace, who, in keeping with her character as heroine of a moral tale, produces a basket of apples which she has bought out of her own pocket-money, and distributes its contents amongst her companions. She also, in order to encourage the growing spirit of amity, volunteers to tell the story of her own life, and thus to show how she came by her peace-loving disposition, and suggests that each of the little girls do the same on each succeeding day for nine days. The autobiographies of the nine children, written down and edited by Miss Jenny, make up most of the rest of the volume, and so great does the rage for story-telling become that every spare minute is spent sitting in the arbour listening to a tale. Miss Jenny Peace herself reads the tale of "the cruel giant Barbarico, the good giant Benefico, and the little pretty dwarf Mignon." But this arouses Mrs. Teachum's alarms. Like many of her contemporaries, she is suspicious of the fairy-tale. "By no means let the notion of giants and magic dwell upon your minds," she admonishes. Fairy-tales must be indulged in by the young only in the strictest moderation, though if the moral be made sufficiently prominent some few may be allowed.

It is a sad day for the Little Female Academy when Miss Jenny Peace is called upon to leave it. The reader feels that the school itself must come to an end without its model girl. But not so: Mrs. Teachum, we are assured, continued ever to exercise "the same watchful care over any young persons who were entrusted to her management; and by the daily improvement of all her girls, it plainly appeared, how early young people might attain great knowledge, if their minds were free from foolish anxieties about trifles, and always employed upon their own improvement."

On reading "The Academy; or, a Picture of Youth," and comparing it with Miss Fielding's "Governess," written some sixty years earlier, one is tempted to conclude, what experience of present-day schools seems to confirm, that the small boarding-school is amongst the most conservative of educational institutions. At all events, if our two little volumes are to be trusted, the early eighteenth-century boarding-school seems to differ but little in spirit and methods from that of the early nineteenth century.

The author of "The Academy" is, unlike Miss Fielding, a teacher by profession. He has "for several years been employed in the education of youth," has taught in a small town and is now established in a large city. He has been at one time a teacher in a hospital and has also been much employed in private tuition. "He has taught all ranks, from the peer's son to the children of the lower orders." We may expect, therefore, to find in his book the product of this wide and varied experience, and, in the opinions and methods of Mr. Macadam, the worthy Rector of the Academy, a reflection of the author's own.

The school is situated "in the vicinity of a pleasant village, a few miles from Edinburgh." Its Head, we are told, "was a man of talents as well as of worth, and while his learning was without pedantry, his manners possessed that engaging affability which is the result of good sense and benevolence."

One questions at first, however, whether, in spite of the engaging affability of his manners, he can have been popular with his boys. He does not, for example, believe in pocket-money, because if money be given at stated periods, the boy "will soon receive it without a sense of gratitude or of obligation." He does not, however, object to the tip, or—as he puts it—money "given only occasionally and without account being rendered." "Corporeal punishment" is included in his discipline, but he aims at raising his pupils "to that dignity of character" to which self-approbation shall be sufficient motive to right conduct. It is an important rule:

with him "never to put it into the power of a boy to be guilty of falsehood," though if a fault be committed by "a boy of noble mind" he will question him about it in private. If the offender cannot be discovered all the boys are deprived of their play.

Having made the acquaintance of the head master of the "Academy," we are now introduced to some of his pupils and incidentally to their parents. The boys belong to various grades in the social scale. Edward Townly is the son of a lord and heir to his title—Joseph Scourhill, the son of a sporting squire—Timothy Tradewell, "of a person who has gained a large fortune by his industry"—John Standfast, of a retired Naval Lieutenant—James Feeblearm, having lost his father at an early age, has been brought up by his mother with the aid of a tutor, Mr. Bendlow. The letters written by the parents of the boys to the head master, introducing their sons and relating the escapades which have necessitated the taking of so drastic a step as sending to school, together with the replies of the Rector, are highly entertaining. Some of them, especially those of the sporting Squire and the Naval Lieutenant, are little short of masterpieces. Lady Townly writes of her son, that "he is a dear youth," and though he perhaps "may not be without his little faults . . . they all arise from the playfulness of his disposition." Her modest hope for his future is "that he should be equally respectable and happy," and we feel that the doubt implied is not altogether imaginary, when we read that he has on one occasion avenged himself on the Honourable Miss Sensitive, who had suggested a good whipping as a fit punishment for some unmannerly trick, by syringing her with wine, thus "making a red flowing stream from the top to the bottom of her gown."

Honest Mr. Tradewell's letter has the true commercial ring: "Please receive per the bearer, my son Timothy, whom I consign to your care. On receipt of this my letter I beg you will turn him to the best account, for I can make nothing of him . . . for the life of me I cannot get him to look me in the face. He has been dismissed from his last school for stealing some tarts, and has since been beaten every day, but to no purpose." The schoolmaster's reply may be quoted: "Our propensities to virtue or vice depend greatly upon the management of our guardians, or upon circumstances which it is their business to watch and control. Youth must be restrained from error by punishment, but they must be led to duty by winning affection."

A wealthy uncle from whom he has expectations, has insisted on sending James Feeblearm to school, because, though "learned in chemistry, botany, natural history, and I know not what all," as his mother fondly writes, he has made his tutor cut a ridiculous figure at a dinner-party by sticking a goose's feather into his crop-wig. The mother's request that her boy shall never be punished, the Rector refuses: "I plead not for severity," he writes, "I observe only that youth must be governed by authority." And so it is with each of the boys—boarding-school is relied upon in every case to provide an antidote to some tendency to mischief or to correct some inherent weakness of character, and in the case of each the Rector proves himself equal to the task.

The boys are not long at school before they show what stuff they are made of. Feeblearm on the morning after his arrival, calls for a servant to help him to put on his shoes and stockings; Townly, having thrown his books into confusion, desires that they shall be put in order for him. Help is refused in both cases, and the Rector improves the occasion, according to his custom, in a manner which we believe to be quite unique. He is in the habit, we are informed, of writing on the schoolroom blackboard almost every morning sentences conveying some moral truth. These he explains to the boys, illustrating sometimes with a story, and asks that they shall repeat them to him in the course of the evening. If the little homilies can be brought to bear on current events, so much the better—when they are called forth by some striking instance of moral obliquity, the names of the individuals concerned are also affixed. Thus, after the

above-mentioned incidents on the first day of term, the blackboard exhibits the following legend:—"We are united to society by our wants, affections and passions; but we should never be dependent on our inferiors by our indolence and weakness. . . . Keep servants at a distance from youth. Bind up the arm for a long period of time, and it loses its power of motion: allow servants to satisfy every wish of a child and its mind loses the power of expansion."

Sunday brings with it more revelations of character. Whilst Mr. Macadam is conducting his little flock to church they start a hare from the furze by the roadside. Scourhill, his sporting propensities at once aroused, leaps on a wall, waves his hat, and hallos loudly, till the Rector recalls him to propriety by gently pulling him down.

In church, Townly objects to Tradewell sitting above him. Standfast, becoming aware of a farm-servant asleep in the pew immediately behind him, whose snoring is neither "low nor melodious," applies a large pinch of snuff dexterously to his nose, with the result that the rustic, dreaming that he is urging a team of horses up the hillside, shouts aloud "Jeho, bravely done!" thus obliging the clergyman, "who was unaccustomed to such kind of applause," to pause in his discourse.

Next morning, we are not surprised to hear, the names of Joseph Scourhill and John Standfast appeared on the blackboard with a severe moral admonition after the name of each.

But the reformation of the boys cannot be left to anything so precarious as the hit or miss of a maxim. Events must teach: they do so with remarkable facility. Townly has had an encounter with "a little rustic," to whom he spoke in an offensive tone, trying to strike him and beating his dog. We are not, therefore, unduly surprised to learn that a few days later, when the boys are bathing in a stream, it is Townly of all others who gets into difficulties. His companions are sensible of his danger, but cannot help him. Though apparently totally submerged, the unhappy Townly "was distinctly seen, sitting with his eyes open, unable to make the least movement to relieve himself." What, then, more natural than that the little injured rustic should pass along at that moment, and with considerable danger to himself, rescue the drowning boy? Next day when he appears at the school to ask after Townly's health, the latter "took him kindly by the hand, and with many obliging expressions, called him his deliverer." The Rector, "penetrated with sensibility" at the scene, announces to the boys that he will relate in the arbour that evening after tea, as an appropriate commentary on recent events, "a noble instance of the forgiveness of injuries in an American Indian."

The moral regeneration of the other young gentlemen is as satisfactorily accomplished and in a manner as suitable. Standfast and Scourhill when out walking come across a poor woman spinning at her cottage door and teaching her grandchild to read the while. They wish to give the child some fruit, but seeing a hen pecking close by, they cannot refrain from throwing a stone at her, with direful results. "The hen received a mortal wound, she fluttered a few yards, and then fell down and expired." Unable to bear the lamentations of the poor woman, for it was her only hen, Standfast and Scourhill return home. Standfast gets together a few shillings and, accompanied by Thomas the servant, goes to market and buys two hens which he presents to the old woman as compensation for her loss. He also writes to his father begging for a copy of the "Pilgrim's Progress" to give her as an additional present. The Lieutenant gladly complies with his son's request, and sends besides "Don Quixote" and Locke "On the Human Understanding." The latter, he remarks, "is out of the way of my reading, but I heard the parson say it was a very fine book. I hope they will suit the old lady." One is relieved to note that the Rector, recognizing the "Human Understanding" as hardly appropriate reading for an old peasant woman, advises Standfast to put the book by till he is of an age to read it himself. Next morning the blackboard exhibits such sentences as the following:—"Humanity is subject to error

but to persevere in error is the proof of depravity. The most virtuous youth may act wrong, but he is more anxious to correct his faults, than either to justify them or to conceal them."

Tradewell is cured of his tendencies to greed and dishonesty in the following way:—Having gone one night with a friend, "one Easifoot," to steal pears from the garden of a gentleman, Mr. Worthy, he is disturbed at his nefarious task, and in his efforts to escape leaves his coat-tails behind him. As a punishment the Rector sentences him to wear the mutilated coat before the whole school. But Tradewell, having gone to Mr. Worthy to apologize, is not only forgiven instantaneously by that gentleman, but invited to sit down and drink tea with him.

And so it happens in the case of each of the pupils of this well regulated establishment; each quite accidentally meets with precisely that course of events which shall best serve to discipline his character. And, if these, together with the sudden cures effected, be of the nature of fairy-tale, at least the good master's methods of conducting his school are transcripts from real life.

When the vacation comes, the Rector, after taking farewell of his pupils, and addressing them in the "pathetic but mild language of kindness," dismisses them to their homes. But, some may be so ungracious as to inquire, Are children ever really influenced by such methods as those employed by the Rector of the Academy? Are such cures permanent? What of the future? To whom we are content to make answer in the words found one morning written on the black-board: "Futurity belongs not to man; it is his part to act as duty requires, and dismissing idle fears, to leave futurity to Providence."

CHILDREN IN SHAKESPEARE.

THERE are no close studies of child life in the plays of Shakespeare. The children are slightly sketched and introduced rather as accessories to other characters than as perfect little entities on their own accounts. Swinburne regrets that Hermione should have forgotten Mamillius "as perfectly and unpardonably as Shakespeare himself at the close of 'King Lear' would seem to have forgotten one who had never forgotten Cordelia," and quotes Beaumont in explanation of Shakespeare's attitude:

Alas, my lord, my life is not a thing
Worthy your noble thoughts! 'Tis not a life,
'Tis but a piece of childhood thrown away.

This would seem to be true of Shakespeare's attitude generally, so far as we can judge from the children—and they are not many—who appear in the plays. They are incidents, extenuating circumstances, pretexts, victims, mere playthings in the world of circumstance. They have no conception of the issues at stake; their childish prattle breaks forth incongruously in scenes burdened with momentous happenings. They do not give the quiet sympathy that animals do, but must needs be prating and taking sides in a world of their own, aloof and remote, or else imitating their elders and judging ill-timed and precocious judgments. Sometimes they charm by contrast, frequently by a subtle and delicate irony that their words suggest, nearly always by a deeper sentiment and emotion that their presence imparts to more important characters in the play. But there are degrees and infinite variation in Shakespeare's appreciation of them as a dramatic resource, and it is some of the more obvious of these that I propose to consider, not for the sake of disproving what appears to be a reasonable thesis, but in order to illustrate and possibly to modify it so that it may be interpreted as a recognition, not perhaps of Shakespeare's profound understanding of child mind, but at least of his powers as a dramatic artist.

In the early plays children seem to be regarded merely as

a dramatic device, a device of comedy or mild amusement. These plays are often reminiscent of the older popular drama and include many examples of what are known as "stock characters," e.g. the braggart, the hedge priest, the fool, and the pedant or schoolmaster, who to be complete must have either a pupil or a curate. Latin lessons, French lessons—lessons, in fact, of any kind—are often found to be effective on the stage; the appeal they make is general, and the irony such as even the simplest minded audience cannot miss nor fail to enjoy. Dr. Johnson was cynical on the subject, but he did not deny the fact. A scene of teaching or a political harangue can nearly always be depended upon to offer scope for comic "business" and dramatic development. A good example of this device occurs in a play which, although dating probably as late as 1599-1600, bears evidence that Shakespeare was compelled by some necessity for immediate production to utilize old material and resort to the dramatic manner of an earlier period. It is the scene in "The Merry Wives of Windsor" where Sir Hugh Evans, at the desire of Mistress Page, asks little William "some questions in his accidence." William is neither better nor worse than most children, and Sir Hugh is distinctly interesting within his limits. He does other things in the play besides catechizing a small boy in order to convince a typical parent of the desirability of an extra day's holiday. William is not too shining a light in scholastic erudition, and we are duly grateful to Shakespeare on that account. What child that is not the most unbearable little prig and uncanny little monster of precocity ever does shine under such circumstances? We remember Gargantua under a similar ordeal, "qui se print à plorer comme une vache, et se cachoit le visage de son bonnet," and by comparison William appears a miracle of self-possession, in every way the normal desirable offspring of his uninformed and credulous parental stock. Peace be with him, and many pebbles, and many holidays in which to enjoy them!

Our next Shakespearean child is very different. "King John" (1595-6) is a play based upon older and very unwieldy material. But Shakespeare created Arthur. He deliberately made the conventional and rather sententious young prince of "The Troublesome Raigne" a child. In company with all critics we should, of course, very much like to know why; but beyond generalizations about the way Shakespeare transformed his dramatic material in the working and "alchemized mere dross," such questions must of necessity go unanswered. The kindest criticism, however, bids us, when we read the play, remember the entry in the Stratford Parish Register that records the burial in the parish churchyard, on August 11, 1596, of Hamnet Shakespeare, aged eleven and a half years. Arthur is Fortune's plaything, the tool of conflicting interests, his mother's pawn in the great game of opposing political factions; but he is a sympathetic study, and the Lady Constance is a great tragedy queen whose tragic circumstance is enhanced by yet another trapping of woe, the fate of her little son. She is on all occasions passionate, but we forget her thwarted ambition to remember her passionate lament for her lost child:

Grief fills the room up of my absent child,
Lies in his bed, walks up and down with me,
Puts on his pretty looks, repeats his words,
Remembers me of all his gracious parts,
Stuffs out his vacant garments with his form;
Then have I reason to be fond of grief. . . .
O Lord! my boy, my Arthur, my fair son!
My life, my joy, my food, my all the world!
My widow-comfort and my sorrow's cure!

The scene in a castle between Arthur and Hubert is one of our childhood's favourites. It has all the interest of the little princes in the Tower, and more, even including the finding of the bones at the foot of the staircase two centuries later. Hubert is so fierce and the executioners are so terrifying. The opening speech of Hubert, from "Heat me these irons hot" to "Young lad, come forth; I have to say with you," used to give us delicious thrills of horror. We specially loved the first sentence. There are no half measures. "Heat

me these irons!" would have been enough, but "Heat me these irons hot!" is just what is wanted to make a really promising beginning. Then Arthur pleads so pathetically, and is so genuinely frightened. Hubert snuffles his ill-disguised emotion and behaves exactly like a hardened grown-up relenting and showing signs of grace. Happily he does not give way without a manly struggle, and our most delicious thrills were all revived again when his stamp is promptly followed by "Re-enter executioners with a cord, irons, &c." Arthur shrieks terrified, and even "Exeunt executioners" did not do much to relieve the tension, for Hubert is still grim and unconvinced, and there is always the angry King to be hoodwinked or somehow reckoned with. Meanwhile Arthur pleads again, and as the irons cool visibly our fears are gradually allayed, until the scene ends with his breathless cry, "O heavens! I thank you, Hubert!" and Hubert rises to the heroic in his reply:

Silence, no more; go closely in with me;
Much danger do I undergo for thee.

It is a pity little Arthur had to be killed for political purposes. His leap from the walls never properly justified itself to our childish imagination. Shakespeare does it, of course, as nicely as possible, and no doubt Arthur was old enough to realize some of the reasons for his persecution. He knows what it is to be Geoffrey's son; his mother has told him things, and he can speak of "the iron age." But how much better it would have been if he could have escaped to France, aided by the faithful Hubert! It is some consolation, though, to know that he tried, and had found means to disguise himself in "shipboy's semblance." His last words, too, are quite satisfactory; they remind us that uncle John is the really villainous uncle of "Babes in the Wood" and other properly constructed stories:

O me! my uncle's spirit is in these stones;
Heaven take my soul and England keep my bones!

A very painful scene is the scene in Macduff's castle between Lady Macduff and her son, which concludes with the entrance of the messenger and the murderers commissioned by Macbeth. It is a scene that jars, and is to our modern susceptibility unnecessarily painful. The direct consequences of the ambition of Macbeth are by no means so painful. Ambition, like all forms of energy, is a purifier, and there is conceivably a sort of spiritual exhilaration in "driving your cart and your plow over the bones of the dead" that can never be associated with "the bullet's grazing . . . killing in relapse of mortality." This is perhaps why we experience in this scene something of the coldness, the depth, of unexplained suffering and the raw edge of life that was later to find full artistic expression in "King Lear." The boy's speeches are prompted and coloured by his mother's sufferings; he is there to hold up the mirror to the maternal mind; his infant precocity and prattle about traitors, honest men, new husbands, and new fathers is but the reflex of his mother's wifely heartsearchings and pain. But he is a brave little fellow. We love him for his retort to the murderer who called his father a "traitor"—the very word whose meaning he had been asking his mother only a few minutes before—and also for his last words: "He has killed me, mother! Run away, I pray you!"

Coriolanus' boy is of the same breed, a little warrior whom his mother "help to frame." He listens to the deep talk between Volumnia and Coriolanus (Virgilia takes but little part), and then understanding vaguely that something tyrannous, unhappy, is intended by his father, breaks in with:

A' shall not tread on me:

I'll run away till I'm bigger, but then I'll fight.

Perhaps his childishness moved Coriolanus as deeply as Volumnia's reasons and Virgilia's gentleness. Sir Thomas North's account of the interview is very beautiful: "First he kissed his mother and embraced her a pretty while, then his wife and little children. And nature so wrought with him that the tears fell from his eyes and he could not keep himself from making much of them, but yielded to the affection of his blood as if he had been violently carried with the fury of a most swift-running stream."

One of the most childish, pathetic, and attractive little figures among Shakspearean children is Hermione's little boy, Mamillius. Like Prince Arthur, he is very affectionate. He is sorry when Hermione says that he troubles her past enduring, and appears very unwilling to leave her for the court ladies. His hearty dislike of kissing and baby talk endears him to us; he is a rational little being and, as the court ladies proved, very observant. The end of this pretty scene and the words of the messenger after the vindication of Hermione's honour by means of the oracle must be quoted: they tell all we know of the life history of little Mamillius. When Hermione is rested, she calls him to her again and says:

Come, sir, now,

I am for you again: pray you, sit by us,
And tell's a tale.

Mam. Merry or sad shall't be?

Her. As merry as you will.

Mam. A sad tale's best for winter;

I have one of sprites and goblins.

Her. Let's have that, good sir.

Come on, sit down: come on, and do your best

To fright me with your sprites; you're powerful at it.

Mam. There was a man,

Her. Nay, come, sit down; then on.

Mam. Dwelt by a churchyard. I will tell it softly:

Yond crickets shall not hear it.

Her. Come on, then,

And give't me in mine ear.

Enter LEONTES, ANTIGONUS, Lords, and others.

And in the trial scene that follows upon the imprisonment of Hermione and the birth of Perdita, a servant enters crying:

My lord the king, the king!

Leontes. What is the business?

Servant. O sir, I shall be hated to report it:

The prince your son, with mere conceit and fear

Of the queen's speed, is gone.

Leon. How! gone!

Serv. Is dead.

Leon. Apollo's angry; and the heavens themselves

Do strike at my injustice.

Child study in Shakespeare is not complete with these examples. Much more should be added. It might include, for instance, the curse of Lear on Goneril, certain speeches from "Macbeth," and Sonnet CXLIII, that reminds one indistinctly of Spenser's inimitable picture of the careful mother in Book I, Canto 12, of "The Faërie Queene." Nor would the study of the illegitimate child be excluded. There are, too, those babes Perdita and Marina, who grow from babyhood to adolescence while we watch them. Shakespeare has made them, from their very cradles, distinct little personalities and essential elements of the plot. Perdita, that "very pretty barne," is a princess royal with her brodered bearing-cloth and fairy gold, and it is through her love for Florizel that the happy ending of the play is brought about. Marina, the storm-tossed, born when the North Wind blew, and later cast upon a sea of troubles more terrible than the sea waves that gave her her name, did by her own most clear remembrance make herself known to Pericles and so become heir of kingdoms and another life to Pericles and Thaisa. Nor are we left without gracious hints that help to bridge over the interval between the infancy of these maid-children and their pure radiant girlhood. Perdita, a shepherd's daughter, the prettiest low-born lass that ever ran on the greensward, and the queen of curds and cream, showed, we are told, something nobler than herself in all she did or seemed, and ever grew in grace equal with wondering. And "the most deeply learned men were not more studied in the learning of those times than was Marina. She sang like one immortal, danced as goddess-like, and with her needle she was so skilful that she seemed to compose Nature's own shapes in birds, fruits, or flowers, the natural roses being scarcely more like to each other than they were to Marina's silken flowers." It is true that all this is hearsay, the affectionate testimony of those who speak because they care; but we listen as willingly to Cleon and the old shepherd as we do to the reminiscence of Juliet's old nurse or to what Prospero has to tell of the childhood of

Miranda, for we know that this is Shakespeare's way of developing the characters that are, and preparing us at the same time for those that will be. There is a radiance over the educational theories (if such they be!) of Shakespeare's romantic plays that is very different from the Stratford Grammar School atmosphere of catechizing pedants who "have been at a great feast of languages and stolen the scraps." It is a radiance that shines like that in Plato's land of health, where the youth dwell amid fair sights and sounds and receive the good in everything; where beauty, the effluence of fair works, flows into the eye and ear like a health-giving breeze from a purer region, and insensibly draws the soul from earliest years into likeness and sympathy with the beauty of reason. There is also a spirit of gentleness and wondering other-worldliness about these later changeling babes of Shakespeare which, although it cannot be defined nor exactly weighed in the balance of critical estimation, may yet be the best and truest realization of the lasting miracle of childhood.

THE TIN WHISTLE.

HE was standing in the gutter, playing something on a tin whistle. Someone passing began to sing out the refrain. So the song was "My Killarney Kate." I was anxious to hear about this Kate, who is of good reputation over the land. So I stopped, and stood up against the window of a whisky shop—if one stands outside a shop in Ireland it must be a whisky shop. He went on playing, and, like lollers against shop windows, I looked on nothing. He went on playing. Perhaps he wanted a penny.

"Here you are," I said, knowing from his face that he wouldn't take it. But why did he go on playing over and over again "My Killarney Kate" if he didn't want me to give him something?

"Don't you want it?"

"I do not."

"Are you hungry?"

"I am not."

"Why do you play?"

"I like it, indeed! I do. When my old Mike he be dead, and my mother not here, indeed, sure it is I who should be playing indeed, when they've shut up the house, and I can go and play where I like. Sure, I shall go on the hills and play; I shall, really."

"Indeed! and is your father dead, now?"

"He is, indeed. It is burying him they be going to do to-day."

"And why aren't you helping to drink a drop just now?"

He pulled his hat over his face. An Irishman's hat is as good as his soul; he can't do without it.

"I like playing out here. Sure, 'Killarney Kate's' a fine song, it is. Come along, then, with me and I'll be showing you the coffin where he's put. It's grand—indeed it is."

Perhaps it was joy in being free which brought into action within him that quick sense of life whose very essence is social. For life cannot be lived alone—it must be shared with others; joy is communal. He was giving out to the people who were passing by his spirit of joy and freedom. The sounds of the whistle everyone could hear. They caught up the refrain and shared the meaning of the sounds with him. But he would go further and be more closely in touch with a human person. He would confide to someone the meaning behind "Killarney Kate." He would give out his whole joy to someone; he would give his whole being to someone—his being which included everyone in its whole. I saw he would. Perhaps he knew I saw he would. He went along, leaving the prints of his bare feet in the mud of the road. I followed.

The men were just finishing the last cakes and biscuits, and drinking the remains of the whisky. Three men sat on the coffin playing cards: playing the last game with their mate,

whose hand was taken by a dummy. Since the poor old fellow was dead, or he had just happened to catch a cold upon the mountains, and had the misfortune to overdrink the health of his mates just afterwards, for which the priest told him he was done for, surely, then, what man required sympathy if he didn't? And it was his favourite game and his favourite whisky. Then let us play and drink with him, for he is only just inside the box. One last drop, which was just enough to make them too hilarious over the drinking of his health, and the coffin was carried out and placed upon the cart. And, since he was going a journey all alone, he needed company as near to him as he could have, and as far on the way as possible; so the singer of "Killarney Kate" sat on the coffin as it was brought along the road.

He was happy as he put his whistle into his pocket and followed the rest in keening. He keened the loudest, though it was not because he was the next of kin. He had tremendous lungs. He felt happy. He was not sad; he felt no sorrow at the going away of his old Mike. He felt happy, for he was now free from the one with whom he was never quite at his ease, and near whom he never could not expect a drunken blow. He keened, but he keened because he was happy, rather; while the tipsy men and women following the procession keened also to give vent to their feelings of the moment. A drunken man must let his energy go; and the mate inside would not mind, for he, too, had loved to do the same, and let his energy out.

"And now," I said, "you have buried your father; what now?"

"It is going to America I am, surely."

He said he was going to get the money for his passage by working for a farmer. I told him he would never do that, for Irish farmers drive their own carts to market. He said then that he would play on his whistle for the money; for he would not be a farmer unless he could drive his own cart to market. And, if he could not get to America to drive his own cart there, he said he would play his whistle in the streets in Ireland. He could "play fine, indeed; he could." And so he could, really. And there was no one in Ireland to say he must not. There was no one in Ireland to shut him up when he would get drunk. For the glory of Ireland, and the way of bringing up Irish individuality, is the keeping of the laws lax and optional.

An Irishman does not show up as a fool or as a comic figure. Though fools may think him a fool, and a comic figure who is under a system of convention, as some Englishmen are, may think he is comic. He is too real to be comic. To real people he cannot appear in a comic light. To unreal people under a system of convention, he can.

An Irishman is born to life as a thing of life, and he lives in life. He is allowed to be himself. He looks into the face of reality—the reality of being himself. He can give confidence to people, to his teachers, who are less under a system of convention than the Englishman, and who, to a lesser extent, subject him to one. He can give confidence to his fellow-Irishmen, for he is real, he is more free to work out his individuality. One cannot give confidence to a not real, a comic person. It would be like joining one's soul to a dead puppet. One cannot get life, real ideas, to help one to live, out of a puppet. A real community is essentially one which consists of individual plus individual, real person plus real person—not puppet plus puppet, but real joy, real sorrow, plus the real sorrow and real joy of another individual with whom one is in sympathy. A child seeks a real person to confide his joy and sorrow to, to help him to live, to join his spirit to. His spirit without such a person or persons must die out. The community must die out.

Englishmen are born to life as things of life; but do they live in life? Do they create a real community, or a mock one, a pretence for one? When an Englishman is young he has life. He likes to look in shop windows and see the things of life; a pistol and a popgun to shoot with; swords to make fight; balls to throw up and to make move, and which will move of themselves (balls are most wonderful things of life—a ball is a precious possession to have when one enjoys life); pieces of string, too, can tie up things and make whips

which will make tops go round—they are all things of life. There is the glory of life in a little shop window. There are matches which will make coloured fire; and penny Christmas stockings made of white net, and some of the things inside can just be seen through the net. Christmas stockings are surprises; they give the same sort of surprise as discoverers experience when they find an unknown land or sea which they knew to be there, but they did not quite know what kind of land or sea it was and what it was like. So Christmas stockings and penny surprise packets do certainly contain something; and there is the joy of life in finding out what is really behind the paper and inside the stocking. It is a discovery which one may call one's own.

There is life, too, in driving along a cow or some sheep, to make them move, to have power over them, and the road of things before one. There is life, too, in playing in the streets; there is life in looking at the people going past—in thinking about them; in wondering who they are, and what they are doing. There is life in chalking faces and things on the pavement and drawing on dusty shop windows; in being a real human being with a joy in one's soul; a great being among other beings, with whom one is joined by the life of one's soul.

This an Englishman is born to, just as an Irishman is. The Irishman often escapes "school," for the law of attendance is lax. The Irishman goes on being himself. He drives his own cart to market when he is older. He rears his own cattle. If he wants a drink he keeps his own whisky shop. He enjoys life. He has to fight for it himself. And the glory that comes to him is the feeling that he has won: he has lived as himself.

The English boy has given up his popguns of life; he is earning his existence under some sort of State "must." He gave up his penny pistol and his joy in looking in shop windows during his school life. More and more as he rose in the school, less and less could he find delight and life in things of life. The school teacher used to teach him things which he felt did not seem to relate to that life in which he joyed. He was all eager to tell his teacher what he saw and did. His mother did not much care about him, and there was no one else to tell. But his teacher did not seem to want to listen. The teacher read him things from books which the code prescribed. The child found no sympathy in his teacher; he became more shy and less desirous of telling about the houses and men who went along the streets where he played. He came to school in the morning fresh from gathering wild roses when the sun made pure white the dew upon their petals. He came to school with the mud clinging to his boots and the yellow dust of buttercups upon them. He came, full of life, all eager to tell some other human person of the life of the morning. The teacher brought out books. He read the story; the teacher explained it and the child looked into teacher's face with an expression of doubtful wonder. Was the teacher right? Surely the story meant something else? But the teacher went on talking.

The teacher was surely not real if his mission was not one of life; a mission to help him to live as a being of life; as an Anglo-Saxon, if not as a Celt, to develop whatever may be the life force of an Anglo-Saxon. He could not confide in a person of fixed ideas, a person who did not change; a puppet; a pretence for a person, who did not change his mood in sympathy with each mood of the child; an unreal person. Reality means change, and the spirit of life is one of change; and life and change are glorified when there is sympathy developing them. But the teacher did not change.

The child became less a thing of life. Convention became too strong for his sensitive soul. Joy in life faded from his soul. And when he was quite little the sound of a church bell had been to him a sound with a meaning full of life. He used to stop and listen, and his soul had lived while he had listened. Ringing bells was prayer going up to God; and he had listened and prayed unconsciously to the Great God of Life. Later, when he was taken to sit in church in his best clothes, when he sat and wished church time was over, the sound of bells came to him as a mock unreality. Can the bell and the church to which it called people be things of life when one's soul is dead within one? The child went out

from school with his own true self gone from him. Is there a real God for him who has no soul of his own? The child drifted into one of those masses—masses of dead humanity who hang round street orators, eager to drink in some message of life and religion, of salvation. The State mark of unhappiness is upon their faces. Is the State responsible for this mark of death upon humanity?

Or is that very spirit which the child has inherited responsible for its own degeneration? Does the Anglo-Saxon spirit in a child die early: that spirit which loves the many things which express the many forms of life—tops and string, and trains, and the ringing of bells, and the people passing in the street? Is that spirit short-lived; does it only live through childhood, and naturally die out during school years, and become cold and conventional, and without hope, without a light before it? If it is natural for any life force not to grow and develop, whatever that life force is—the life of a stone, of a plant, or of a person—then rightly does the Anglo-Saxon child become a soulless, undeveloped Englishman.

But the essence of life is change and growth. Each kind of life force requires its own food to promote that development; some nourishment, some teaching which is akin to its own force, something in sympathy with its own kind of life force, its own degree of life.

The Irish child and the English child are both born as children of life. It is a different life force which each inherits. It is, nevertheless, life; and each seeks to live in that life which he has inherited. At the same time each seeks sustenance for his spirit in a life akin to his own. The Celt desires a life and a teaching relating to life as quick and as living as his own spirit; and perhaps he gets it. The Anglo-Saxon no less desires to be given to him for sustenance a life and a teaching in touch with his own life; one akin to his own life; one which is no less a life force than is the Celt's, though it may be of a finesse more dull than that of the Celt. He may or he may not get it.

The nourishment, the sympathy, must come from an outside force. It is essential to him if he is to be a reality in the community. The modern philosophical definition of reality, of life, is a compromise between that of the Idealist and the Rationalist. Reality in modern thought means that which is created when that which comes from within is brought out by the sympathy which connects what comes from within with some outside force to which it is akin. The child and his expression of life can be a true reality if his growth is the result of that which comes from within him, from his spirit of life, having been brought out by sympathy with an outside force, perhaps his teacher, his State. Does the State and the Church undertake to provide that nourishment, that sympathy, advantageous to the growth and development of the kind of life force expressed in the Anglo-Saxon child which looks to them for help, help to make it a true reality? The pieces of string and the ringing of bells, and boats in a brook, should not become naturally dead when the sense of life in them and in people has been born in a soul. The Anglo-Saxon child cannot be a Celt, but it is possible for him to be himself, living in that particular spirit which he possesses.

The Irishman can be himself also. The State gives him a greater opportunity of being himself. Perhaps it is that the laws are lax and optional, and allow of evasion, and so do not deaden individuality. Perhaps the education code is lax and elastic; or it may be that it and the teacher are more in sympathy with the life of the child such as it is: so that things of life remain always things of life, having always meaning intimately related to the life of the child. He can find life in his religion; his Church is a reality to him, for he has made it real by bringing his unfettered life to it.

And the Irish boy who played "Killarney Kate," with the light of the hills in his eyes—whenver he looked up, for he was very shy in spite of his tremendous lungs—he is earning his living playing his whistle where he likes. The word "existence" has no meaning for him: he knows only the meaning of "living." Existence is the state of being cut off from one's natural sphere in life. It is life without one's own spirit, and so without a spirit at all. It is "half-life." Living

is whole-life. He is living his own soul somewhere; it does not matter where, so long as he is living in the joy of his own soul and not living, or rather "existing," in the dead light of ideas made for him by somebody else's soul, and imposed upon him, whose soul—if soul it has—is not his. I know he is still praising life, unhampered by convention; he had so far managed to escape "school." I know he will always manage to escape "school." I saw the light, the spirit, of his shy eyes as he pulled down his hat over his face and disappeared into the summer twilight under the trees by Killarney Cathedral. He was grasping his tin whistle, which he had chosen from among the many things in the little shop window. The many things express the many things in life. Each chooses his own. He had chosen the tin whistle; it was his expression of life; it expressed the meaning of life for him. He will play on it all his life. I know he will, for he had the light of true freedom on his face. There will be no teacher to tell him that his tin whistle does not mean his expression of life, but that a something else does, whatever thing the teacher wishes to say does. He will put the meaning of the sun and the morning dew into his whistle; the meaning of the sound of ringing bells. He will put into it the meaning of himself, of other people, of his relations to other people, just as the English boy does when he looks upon the people in the street, but does not yet find form to express his meaning; and, perhaps, he never does, for the teacher gives him a ready-made form of expression. The Irish boy will put the meaning of the world into his whistle. And he will be happy; and the world will be happy, because he makes it happy by giving it life. I know he will.

M. A. N. MARSHALL.

AT AN ENTRANCE SCHOLARSHIP EXAMINATION.

By SYDNEY WALTON.

TO-DAY we began our admission tests: the spoon—as someone has it in picturesque phrase—whereby we skim the cream off those broad basins, the elementary schools. Ninety-five boys, the pride of their brethren, came up for examination. Their ages ranged from ten to fourteen. It is easy to tell which of the number had gone through the ordeal before. They, of course, knew the ropes; the first fear was no more, they could play the part of fathers among nurslings. "There's the Head's room," shouted one with just a suspicion of the cock-crow in his voice; "you'll have to go in one by one. He sees us all. I saw a swish when I was in last time"—and the faces grow still more solemn. I fancy there is the pang of disillusionment. They had dreamed of a secondary school as their ultimate Eden where the tree of knowledge was not a birch.

The whole hundred is early on the premises—save one who came in with scarlet haste after the others had begun. Two o'clock is the hour fixed; anxious groups whisper in the ante-hall half-an-hour before that. Mothers and fathers (particularly the former) forgather too, and discuss the perils and prospects of battle; for to-day destiny is at the door and home throbs with the sense of crisis. Some of the sires are as nervous as their sons. "If he gets his feet in here," I overhear a parent (who is white to-day because his boy is pale), "he might win his way to the University." He is conscious of a ladder let down from a mystic sky. These grown-ups wish, as they wait, they were young again. The Past was not so privileged.

Pens and papers are handed out; each boy takes his place and becomes, in the official eye, a number merely. The name comes later—if he succeed, and Number 69 takes his place in the school as "Brown Minor." I am invigilating. As the day wears on, the duty grows drab and dreary. But there is some relief at the outset. I pick out from the crowd the young emigrants who seek our school-shore. There are various nationalities, a Dutch boy, a German youth; boys of

every type of temperament. Puck peers in that face there, Peter Pan in this, yonder is a little tyrant of the street, and near him an eagle-spirit that no man can tame. Can the school-republic absorb all these into itself and make them become worthy citizens within its borders?

The invigilator makes his routine speech. He quotes certain rules, ancient as the evil genius of examinations, to wit: "Put your number on the right-hand corner"; "Use one side of the paper only." But it is waste of breath. As if we ever heed advice until we need it—when we are at the bottom of the page, that is. At 2.30 the instructions have to be repeated in answer to an inquirer; again at 2.40, and at 2.45. Five minutes later, two boys ask if they should use both sides of the paper! Nervousness is the sponge of the mind; it rubs off every chalk mark.

Dictation comes first—two simple pieces. The little feverish faces look up wondering what dark sayings the oracle will utter. He must look stern on a state occasion, but he cannot suppress a smile when, after three times enunciating the words "an ardent faith," a hand goes up and a voice quivers: "Please did you say 'an angry face'?" The policeman frowns. In the second piece the last word was "execrable," and I agree. It was—for boys so young. But, at any rate, the word is spelt pretty much as spoken. So I thought before I saw the papers. The word was written in a score of ways, from "exeycrabel" to "ekikrobble," with octaves of variation between. They say now that spelling is antique discipline, out of date like the spinet, and standing even so in the corner of an old lumber-room, "Old Curiosity Shop, Whitehall." As the terrible word burst upon the hundred heads, eyes instantly began to roam the ceiling, in the belief, one guesses, that all good things come from above.

Arithmetic begins: the papers are greedily seized; boy-eyes, quick as the lynx, hurry down the dozen riddles of the Sphinx. At first the boy feels he can solve none—his heart is ice; then the unknown begins, little by little, to distil into the known—the iceberg sails slowly from the ship; the boy is tasting the supreme joy of an examination, a life-joy in fact, to find that things are not so mystic, so meaningless as Fear, that stammering interpreter, would make out. I pace the room. In front, rows of pens and bended heads; behind, heads only to be seen, like a garden cobble-pavement overgrown with springtime grasses. They have lost their legs and limbs, these hundred boys. They are as many round balls tied to as many stakes. They are "Little Mucks"—as the Germans would say—huge heads, tiny bodies, because these latter groan in bondage. The true teacher trains more than the head. He remembers hand and heart, and those physical tissues with which the muscles of the mind are entangled. And if playing-fields make a school—a strong commonwealth of boys, that is, healthy and courageous and not lotus eaters—why not a physical test? And why written work alone? Why not craft of hand and the use of pencil and brush?

Everybody is hard at it: I hear the scratching of the pens amid the slow march of the pendulum. It's a weary business; I think I could get to know more of these boys out yonder on the school fields, playing and mingling with them. Still they scratch on, a screech of pens. A relief at last: a boy comes to ask for "more paper, Sir." His face lights up as he asks; his individuality flashes out. It is curious: as they sit there writing, I notice with astonishment that the boys are all one type, one same drear pattern, pale and passionless. Their personality is in the backwoods; a mere machine, a calculator, is left. We are examining them, but *they* are missing. The hundred are all one feature without distinction. Davies and Smith are lost in the number. But Davies comes forward with a query, and his nature glows large upon his transfigured face. At once I see the logic for oral examinations, for a talk instead of a task. A colleague is hearing boys read in the room adjoining. I envy him. The voice, not the pen, brings the boy-soul into the daylight. I compare notes with my friend afterwards. He knows lots about these boys, has looked into them, through their eyes of blue. I know nothing; and this is burned into my brain—that there should be no written examination

(Continued on page 664.)

NEW EDITIONS, WITH PROBLEMS AND EXERCISES,
OF
PROF. L. W. LYDE'S GEOGRAPHIES

Professor Lyde's Geographies appeal particularly and, indeed, are specially adapted for, all those numerous teachers of the modern school of geography who believe in striking what is known as the human note in the geography lesson.

Cause and consequence, consequence and cause, and particularly cause and consequence in relation to mankind, should never be absent from the geography lesson. This is the human note. It should run through all stages, from the preparatory to the sixth form. The only difference of treatment will be that necessitated by the greater intelligence of the older boys.

---	-----------------------------------	------------------------------

To use the books, two accessories are absolutely essential—an atlas and a note-book—and the atlas should be especially one which emphasizes physical features.

The text itself, and the style of the books, lend themselves admirably to the best form of "note" taking—i.e., notes which are largely the work of the students themselves. The subject-matter of the books is presented in the form of paragraphs, or short sections, numbered for convenience of reference. There are very few of these paragraphs which do not invite extension, or explanation, or illustration in the note-book. And the simpler the illustration the better. Little map drawing should be required. It takes up too much time. Diagrams are quite as effective.

The problems and exercises at the end of the book should be made full use of. There are not many, but they are suggestive. Scores more of a similar type will occur to the interested teacher, and, for the matter of that, to the interested student. And if they do come from the latter, seize upon them at once, and incorporate them in the note-book. Let the watchword be—analyse, compare, correlate. All the books of the series lend themselves admirably to these ends.

The above notes are culled from "Foreword to Teachers on the use of Prof. Lyde's Geographies," compiled by E. R. WETHEY, M.A., a copy of which will be sent on application to the publishers

ADAM & CHARLES BLACK, 4, 5, & 6 Soho Square, London, W.

B. H. BLACKWELL'S EDUCATIONAL BOOKS.

Worked Exercises in Elementary Geometry. By F. C. GILLESPIE, M.A. Crown 8vo, cloth, 3s. 6d. net.

JUST PUBLISHED.

The Exercises, which are arranged in logical sequence, are designed to cover the ground of the various University Matriculation Examinations, the Oxford and Cambridge Local and Joint Board Examinations, the Leaving Certificates of the Public Schools, and the Schedules of the Training Colleges.

A Short Constitutional History of England. By H. ST. CLAIR FELDEN, M.A. Revised, and in part re-written, by W. GRAY ETHERIDGE, M.A., Keble College. Fourth Edition, revised and brought up to date by D. H. J. HARTLEY, M.A. Crown 8vo, cloth, 5s. net.

"We strongly recommend the book to teachers."—THE EDUCATIONAL TIMES.

"We have seldom met a better book in its way."—THE OXFORD MAGAZINE.

"A very excellent handbook."—THE LAW STUDENTS' JOURNAL.

A Primer of Greek Constitutional History. By A. H. WALKER. Fcap. 8vo, cloth, 2s. net.

"It is for high forms at public schools and University students, and fills a vacant place in their bookshelves by providing a sound and concise exposition both of the theory and of the history."—THE TIMES.

"This is a valuable little book, carefully put together, and sober in its conjectures and conclusions."—THE SPECTATOR.

A Plain Guide to Greek Accentuation. By F. DARWIN SWIFT, M.A. Second Edition, revised. Demy 8vo, cloth boards, 1s. 6d. net.

"The rules have been made as exhaustive as possible, . . . and every device in the way of type arrangement and rhythm has been successfully resorted to in order to present this difficult subject in as vivid a manner as possible to the eye and mind of the scholar."—THE SCHOOLMASTER.

A Word-List of Virgil. With blank column for additional words. Prepared by A. G. S. Crown 8vo, sewed, 1s. net.

The lists have been compiled in the hope that the time which has until now been given to "looking out" may in future be devoted to learning Latin words.

The Teaching of History. By OSKAR JÄGER. Translated from the German by H. J. CHAYTOR, M.A., with a preface by C. H. FIRTH, M.A., Regius Professor of Modern History in the University of Oxford. Crown 8vo, cloth, 3s. 6d. net.

"Dr. Jäger's methods strike us as truly excellent."—THE UNIVERSITY EXTENSION BULLETIN.

Helps to Latin Syntax. By G. C. MORTIMER, M.A. Crown 8vo, 1s. net.

"I do not know that any book of the kind could deserve higher praise."—MR. A. H. GILKES (late Master of Dulwich College).

BROAD STREET, OXFORD.

BY THE HON. LIONEL A. TOLLEMACHE.

Author of "Talks with Mr. Gladstone," "Benjamin Jowett: a Personal Memoir," &c.

NOW READY.

EIGHTH EDITION.—Demy 8vo, pp. 460. With Photogravures of Hon. Lionel A. Tollemache and Hon. Mrs. L. A. Tollemache. Cloth elegant, gilt top, price 7s. 6d.

Stones of Stumbling.

Contents:—The Cure for Incurables—The Fear of Death—Fearless Deaths—Divine Economy of Truth. *Appendices:*—Recollections of Mark Pattison—Mr. Romanes's Catechism—Neochristianity and Neocatholicism: a Sequel—Index to the Classical and other Quotations, with English renderings.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

without a *viva voce*, and that the latter should count infinitely more. The Head Master is sending to see the candidates one by one. He is wise.

It is 4.30; at 5 we close. The hour crawls to its close. I notice trivial things. We were taught at school to put the first and second fingers on the shank of the pen, and point it to the shoulder. Only one boy out of ninety-five practises the traditional poise. Does this argue for Nature against tradition? Seven boys make lip-movements as they work out their problems; two count on their fingers. Now there is a rain of papers; the boys rush out of bondage, carrying away the printed papers with extreme of reverence. They might be Sibylline leaves. Away home the emancipated hurry with tales of to-day, fears for to-morrow. I fold up the written sheets with a haunting thought that I am grasping the shades of the prison house, that no winds come to me from the fields of sleep.

CAVALIER AND ROUNDHEAD.

"BEING indeed of the Cavalier or pleasure-loving temperament. . . ." I cannot complete the quotation, but I know it was applied to schoolboys. I found it in an educational essay, whither I had betaken myself for admonition and comfort. The quotation stimulated me more than the exhortation, for it is the only part of the essay which I can remember. However, it is worth remembering.

The modern conflict between Cavalier and Roundhead—i.e. between child and teacher—cries out for attention. Some people would have us believe that there is no such thing as a contest, that the child goes to school because Nature impels him to do so; that once he has arrived there all is a May game. I sometimes wonder what kind of children cross the paths of the people who write educational treatises; certainly they are not Cavaliers. Hardly any normal parent or teacher would recognize them as children.

There is no question about it but that there must be a struggle. The young Cavalier goes to school, and, obeying a natural instinct, chatters in class or mauls his neighbour. The authorities have been brought up on educational treatises, and consequently regard life seriously; straightway begins the conflict between Puritan and Cavalier, ascetic and hedonist, and dull Might becomes Right.

Sometimes the Roundheads appreciate the Cavaliers, and then the tragedy is lightened; often they wish to turn them into Roundheads, which is a pitiable state of things. Whatever the moralists may say, every healthy child is, and ought to be, a Cavalier. Let us understand what that means. A Cavalier is not a mere pleasure-seeker. Teach history, and you will soon find that nobody is as hard on voluptuaries as the young epicures who, in unofficial language, consider Edward II a "rotter." The Cavaliers do not admire slackness; however much they may make of the claims of enjoyment, they have no patience with pampering or effeminacy. They love pleasure, you say? Possibly; but they also love to hear of men who endured hardships. The Cavaliers revelled in life, but they were ready to face death at the demands of a quixotic unreasoning loyalty. We are thrilled by them as by all that is young, and splendid, and irrational. The philosophers cared about prudence and common sense; but the Cavaliers stood for the things which lie beyond argument and logic. Did we call them irrational? They were rather *super-rational*, obeying blindly the instincts which are greater than Intellect, and lead men to the apprehension of Infinity. The Cavaliers of the schoolroom are of the same stock as the "great-hearted gentlemen" who fought for King Charles. If they are able to enjoy life they are also able to endure it. They often purchase their enjoyment at a high rate, but they never grumble at the price. The old Cavaliers were like Mercutio, who met death with a jest on his lips; their modern prototypes undergo humiliation and disgrace, make no fuss about it, and bear no grudge. They are too proud to stand on their own defence or to explain their motives; often indeed they suffer injustice

which could be removed by a little frankness, a slight relaxation of dignity. There can be no doubt but that our Cavaliers face punishment with a splendid reticence and courage.

The Puritanic pedagogue probably condemns this attitude as defiant. It is nothing of the kind. Nobody is more generous, more ready to confess to real error than the Cavalier; but he is not prepared to make canting speeches about sins which he feels to be no sins. The Cavalier is clean and straight in his dealings; and a child's sense of honour, of integrity, is worthy of all reverence. But the Puritans in authority invent artificial sins and demand an artificial penitence. You may argue all day with a child concerning the immorality of certain petty infringements of rules, but you will not convince him; he has too much sanity to be convinced. He regards rules as a dreadful bore; and so they are. He breaks free from this boredom as often as is possible or convenient. He gets into trouble, of course; but that is simply one of the conditions of the game, and he takes his defeat with a good grace. He sits on no stool of repentance, for he fails to recognize any moral wrong in his actions. Rules are a practical necessity, and in breaking them he sins, not against his conscience, but against common sense. That is the child's point of view, and nothing will alter it. It may not be a complete scheme of morality, but so far as it goes it is really quite inspiring. Some great virtues, such as obedience, he carelessly leaves on one side; but consider his dealings with those which he *can* appreciate—Justice, Truth, and Courage. Duty is no "stern daughter" to him, he hardly understands the meaning of the word. Without preaching, or indeed any conscious system of ethics, he enters into the relations of life with a gusto and buoyancy which make morality a rejoicing of the heart.

I really do not know what more we can expect. It is rather more than the child's elders usually perform, although they discuss moral problems fluently and persuasively. What we should do is, not to turn our Cavaliers into Puritans, but to aim at making them something better in their own kind. I think that the Greek or Elizabethan ideal is equally youthful, and infinitely safer. The Cavalier, no matter how charming, is inadequate; he needs a Puritan to keep him in order, otherwise he becomes an intolerable nuisance. This is true neither of the Greek nor the Elizabethan. The Greek is safeguarded by his sense of proportion, his conception of the harmony of body and soul; and the Elizabethan finds outlet for every energy in his amazing versatility, his appreciation of the boundless value of life. The Cavalier left to himself will probably develop his faculty for enjoyment at the expense of all others; he often becomes childish, whereas the Greek and the Elizabethan remain childlike to the end. The Cavalier is indeed a case of arrested development, he is an Elizabethan who has failed to grow up. To be truthful Peter Pan is an offence against Nature. We prefer Sophocles or Drake, Achilles or Shakespeare. They grew up, but they never became old or formal; what more could we desire?

M. A. B.

At the Conference of the Association of Teachers in Technical Institutes, Mr. P. Abbott (Regent Street Polytechnic) chose as the main subject of his Presidential Address Internal and External Examinations. The Board of Education had taken the lead by abolishing a large part of its examinations. It had thus encouraged the Group Course system in lieu of training in one or several unrelated subjects on which certificates and grants depended. These external examinations are peculiar to England, and are strongly condemned in the recent Report of the Canadian Royal Commission on Technical Education. Mr. Abbott admits that there must be some guarantee of the efficiency of an Institution and of the attainments and work of the teachers, but this he would provide by the institution of Advisory Boards for each area, representing Local Authorities, employers and employed, inspectors, and teachers. In suggesting, however, that "under such a scheme the examinations will approximate to internal examinations" Mr. Abbott does not show the courage of his opinions. His whole argument is that external examinations are an unmixed evil, and in consistency he should have limited the work of the Advisory Boards to inspection. For the rest, Mr. Abbott approved the Denman Bill as an advance on the right lines, but feared that it would be of little avail unless it were made compulsory.

310 MEDALS AND PRIZES!!!**STUDENT'S ELEMENTARY
BOOK-KEEPING**

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward copy **Index** and **Specimen Pages** on receipt of
Post Card addressed to **Box D 50, Huddersfield.**

355 Pages. 19th Edition. Post free 2/-.
100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1/-.

The **ONLY TEXTBOOK** to which there is a **FULL KEY.**

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The **exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Society of Arts, the W.R.C.C., College of Preceptors, the Oxford and Cambridge Locals, and the L.C.C.,** are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

**THE STUDENT'S
BUSINESS METHODS**

and

Commercial Correspondence.

By ARTHUR FIELDHOUSE, Accountant,
Huddersfield,

who will forward **Specimen Pages** and **Index** on receipt of Post Card
addressed to **P.O. Box D 50, Huddersfield.**

Sixth Edition. 372 Pages.
2/6 Post free.

80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.

This is the only **practical, up-to-date** book on **Commercial Correspondence and Office Work**, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well **graded**, and the **teacher** is **saved** the **drudgery** of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers. PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the only **Complete Guide**, covering all the **Elementary Examinations.** Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the **Junior** in the **Office. Teacher's Specimen, from Author only, 1/3 post free.**

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

VIRGIL, ECLOGUE IV.

MY Pastoral Muse, a loftier mood essay;
 Osiers and tamarisks will not please alway;
 Or if the woodlands still to thee be dear,
 See that thy woodnotes suit a Consul's ear.

The circling years confirm the Sibyl's truth;
 Again the world renews her primal youth,
 Justice returns and Saturn reigns again;
 From heaven descends a new-born race of men.
 A child is born the iron age to end
 And to earth's bounds the race of gold extend,
 Oh at his birth, Lucina chaste, be by,
 Propitious! Thine Apollo rules the sky.

Thou too, great Consul, whence this age shall date,
 Pollio, thy year the mighty moons await.
 With thee of old misrule shall disappear
 All tracks, and nations cease to cower in fear.
 Meanwhile the child, with life divine endowed,
 Moves as their peer 'mid the celestial crowd
 Of gods and heroes, learning how to sway
 A world his father's virtues schooled to obey.

Wild flowers, behold, a birthday offering,
 The boon earth scatters for her new-born king;
 Foxgloves, and ivy sprays, and 'mid the sheen
 Of glossy bear's-foot, the Egyptian bean.
 She goats unherded bring full udders home;
 To scare the kine no ravening lions roam.
 All round thy cradle delicate blossoms spring;
 Where lurks no poison and no adders sting;
 All airs a breath of Syrian spikenard bring.

Soon, as in wisdom grown, thy childhood reads
 Of Roman valour and thy father's deeds,
 The plain untill'd shall wave with yellow corn,
 Clusters of grapes shall hang from the hedgerow thorn,
 And gnarled oak-boles honeydews distil.

Yet shall subsist some lingering seeds of ill,
 Tempting to sail the ocean, towns to invest
 With walls, and score with furrows earth's soft breast.
 Another Tiphys steers an Argo fraught
 With new adventures, other wars are fought,
 A new Achilles finds 'neath Troy his doom.

But when to perfect manhood thou art come,
 E'en merchants shall have ceased the seas to scour;
 For every land bears every fruit and flower.
 No need for harrow, then, or pruning hook;
 The hind has freed his oxen from the yoke.

No need to learn the dyer's lying art,
 When Nature every colour shall impart.
 See the ram strut now clad in Tyrian dyes,
 And now in yellow that with China vies;
 And as the new-born lambs their mothers nose,
 A livelier crimson through their fleeces glows.

Such was the web the Three Weird Sisters span,
 Bidding their spindles fix for aye the plan
 The Fates immutable ordain for man.

Prepare, the hour is nigh and will not wait,
 To assume, O child of promise, thy great state;
 Scion of gods, the germ whence Jove shall spring!
 Lo, the round world bows down to hail its king;
 Lands, ocean tracts, and azure heights, all nod
 Responsive to the advent of a god.
 Oh may to me of life a breath remain,
 Enough, no more, to sing thy glorious reign!
 Linus nor Orpheus then should win the prize,
 Though either boast a parent in the skies,
 He fair Apollo, he Calliope;
 Nay, if the great god Pan should challenge me,
 I would accept, with Arcady as judge;
 My victory then not Pan himself would grudge.

Learn, babe, to greet thy mother with a smile:
 She bare thee 'neath her heart a weary while.
 Begin, sweet babe, betimes. That ill-starred child
 On whom his earthly parents have not smiled,
 Shall ne'er, translated to the heavens above,
 Feast with the gods or share a goddess' love.

F. S.

STANFORD'S
WAR MAPS.

War Map No. 1. CENTRAL AND EASTERN EUROPE, showing in colours the International Frontiers. The Map extends to St. Petersburg on the North, Brussels on the West, Constantinople on the East, and Malta on the South. The Principal Fortresses are printed in Red.

One sheet: 27 × 40 inches; 50½ miles to an inch (1 : 3,220,177).

Prices:—Coloured sheet, 5s. (5s. 5d.).

Mounted to fold in case, 8s. 6d. (8s. 10d.).

Mounted on board to hang, 8s. 6d. (packing and rail extra).

War Map No. 2. HOLLAND AND BELGIUM, extending from Borkum on the North, Dunkerque on the West, Coblenz on the East, and Luxembourg on the South; the International Boundaries are coloured, and the basis of the Map is a beautifully engraved plate in Stanford's Folio London Atlas.

One sheet: 22 × 30 inches; 12 miles to an inch (1 : 1,760,320).

Prices:—Coloured Sheet, 2s. 6d. (2s. 11d.).

Mounted to fold in case, 5s. (5s. 3d.).

Mounted on board to hang, 5s. (packing and rail extra).

War Map No. 3. FRANCE, with parts of the adjoining Countries. The International Boundaries are coloured, and the basis of the map is a finely engraved plate in Stanford's Folio London Atlas.

One sheet: 22 × 30 inches; 30 miles to an inch (1 : 1,900,800).

Prices:—Coloured sheet, 2s. 6d. (2s. 11d.).

Mounted to fold in case, 5s. (5s. 3d.).

Mounted on board to hang, 5s. (packing and rail extra).

War Map No. 4. THE FRANCO-GERMAN FRONTIER AND WESTERN GERMANY. This map extends on the North to Copenhagen, on the South to Basle and Innsbruck; it reaches Berlin on the East, and Brussels, the Hook of Holland, and Flushing on the West. It is a very plain, distinct, clear, and readable map, and the boundaries are coloured in pale transparent colours.

One sheet: 27 × 40 inches; 17½ miles to 1 inch (1 : 1,125,000).

Prices:—Coloured sheet, 5s. (5s. 5d.).

Mounted to fold in case, 8s. 6d. (8s. 10d.).

Mounted on millboard to hang, 8s. 6d. (packing and rail extra).

War Map No. 5. THE NORTH SEA AND THE BALTIC, embracing the whole of the British Islands on the West, the Farøe Islands and Aland Islands on the North, the Entrance to the Gulf of Finland on the East, and Vienna and Paris on the South.

One sheet: 30 × 22 inches; 50½ miles to 1 inch (1 : 3,220,177).

Prices:—Coloured sheet, 2s. 6d. (2s. 11d.).

Mounted to fold in case, 5s. (5s. 3d.).

Mounted on board to hang, 5s. (packing and rail extra).

War Map No. 6. THE SEAT OF WAR IN BELGIUM, including Rotterdam on the North, Ostend and Dunkirk on the West, Cologne and Coblenz on the East, and Luxembourg and Sedan on the South.

One sheet: 41 × 32 inches; 6 miles to 1 inch (1 : 380,160).

Prices:—Coloured sheet, 5s. (5s. 5d.).

Mounted to fold in case, 8s. 6d. (8s. 10d.).

Mounted on board to hang, 8s. 6d. (packing and rail extra).

* * The Prices given in brackets are post free for cash with order, including a roller for packing sheet copies.

Customers enclosing cash with order will have priority in the execution of orders.

EUROPE. Stanford's Library Map of Europe, New and Revised Edition, showing the boundaries of all the independent states as well as the subdivisions of the larger continental powers. Boundaries of the Balkan States to date (1914). Railways are accurately and distinctly delineated; principal roads, submarine telegraph lines, and sand banks of the North Sea are also given. British possessions are coloured red. The north coast of Africa is included, so that the map is useful for travellers in the Mediterranean, or by the overland route as far as Suez. This is the largest and most detailed map of Europe published, and has been largely used by the Government offices, clubs, banks, and the leading commercial firms of the world.

Four sheets: 65 × 58 inches, 50½ miles to an inch (1 : 3,220,177).

Prices:—Coloured Sheets, 35s. (35s. 6d.).

Mounted on rollers and varnished, 45s.

Mounted to fold in morocco case, 60s. (60s. 6d.).

Mounted on spring roller, £5.

Case copies are mounted for convenience in four sections.

EUROPE—CENTRAL. Stanford's Map of the Greater Part of Europe, extending from Moscow to the Atlantic, and from the Gulf of Bothnia to the Mediterranean, distinguishing the political divisions, railways, and principal roads, thus forming a useful travelling map for Central Europe as far East as Constantinople.

Two sheets: 46 × 42 inches; 50½ miles to an inch (1 : 3,220,177).

Prices:—Coloured sheets, 21s. (21s. 6d.).

Mounted to fold in case, 25s. (25s. 4d.).

Mounted on rollers and varnished, 30s.

FLAGS. Small marking flags for use on the maps, **British** (Union Jacks and White Ensigns), **Belgian, French, Russian, German, Austrian, Servian, Turkish, Bulgarian, Montenegrin, and Greek**, or any plain colours. 6d. per dozen (postage 1d.).

London: **EDWARD STANFORD, Ltd., 12, 13, & 14, Long Acre, W.C.**

TEXTBOOKS FOR MIDDLE AND LOWER FORMS OF SECONDARY SCHOOLS.

MATHEMATICS AND SCIENCE.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and A. BARRACLOUGH, M.A. 2s. 6d. [*In preparation.*]

Arithmetic, Preliminary. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 9d.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.
"Quite admirably suited for its purpose."—*London Teacher*.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPE, B.A. (With or without Answers.) *Third Edition.* 2s. 6d.

"The book has our fullest appreciation."—*Schoolmaster*.
"Just as good a handbook on arithmetic as the student can desire."—*Nature*.

Botany, Junior. By Prof. F. CAVERS, D.Sc., F.L.S. 2s. 6d. [*In preparation.*]

Chemistry, Preliminary. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.

"It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—*Educational News*.

"Nothing is taken for granted; everything is carefully and simply explained."—*School Guardian*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition.* 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

The object of this book is to combine simplicity of treatment with logical accuracy, and thus to develop the full educational value of the subject.

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.

"An excellent little volume."—*Educational News*.

"A good practical course. The diagrams are very clear and the subject-matter all that could be desired."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. 2s. 6d.

"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster*.

Plant Biology. By F. CAVERS, D.Sc., F.L.S. 3s. 6d.

This is a textbook of Elementary Botany arranged for modern methods of teaching.

"The freshness of treatment should secure for Professor Cavers's book an instant welcome."—*School World*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition.* 2s. 6d.

"Mr. Hooton . . . has condensed very well a couple of years' good junior work into one handy half-crown volume."—*Guardian*.

"An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News*.

Sound and Light, Junior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 2s. 6d.

"Reaches a high standard, with plenty of practical work and exercises."—*Guardian*.

"In this book the pupil is encouraged to experiment as well as to think for himself, and his way is made plain by careful explanations and good illustrations."—*School Guardian*.

LANGUAGES, HISTORY, AND GEOGRAPHY.

English Course, Preliminary. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 1s. 6d.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded and the author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenæum*.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"Examples and illustrations are plentiful, and have been compiled with an eye to their utility as well as their literary merit."—*Educational News*.

English Grammar, Junior. By A. M. WALMSLEY, M.A. 1s. 6d.

"A simple and satisfactory grammar, which avoids most of the superfluity of naughtiness of the old grammarians."—*The Journal of Education*.

French Course, Preliminary. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. 1s. 6d.

"This Elementary course supplies an excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method and also to the necessity for thoroughness in the accidence of the language. Free use is made of black type for emphasis."—*Athenæum*.

French Course, New Junior. By G. A. ROBERTS, M.A., Senior Modern Language Master, Royal Masonic School, Bushey. 2s. 6d.

"The short extracts are generally well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., Senior Modern Language Master, Secondary School, Southend, and L. J. GARDINER, M.A. 2s.

"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education*.

Geography, Preliminary. By E. G. HODGKISON, B.A., Assistant Master, County Secondary School, Crewe. 1s. 6d.

"This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils for whose use the book is intended."—*Teachers' Times*.

Geography, Junior. By G. C. FRY, M.Sc. 2s. 6d.

The following parts are issued separately:—

The British Isles, with Outlines of Physical Geography. 1s. 6d.
Asia. 8d. South America. 8d. North America. 8d.

History of England, Preliminary. By M. K. ELLIOTT, Honours in Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. 2s.

This book deals fully, though in an elementary way, with those social and economic questions to which modern history teaching now rightly attaches such importance.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, To 1603; II, 1485 to 1714; and III, 1660 to 1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., Senior Classical Master, Strand School, and L. M. PENN, M.A., Classical Master, Beckenham County School. 3s. 6d.

"Admirably unites the more modern methods of teaching with those which have long stood the test of time."—*Educational News*.

Latin Reader, New Junior. By A. J. TATE, M.A., Assistant Classical Master, Owen's School, Islington. 2s.

"Great care and thoroughness have been employed in the preparation of this reader. Mr. Tate shows a fine discrimination in the selection of the extracts from the Classics."—*Literary World*.

BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education. The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studios, is situated on very high ground, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS. *Ling's Swedish System.*

Aim of the Union: To advance the cause of Physical Education on scientific lines. UNIVERSITY COLLEGE HOSPITAL MEDICAL SCHOOL. (UNIVERSITY OF LONDON.)

WINTER SESSION 1914-15 begins on THURSDAY, October 1, 1914. A Medical Student may enter the School as soon as he has passed the University of London Matriculation Examination, or one of the other preliminary Examinations that qualify a Medical Student for entering a Medical School. In this case he will pursue his Preliminary and Intermediate Studies at University College, and when these are completed he will carry on his Final Medical Studies at University College Hospital Medical School. The Student who, in addition to having passed a Matriculation or other Examination, has completed his Preliminary and Intermediate Medical Studies at University College or elsewhere may enter University College Hospital Medical School for his Final Medical Studies only.

A complete education designed to meet the requirements of the Final Examination of the Universities of Oxford, Cambridge, and London and of the M.R.C.S.(Eng.), L.R.C.P.(London), and F.R.C.S.(England) Examinations is given.

Thirty-seven Clinical Appointments, eighteen of which are resident, are filled up by competition during the year, and these as well as all Clerkships and Dresserships, are open to Students of the Hospital without extra fee.

The Research Department offers special facilities for Pathological Research. For particulars apply to Dr. CHARLES BOLTON at the School.

The New Dental Department (formerly the National Dental Hospital) provides four years' curriculum for students desirous of obtaining the Licences in Dental Surgery, including two years' Practical Dental Mechanics.

Scholarships and Exhibitions of the value of over £1,000 are offered for competition annually.

For Prospectus and further particulars apply to the DEAN, University College Hospital Medical School, University Street, Gower Street, W.C.

G. P. BLACKER, M.D., F.R.C.P., F.R.C.S.

LONDON (Royal Free Hospital) SCHOOL OF MEDICINE FOR WOMEN. (UNIVERSITY OF LONDON.)

GEORGE GILL & SONS, Ltd.

Before selecting Textbooks for the coming year write for particulars, or specimen copies, of

The Oxford and Cambridge Edition.

"Guides and Syllabus Extracts" for the 1915 Local Examinations post free.

A NEW READER FOR JUNIOR FORMS.

GREEK AND ROMAN GODS AND HEROES.

By P. C. SANDS, M.A., late Fellow St. John's College, Cambridge. The aim of the writer is to introduce to pupils of 12 to 14 years of age the stories of the Greek and Roman Gods and Heroes, and some account of Greek and Roman beliefs, and so not only to bring them into contact with a most beautiful series of legends, but to enable them to understand allusions to classical lore in their later reading. With 8 full-page reproductions of world-renowned pictures and numerous other illustrations. Crown 8vo, cloth ... 9d.

A NEW FRENCH READER.

"A.D. 1914." Being extracts from the leading French and Belgium Journals on the present European War.

The extracts have been, as far as possible, arranged in sequence, and are carefully chosen. The retaining interest of the book will widen the vocabulary and impress modern French constructions upon the mind of the student much more readily than the hackneyed "unseens" from which the master has, hitherto, had to choose. Crown 8vo, cloth 8d.

THE STUDENT'S WORD BOOK. By F. A. GINEVER, B.A. With Introduction by Professor W. W. SKEAT ... 4d.

The great difficulty in teaching spelling is overcome by "The Student's Word Book." This is not the usual disconnected and meaningless list of spelling words, but a comprehensive and classified arrangement which excites the curiosity and creates a live interest in the subject.

FIRST AID IN ACCIDENTS. By Sir J. COLLIE and C. F. WIGHTMAN, F.R.C.S. 9d. net.

"It deals with really 'First Aid.' The directions are very good and so clearly written that anyone of ordinary intelligence cannot fail to understand them."—LANCET.

NURSING AT HOME. By Sir J. COLLIE and J. D. E. MORTIMER, F.R.C.S. 8d. net.

"The information is given in a simple and practical manner, but is thorough and up to date."—NURSING TIMES.

ELEMENTARY GEOMETRY. A Modern Textbook of Practical and Theoretical Geometry. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Seventh Edition, Revised and Enlarged. Crown 8vo, complete, 4s. 6d. Also to be had in Parts.

GEOMETRY FOR SCHOOLS. By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A. Crown 8vo. Complete, 4s. 6d. The separate volumes may also be obtained.

A NEW SCHOOL ARITHMETIC. By C. PENDLEBURY, M.A., and F. E. ROBINSON, M.A. With or without Answers, 4s. 6d. Or in two Parts, 2s. 6d. each. Full Key to Part II, 2s. 6d. net.

ELEMENTARY ALGEBRA. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. With or without Answers, 4s. 6d. Or in two Parts—Part I, 2s. 6d. With Answers, 3s. Part II, 2s. 6d.

A NEW TRIGONOMETRY for SCHOOLS. By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A. 4s. 6d. Or in two Parts, 2s. 6d. each. Key, 10s. net, or in two Parts, 5s. net each.

A JUNIOR TRIGONOMETRY. By the same Authors. 3s. 6d.

CHEMISTRY.

ELEMENTARY INORGANIC CHEMISTRY. By JAMES WALKER, D.Sc., Ph.D., F.R.S., Professor of Chemistry in the University of Edinburgh. Sixth Edition, Revised. Crown 8vo. 3s. 6d.

INTRODUCTION TO INORGANIC CHEMISTRY. By ALEXANDER SMITH, B.Sc., Ph.D., F.R.S.E. New Edition (27th Thousand). 8vo, 780 pages, 7s. 6d. net.

GENERAL CHEMISTRY FOR SCHOOLS AND COLLEGES. By ALEXANDER SMITH, B.Sc., Ph.D. 25th Thousand. 8vo, 2s. 6d. net.

A LABORATORY OUTLINE OF GENERAL CHEMISTRY. By ALEXANDER SMITH, B.Sc., Ph.D. Fourth Edition, revised in collaboration with WILLIAM J. HALE. Crown 8vo. Interleaved throughout. With 20 Illustrations. 2s. 6d.

FRENCH.

GRAMMAIRE FRANÇAISE MODERNE.

By M. DESHUMBERT, late Professor at the Staff College, Camberley, and at the Royal Military College, Sandhurst; and MARC CEPPI, Whitgift School, Croydon. Issued in two forms—one with the Rules in French and the other with the Rules in English. Crown 8vo, 2s. 6d. net either volume.

THE DIRECT METHOD OF TEACHING FRENCH. By D. MACKAY, M.A., of Ayr Academy, N.B., and F. J. CURTIS, Ph.D., Professor at the Akademie, Frankfurt-am-Main.

FIRST FRENCH BOOK. With Coloured Frontispiece and 21 Illustrations. Sixth Edition. 1s. net.

SECOND FRENCH BOOK. With 38 Illustrations. Sixth Edition. 1s. 6d. net.

TEACHERS' HANDBOOK. 1s. net.

SUBJECT WALL PICTURE (Coloured). For use with the above 60 in. by 40 in., mounted on rollers. 7s. 6d. net.

GASO'S CONCISE DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES. Sixth Edition, Revised. 3s. 6d. Or in two Parts—Part I (French-English), 2s. Part II (English-French), 2s.

HISTORY.

AN INTRODUCTION TO ENGLISH INDUSTRIAL HISTORY. By HENRY ALLSOPP, B.A., late Vice-Principal of Ruskin College, Oxford. With Maps and Plans. Second Edition. 2s.

A JUNIOR HISTORY OF ENGLAND. By E. NIXON. Fourth Edition. Crown 8vo, with 66 Illustrations. 1s. 6d.

A SENIOR HISTORY OF ENGLAND. By A. E. MCKILLIAM, M.A. 2s.

ENGLISH.

AIDS TO THE WRITING OF ENGLISH COMPOSITION. By F. W. BEWSHER, B.A., Assistant Master at St. Paul's School. Crown 8vo, 1s. net.

EXERCISES IN ENGLISH. Including Dictation, Reproduction, Analysis, Parsing, Classification, Synonyms, Meaning of Words, &c., with Explanation of Methods and Grammatical Terms. By FRED W. BEWSHER, B.A. 1s. net.

A PRACTICAL COURSE IN ENGLISH. By E. J. BALLEY, B.A., Whitgift Grammar School, Croydon. 1s. 6d.

MASON'S NEW ENGLISH GRAMMARS. Revised in accordance with modern Requirements, by A. J. ASHTON, M.A., Chief Lecturer in English under the Glasgow Provincial Committee for Training of Teachers, Examiner in English to the College of Preceptors.

MASON'S JUNIOR ENGLISH GRAMMAR. Fourth Edition, Revised. 1s.

MASON'S INTERMEDIATE ENGLISH GRAMMAR. Second Edition. 2s.

MASON'S SENIOR ENGLISH GRAMMAR. 3s. 6d.

THE PREPARATORY ENGLISH GRAMMAR AND SPELLING BOOK. By W. BENSON, M.A., late Assistant Master at St. Paul's Preparatory School. Fcap 8vo. New and Enlarged Edition. 1s. net.

A FIRST ENGLISH GRAMMAR. By the Rev. J. E. W. WALLIS, B.A., Junior School, Christ's Hospital. Fcap. 8vo. Strongly bound in cloth. 1s.

OUTLINE HISTORY OF ENGLISH LITERATURE. By W. H. HUDSON, Staff Lecturer in English Literature to the Extension Board of London University. Crown 8vo, 2s. 6d. net.

REPRESENTATIVE PASSAGES FROM ENGLISH LITERATURE. Chosen and arranged by W. H. HUDSON. Crown 8vo. 2s. 6d. net.

LATIN.

BELL'S ILLUSTRATED LATIN READERS

Edited by E. C. MARCHANT, M.A. Uniform with Bell's Illustrated Classics. With short notes and Vocabularies and Illustrations. 1s. each.

SCALAE PRIMAE. Ninth Edition.

SCALAE MEDIAE. Eighth Edition.

SCALAE TERTIAE. Fourth Edition.

BELL'S LATIN COURSE FOR THE FIRST YEAR. By E. C. MARCHANT, M.A. Fellow of Lincoln College, Oxford, and J. G. SPENCER, B.A., Assistant Master at St. Paul's Preparatory School. In three Parts. Crown 8vo. With Coloured Plates and numerous other Illustrations. 1s. 6d. each.

BELL'S CONCISE LATIN COURSE. Part I. By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. Fifth Edition. Crown 8vo, 2s. Part II. By E. C. MARCHANT, M.A., and S. E. WINBOLT, M.A. Second Edition. Crown 8vo, 2s. 6d.

BELL'S LATIN PICTURE CARDS. Edited by Professor FRANK GRANGER. A Set of 16 Cards, printed in colours, with Vocabularies and Exercises on the back of each Card. Price 1s. 3d. net.

LONDON: G. BELL & SONS, Ltd., York House, Portugal Street, W.C.

BELL'S NEW BOOKS.

Crown 8vo. 3s. 6d.

ENGLISH COMPOSITION.

By R. S. BATE, M.A.

The aim of this book is to teach Composition from the earliest stages. The author has endeavoured to point out, as they emerge, the difficulties which await the young writer, and has devoted more space than usual to the construction of sentences and the writing of paragraphs. Précis writing and free composition are also dealt with thoroughly and materials given for thirty-five paragraphs and outlines of fifty essays, besides long lists of subjects for both paragraphs and essays.

Pott 8vo. 1s. each.

BELL'S SHAKESPEARE FOR SCHOOLS.

Edited with Introduction, Notes, Hints, and Questions, by
S. P. B. MAIS, M.A.,
Assistant Master at Sherborne School.

Volumes Now Ready:

**HAMLET. MACBETH.
TWELFTH NIGHT.**

In Four Volumes. Crown 8vo. 2s. each.

A HISTORICAL COURSE FOR MIDDLE FORMS.

By B. L. K. HENDERSON, M.A., D.Litt., and
P. MEADOWS, M.A.

Just issued:

Vol. III.

THE ENGLISH NATION: CONSTITUTIONAL HISTORY.

By P. MEADOWS, M.A.

Vol. IV.

LATIN.

FABULAE. A Second Latin Reader. By R. B. APPLETON, M.A., Perse School, Cambridge. Crown 8vo. Illustrated. 2s.

PŌNS TĪRŌNUM: A First Latin Reader. By R. B. APPLETON, M.A., and W. H. S. JONES, M.A., both of Perse School, Cambridge. Illustrated. 1s.

DE DUOBUS. Selections from Cornelius Nepos. By W. G. BUTLER, M.A., Christ's Hospital. With numerous Illustrations and brief Grammatical Notes. 1s. 6d.

Demy 8vo. 4s. 6d. net.

AN INTRODUCTION TO THE STUDY OF PLANTS.

By F. S. FRITSCH, D.Sc., Ph.D., F.L.S., and
E. L. SALISBURY, D.Sc., F.L.S.

Profusely illustrated by over 220 Figures and Photographs comprising 500 Drawings, carefully prepared from the living plant, and specially drawn for this volume.

Crown 8vo. 2s. 6d.

AN INTRODUCTION TO GEOLOGY.

By C. I. GARDINER, M.A., F.G.S.

Senior Science Master at Cheltenham College.

This little book is not intended to replace the formal textbook, but rather to lead up to the proper understanding of such a book. It gives some account of matters of general interest which come into the domain of geological science, and is designed to help its readers to understand the geology of the particular district in which they live. The numerous illustrations have been carefully selected with this end in view.

Crown 8vo. Illustrated. 2s. net.

PHYSIOLOGY AND HYGIENE.

For Girls' Schools and Colleges.

By ELIZABETH SLOAN CHESSEY, M.B.

Lecturer to the Institute of Hygiene and Author of "Perfect Health for Women and Children," &c.

The importance of hygiene as a school and college subject is universally recognized by educational authorities. This book by a lady doctor deals from the dual point of view of the doctor and the housewife with such subjects as Home Hygiene, Physical Training, Personal Hygiene, Dietetics, &c.

FRENCH.

MR. CEPPI'S NEW READERS.

CONTES FRANÇAIS. With or without Vocabulary. 1s. 6d. Also with Questionnaire and Exercises, 2s. Handbook of Exercises and Questionnaire separately, 6d.

A FRENCH DRAMATIC READER. With or without Vocabulary and Notes, 1s. 6d.

SIMPLE FRENCH STORIES. With Vocabulary and Notes. Illustrated, 1s. net.

TALES FROM MOLIERE. 1s. 6d. Or with Vocabulary and Notes, 2s.

A FRENCH PICTURE VOCABULARY. Text by J. H. B. LOCKHART (of Rugby), with over 300 Illustrations by GEORGE MORROW, of *Punch*. Wide crown 8vo, 1s.

BELL'S STANDARD FRENCH TEXTS.

Edited by MARC CEPPI. Crown 8vo.

Issued in two forms—I. For the Direct Method, with the Notes, Life, and Vocabulary in French. II. With English Notes, Life, and French-English Vocabulary.

MÉRIMEE'S COLOMBA. Edited by A. H. SMITH, M.A., Docteur de l'Université de Paris. 2s.

TEXTBOOKS FOR MIDDLE AND LOWER FORMS OF SECONDARY SCHOOLS.

MATHEMATICS AND SCIENCE.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and A. BARRACLOUGH, M.A. 2s. 6d. [*In preparation.*]

Arithmetic, Preliminary. By AUGUSTUS BARRACLOUGH, M.A. 1s. 6d. With Answers, 1s. 9d.
 "The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.
 "Quite admirably suited for its purpose."—*London Teacher*.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPE, B.A. (With or without Answers.) *Third Edition.* 2s. 6d.
 "The book has our fullest appreciation."—*Schoolmaster*.
 "Just as good a handbook on arithmetic as the student can desire."—*Nature*.

Botany, Junior. By Prof. F. CAVERS, D.Sc., F.L.S. 2s. 6d. [*In preparation.*]

Chemistry, Preliminary. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.
 "It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—*Educational News*.
 "Nothing is taken for granted; everything is carefully and simply explained."—*School Guardian*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition.* 2s. 6d.
 "The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.
 The object of this book is to combine simplicity of treatment with logical accuracy, and thus to develop the full educational value of the subject.

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.
 "An excellent little volume."—*Educational News*.
 "A good practical course. The diagrams are very clear and the subject-matter all that could be desired."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.
 "This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
 "The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster*.

Plant Biology. By F. CAVERS, D.Sc., F.L.S. 3s. 6d.
 This is a textbook of Elementary Botany arranged for modern methods of teaching.
 "The freshness of treatment should secure for Professor Cavers's book an instant welcome."—*School World*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition.* 2s. 6d.
 "Mr. Hooton . . . has condensed very well a couple of years' good junior work into one handy half-crown volume."—*Guardian*.
 "An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News*.

Sound and Light, Junior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 2s. 6d.
 "Reaches a high standard, with plenty of practical work and exercises."—*Guardian*.
 "In this book the pupil is encouraged to experiment as well as to think for himself, and his way is made plain by careful explanations and good illustrations."—*School Guardian*.

LANGUAGES, HISTORY, AND GEOGRAPHY.

English Course, Preliminary. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 1s. 6d.
 "An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded and the author has kept in view the real aim of grammar, namely, the production of good English."—*Athenæum*.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.
 "This is the work of a clever practical teacher. The success of the method adopted is evident. A really helpful, well written book."—*Schoolmaster*.

English Grammar, Junior. By A. M. WALMSLEY, M.A. 1s. 6d.
 "A simple and satisfactory grammar, which avoids most of the superfluity of naughtiness of the old grammarians."—*The Journal of Education*.

French Course, Preliminary. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. 1s. 6d.
 "This Elementary course supplies an excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method and also to the necessity for thoroughness in the acquisition of the language. Free use is made of black type for emphasis."—*Athenæum*.

French Course, New Junior. By G. A. ROBERTS, M.A., Senior Modern Language Master, Royal Masonic School, Bushey. 2s. 6d.
 "The short extracts are generally well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.
 "The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education*.

Geography, Preliminary. By E. G. HODGKINSON, B.A., Assistant Master, County Secondary School, Crewe. 1s. 6d.
 "This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils for whose use the book is intended."—*Teachers' Times*.

Geography, Junior. By G. C. FRY, M.Sc. 2s. 6d.
 The following parts are issued separately:—
 The British Isles, with Outlines of Physical Geography. 1s. 6d.
 Asia. 8d. South America. 8d. North America. 8d.

History of England, Preliminary. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With Illustrations. 2s.
 This book deals fully, though in an elementary way, with those social and economic questions to which modern history teaching now rightly attaches such importance.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.
 Also in three parts as follows:—I, To 1603; II, 1485 to 1714; and III, 1660 to 1910. 1s. 6d. each.
 "The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., Senior Classical Master, Strand School, and L. M. PENN, M.A., Classical Master, Beckenham County School. 3s. 6d.

"Bears the hall-mark of practicality that appears on all Messrs. Clive's educational books."—*Guardian*.

Latin Reader, New Junior. By A. J. TATE, M.A., Assistant Classical Master, Owen's School, Islington. 2s.
 "Great care and thoroughness have been employed in the preparation of this reader. Mr. Tate shows a fine discrimination in the selection of the extracts from the Classics."—*Literary World*.

OCCASIONAL NOTES.

WE hope that there will be a good deal of instruction about the origin and causes of the war given in schools. The history of the rivalry between Germany and England will need discreet handling, but there are no doubt many teachers who can be trusted to discuss it in a broad and fair spirit. They will remember that the War will probably at the worst not last for longer than what is only a small fraction of the lifetime of a generation, and that their pupils have got to learn to be good friends again with our enemies after it is over. The dispassionate statement of the Oxford historians, with its appendix of original documents ("Why we are at War," Oxford Clarendon Press, 2s. net), should be mastered by every teacher of history, and serve him as a model for presenting to his class Great Britain's case. Let him illuminate the argument by narratives of heroism and self-devotion, drawn as far as possible from both sides, but there is no need at the present moment to fan the fire of patriotism. He should rather point out that the German Michel is no less patriotic than John Bull, but his patriotism has been perverted by a government in which he has no share and a military oligarchy which has usurped the powers of the nation.

OUR school children ought to learn what Russia has to do with Servia, what Austria is and how it came to be first the foe and then the friend of Germany, why Italy entered and then deserted the Triple Alliance. Indeed, we hope that one of the results of the War will be a great

quickening of interest in modern European history, both in schools and in readers whose only textbook is the newspaper. It ought at least to teach everybody that the present is essentially one with the past, and that, as Freeman used to say, history is the politics of the past, and politics is the history of the present.

OUTSIDE the question of Germany and England there is much connected with the origin of the War about which most boys and girls are probably quite ignorant. There is the question of the neutrality of Belgium. Everybody ought to understand what neutrality is, and what were the reasons for the special position of Belgium as a country whose neutrality was guaranteed by the Powers. Then there is that "vast, immeasurable abyss" of the Slav world, of which so few of us know anything.

AMONG the social effects of the War will probably be the advance of women into areas of work now occupied by men. Women will step into many of the million or so of posts which have been or are being vacated by men, and in many cases they will retain them permanently, for some of the million will never see the end of the War and others will not return to civil life. In teaching, certainly more women than ever before will be employed. The spheres of men and women in schools have never been delimited by authority, but, speaking broadly, women are employed in boys' schools only for young children and to some extent for mixed classes. But co-education for boys and girls over twelve has not won any large measure of support in this country, except on financial grounds in sparsely populated districts, and the American system of entrusting the teaching of boys to women is still less popular. Some extension of the woman's sphere of influence will, we believe, do no harm and often prove a positive gain. The transference of women to the lower class in the boys' department of the elementary school would be a change for the better, for there are few men who have sufficient sympathy with children under ten to teach them well.

THE National Education Association have issued a Memorandum on Children and the War which deserves careful consideration. The Committee believe that the number of boys and girls who will either lose their employment through the War or be unable to obtain any will be very large. They compute the number, indeed, at at least half a million. Their first suggestion is that children should be encouraged by every possible means to stay at school as long as possible; and, in this connexion, they point out that Local Education Authorities have the power, under the Education Act of 1907, to assist children by bursaries to remain in the schools to the age of sixteen. Next, they recommend that young people who have no employment should be gathered "as firmly as possible" into emergency schools, either day or evening, where they can have vocational training or education of a more or less "recreative" character. Certainly there will be a great problem to be faced in the coming winter and a great chance for the evening schools. Toy-making might be one subject taught.

THERE can be no doubt that the preparation of teachers will suffer much from the War. A large

number of the men students are members of the Officers' Training Corps and have been embodied. The Board propose that, if they are able to return to their studies next January, the missed term shall count towards their two years; but we fear that the chances of the War being over by the New Year are remote. These young men will therefore probably begin their second-year work when peace is signed, and their period of preparation will thus be rudely broken in two. Against that, however, we may set the broadening of their horizons which military service will bring. They will come into contact with all sorts and conditions of men, their angles will be rubbed away, their little class conceits and vanities knocked on the head. They will be broader and bigger men for their spell of active service, and that will be no small compensation for some loss of learning. But this is not the only way in which training will suffer. Some colleges are depleted of students or have been taken for military hospitals, so that it has been necessary to send the men and women to other colleges. The result will be a considerable amount of inevitable dislocation.

ONLY two more remarks connected with the War, for we do not mean to let the great struggle be an Aaron's rod swallowing up everything else. There must be large numbers of Belgian children now in England and likely to be with us for some time. We trust that places—free places in cases where it is necessary—will be found for them in the schools, where they will at least learn something of England and English ways and form a new link between the two allied nations. It would be a good thing, too, for our own boys and girls to have these children with them and to be able to welcome and help them. Our other observation is that we hope that every schoolgirl will do something, however humble, for our soldiers and sailors, for their wives and families. The elder girls might well be employed in assisting Relief and Care Committees. It is only by house-to-house visitation that relief can be assured wherever needed, and duplication of relief or imposture be detected and arrested. Many boys have already done useful work as messengers and in other ways, and we are sure that their sisters will like to follow their example.

AT a recent meeting of the Executive of the National Union of Teachers there was a long and heated debate upon the question whether the experience and status of each teacher should be exhibited in the Register when it is printed and published. It is hard to understand why the letters "A.M." (Assistant Master) should have proved such a red rag to the majority of the N.U.T. The main argument against the inclusion was that in the Medical Register there is no record of employment past or present. The reason is that experience is not one of the qualifications for the medical profession. What would be said of subalterns who demanded that in the Army List no distinction should be drawn between generals and ensigns? How much information should be given in addition to the teacher's name is mainly a question of convenience and finance. We cannot see that the addition of "A.M." to a man or woman's name should cause any heart-burning, or be likely to drive a wedge between different sections of the profes-

sion. A Register which is a mere list of names with nothing to discriminate the University professor from the village schoolmaster would be a somewhat uninteresting and useless publication. We should like to repeat, however, what we said last month, that the same nomenclature ought to be used for all masters and mistresses, in whatever schools they work.

AMONG the points of the Board of Education's Circular on Examinations, which we had no space to discuss last month, one of the most important is the suggestion for giving teachers some voice in the conduct of examinations. This the Board think may be done, first, by giving them representation on the examining body, or by some regular form of consultation, and, secondly, by giving the schools the right to submit their own syllabuses for examination. Of these we regard the second as the more important. The real defect of the examination system is that it hampers originality and experiment in schools. It is a valuable stimulus for the many, but it affects a few prejudicially, and just those that are doing pioneer work. And in education such work is specially valuable, because schools are always tending to get into grooves. There is also a suggestion that principals of schools should be required to submit their own estimate of candidates' merits, which may be considered in doubtful cases. These proposals we consider much more practicable than any suggestion for allowing teachers to have a share in the preparation of the examination paper, an idea which we have never regarded as feasible.

WHAT exactly do teachers mean by "appreciation of literature," of which we have lately heard so much? As regards Poetry, Miss Faithfull, in her contribution to "Idola Linguarum" gives a clear and definite answer; but we would propound the same question as regards prose, in the hope of provoking no less definite answers from her or other teachers. Let us take two instances. The first shall be Anson's "Voyage round the World," one of the most entrancing narratives ever written. Is it sufficient in the view of our reformers that boys shall be entranced by it? Or ought they to learn from it history and geography, and find out from it a great deal about the Navy in the eighteenth century, and the difficulties against which our admirals had to contend? Should they appreciate it, that is, as a source of information or only as a specimen of the literary art? The second example shall be a book suitable only for the oldest classes, Burke's "Reflections on the French Revolution." Is this work to be appreciated as a piece of political reasoning or only as a piece of eloquence? Is comprehension of the arguments the thing to be aimed at or enjoyment of the language? Is it more important that the boys and girls should know by heart the famous passage about Marie Antoinette, or that they should understand the falsity of the dictum about the age of chivalry? In a word, does appreciation include the power to weigh and judge as well as the power to enjoy, the capacity to reject as well as the capacity to absorb?

WE have no hesitation in recommending all teachers to sign the memorial of the Simplified Spelling Society, petitioning the Prime Minister for a Royal

Spelling Reform.

Commission. It makes no reference to any particular scheme; it simply asks for an inquiry into the subject, with a view to the adoption of a rational system. It suggests that the Commission ought to include educationists and representatives of the commercial world as well as scholars and literary men. To teachers most of all ought spelling reform to appeal. It is not merely that our chaotic spelling is a nuisance to the child, but that it is positively harmful to his mind, because it accustoms him from an early period of his intellectual life to the rule of unreason in the world of language. In what way improvement is to come, what scheme should be sanctioned, or whether any hard-and-fast scheme should be adopted, are matters for discussion. Not revolution, but reform, should be the watchword. No suggestions will be successful which do not take full account of the sentiment—the unreasoning sentiment, if the reformers like to call it so—with which a nation clings to the outward appearance of its mother-tongue. You cannot change even the externals of the language in which a national literature is written as if it were a telegraphic code or a system of shorthand. Whatever the phoneticians may say, plain people will never regard the printed as a mere reflection of the spoken language, and as a thing which has no life in itself. No argument drawn from convenience will ever reconcile a generation to a revolutionary change in the look of the printed page.

Juvenile Employment Schemes.

IN the *School Government Chronicle* has appeared an interesting account of the Liverpool scheme for helping children to obtain suitable employment on leaving school. The machinery consists of a Juvenile Employment Committee and an Advisory Committee of Employers. The first object of the scheme is to induce parents to place their children in employments which will give them a good training for after life, and not in those which merely offer good wages for a year or two. Every parent of a boy or girl about to leave school is invited to confer with the head teacher about his or her future. If an opening has been found for the child, a note is made of it, so that he can be followed up; if not, the parent is referred to the Juvenile Employment Registry. The importance of the attendance of young people at continuation or technical classes is also urged upon the parents. The system has been at work only two years, but last year 4,000 children were placed in suitable positions by its means. The scheme is a move in the right direction. The State will eventually have to assume the responsibility of seeing that every young person at least gets an opportunity of being trained in some craft, and towns like Liverpool are showing us the way.

THE word "museum" used to be a synonym for "dullness," and we have all heard stories of children who were threatened with a visit to the British Museum as a punishment for naughtiness. But at last we are beginning to find out how to use them. "Personally conducted tours" under efficient guides are now a matter of ordinary routine in the great national collections. Four courses of lectures are being given in Great Russell Street and at South Kensington this autumn and winter by Mr. Kaines Smith and Mr. Banister Fletcher. One of the subjects of the first-named is "Greek Religion," and in the proposed twenty-four lectures he will have

Hellenism without Greek.

space to treat and illustrate it fully. The illustrations will be all around him. Such lectures and the audiences that listen to them are the best answer to the plea of Dr. Macan's "Greeklings" that the decay of Greek in schools is killing the knowledge of Greek life and thought in the country. When dons and schoolmasters talk in that way they are magnifying their office overmuch. Intellectual interests are not dependent only on schools and colleges. A moment's thought will suggest an endless number of subjects—Italian art, folk-lore, sociology, Oriental studies Biblical studies are a few—which educational institutions have fostered only a little or not at all, but which, nevertheless, are studied more widely and more keenly than ever before. In saying this we are not criticizing the schools, whose business is anything rather than the teaching of things in general; we are only bidding schoolmasters to beware of supposing that no one will care about Greek when they have ceased to teach it.

THE writer of the Note which Mr. Platt traverses in his letter remembers the pleasure with which, when about thirteen, he read to himself large portions of "Paradise Lost," unhampered by any apparatus criticus. He also remembers that Mark Pattison said, "an appreciation of Milton is the last reward of consummated scholarship." Between the reading of the ignorant schoolboy, seeking for nothing but story, emotion, and sound, and the reading of the finished scholar, weighing every word and every thought, there are an infinite number of methods of study. Would Mr. Platt urge that the teacher is to do nothing beyond letting boys read Milton as they would a novel? Does he mean us to understand that he would read "Paradise Lost" through with a class without any discussion of Milton's theology and cosmogony, of his blindness, of his relation to his age, to mention only a few points out of many? Would he pass by all the hard sentences and hard words, all the classical and Biblical allusions, without seeing that his pupils understood them? Whether the fifty-two notes are suitable depends partly on their nature (they may be monstrously bad) and partly on the age of the boys and girls. "Children" may very well content themselves with just the story, though even children frequently feel the need for explanation; young men and women of eighteen should study thought and language. Finally, no one "considers an acquaintance with the notes to be proof of an appreciation of the author," nor did our remarks suggest anything of the kind.

PROF. CRAMB'S "Germany and England" is a brilliant pamphlet in favour of conscription, and any stick is good enough to beat into England a sense of her ignorance of German *Geist* and the judicial blindness of her statesmen. There is a characteristic sample in the first lecture:—

German in England.

A few weeks ago the head master of one of our public schools exhumed a letter of the late Mr. Gladstone, in which that eminent politician cast a slur upon the whole of German literature, denouncing the author of "Faust" as an immoral writer, in whose works we find virtue banished and self-indulgence reigning. . . . That such a verdict on Goethe and on German literature should exist is not astonishing. The astonishing thing is that in the second decade of the twentieth century an Englishman should have been found who, having exhumed such a verdict, did not for very shame instantly cover it again in complete oblivion. Instead of this, he incontinently published it in the *Times*, not once only, but in two

different issues. The publication of this letter is discreditable at once to the critic, to the exhumers, to the Press, and to the nation.

Such fustian would not deserve notice were it not typical of a book that is selling as fast as it can be printed. We have complained no less persistently than the late Professor of the neglect of German in our schools, but that Mr. Gladstone and his head master represent the present attitude of educated Englishmen towards Goethe and German literature is a gross libel. The best "Life of Goethe" and the best translation of "Faust" are both in English, and we cannot see the harm of publishing the letter as a literary curiosity. It would be as fair to quote Mr. Gladstone's discovery of the Trinity in Homer as a sample of English theology and English classical scholarship.

LOCAL AUTHORITIES.

Teachers and Military Service. THERE appears to be considerable diversity among the various Local Authorities as to the consideration extended to teachers who have been called upon or who may volunteer for military service. As regards married men and those having relatives mainly dependent upon their earnings, Authorities are no doubt well advised to pay the ordinary rate of salary less the amount received for military service. It may be questioned, however, whether this provision should be extended to unmarried teachers who have no dependents. Teachers have been trained for the work of education, and it is of national importance for that work to be carried on. At the same time, if the young teacher feels the call to serve his country in another capacity, he should be free to do so, provided the call is sufficiently imperative to be accepted with its financial consequences. The Authority is, therefore, acting generously if, in addition to keeping the position vacant during the period of absence, it pays such sum as, with the Government allowances, will make up one half of the full salary.

West Riding Tests for Scholarships. AN interesting development of the various efforts made by Local Authorities to devise tests, for the award of Junior Scholarships, which will ensure the selection of the best material is recorded in a report issued by the West Riding of Yorkshire Education Committee. In addition to a written and oral examination a "practical test" is introduced. The object of the test is to give some credit to the candidate who can show his intelligence by solving a problem in concrete materials as well as, or better than, by a written or an oral answer. The chief difficulty appears to be the administrative one of arranging for a suitable practical test for all candidates. In the West Riding, with nearly 4,500 entries for examination, it is found to be impossible. Consequently the bulk of the candidates are eliminated by means of a written test before the practical test is applied, and it is suggested that many of those whose abilities this particular test is specially intended to reward are rejected without having had a fair chance. "However good the practical test may be as a selective test," the report states, "it cannot be used at the right stage in the examination, and therefore loses greatly in effectiveness. It has no doubt done good service in bringing to the notice of teachers a type of problem which extends the functions of handwork and correlates it with arithmetic and geometry; but handwork is now so firmly established in the schools as to need little outside advocacy. So far as increasing the efficiency of the examination as a means of selection is concerned, the time spent on the practical test would probably be better employed in extending the period of the oral examination."

Quality of Material. WITH reference to the question whether the material selected by means of the examination is satisfactory or otherwise, the Committee made inquiries of the Heads of secondary schools with regard to boys and girls to whom scholarships were awarded last year. The number entering secondary schools with County Minor Scholarships last year was 400. Upon these, after two terms' work, the Heads of secondary schools report as follows:—

(a) Award of Scholarship justified	367
(b) Award of Scholarship not justified	16
(c) Doubtful	16
(d) Withdrawn	1

Thus less than 5 per cent. of the successful candidates have up to the present distinctly failed to confirm the verdict of the examination. This is certainly not an unsatisfactory result, although, perhaps, more trustworthy conclusions might have been formed if the inquiry had been concerned with pupils who have held scholarships for two or three years. The Heads of secondary schools also reported upon the progress made by 168 children who were unsuccessful competitors in the Scholarship Examination, but who entered the schools at the same time as the County scholars. They all appear to be doing well, and some of them better than the holders of scholarships. From a careful scrutiny of the work done by these unsuccessful candidates in the examination it is inferred, with great caution, that arithmetic is possibly a less reliable factor in the examination than English.

Brighton. THE annual report of the Education Committee for the County Borough of Brighton is a well-arranged, complete, and very interesting record of useful work. During the past year, it is stated, careful consideration has been given to a variety of important and fundamental questions underlying the service of the Committee, the questions ranging from the provision of bricks and mortar to a consideration of the organic developments in the theory and practice of education. The growth of the Committee's work is naturally reflected in the growth of expenditure, and from the general trend of events it is not anticipated that any decrease of expenditure will be possible in the future. Six years ago the Government contributed 41.6 per cent. of the cost of elementary education, and last year the proportion fell to 39.4 per cent. In common with other Local Authorities, the Committee feel that it is a matter of vital urgency that the Government should take steps to adjust the burden on a more equitable basis.

Expenditure. HAVING regard to the variety of its educational activities, the rate in Brighton—which was 1s. 5½d. in the pound for 1913-14—is not high. It was 1s. 2½d. in 1903-4. The total debt for educational purposes in 1903 was £246,681, and it is now £252,208, so that the amount borrowed during eleven years has been somewhat more than the sum repaid. As regards elementary education, comparing the figures for 1903-4 with 1913-14, salaries of teachers have advanced from £43,381 to £49,549, debt charges from £13,661 to £20,038, and other expenses from £17,091 to £21,580. There is nothing abnormal in these increases, but the figures for higher education during the same period indicate that in the sphere of education other than elementary there has been rapid development. The salaries of teachers, in this account, have gone up from £9,410 to £18,027, debt charges from £1,653 to £8,563, and other expenses from £4,706 to £13,650. In this department of education the advance has been shared by the Government, the grants having increased from £8,132 to £15,687.

Secondary Schools. THE Brighton Municipal Secondary School for Boys appears to be making satisfactory progress, and had 614 pupils on the roll in October last. The cost per pupil is about £11. 9s. 6d., of which sum £3. 13s. 2d. was derived from Government grants, £3. 15s. 2d. from pupils' fees, and £3. 18s. 2d. from rates. The girls' school, with 401 pupils, cost £10. 12s. 8d. per head, of which £4. 15s. 4d. came from the Government, £3. 6s. 3d. from fees, and £2s. 5s. 9d. from rates. In the Municipal Technical College there were 80 full-time and 89 part-time day students, 120 training college students, and 1,070 pupils attending evening classes. The Committee's scheme for the preliminary training of teachers makes provision for 15 boys and 40 girls annually. The number of student teachers trained in Brighton in 1913-14 was 8 boys and 16 girls. With a view to meeting the deficiency, the Committee proposes, as a temporary expedient, to enable a certain number of children who remain in the elementary schools beyond the scholarship age—viz., 11-12 years—to enter into training for the teaching profession, if recommended as suitable by the head teachers of their schools.

Wiltshire Salaries. AT a recent meeting of the Wiltshire Education Committee the Teaching Staff Sub-Committee recommended some improvement in the remuneration of head teachers, but adjourned the consideration of amending the scale of salaries for assistant teachers. It was suggested that the number of certificated assistants is at present not so large as to make it impossible for promotions to headships to be secured within a reasonable time. A period of nine years (five for a woman) elapses between the appointment of a certificated man teacher from college and the time when he reaches his maximum salary. After the lapse of these years a competent teacher should

have secured a headship. In the past this has not been possible because the number of head teacherships falling vacant to which sufficiently high salaries are attached has been inadequate. This view was not accepted by the Committee, and the Sub-Committee was requested to bring up a revised scale of salaries for certificated assistant teachers.

THE Special Schools After-care Sub-Committee of the Birmingham Education Committee has issued a report which is of special interest and value at this time. The Sub-committee, since its formation in 1901, has dealt with 1,956 cases, of which 1,257 were mentally defective, 151 deaf, 485 cripples, and 63 partially blind. Of the mentally defective, 397 are doing remunerative work, that is to say, earning wages varying from 6d. to 30s. a week, the average being 9s. 2d. The remainder, with the exception of 306 who have been lost sight of, and 116 transferred to ordinary schools, are still in institutions, or living at home, doing no paid work. The reports on the deaf, it is stated, have always been satisfactory, and this year's returns form no exception to the rule. Of 151 cases, 72 are doing remunerative work. Regarding the cripples, 44 of the 485 are dead, and of 235 who have left school and whose whereabouts are known 42.1 per cent. are earning wages.

THE Council of the City and Guilds of London Institute state in their report that the inclusion of the Central Technical College as a school of the University of London has been a distinct advantage to the students by enabling them to obtain an Engineering Degree as internal students of the University. The Council venture to think that it has also been to the advantage of the University, having regard to the number of engineering students presented by the Institute's college. Since the first year of the examination (1903) nearly half the total number of Internal degrees conferred by the University in Engineering have been taken by students of the college, the figures being as follows:—

	1903-1913.		
	Honours.	Pass.	Total.
City and Guilds (Engineering College) ...	170	65	235
All other colleges of the University ...	173	112	285
Totals ...	343	177	520

The Report of the Council shows that the various branches of the Institute's valuable activities are making extremely satisfactory progress.

THE evening school, or class, which accepted all-comers, and frequently led from "nowhere to nowhere," is no longer encouraged; and the evening student is not welcomed unless he produces suitable credentials, and is prepared to pursue a correlated course of instruction. There is no doubt that much labour and money have been wasted on evening classes, and that the determination to invest them with an educational purpose is wise. At the same time it is not to be forgotten that many working men in the past were frequently aided mentally, morally, and also materially, by the discarded "detached" class recognized by the Science and Art Department. The class was, perhaps, started by an indifferent teacher, content with "payment by results." The student may have been attracted only by the title of the subject, and may have possessed an inadequate foundation of preparatory knowledge. But he became, in a humble way, a student; he obtained some knowledge and an appreciation of the value of knowledge. It will be unfortunate if the wise determination to place evening class instruction on a strictly educational basis eliminates the possibility of enlisting students of this type.

THE above reflection was suggested by certain possibly necessary conditions and regulations adopted by the Leicestershire Education Committee—for educational and economical reasons—regarding the recognition of evening schools during the coming session, and also in view of the pressure constantly exerted by the Board of Education in favour of "grouped courses." Evening classes have a social as well as an educational value to the community; but, no doubt, a Local Authority, with limited funds at its disposal, is obliged to endeavour to obtain the best educational value for any expenditure it incurs. In Leicestershire, in 1913-14, there were 5,230 evening students on the registers and 3,990 qualified for grant, the average hours of attendance per student being 40. The total cost of the classes was £4,720, of which the county contributed 57 per cent. It must always be an open question whether

it is more productive, educationally, to spend £1 per head on 4,000 pupils or £10 per head on 400.

WE have received a prospectus of the University courses in the Municipal School of Technology, Manchester, the calendar of the Municipal School of Art, and the prospectus of the Municipal School of Domestic Economy, all of which are admirably arranged and attractively presented.

SCIENCE NOTES.

FOR months past Delavan's comet has been watched by astronomers, but it has only recently become an easily distinguished naked-eye object. In the middle of September it was south of the pointers of the Plough; during October it will move south of the well known group towards Arcturus. With a binocular the general shape of the tail can be discerned on a clear night, and there should be little difficulty in seeing the brighter part, which extends for three degrees or more. In the British Isles the comet remains above the horizon throughout the twenty-four hours, and a good time for observation is two hours after sunset, provided that there is not too much moonlight. During the third week in September the star 31 Ursae Majoris shone brightly through the tail when viewed through a 3½-inch telescope.

THE opening address given by Sir Everard im Thurn to Section H of the British Association carried more than ordinary weight, by reason of the distinguished position which its author has held as an anthropological administrator in tropical places. It was also deliberately addressed to a wider audience than professed anthropologists, technical terms being avoided or explained. Many of our readers are interested in psychology, and to such we can commend the perusal of this essay on the primitive character of Polynesians, especially of Fijians. Students of Dr. McDougall's works will hardly need reminding of the use made by the author of his experiences in Borneo; but Sir Everard im Thurn aims simply at discovering the springs of action of the Fijian, especially as regards cannibalism, with little more than a hint of their connexion with animal "instincts." It is remarkable how different is (or should we say "was"?) the attitude of primitive man towards the ownership of property from the sentiment of proprietorship held by an English child. One does not often find a little boy who would not resist, "nor even wish to resist, the taking from himself of property by any one who could and would take it."

LAST month we cautioned our readers to avoid unnecessary expenditure of glass tubing. This warning may be extended to glass apparatus of all kinds, and also to porcelain. Practically all school laboratories depend for these goods on German factories. For many purposes lids of crucibles can take the place of crucibles themselves, and even lids of cocoa tins, &c., can be pressed into service. It may not be out of place to remind our readers that the oxides of lead react with porcelain and glass somewhat readily.

AMONG scientific industries which, it is to be hoped, will now receive encouragement as branches of English manufacture are—(1) "Berlin porcelain," i.e. porcelain of the finest heat-resisting quality; (2) "Jena glass," which is a borosilicate containing oxides of zinc and barium; (3) thorium nitrate, used for incandescent mantles; (4) drugs such as formaldehyde and salicylic acid; (5) photographic developers. In many of these instances England has not been under any disadvantage in the past as regards access to raw material, nor is her position likely to be injured in this respect. Thus the main source of thorium is monazite sand, obtained chiefly from Brazil.

As a systematizer, with an unsurpassed genius for name-giving, classifying, and compiling, Linnæus is known to all. A few months ago the University of Upsala issued a course of lectures, collated from students' notes taken during the period 1748 to 1752, which reveal Linnæus as inspired with a deep sense of philosophy and humanity. We should be grateful to the native student who

would give us an English translation of Linné's "Föreläsningar öfver Djurriket" (Lectures on the Animal Kingdom).

IN 1859 Kirchhoff established the coincidence of the bright lines from glowing sodium with the D lines of the solar spectrum, and also showed that sodium vapour could produce the dark lines by absorption. It is historically appropriate that sodium should now be used to demonstrate the principles to beginners, but it is, perhaps, a mistake to stop short and remain contented with a single pair out of thousands of solar lines. The *b* group in the solar spectrum is characteristic and well defined, and the correspondence of three of these lines with bright lines from burning magnesium is so easy to observe as to form an instructive exercise within the experimental capacity of students. We do not remember to have seen this exercise in any school textbook or syllabus. The *b* group, which is quadruple if sufficient dispersion be used, appears triple in an instrument of small resolving power, but, even so, the spacing of the lines has an individual character, which renders the group identifiable.

IDOLA LINGUARUM.

ENGLISH LITERATURE AND LANGUAGE.

By LILIAN M. FAITHFULL.

DURING the Conference of Teachers, held at Stratford-on-Avon in the beginning of August, an interesting discussion took place upon the methods of teaching Shakespeare. It amounted, in fact, to a discussion upon the methods of teaching English literature in general. It was clear that during the last ten years a great change had taken place in the whole conception of English teaching, that the old system of piecemeal study was obsolete, and that the study of literature had come to be regarded from a different point of view. The various speakers laid stress upon the necessity for a comprehensive grasp of characterization and of plot, and upon the encouragement of a feeling for the language and rhythm of poetry, arguing that the disentanglement of difficult passages had assumed too great an importance, and tended to overburden the memory with elaborate historical or philological notes. It was insisted further that infinite care was necessary in order to reveal the essential beauty in passages notable for their profound emotion or subtlety of thought, since it is a matter of greater importance that pupils should feel rightly about literature than that they should understand every passage precisely.

These are the very points that I would wish to insist upon in speaking of the general teaching of English literature and language. Long ago Mr. Birrell told us that the first thing for people to be taught is to enjoy great things greatly, and I certainly hold that the primary care of every teacher should be to make pupils enjoy the great things of literature greatly. This enjoyment is necessary if an impulse is to be given towards that further independent and scholarly study which alone can result in something more than a superficial acquaintance with English literature. That this view is generally accepted is proved by the tendency to give up the teaching of the history of literature in favour of the detailed study of set poems, a change which marks, on the whole, a step in advance. Pupils are always ready to think that they know poetry or prose works because they know a good deal about them, and discount the value of acquaintance at first hand. There is, however, a danger lest the reaction against sketches and outlines of English literature should be carried too far. We cannot dispense with that knowledge of the author, his friends, his environment, and his age which helps the student to a fair judgment of his work. How are Addison and Pope and Swift to be appreciated by anyone without touching on the politics and society of the eighteenth century, its intrigues, and its antagonisms? The criticisms of examiners again and again emphasize the indifference in candidates to chronology, and the grouping together of authors widely separated from each other by some scores, if not hundreds, of years. This indicates the

necessity for some framework into which to fit a knowledge of men and books.

It is, moreover, unquestionable that the friendship born of familiarity with an author—his daily life, his habits, his friends—is in the case of children the best introduction to his work. All children are attracted by stories of real people; they will readily make friends and heroes of men of letters as well as of men of action, and will go to a book with a wholly different and more intelligent interest if they already know what manner of man the writer was. This is the case with such authors as Charles Lamb, or Sir Philip Sidney, or Goldsmith. Arnold Bennett, in the following passage, endorses this opinion: "It is extremely important that the beginners in literary study should always form an idea of the man behind the book. The book is nothing but the expression of the man trying to talk to you: trying to impart to you some of his feelings. An experienced student will divine the man from the book; will understand the man by the book, as is, of course, logically proper. But the beginner will do well to aid himself in understanding the book by means of independent information about the man. He will then at once relate the book to something human, and strengthen in his mind the essential relation between literature and life."

This humanizing of literature should be one of the aims of the teacher, and in order to carry out the idea it is well, if possible, to correlate the teaching of literature and history. Experience proves that this can be achieved only in a measure, for in planning a syllabus for the treatment of contemporary history and literature it will often happen that the literary period will be full to overflowing, whilst the corresponding historical period is comparatively barren, and *vice versa*.

Or again, it may be that, while the history of a certain period is highly suitable, the class are unable to appreciate the corresponding literature. It would be impossible, for instance, to enter upon the study of the metaphysical school of poets with pupils who had only just emerged from the "story" stage of literature. In these days of overcrowded time-tables far more co-operation is required between the teachers of different subjects in order to avoid overlapping. Either a history or a literature lesson may include the survey of social conditions and religious feeling, but it is not necessary that these subjects should be dealt with again and again: for example, in the eighteenth century, when the men of letters figure largely in politics, a history lesson may justifiably be devoted to them. Drawing lessons may also serve to emphasize both literature and history by the selection of subjects for illustration from the period actually under treatment. I would suggest that the English curriculum in schools should be carefully considered, working upwards from the lowest form to the highest, with a view to giving a girl or boy who has remained at school from the age of eleven to that of seventeen or eighteen a sound knowledge of the outlines of English literature, and of the chief prose writers and poets represented, not by extracts, but by a thorough acquaintance with truly characteristic works.

It must be borne in mind that "some books are to be tasted, others to be swallowed, some few to be chewed and digested." Certain plays or poems should be studied in detail, and a large number read rapidly in order to obtain a general idea of the author's work and to foster a thorough enjoyment of the subject. I would here urge the importance of reading or acting every play of Shakespeare as a whole before permitting the study of it scene by scene, and I would insist that every poem studied in school should be read through perhaps more than once before embarking upon notes and explanations of parts which the teacher may imagine unintelligible long before the pupil has felt them to be so. I would note also the great mistake, now generally admitted, of attempting to teach children what should be their feelings towards any character in a play or poem. This is, of course, one of the most interesting points with which a teacher has to deal, and it is hard to refrain from touching upon it; but, while everything may be done in the way of pointing out traits or significant features, the building up of the character and the formation of the final estimate should be the work of the child

alone. For this reason the summary of any character found at the beginning of school editions of any poet or dramatist should be studiously kept from the pupils until their own conclusions have been drawn, after which it can profitably be compared and discussed. There will be almost as many and varied estimates as there are pupils in the class, and the delight of those who find themselves in agreement with an acknowledged authority will be intense.

Here I would insist upon the importance of the choice of teachers possessed of a feeling for style and a real enthusiasm for literature. This may seem to go without saying, but the teacher with the power of feeling and communicating that enthusiasm is not easy to find. The natural tendency to reserve in English men and women makes it specially hard to find the teacher with the power and the courage to let himself go in order to evoke a corresponding feeling in the class. For one must remember that the national reserve will affect the pupils as well as the teacher and make his task difficult. Those who have some dramatic gift, whether conscious or unconscious, will find it easier to make the class forget their self-consciousness in the enjoyment of the works which they are studying, and this will help them both to a better understanding of their author and to a more natural and unforced expression of their own feelings. Other essential qualifications are a wide general culture, a knowledge of art in its various departments, and a thorough acquaintance with history. In addition, such a teacher should possess a talent for reading aloud, since this is one of the best aids to the development of true literary appreciation. Above all, this is true of poetry, for as a matter of fact—among young people, at all events—there are a number who like a stirring ballad, such as Macaulay's "Horatius," or a story in verse, such as Scott's "Marmion," and yet have no real love and appreciation of poetry. I have often been struck by the fact that if a large class is asked whether, on being left in a room with a number of new books of prose and poetry, they would pick up and read prose or poetry, the vote of a large proportion is in favour of prose. A natural love of poetry seems comparatively rare, and it appears to be necessary that the feeling for it, and the understanding of it, should be communicated by a real enthusiast. I have a firm belief that if you were to ask the whole roll of Honour students in English literature what had created in them the desire to study the subject, it would be the love of it awakened by a teacher or a friend.

I do not propose to enter upon the subject of philology, as this paper is intended to deal more with school than with University work, but the teaching of style and composition and the study of words is full of problems and difficulties. Just as the study of literature depends upon arousing the appreciation and feeling for it, so, too, I believe that if you are to free the study of composition and style from the charge of dullness, you must first of all arouse in children an appreciation of words, not so much for their meaning as for a feeling of their power, not for their origin and history, but for their beauty. This feeling must be encouraged in opposition to the tendency, hitherto dominant, towards regarding sentences merely as material for paraphrase and analysis. No amount of formal lessons or rules could ever produce the perception of good or interesting writing, yet this is in the highest degree necessary if pupils are to approach literature in a spirit of true understanding. It is therefore necessary to encourage a natural appreciation of the lilt of verse, of the vigorous language of the old ballads, and of the music of Spenser. When this has been aroused, a feeling for words themselves and a pleasure in exact expression of thought will inevitably develop together with an ever-growing consciousness of the possibilities of speech.

The average Englishman and Englishwoman of to-day make use of a miserably poor vocabulary, though they have the richest language in the world to draw upon, and this, I think, is due to some extent to the greater freedom of speech allowed to the younger generation. Slang and colloquialisms are tolerated not only in the home, but in social converse with masters and mistresses, sometimes even in the classroom; they have crept into essay writing also, and the

language of the playing-fields is used without discrimination and made to do service for every occasion. The vocabulary of the average schoolgirl grows more and more restricted; her admiration is usually expressed by "ripping," her disapproval by "rotten," and these two words are applied promiscuously to people, games, views, nature, weather, music, or pictures, whilst all other terms of appreciation or depreciation are instinctively regarded as somewhat affected or pedantic. Consequently language becomes impoverished, and if an effort is sometimes made towards a greater wealth of expression, the result is a hybrid production, composed of two absolutely inharmonious elements, the colloquialisms imported from everyday speech, and the adjectives and phrases borrowed from books. As a result the language of educated young people to-day becomes entirely divorced from true literary expression.

A remedy for this evil lies in appreciation of the fundamental beauties of speech, and it should be the business of the teacher to evoke and encourage enthusiasm for the beauty of words. A class once trained to listen will detect beauties and flaws which would have passed unnoticed in writing, and when appreciation has been awakened and the critical spirit encouraged it may be applied by pupils to their own work as well as to the work of the great masters. This is best done by reading aloud papers sent in and inviting the class to criticize them. Girls, especially, get eager and interested in discriminating between good and bad work; they will often find pleasure, as Stevenson found it, in imitating the styles of various authors. It is astonishing to see what bold attempts children of ten or twelve will make at writing blank verse, composing a sonnet, or turning out riddles in imitation of Cynewulf.

Nothing that stimulates a feeling for right words should be despised, and a very successful teacher has made the following experiments with a class of small children of ten to eleven. (a) The teacher reads aloud well written passages in prose and verse, and lets the class make a list of the words or phrases which appeal to them most; (b) the class is encouraged to find passages which they would like to have written themselves and to point out the thoughts and phrases which they admire most; (c) the class visualizes and then writes its impression of some picture or scene. In this way words and phrases are suggested which might not otherwise have occurred; (d) for composition, where the class is fairly imaginative, the children may be allowed to sit for a few moments with their eyes shut, imagining they are in communication with the theme of their composition. The most charming results have been obtained with a class of small children by telling them to shut their eyes and pretend that the stream, or flower, or whatever they were going to write about was whispering its secret.

All subjects for composition should be carefully selected, and pupils should never have to write upon one about which they know nothing and care less. A great mistake is sometimes made by forcing children to write a formal literary criticism at too early an age, and with young pupils I should suggest the value of "word-pictures," or short compositions upon a single word, such as wind, shadows, dust. These afford excellent beginnings in the matter of composition, as they allow of an infinite variety of treatment.

The war concerning the teaching of grammar is still raging, and will probably continue to rage; but it will, I think, be agreed that the main defects to be deplored in the writing of English do not arise from a lack of grammatical knowledge, but rather from an impoverished vocabulary, clumsiness in construction, misapplication of terms, want of lucidity, and a lack of feeling for grace, beauty, and neatness in composition. These are the crying faults of the day, and to the list must be added, in the case of girls, an almost ineradicable tendency to diffuseness and irrelevance. The classical education which most boys receive encourages conciseness, precision, and a greater sense of the values of words; they do not require the warning against fine writing which has to be constantly reiterated when teaching girls, but to the latter a study of Bacon's "Essays" may come as a useful corrective.

There is no marked difference in grammatical accuracy between the children who have been taught formal grammar and those who have not, and I am of opinion that, on the whole, it would be best to teach formal grammatical rules and terminology through the medium of foreign languages, applying these to English as occasion offers. It is true that analysis sometimes awakens interest, but parsing seldom or never, and I agree with those who hold that it is worse than useless to attempt to teach parts of speech by definition. Language should never be regarded merely as a linguistic exercise; words should be living realities to be made friends with, not dead bodies to be dissected. They should be treated with reverence and care, and children should learn to adventure with them and to experiment in the use of language.

JOTTINGS.

La Réforme Intellectuelle et Morale publishes a letter of Renan to Strauss, dated September 15, 1871, singularly apposite and prophetic. We quote two sentences:—"L'outrance est mauvaise; l'orgueil est le seul vice qui soit puni en ce monde. Triompher est toujours une faute; en tout cas quelque chose de bien peu philosophique." "J'ai travaillé dans mon humble sphère à l'amitié de la France et de l'Allemagne; si c'est maintenant le temps de cesser les baisers," comme dit l'Ecclesiaste, je me retire. Je ne conseillerai pas la haine, après avoir conseillé l'amour; je me tairai."

It is seriously maintained, not only by German diplomatists, but by her professors and pastors, that England has deliberately provoked war because she was afraid of her German rivals in industry and commerce. In this connexion it is worth recalling Lord Haldane's speech made only a month or two ago at the opening of the re-constituted Hartley University. "I am not," he said, "the least afraid of the invasion of German armies, but I am very much afraid of the competition of men trained in German Universities and schools."

THE Royal Drawing Society has this year examined some 60,000 candidates from over a thousand schools. The prize winners vary in age from nine to twenty-one, and come from regions as remote as Rio de Janeiro, Pietermaritzburg, and Darjeeling.

DR. MONTESSORI will deliver a course of eight lectures in London from October 6 to November 21. The fee for the course, including practice work and observation, is 12 guineas.

MISS E. LAWRENCE, Principal of the Froebel Institute, will deliver a lecture on "Free Kindergartens," at the College of Preceptors, on the 7th inst., at 7.30 p.m.

ON August 29 Edward Carpenter was presented with a congratulatory address on the completion of his seventieth year. A few names taken at random among the signatories will show how profound his influence has been among men of divers creeds and nationalities: James Adderley, Augustine Birrell, Prince Kropotkin, H.H. Margaret of Sarawak, Rabindranath Tagore, Israel Zangwill. He himself has passed through many phases of thought since he began life as the curate of F. D. Maurice, but all his works have revealed "the man behind the book," the same spirit of comradeship, of love for his fellow man, and self-sacrifice.

WE hope that the Committee of the Classical Association, which is considering the application of Direct Method principles to the teaching of Latin, will include in its report a list of available textbooks. Those of the Perse School are well known, but among the medieval Latinists there is a rich mine that has been little worked. The Colloquies of Corderius and Erasmus will come home to boys' business and bosoms. It is assuredly a profanation to read Virgil with a class who, as Canon Cruickshank reports, regarded the story of Dido as a screaming farce, and when they read how, at the sack of Troy, the dishevelled matrons kissed the doorposts, were convulsed with laughter. Whether the child who has had the advantage of a Latin-speaking *bonne* (there was the other day an advertisement for one), and has been taught to relate in

Latin a bicycle ride, will be led at a later stage to appreciate the "Aeneid" and Tacitus, is another question.

WE note for reference the dimensions laid down by the Board in the new Building Regulations for Secondary Schools. Classrooms must be provided at the rate of at least four for every 100 pupils, and each room must be designed for not more than 30 or less than 15 pupils. There should be an extra room to hold from 10 to 15. A lecture room counts as the equivalent of one classroom. The classroom should be designed to take single desks, and this, allowing for an 18 in. gangway between them, works out at a floor area of 16 to 18 square feet per head. The playground must provide at least 50 square feet per head; and the minimum size is 750 square yards. The minimum size of a playing-field, which is compulsory, is two acres. We regret that the Board has not furnished estimates of the probable cost of buildings designed for 100, 200, 300 scholars.

ABBOTSHOLME School is celebrating, on the first of this month, its Silver Jubilee, and the Bureau International de Documentation Educative is publishing in its official organ, *Minerva*, a full account of the "New School" movement at home and abroad, together with a chronicle of the parent school.

THE London Library is appealing for German books for German prisoners of war and suspects, and French books for the Belgian refugees. Parcels should be sent to the Librarian, London Library, St. James's Square, S.W.

A BRIGADE of five thousand public-school and University men has been formed, and it is confidently expected that it will be followed by a second. Nearly all the men know their drill and can shoot. This is a useful outcome of the old Cadet Corps.

AMONGST the classes who will be hit hardest by the War are private teachers of music, drawing, and other arts. A large number of men, and women also, who have been earning a livelihood by private teaching in Continental cities are now stranded in England, and the women especially are finding it difficult to get employment. No class is more deserving of help than such teachers.

MOST Education Authorities are paying teachers who are away on active service their full salaries, less Army pay, and keeping their places open for them. Sir Philip Magnus, Chairman of the Secondary Schools Association, has suggested that Governing Bodies of Secondary Schools should do the same. The elementary justice of such a course must be plain to everyone, but where are the governors of an ordinary endowed school to get the money? We think it is a case for a special grant, to be sanctioned by Parliament.

OWING to the War, the presentation of his portrait to Mr. W. G. Rushbrooke, of St. Olave's School, has had to be postponed. The portrait, which is by Mr. Hugh Rivière, was sent to Berlin in order that reproductions might be executed by the Berlin Photographic Company—and at Berlin it still remains.

THE Head Master of Colchester Grammar School, who has been for the last few weeks holding classes of Red Cross workers, has composed for their benefit two very simple guides to French and German conversation (by Shaw-Jeffrey; Hachette, each 6d. net). They are drawn up by a skilled teacher who knows what is wanted, and should be given to all who have to do with French or German sick or wounded.

"THE King's Message to his Peoples Oversea," now published with His authority, by Methuen & Co., is a noble answer to the insolent and mendacious challenge of the German Emperor, a calm, yet passionate vindication of right against might, the voice of peoples speaking through their Head, instinct with faith and hope though the name of God is never mentioned. "The Kaiser," said a witty American, "seems to have no friends but the Almighty, and we have only his word for it."

MR. WILLIAM LORING, the Warden of Goldsmiths' College, New Cross, is absent this term, having joined his Corps, the Scottish Horse, at Aberdeen. Sir Frederic Kenyon had also joined the Inns of Court Corps, in which he is a captain, but was recalled to his post by the Trustees of the British Museum.

THE OXFORD VACATION TERM FOR BIBLICAL STUDY.

THE twelfth Vacation Term for Biblical Study was held at Oxford from July 25 to August 15. It will always stand out apart from all other Vacation Terms in the memories of those who attended it for three reasons. First, the war cloud, which had been gathering towards the end of the first week, broke in the second week, bringing with it for all varying degrees of anxiety and trouble. Secondly, the calmness and self-control with which the trouble was met were remarkable, and the decision of the Committee and of Somerville College to let the course go on as previously planned was wise and prevented any possible tendency to panic. Thirdly, in the present writer's experience of seven Vacation Terms, never before have the lectures so closely illustrated the central scheme, and never before has such a remarkably even standard of excellence been reached.

The central idea running throughout the scheme was "The Vital Relation of Personal Religion to the Corporate Life of the Church." The inaugural lecture, on "The Corporate Character of Individuality," was given by Canon Scott Holland. The Regius Professor of Divinity first worked out his theme in connexion with the relation of the individual to the State. "Individualism is the worst foe of Individuality"; it is only in the corporate life that individuality can come to its own, and "the significance, the initiative, the worth of the individual, rises with the rise of the State, because the more the State does the more you have to do, for you are the expression and embodiment of the State." He then turned to the Christian position, reminding his audience that "our religion magnifies and sanctifies the individual." But it has done this by intensifying the representative character of individuality. "In Christ as Messiah the people of God is summed up, and we as individuals acquire value by our incorporation in the One Body." "Only by passing into a wider corporate existence do we rise to our full individual capacity."

In the first week an interesting course on "Ezekiel" was given by the Rev. W. F. Lofthouse, M.A., of Handsworth College, Birmingham. Ezekiel was considered as the Man, the Prophet, the Priest, and the Theologian; and the importance of his teaching in the development of Hebrew thought was well brought out. Ezekiel carried on and worked out Jeremiah's teaching as to individual responsibility; he saw that the repentance of the community can only be accomplished by the repentance of individual souls who belong to the community; he first began to work out the doctrine of the Spirit of God. Those who heard the lectures can never again regard Ezekiel or his book as uninteresting; rather will he be thought of as a pioneer in religious thought, "a creative artist, and a social reformer."

The course given by the Rev. Dr. McNeile, Dean of Sidney Sussex College, Cambridge, on "The Development of Personal Religion in the Old Testament and in the Gospels," was a masterly sketch of the progress of Hebrew religion from the earliest times to its climax in the New Testament. The lecturer showed that there are indications in the Old Testament that the earliest form of Hebrew religion was polytheistic, but that, as the teaching of Moses was gradually realized, the Israelites became monotheistic. In both these stages religion was personal as well as national, but was selfish, conditioned by man's fear of what the Deity might do if not placated. Then came the great prophets, and with them a mighty transformation. Belief in one God, and that God a moral God, requiring morality in His followers, took the place of the older belief. Dr. McNeile differs from many modern scholars, in that he considers monotheism to be not a development from henotheism, but a contradiction of all that had gone before, a special mystical revelation given to the great prophets. The development of personal religion in the post-exilic period, as seen in the Law, the Psalms, and the Wisdom Books, was next traced, and it was shown how the problem of suffering gave rise eventually to eschatological expectation and belief in a future life. In the Gospels personal religion reached its climax. "Personal religion in others means reaching out to God. In Christ it meant complete and unvarying communion." Dr. Neville Figgis, C.R., gave a brilliant lecture on "Ideal Politics." Beginning with Plato's "Republic," he went on to consider St. Augustine's "De Civitate Dei" and Hooker's "Ecclesiastical Polity." He showed how, with Machiavelli, there began that spirit of nationalism which became increasingly important in the next three centuries. Fénelon's "Télémaque" and his "Letter to the King" were considered, as preparing men's minds for the French Revolution. Finally, Nietzsche's "Thus spake Zarathustra" was dealt with, and Nietzsche's importance as "the first European thinker of world-wide fame to note the failure of democracy" was pointed out. Mrs. Stuart Moore

(Evelyn Underhill), in her lecture on "The Mystic and Corporate Life," showed, by reference to the great mystics, that the mystic attains his highest development not when he is cut off from corporate life, but when he remains as a loyal member of the Church. The mystic's treasure is not for himself alone, but for the whole body of Christians, which is another way of expressing the doctrine of "the communion of saints."

In the second week the Rev. Dr. Anderson Scott, of Westminster College, Cambridge, gave a course of four lectures on "The Religious Experience of St. Paul." Paulinism was considered "not as a system of thought, but as a network of religious conceptions and convictions, together with their issue in a certain type of character and conduct." "St. Paul's thinking as a Christian was rooted in his experience as a Christian." On these lines St. Paul's teaching about Redemption, Salvation, Justification, the Person of Christ, and the doctrine of the Holy Spirit, was carefully and thoughtfully dealt with. Prof. Kirsopp Lake, of Leyden, lectured on "Life within the Christian Community in the First and Second Centuries." The lecturer treated his subject from the psychological rather than from the historical point of view. He considered the influence of its surroundings on the early Christian Church and on the Church's solutions of the problems which arose. The reconciliation of the "world-renouncing" ethic, which was possible when the world was thought of as coming to an immediate end, with the "world-accepting" ethic of an ordered society, was discussed; and it was concluded that the little church in Jerusalem was trying an experiment which had to be postponed because human nature was not ready for it. The effect of the specifically Christian doctrines and practices—the "breaking of bread," the identification of Jesus with the Messiah, the consciousness of inspiration by the Spirit—on the differentiation of the Christian community from their Jewish brethren, was considered. The influence of the Roman Empire on the Church in three directions was traced: (1) the ideal of something greater than nationality, which the Roman Empire stood for; (2) the cult of the Caesars, which, on its good side, implied a recognition of the immanence of God in the world, and counteracted the Jewish tendency to a transcendent theory of the Deity; (3) the sacramentalism of the mystery religions. Finally, the lecturer gave a sketch of Church life in Rome in the second century, as depicted in the "Pastor" of Hermas. The course was extremely interesting, as Prof. Lake connected the experience of these early Christians with the experience of Christians today, their problems with ours. Prof. Lake also gave a single lecture on "The Didache." Two excellent single lectures were given, on "Tendencies to Individualism in Ancient Oriental Religions," by Mr. Stanley A. Cook, of Cambridge, and on "The Book of Lamentations: a study in Personal Religion," by the Rev. Dr. Oesterley.

In the third week a very able course on "The Relation of the Individual to the Community" was delivered by Mr. Clement C. J. Webb, M.A., of Oxford. The lecturer said that side by side with a general tendency to individualism in religion was a counter tendency to emphasize the importance of the community, to study religion as belonging to the group-consciousness only. These counter tendencies combine in support of a far-reaching scepticism as to the presence in the world of The Good, apart from humanity. Ritschlianism and its counterblast Roman Catholic Modernism, with its affinities to the Bergsonian philosophy, the French sociologists who belong to the school of Comte, the theories of Miss Jane Harrison and of Mr. Cornford were all reviewed in an illuminating manner. Next, a sketch of the history of European thought during the last one hundred and fifty years showed how the pendulum swings backwards and forwards—the Rationalism of Voltaire was followed by the Sentimentalism of Rousseau; the attempt of the French Revolution to destroy the political traditions of Europe called forth the rise of historical science in the nineteenth century. After a discussion of the Hegelian philosophy of religion, the principle underlying Plato's "Republic"—that the institutions of the community express something in the soul of the normal member of the community—was examined in some detail. The Pauline conception of the life of the community whose life is nothing else than that of God Himself was seen to be the only satisfying conception. The relations of Church and State from St. Paul's time to the present day were briefly reviewed, and Feudalism, State-Socialism, Syndicalism, the position of Corporations as personalities with regard to the law were all discussed. The solution of the problem of the relation of the individual to the community is to be sought in Christian love: "in religion man becomes conscious of a nature which he has in common with others, but also of a relation to God which is unique. Love of God and love of the community are not divided: love is not two, but one." Lack of space forbids more than a brief mention of an interesting and valuable course on "I and II Corinthians," by the Rev. S. Kirsbaum, B.D., of King's College, London.

Finally, Dr. Sanday gave two lectures on "The Evolution of Religion," in which he divided the stages of the development of religion into four: (1) the period of rudimentary Nature- and spirit-worship, when stones, trees, and springs were held sacred; (2) the period of theriomorphic and anthropomorphic worship (either separate or com-

bined), as that of the Sumerians, Assyrians, Babylonians, Egyptians, and Greeks; (3) spiritual religion in the pre-scientific stage, *i.e.* from the Hebrew prophets of the eighth to the sixth centuries B.C. to the sixteenth century A.D.; (4) spiritual religion in an age of science, *i.e.* from the sixteenth century to the present day. The lecturer thought that the course of personal and spiritual religion, begun with the eighth century prophets, passed on without a break into Christianity; the real break came with the growth of modern science. This has involved the necessity of (1) adjusting the whole body of our ideas to the conception of an *infinite* cosmos; (2) a revised doctrine of inspiration; (3) more systematic employment of the new methods of historical criticism. The lecturer concluded with a bold assertion of the liberty of prophesying: "It is self-evident that propositions of faith drawn up under newer conditions must differ from those of old times. It is necessary to make experiments. We have no choice but to make the attempt, determined in the last resort to yield to Truth and to nothing else."

EVELYN W. HIPPLEY, S.Th.

THE EXCHANGE OF TEACHERS THROUGH THE EMPIRE.

By ONE WHO HAS TRIED IT.

THERE is an interesting scheme on foot for interchanging teachers in different parts of the Empire. There can be no doubt that this may be of enormous value to the teachers concerned and in a proper educational system should constitute a kind of D.S.O., entitling them to a higher service and forming a valuable qualification thereto. At the same time it is essential that the right kind of men should go out, and it is equally necessary that teachers intending the move should be prepared for the task before them.

Most teachers, I fear, have a kind of Picture-Theatre idea of the Dominions, and, *per contra*, the people of the Dominions have a significant phrase about "making good" which has some connexion with the sign in Western Canada, "No Englishman need apply."

The present writer can speak only of first impressions of one dominion, but he has had experience of the grammar school in both agricultural and industrial England, of a well known Scottish school, and also for three years of school and University life on the Continent of Europe.

If his present experiences can be taken as of broad and general application, he would say this: the colonies stand for a tradition in which, at any rate in the past, there has been considerable looseness and liberty, where the parental hand has only interfered finally, although then perhaps firmly! It must, moreover, be borne in mind that growing sons will quite early be sharing in the father's work and will consequently take a semi-adult standing. If you wish to find references as to what this leads to when the custom remains but its use has departed, I advise you to overhaul your "Buster Brown" and especially your "Huck Finn," and further I would recommend a study of the "Charitable Grinder," and of Joseph Vance and his father, together with that of the boys in "Auld Licht Idylls."

Now when you have grouped this company into a school, under what conditions will they be there? You will remember that all, or nearly all, have very strongly the desire to get on, the good will and intention to work; there will be few dullards in your forms; everyone, even Huck Finn, will have his exercises done efficiently.

But they will also enter on their task with a good deal of eighteenth-century optimism. They will not have anticipated the thorns and shallow ground in which good seed may fall, but they will certainly take the first opportunity to slack off, to argue, to bait the teacher, and finally—as you are a foreigner with pretensions to superiority and also with a curious accent—to test you and put you in your proper place.

If you try to select ringleaders you will find you are fortunate if you have a good case, for it is going to be disputed

down to the ground and taken to the final court of appeal. If you start out firmly to deal with the class as a whole and insist on silence, we will say, then you must make certain of what your powers may be, what weapons are in your hands, and what attitude the authorities will have towards you—who are still a foreigner. If you are philosophic, and endure all things—I may mention that turning round to write on the board is a very provocative act—you will presently begin to disentangle the fact that many are willing to work, that they will ply you with questions, many at a time, and some spurious, that all boys will freely consult their neighbours, that principles you lay down will be readier accepted in general than in detail.

The teacher of some years' standing will smile and think these are a beginner's difficulties. Please remember that you are a beginner if you have taught for years, and remember, too, your pity for a foreign colleague who had no idea of order. The educational administrative Chief of this district told me, "I don't think we shall have any more Englishmen. They don't seem to understand our boys."

But, of course, the difference is one of degree only. It is the eternal boy, *créature adorable toujours*, and the most inadequate means, persisted in, will wear him down a little.

But there are aids you may not readily have thought of. You have inherited old traditions, moved in ancient ways. Only in extreme cases have you gone to the court of appeal. Mostly you have relied on a vague authority, the dominie's robe, what not. It exists here, too, in a different form. Five minutes' private talk, if you have the gift, will reduce your boldest rioter to tears, although he will begin again within two days. But with our boys at home, callous and indifferent, that has gone out. Again, here you have an opportunity of showing you are an intellectual force, and attention to the things of the spirit will be better than in the old country on the whole. It will be your fault too if, having survived half a year, you do not harness the desire, the fear, of passing examinations to your purposes. The supreme punishment is to be set back a year, a thing to be explained to parents with all Huck Finn's ingenuity, and involving a lurid and revolting picture of yourself in which you may find some features distorted and caricatured—but there!

These lines have been written that the would-be adventurer may know, and I am especially doubtful about the one year; if it were three it might be otherwise. Perhaps you would have forgotten your longing for green fields. Perhaps you would have turned your back on damp and dismal England, and gone in for real estate—though *hoffentlich* in three years you will find the people there. Perhaps you will have realized that you are in New Britain, with Scotch and Irish names like raisins in a plum pudding; then this country needs you, needs you to keep up its contact and communication with its heart, to which some day the ruddy drops may return.

W. M. C.

OFFER OF CAMBRIDGE TO LOUVAIN.

THE University of Cambridge has offered hospitality to the Catholic University of Louvain. The full meaning of this offer is explained by Monsignor Barnes, Catholic Chaplain of the University of Cambridge. Louvain is invited to migrate to Cambridge and there to continue its own separate studies, granting its own degrees, while Cambridge supplies living accommodation and all facilities for the technical carrying out of this work.

If the proportion of absentees is the same at Cambridge as at Oxford, it should be possible to lodge at least a half of the normal muster-roll of Louvain students, and we hope the governing body of bishops will see their way to avail themselves of this generous offer. No more telling answer could be made to German charges of English self-seeking greed and hypocrisy.

PITMAN'S SHORTHAND TEACHERS' JOINT EXAMINING BOARD.

President—ALFRED PITMAN, Esq.

EXAMINATIONS for the Shorthand Teacher's Diploma of this BOARD are held in the principal cities of the United Kingdom throughout the year. The Diploma is recognized by County Councils and other important Educational Authorities as the highest possible testimony to a Teacher's ability and its possession is, therefore, of the utmost value to Teachers seeking appointments. The Diploma is specified as a qualification by the Department of Technical Instruction for Ireland. Full particulars of the examination, together with a copy of "HINTS TO CANDIDATES," may be had, post free, from the

EXAMINATIONS SECRETARY, PHONETIC INSTITUTE, BATH.

NATURE STUDY AND BOTANY.

Instructive Nature Study cases and specimens for class work, as supplied to the Universities, Colleges, and Higher Grade Schools. Birds, mammals, shells, crustaceans, butterflies, &c., carefully mounted for painting studies.

Lists from

A. FORD, Naturalist, South View, Irving Road, Bournemouth, Hampshire.

NOTICE.

Increase in price of back numbers of
"The Journal of Education."

Copies of *The Journal of Education* over twelve months old are now charged **double price**, and those more than three years old, **treble price**.

For a list of Numbers, Volumes, and Binding Cases, still in print, apply to the Publisher:

- Working of a School Inspection Clinic. *Medical Officer*, September 19.

THE CRAFT SCHOOL, STEPNEY GREEN, E.—The Craft School, which commenced last month, as usual, its autumn session, is an independent institution managed by an influential committee and supported by private subscriptions and grants from some of the City Companies, the Board of Education, and the London County Council. It was the first school of its kind to be established, and was founded twenty-three years ago as an experimental educational centre by Sir H. Llewellyn Smith (now Permanent Secretary of the Board of Trade), who was largely responsible for the initial movement in technical education in London. Amongst its aims are to give art and technical instruction to persons engaged in the artistic crafts, and to cultivate and direct the artistic proclivities in the young. The long course of experiment in art and craft teaching to young children, mainly boys, has matured into a complete scheme of dynamic education. This links together the child's expressive powers, creative faculties, and play activities, and provides training for the intelligence, imagination, and taste in the production of drawing, designs, and decoration, and for the hand in the manipulation of various materials; and it co-ordinates both mental and physical activities in the manufacture and embellishment of useful articles made and designed by the same individual, such as pottery, ironmongery, and furniture. The Principal of the School has been connected with it since its beginning, and is the son of the late Ebenezer Cooke. He has special experience and knowledge of methods and principles of education, was trained in a kindergarten, studied art at the Slade School, and has had practical experience in various crafts.

BATTERSEA POLYTECHNIC.—Owing to the increasing demand for accommodation at the Polytechnic Hostel for Women Students, the Governing Body has taken a third house in North Side, facing Clapham Common, and can now lodge ninety students. The session, which opened on September 15, now includes—(1) Training Department of Domestic Science (two, three, or four years' course); (2) Commerce Department in preparation for Secretarial and other business appointments, and Civil Service Examinations (two or three years' course); (3) Physical Training Department for Women (three years' course).

A Selection from Methuen's List.

GENERAL PLAN.

Carefully selected illustrations in colour and in photograph, combining accuracy of detail with truth of atmosphere and characteristic colouring.

1. Typical scenery and vegetation, in both summer and winter aspects.
2. Vivid representations of human and animal life.
3. Illustrations of products and industries.
4. Pictures of great cities and famous buildings.

OUTLINES OF PHYSICAL GEOGRAPHY.

By **H. CLIVE BARNARD, M.A., B.Litt.**

Containing 92 Illustrations, Maps, and Diagrams.

SMALL CROWN 8vo, CLOTH.

Price **1s. 6d.**

THIS little volume covers the physical groundwork of Geography as prescribed by the syllabuses of the Oxford and Cambridge Locals and similar examinations, and it should therefore prove suitable for any pupils who have these tests in view. At the same time it may be useful to "classical" and other boys whose study of scientific subjects is necessarily limited. It affords a progressive course which should be applied in dealing with the various regions which are described in the ordinary school textbook of Geography.

An attempt has been made to render the majority of the questions which are appended to each section of the book, as far as possible, *problems*; i.e., they demand from the pupil something more than a mere repetition of facts given in the text.

Published by **ADAM & CHARLES BLACK, 4, 5, & 6 Soho Square, London, W.**

PHYSICAL TRAINING COLLEGE FOR MEN STUDENTS. THE LONDON CENTRAL INSTITUTE FOR SWEDISH GYMNASTICS.

Clough's Correspondence College

THE MOST SUCCESSFUL CORRESPONDENCE COLLEGE.

L.L.A.

Some Letters from Successful Students at the L.L.A. Examination, May 1914.

G. B. Clough, Esq.—Sir,
20 Melrose Avenue, Cricklewood, N.W.,
August 29th, 1914.
I am pleased to be able to inform you that in the L.L.A. Examination I was successful in all that I undertook, obtaining **Honours in Education**, Pass in History, and Pass in Geography.

I only had six months' training from you for the three subjects, hence the excellency of your tuition speaks for itself.

I feel that I cannot express sufficient gratitude.

I am, Sir, faithfully yours, R. K. GULLEFORD.

Dear Mr. Clough,

37 Buller Road, Newton Abbot, Devon.
August 26th, 1914.
I am pleased to be able to inform you that I have obtained **Honours in History**. As I did not commence working until the end of November, I am very pleased with the result, which is entirely due to the help which I received from your Class.

Yours truly, ANNIE SADLER.

The School House, Highcliffe-on-Sea, Christchurch,

Dear Mr. Clough,

August 4th, 1914.
I received the result of the L.L.A. Examination this morning, and you will be pleased to hear that I have completed the requisite number of subjects for the Diploma and Title.

I wish to thank you for all the help you have given me, as I am sure that without your splendid papers I should never have been so successful. The fact that I joined your classes for Preliminary Certificate, and after I left Cheltenham College again joined the L.L.A. Classes, shows how much I appreciate the thorough instructions you give.

Believe me, yours faithfully, D. M. PHILLIPS.

25 Almeric Road, Battersea Rise, S.W.

Mr. G. B. Clough—Dear Sir,

August 4th, 1914.
I am pleased to be able to tell you that I have passed in **History and also Education Honours**. The result is very gratifying. Will you kindly thank my tutors, as I feel much of the success is due to their efforts and systematic marking.

I am, yours faithfully, LOUISA A. BARNETT.

HIGHER FROEBEL

Some Letters from Successful Students at the Higher Froebel Examination, July 1914.

G. B. Clough, Esq.—Dear Sir,
3 Dunheved Terrace, Saltash, Cornwall.
September 10th, 1914.
You will doubtless be pleased to know that the result of the Higher Froebel Examination at hand to-day shows that I have been successful, and have obtained **First Class in Literature, Zoology, Mathematics, and Singing**.

I feel that I owe my success entirely to your splendid tuition, as the work was entirely new to me.

I shall be pleased to have particulars of your Classes for Part II.

Yours sincerely, MAY C. GLINN.

Dear Mr. Clough,

September 10th, 1914.
I am glad to tell you that I have passed the Higher Froebel Examination, Part I. I have **Class I in Literature, Zoology, Botany, and Singing**, and Class II in Mathematics, Geography, and Child Hygiene. I thank you heartily for the thorough preparation your College gave me and the personal interest you took in my work, which I always enjoyed.

Will you please send me a syllabus and full particulars of Part II, which I wish to take in December, 1915?

Yours sincerely, ALICE C. COOMBS.

Virginia Cottage, Heamoor S.O., Cornwall.

Dear Mr. Clough,

September 12th, 1914.
I received the result of Part I Higher Froebel Examination last Thursday, and have obtained **First Class Passes in Literature, Botany, Zoology, and Singing**, and Second Class Passes in Elementary Mathematics, Hygiene, and Geography. I am perfectly satisfied with the result, and thank you very much for splendid help that you gave me. I will always warmly recommend your Classes to any person whom I may meet who is needing help.

Thanking you very much,

I am, yours sincerely, IRENE SERJEANT.

G. B. Clough, Esq.—Dear Sir,
Belsham, Bury St. Edmunds, Suffolk.
August 24th, 1914.
I am writing to inform you that in the recent L.L.A. Examination I was successful in obtaining **Honours in Geography** and a Pass in Mathematics. The result is extremely gratifying to me, and is entirely due to the thorough tuition that I received through your classes.

I should like to specially thank the Tutor in Geography who marked my papers most carefully and gave me such valuable notes.

Again thanking you and wishing your classes success in the future.

Yours faithfully, HILDA E. STERNE.

Westmeston School, Hassocks, Sussex.

Dear Sir,

August 3rd, 1914.
I have to-day received the result of the L.L.A. Examination. I am delighted to tell you that I have obtained **English Honours B** and a Physiology and Hygiene Pass.

As this was all I attempted I have reason to be well satisfied. It is more than I dared hoped for, as, owing to a very serious illness of my sister, my studies had to be abandoned for about three months just before the Examination, as you already know.

The result speaks well for your excellent tuition, for which I heartily thank you. I have previously studied under another Correspondence College for a different Examination, but I must say I consider yours much superior, and, I believe, less expensive. A good Correspondence College is most valuable to one living in an isolated country district as I do.

Yours faithfully, WINIFRED E. HOLDEN.

"Griffel," High Street, Harrow-on-the-Hill.

Dear Mr. Clough,

August 1914.
I have just heard that I have passed in L.L.A. **English Literature Honours** and French Pass.

I am very delighted with these results, which I attribute very largely to the excellence of your Correspondence Class.

Thank you very much indeed for all the trouble you took in assisting me in the choice of subjects as well as for the most valuable coaching I received as one of your pupils.

I am, your truly, ALICE L. RIGDEN.

Dear Mr. Clough,
Hazelwood, Leas Road, Guildford.
September 10th, 1914.
The result of Higher Froebel, Part I, came to-day. I have **Literature Class I, Botany Class I, Mathematics Class I, Singing Class I, Geography Class II, Hygiene Class II, and Zoology Class II**.

As I had rather a disturbed year of study, I feel very pleased with this result.

Will you please let me have information about Part II?

Thanking you for your splendid papers,

I am, yours faithfully, ELSIE G. POWELL.

3 Queen's Road, Hartshill, Stoke-on-Trent.
September 10th, 1914.
G. B. Clough, Esq.—Dear Sir,
This morning I received the result of the National Froebel Union Examination, Part I. I am pleased to tell you that I have passed.

I obtained **Class I in Literature, Botany, and Zoology**, and Class II in Geography, Mathematics, and Child Hygiene, Singing (exempt). As I only had five months, and could not give much of my time to the work, and two of the subjects, Zoology and Child Hygiene, were quite new to me, I am very pleased with the result.

I thank you very much for the tuition I received through your Correspondence Classes. I shall be pleased to recommend your Classes to others, if I have an opportunity of doing so.

With many thanks again for your help,

I remain, yours very truly, DOROTHY M. DIMMOCK.

Friary House, Beaumont Road, Plymouth.

Mr. Clough—Dear Sir,
September 10th, 1914.
I received news this morning that I have passed the Higher Froebel Examination, Part I, obtaining a **First Class pass in three subjects**, and a Second in four.

This good result is in a large measure due to your splendid system of tuition, and I wish to thank you most heartily, and to assure you that I will always recommend your Classes as the best possible means of preparation for Examination by correspondence.

Yours faithfully, HILDA KATE LODDER.

Classes for the **L.L.A. EXAMINATION, MAY 1915**, and **HIGHER FROEBEL EXAMINATION, Part I, JULY 1915, Part II, DECEMBER 1915**, are now commencing work.

Students should join at once in order to obtain the fullest advantage from the Course.

For Prospectus, Syllabus, and full particulars of any of Clough's Classes,

PUPIL TEACHER, PREL. CERT., OXFORD AND CAMBRIDGE LOCALS (JUNIOR AND SENIOR), MATRICULATION, CERTIFICATE, A.O.P., L.O.P., COLLEGE OF PRECEPTORS, HIGHER FROEBEL, L.L.A., CIVIL SERVICE, &c.,

 FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post
 Offices are not taken in, but are sent at once to the Returned Letter Office.]*

All Letters respecting Advertisements and Subscriptions should be addressed—
 "THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE
 HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C.,
 should be made payable to WILLIAM RICE: Orders and Cheques may be crossed,
 "The London City and Midland Bank, Ludgate Branch." *Postage stamps can
 only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad,
 stating full name and address of the sender; and all Foreign Money Orders
 must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

A LETTER TO TEACHERS IN THE TIME
 OF WAR.

MR. PEASE has addressed an open letter "To my col-
 leagues in the national service of education," which
 will carry more weight than could any official memorandum
 signed by the President of the Board. It is a still small voice
 that is in danger of being drowned by Mr. Asquith's stately
 eloquence and the trumpet note of Mr. Lloyd George's call to
 arms. The first duty of teachers, he urges, is to keep the
 system of education going; to fill up the gaps in our ranks;
 to contrive makeshifts; and be ready to work double spells
 when called upon. "They also serve who only stand and
 wait." A special duty at this time is to see that school
 children are properly fed, and herein teachers can actively co-
 operate with the Local Education Authorities and Voluntary
 Committees.

The next duty of teachers is to bring it home to their
 scholars that the War in which we are engaged is a just War,
 reluctantly undertaken in fulfilment of a solemn pledge, in de-
 fence of the weak against the strong, in the cause of national
 independence and liberty, against a nation that has confessedly
 broken its pledges and avowedly aims at supremacy among
 the nations of Europe and world domination by force of arms.
 Above all, they must be made to feel that war at the best is a
 hateful thing; that we are fighting in the cause of peace; that
 it is with the Government, not the people, of Germany that we
 are fighting; and that when this "strong delusion that they
 should believe a lie" is over we shall again welcome them as
 our generous rivals in industry and commerce, and "the first
 by the throne" in science and philosophy.

But we must not only keep the system of education going;
 we must seize the opportunity to remedy the defects that the
 War has revealed, to strengthen, broaden, and consolidate it.
 "We are the trustees for posterity. We guard the lines
 of communication between the present and the future." The

seven millions who compose the school population of England, an army comparable in number to the total of the fighting forces of Europe, are the future of England. These will have to replace the thousands of skilled mechanics, artisans, and manufacturers, the wastage of War. We must provide for them a longer education, better instruction in smaller classes, and a fuller training adapted to their respective occupations.

"It is to them that we shall hand over the national and international polity which emerges from the present struggle—a form of society, we may hope, broader and more firmly based, freed of the secular heritage of racial hatred and military aggression which Europe is now expiating, but assuredly more exacting—demanding of all its members larger faculties, more highly trained aptitudes, a clearer realization of the common duty and destiny of man."

We have ventured freely to paraphrase the Letter, with every word of which we agree, and Mr. Pease must not be held responsible for our wording. It was doubtless wise on his part in such a document to avoid all contentious points, but we cannot help regretting that he did not see his way to proffer some advice on military drill, Officers' Training Corps, Cadet Corps, and Boy Scouts.

We make no excuse for reproducing the first paragraph of last month's "Colonial and Foreign Notes": "At the moment when the news came that Germany had declared war against Russia, we asked a German of knowledge and some insight, what he thought of the prospects. 'We are very hopeful,' he replied; '*the continuation schools have been doing their work.*' Reville Germany as you will, she has always understood that man-making is a subject with which true statesmanship must concern itself." So wrote the editor who had just escaped by the skin of his teeth from detention in Germany, and we are now able to point the moral that he left for our readers to draw. Were Colonel Newcome alive, he would no longer air his Latin tag on the humanizing influence of the liberal arts, unless he emphasized the qualifying *fideliter*. He would have to rub up his Horace, point to Louvain and Reims, "*foeda nigro simulacra fumo*," and quote:

Utrumque defecere mores,
Dedecorant bene nata culpae.

The later-day prophet who bade us organize our secondary education, and held up Germany as a bright example, also preached that conduct (*mores*) is three-fourths of life, and would have been the first to denounce the latest German emendation of the Sermon on the Mount, accepted by professors of theology whom we have hitherto revered and honoured: "Blessed are the strong, for they shall inherit the earth."

PROGRESS OF SCIENCE IN PUBLIC SCHOOLS.

II.—THE NEED OF REFORM.

KNOWLEDGE of human nature, wrote one of our leading literary thinkers, has made little, if any, progress since the days of ancient Greece and Rome, the only real advance having been in natural knowledge. This thought naturally leads to the time-honoured question of the relative value of Humanistic and Scientific training. The advocates of the former held undisputed sway over the scholastic field for centuries. To-day they still dominate, but their rule is not undisputed. To-morrow? An extrapolation on the curve of Progress would give a result not entirely satisfactory to those who are now in command. No science man with a claim to general culture will for one moment deny the value of literary and linguistic studies when they go beyond mere memory-training and conduce to self-culture in a knowledge of man. Such studies have so many points of contact with human thought and endeavour, history, philosophy, religion, morals, archæology, and poetry, that few will deny that they should form a most important ingredient in any rational scheme of

education; but that which was best and all-sufficient in the Middle Ages does not necessarily retain these attributes in the twentieth century. Humanistic and scientific studies are not antagonistic but complementary, and he who neglects either at the expense of the other will become a one-sided, and therefore a prejudiced, man. Neither in the school nor in the world outside is science rated in accordance with its value, either as a means of training or with its importance in the civilized world. In academic circles there is still an excess of literary-conservative acidity, which can only be neutralized by changing the base of the scholastic division of labour. The influence of the older Universities is largely responsible for the continuance of these medieval conditions, and, until these bodies can be inoculated with the germs of progress, or deprived of their hegemony, secondary education in this country will remain stagnant, and it is to be hoped that a false sense of patriotism will not debar those who owe their academic training to these "ancient and pious foundations" from pressing for reforms and adaptation to new conditions. Their influence is not only paramount in the present examination system, but is also traceable in the staffing, and hence in the whole "tone-colouring" of the schools. Out of 108 head masters of schools represented on the Association of Public School Science Masters, there are only 6 science men; there are 17 mathematical, and no less than 85 classical or literary. In the schools presided over by the last mentioned, there are approximately 28,000 boys; mathematical head masters rule over about 3,500, and science head masters exercise dominion over a little more than 1,000 boys. There is need here of some frontier rectification in the interest of science, which will give her, if not the premier place in the scholastic sun, at any rate a position more favourable than her present one of almost total eclipse.

In consequence of this literary supremacy, we find that in many schools science is still treated as the Cinderella of the curriculum. It is not uncommon to find schools of 400 to 600 boys where the whole of the science work is taken by two science masters, and where the ratio of the latter to the remaining staff is about 1 : 12. Accordingly, in such schools we find a very great disproportion in the time devoted to scientific and other studies, and, as a consequence, the relative mark value of the former is very low, and many boys regard these subjects less seriously. A more equitable division of labour would be to organize the time-table in such a way that one-half of the pupil's time should be devoted to literary-linguistic studies and the other half to mathematics, science, and handicraft. The age at which scientific instruction is begun in some schools is very late—in some cases as late as fifteen. There is no reason why it should not be started far earlier, and it would be advisable to make Elementary Science, including Natural History, an obligatory subject for Entrance Scholarships. A love of natural history early implanted in the juvenile brain is one of the greatest assets in after life, and it is pleasant to read in the records of the South Polar Expedition that this view was shared by its illustrious leader. In his last letter to his wife, Captain Scott wrote concerning his son: "Make the boy interested in natural history if you can; it is better than games; they encourage it at some schools."

The Organization of Science Classes.

One of the most important problems in school science is the arrangement of classes, or sets, so as to obtain a maximum of efficiency. The methods in vogue may be classified as follows:—(1) The Form system; (2) The Block system, each block covering two or more school forms; (3) Science and Mathematics organized conjointly, but independently of other subjects; (4) arrangement according to attainment in Science alone. Of the 46 schools investigated in 1908, 20 worked according to (1), 12 according to (2), and a few adopted plan (3). The form system naturally suits such schools best which attach a minor value to science, for the whole work can usually be performed by two masters, one for Physics and one for Chemistry. An advantage of this plan

is that under it nearly every boy will do some science, but it will be contended by many that this should be the case whatever system of organization be in vogue. The disadvantages outweigh the advantages. The attainment of boys in science is often very different from that in form subjects (and this is especially so in the lower forms of public schools, where the Entrance Examination does not demand compulsory science), so that they are often promoted when their scientific attainment does not justify it, and *vice versa*. Also, in schools where such impedimenta to continuity, as double promotions, by-moves, &c., are allowed to exist, subjects like science, which are taught in a logical manner, frequently without textbooks, and usually in a very limited time, suffer more than other subjects taught in a different manner.

(2) The division of scientific labour into sets, either alone or in conjunction with mathematics, appears to have much more to recommend it, but here expressions of opinion from science masters are urgently needed. In any case this system requires a larger science staff than (1).

(3) The ideal plan appears to be the division of the whole school into separate sets for all cognate subjects, each being taught by specialists. This arrangement was used in University College School, and there it is said to have worked well; but it is not difficult to see that its adoption would involve very radical changes in any established school which put it into practice. A disadvantage would be that the boys might lack the corporate feeling which they often acquire when grouped together in a form under the predominating influence of one master; but the old idea of the form master who knows a "little of everything" and "nothing of something" is already being displaced by that of the specialist, who knows "everything of something," and sometimes, alas! nearly "nothing of everything" else.

Whichever scheme of arrangement be adopted, the system of "intensive culture"—i.e., of devoting the whole of the time allotted to science to one branch of it at a time—deserves serious consideration, and only experiment can decide as to its feasibility.

One of the chief obstacles to reorganization is finance, and the same consideration presents itself in determining the size of classes. There is no doubt that for work in experimental science the number of boys in a class managed by one teacher should not exceed sixteen. In many schools classes of thirty beginners are not uncommon, and it is precisely the beginners who require the greatest care and attention. Relief is frequently found by allowing boys to work in pairs, but this plan is not to be recommended as a rule, particularly for quantitative work. It is not always easy to know which member of the pair may be responsible for the success or failure of an experiment; it often leads to the creation of "sleeping" partnerships; it tends to take away from some boys their sense of independence and responsibility; and it sometimes conduces to conversations which are not strictly "scientific."

Examinations.

Of all the ills that scholastic mankind is heir to, the examination system is the most deep-seated and requires the earliest attention. The general aspect of this question was fully discussed in the Report on Examinations issued by the Consultative Committee of the Board of Education in 1911, and he who wishes may there read a vigorous and unanimous indictment of our present system, together with practical recommendations for reform. It is a matter for regret that, with the exception of a few medical witnesses, no one representing the interests of science was called upon to give evidence. In one or two cases classical head masters bore witness to the futility of practical examinations conducted at a distance, and this was the practically unanimous verdict of those who debated the question at the annual meeting of the Public-school Science Masters in 1913, and also the recommendation of the Sub-Committee appointed to investigate it. The unsatisfactory nature of external examinations in science is due to the fact that the chosen examiners frequently lack the essential qualification of being in intimate touch with

school work, and the success of the science papers in the London Matriculation Examination may be in no small measure due to the circumstance that the examiners are frequently practical schoolmasters. Too many questions are set that test the memory alone, and not the power of insight or the knowledge of principles. Many papers cover but a small fraction of the set syllabus, so that a candidate may fail when he does not deserve to; and when the syllabus is long and the time of examination short, it is a matter of common justice that alternative questions, with or without obligatory ones, should be presented for solution. Science masters would welcome the institution of one general examination, more or less corresponding to the standard of the London Matriculation, to be taken in the sixteenth or seventeenth year of age. It need not be of a rigid, stereotyped kind such as one would expect if conducted by a Government Department, but although of a recognized standard it should be to some extent adaptable to local conditions. In any case it should be thorough, i.e. both written and *viva voce* and undertaken with the co-operation of the actual teachers, who necessarily have the best knowledge of the candidates. Such an examination should unlock the door to the entrance of all professions and Universities, and might in addition confer upon the successful candidate the privilege of an additional vote at Parliamentary elections when he, and perhaps she, reached the voting age. Opposition to the adoption of such an English modification of the German *Abiturienten* examination is naturally to be expected from vested interests, but if the scholastic world is united the powers of reaction will have to give way.

Finance.

Dealing with the financial side of school science, we have to face the old argument that, in comparison with other kinds of instruction, it is economically burdensome, and in those cases where schools are not well off—they are the majority—a full course of science work for all boys is beyond the range of practical politics. There is undoubtedly truth in this contention, but its importance is apt to be exaggerated, and the difficulty is to some extent a fictitious one. As regards the cost of construction and equipment of laboratories, it must be borne in mind that large sums are often wasted on bricks and mortar and luxurious appliances, which assistant masters would gladly see devoted to other and more useful purposes. Some of the work of the great French chemist, whose labours saved his country more money than the disastrous war with Germany cost it, was conducted in an underground cellar in Paris.

Although considerations of health demand that our work should be carried out in well-ventilated, warm, and adequately lighted buildings, these are not necessarily expensive, particularly if the work is put out to public tender and the local builder or plumber is kept at a distance. Simplicity and economy should be the watch-words, alike from the practical, financial, and the scientific points of view. The cost of maintenance, &c., must inevitably be greater in a chemical than in a physical laboratory, for the reason that in the former so much material finds its way into the sinks. Unless the cookery-book recipes of certain textbooks are followed, the use of expensive chemicals is seldom, if ever, necessary, and money can be saved by going direct to the manufacturers. In one large school, where about three hundred boys devote four hours per week to science, the average working cost amounts to 1s. 3d. per head per term. This figure does not include the cost of gas, but it is estimated that this item is counterbalanced by the saving involved in working without textbooks. Finally, the question of charging special fees for subjects like science, which entail extra cost, needs consideration. This principle is not to be recommended, as it facilitates excuses for neglecting science, and tends to cause it to be regarded as a luxury and not a necessity; and generally the system of "extras"—so dear to the proprietors of hotels and boarding houses—is never one which commends itself to parents. It is far better not to discriminate between different subjects in regard to their cost. Whether we like it or not, the trend of modern education is in a democratic direction. National

efficiency and a common sense of justice demand that the "capables" of whatever class should be given their opportunity to rise to the top; and the school authority of the future will not allow considerations of relative cost to influence the choice or rejection of what it considers to be the proper elements of the school curriculum.

CLASS OR STANDARD?

A REPLY TO MR. TOYNE.

[FROM A CORRESPONDENT.]

MR. TOYNE'S paper, which appeared in the July number of this journal, will be of service if it brings a vexed question of pedagogy into the crucible of open discussion. To the bulk of those whose lives have been spent in the elementary schools themselves his views are likely, it is true, to appear plausible rather than convincing; but they are persuasively advocated, and they wear at first sight a seductive air of enlightenment which may not only win the assent of the plain man, but appeal for a moment to a certain type of professional mind. For these reasons they deserve to be carefully examined.

Mr. Toyne revives the old quarrel with the "standards." Infelicitously enough, he finds a parallel to the retention of the term "standard" in the occasional recrudescence of the obsolete designation "Board school," forgetting that, while the latter is no more than the harmless survival of a name no longer appropriate, the former, according to his own contention, is a symptom, if not a contributing cause, of persistent educational disease. He finds no harm in the term so far as it is used for the purposes of a "common denominator or standard of comparison between different schools," though he does not notice that this is a much more important matter in the case of elementary schools, which children attend of necessity, than in that of secondary schools, which depend for their very existence on the free choice of parents—ultimately, that is, on their good management and efficiency. But he assails it as connoting the idea "of a year's work of a given quality for each pupil of a given age." Here everyone will agree with him, though he is flogging a dead horse and contending for what has been long admitted on all hands. When, however, he adds that "the cramping effect [of the standard principle] on the organization can hardly be overestimated," he certainly exaggerates; and his picture of its working "at its worst" is grotesquely inaccurate. "The principle," he tells us, "works as follows:—You start with a notion of what is suitable for, say, Standard x ; you then proceed, . . . where the system is at its worst, to find the children of the age which you consider fitted for that work."

Taken in conjunction with what precedes and follows, the plain meaning of the passage is that classification by age is prevalent in inferior schools, and is at the root of much defective organization and teaching. Can Mr. Toyne be unaware that in the less satisfactory schools of the present day scarcely any regard is paid to considerations of age, that promotion is slow, that the lower sections are packed with old children, the higher classes depleted? The true evil is that average children—apart from cases of retarded intellect and other special disadvantage—do not advance rapidly enough from class to class in a large number of schools; the less satisfactory the school the more heterogeneous are the ages; to assert that age classification is a characteristic of weak schools is a palpable distortion of facts, which can be disproved by the simple process of turning over the registers. We may admit that a reform of classification is essential, but the *fons et origo mali* is not promotion according to age, nor in the main the "principle of the year's work," but lies deeper.

The sovereign remedy which Mr. Toyne prescribes is

classification by attainments, which is merely what every one else desires; only he forgets to insist that when you have taken "your 40, 54, or 60 children according to attainments," and have proceeded to find the suitable curriculum for them, you must see that they are well trained. Let the training be made as individual and varied as the conditions of elementary education will allow; though, even if the conditions were entirely favourable, it would be rash to carry specialization at an early age to the lengths suggested by Mr. Toyne; and, given good teaching (judicious, broad, and stimulating), the age question will settle itself. As a matter of fact, the only difficulties regarding classification in the good schools are of a purely administrative character. Mr. Toyne's argument in bare summary seems to be: Once arrange your scholars according to attainments, and all will be well; teachers should be left to do as they please; whether the children's attainments are satisfactory for their age is not to be considered, lest you should fetter the "real freedom" of the teachers. He completely begs the question when he says: "The solution would seem to lie in permitting the utmost freedom to a head teacher to organize within his own school, *provided that the aims in view are achieved when the child leaves school.*" For when Education Committees or Inspectors complain of the high age of children in the lower classes they are, in fact, stating in one form that the aim (*i.e.* the reasonably high aim) is *not* achieved. What they desiderate is not, of course, an age classification, but efficient instruction and fair opportunities for the scholars. His indictment of officials does not go so far as to attribute to them any wish to *detain* children in a particular standard on account of age. But Mr. Toyne betrays a curious inability to see the point of view of others who are in reality working for the same end as himself when he accuses some Inspectors of "urging what is essentially an age classification." If some Inspectors adduce relatively high ages as evidence of inelastic promotion, and as part of their plea for improvement, they should have his support. Elasticity in classification is the gospel they preach; and it may be added, with reference to small schools in particular, that the "standard" has in them already become nothing more than a "common denominator," employed to convey some conception of the aim of the teaching. Mr. Toyne would find it difficult to produce instances in which "adherence to the standard idea has created for the teacher totally unnecessary and almost overwhelming difficulties of organization." The whole tenor and spirit of official documents and official practice is out of harmony with the impression which these words convey.

The psychological argument on which Mr. Toyne partly relies does not strengthen his case. Psychology and physiology are sisters; psychological and physiological changes go on together in the growing child; abilities may differ, but growth proceeds; in average cases it is seldom profitable for the child to be classed year after year with its juniors; and in a vast number of instances it is far more wholesome for a backward child of healthy physique to go forward than to be kept back; the development of faculty is retarded by the very fact of non-promotion. The true inference is that age ought to have its due weight as a factor in classification, and presumably this is the utmost length to which the offending official scapegoat would go. Again, we learn that, under the "new system" proposed, "no doubt in the transition stages some classes would be of a very composite and heterogeneous nature." It would seem, therefore, as if, from the psychological point of view, they would be no better than the other sort of classes, which Mr. Toyne, like everyone else, condemns, but which do not exist except in his imagination.

No less fictitious in actuality is the clear gap "between the top boy of one standard and the bottom boy of the next." Nor is his idea of reclassification for particular subjects more than an expansion of a practice already in existence to a limited extent, and against any considerable extension of which obvious educational objections might be urged. Mr. Toyne's final insistence upon the need of smaller classes will, of course, command universal assent, and elastic classification under existing conditions will be welcomed on all hands, pro-

vided that security is taken for good teaching. This is, after all, the essential need, in default of which no remedies, new or old, can be efficacious.

OBITUARY.

DORINDA NELIGAN.

ON July 18 there passed away, in her eighty-second year, a woman of marked originality and lifelong devotion to the cause of women. Dorinda Neligan was of Irish parentage, born near Cork in 1833. Her father, an officer in the British army, had taken part in the sieges of Badajoz and Ciudad Rodrigo and in the battle of Salamanca. In 1860 she left home to make her own way in the world, and had to face difficulties and hardships unknown to the present generation. She first went as a governess to France and to Germany, where she learnt French and German thoroughly. On the strength of this knowledge, in 1870, she was, after six months' training at Charing Cross Hospital, appointed as a Red Cross nurse during the Franco-Prussian war. She was present at the siege of Metz and the battle of Sedan, and on her return received the medal of the Red Cross Society. In 1874 she was appointed Head Mistress of the new school in Croydon started by the Public Day School Company.

Croydon was among the first of these schools, which marked a new era in the higher education of women. Under the direction of a number of singularly able head mistresses, girls of the middle and upper classes whose education had hitherto been neglected were taught efficiently, as was proved by their subsequent careers at Oxford and Cambridge.

The general lack of University training in their head mistresses was amply compensated by special gifts of character and personality. Miss Neligan was one of these women, and in a very few years the Croydon Girls' School had attained a high intellectual level. Before becoming a Head Mistress she had had a wide experience of men and institutions, if not of school organization, and she brought this valuable knowledge to bear on questions touching the welfare of the children she loved so well, both collectively and individually. From the time of her appointment as Head Mistress she deliberately dedicated all her power to widening the lives of girls and women, beginning with her own pupils. It is difficult for the women of a later generation to realize the debt of gratitude due to the pioneers of this movement. It is they who laid the foundations of the girls' public schools of this country and established a noble tradition. The education of girls has progressed during the last years, especially in the development of domestic and physical training, but the main characteristics of its early days have remained unchanged.

Like her fellow workers, Miss Emily Davies and Mrs. William Grey, Miss Neligan believed that girls no less than boys could rise to responsibility and take their part in civic and public duties. This belief was the guiding principle of her rule. She was full of ideas herself, and had the power of drawing from both young and old the best of which each was capable, owing to a sympathy for and a belief in the willingness of all to give of the best. She aimed herself at a high standard, and expected the same from others. She was also able to inspire the girls with a wholesome awe, which led not to fear but affection. Above all, she placed before them a high sense of duty, and maintained that marks and prizes were not a necessary incentive to good conduct and work.

In 1901 Miss Neligan retired from her post as head mistress, after nearly thirty years' service; but she continued to live in Croydon. To the end she kept up her interest in the Teachers' Guild, of which she was an original member; in Women's Suffrage, of which from the first she had been an ardent supporter; and in the many social reforms for which she had all her life done battle.

The hastening of her death from the strain of nursing and a chill, caught by the deathbed of an aged friend whom she had housed and cared for, was characteristic of her whole unselfish life.

MR. A. MANSBRIDGE, the indefatigable Secretary of the Workers' Educational Association, appeals for help to meet the special call of members to provide opportunities bearing upon the present crisis. Bodies such as trade union branches and working men's clubs, desirous of arranging for lecture courses or classes are invited to communicate with the Secretary, and offers of lectures on Modern European History, Political History, and cognate subjects will be gratefully received. The address of the Association is 14 Red Lion Square, W.C.

CORRESPONDENCE.

"FOREIGN DOCTORATES: HOODS AND FALSE HOODS."

To the Editor of The Journal of Education.

SIR,—The statements made in the article that appeared in the August number were not a whit exaggerated, and I find nothing to retract in reply to the letter signed "Z."

It was high time to point out the vast difference between a *doctorat d'Université* (a mere ornamental title) and a *doctorat d'Etat* (the highest University degree), with chapter-and-verse references to official sources of information, and to raise a loud protest against those *docteurs d'Université* who unblushingly call themselves *docteurs ès lettres*, and actually don the robe and insignia of such. Would that this protest might re-echo far and wide!

Particular care was taken to name the Universities (Rennes, Poitiers, Dijon, Montpellier, Grenoble) that are emulously catering to the foreign demand for the new-fangled doctorate without imposing any conditions as to preliminary degrees and previous attainments. It is not true that, even in the Universities whose regulations are not so lax, the B.A. with honours is a *sine qua non* for aspirants to the new title; their official programs clearly state that candidates need produce only such evidence of studies or such diplomas as may be approved by the Faculties.

Among the theses presented for the *doctorat d'Université* there may, of course, be meritorious works, but the majority do certainly not compare with the theses for the *doctorat d'Etat*; and of those which are written in French we do not know to what extent the foreigners' essays were amended and touched up by their French professors or advisers. The manifold blunders which—on unimpeachable testimony—some British teachers of French sporting the new title have perpetrated in correcting their pupils' exercises, show plainly what a multitude of sins and shortcomings this title may cover, and how foolish it is of educational authorities to appoint such *demi-savants* to French chairs in preference to capable native scholars.

The mere fact that there are no insignia and no prerogatives attached to the *doctorat d'Université* tells its own tale. Dr. Condamin of the Faculty of Lyons, who knows what's what and whose sound judgment cannot be questioned, did not mine matters when he spoke his mind about the "ludicrous innovation." The sustaining of theses for the *doctorat d'Etat* is always announced in the *Bulletin administratif* issued by the Ministry of Education, but no mention is ever made therein of the examinations for the *doctorat d'Université*.

As for the Ph.D., it was a clever stroke of policy on the part of German Universities to be so lavish of that degree to Britons and Americans. Germany thereby made hosts of friends abroad, ever ready to say a good word for the Fatherland and to extol Teutonic science and culture. I fancy that after the present War there will not be so many foreigners coveting University honours from the modern barbarians. A famous professor of Göttingen, on being twitted with the deplorable indulgence shown to these alien candidates for the Ph.D., once remarked: "Sumimus pecuniam et mittimus asinam in patriam."—Faithfully yours, A. B.

[We have also received a letter signed "Docteur d'Université," protesting against some of the statements in "A. B.'s" article. We do not publish it because, in the main, it repeats what appeared last month under the signature "Z."; but, in our judgment, she does furnish proof that the title as conferred by the Paris University "implies not only a considerable amount of original research, but also an intimate acquaintance with the French language."—ED.]

TEACHING OF ENGLISH LITERATURE.

To the Editor of the Journal of Education.

SIR,—In your "Occasional Notes" you make the following criticism:—"In the reaction from burying great authors under a cloud of notes we run some risk of substituting shallow impressionism for serious study." May I be allowed to ask why it is that if a pupil is told to take his opinions, undigested, from a note, that is "serious study," while if he is asked to form his own opinion that is "shallow impressionism"?

Why "shallow"? Is not a boy or girl, aged from thirteen to seventeen, capable of a very distinct and characteristic literary judgment? The whole question at issue is prejudged by the use of this denunciatory adjective. Why not say, "By returning to the system of considering an acquaintance with the notes to be proof of an appreciation of the author we run the risk of substituting shallow scholasticism for serious study?" This, with all due deference, seems to me to be a marked improvement upon the original, and to be much more in accordance with the facts.

Then we come in your remarks upon the Puritan horror of the threatened catastrophe that the reading of literature might be "nothing but unmitigated enjoyment." Even this awful menace fails to daunt me. Painfully I have to confess that when the boys and girls of my literature class, in their leisure time, read Shakespeare and Milton for the sheer enjoyment of them, I do not recognize, as you apparently would have me do, that this is a proof of my failure as a teacher of literature. On the contrary, I glory in it as my highest success. I fear that you must regard me as a very hardened case.

About eighteen months ago I was discussing educational matters with the present Premier of New South Wales (the Hon. W. Holman), and he said to me, "I wonder at the hold which Shakespeare still has over the English people. When I was a schoolboy the Shakespeare teaching was made so dull and heavy that it is something of a marvel that we ever wished to hear his name again." And this was from a man who has the literary instinct to his very finger tips.

In my experience there are few passages which stir the admiration of boys and girls more than that which describes the sublime offer of the Son of God in "Paradise Lost," Book III, lines 217 to 345 (the offer of the Divine Sacrifice). Children will read this with deep and beautiful religious ecstasy. I should consider myself a blasphemer if I interrupted them with the fifty-two notes which the school edition devotes to these lines.—Faithfully yours,

WILLIAM PLATT.

The Home School, Grindleford, Derbyshire,
September, 1914.

SCIENCE FOR GIRLS.

To the Editor of The Journal of Education.

DEAR SIR,—Perhaps you will be kind enough to let me say a few words in reply to Miss Fortey's letter on "Sexless Science" in your September issue. I was fortunate enough to have the opportunity of talking to Miss Freund about science teaching, and, had the state of her health allowed of her reading my little book, she would, I feel, have approved of it. I do not think that she sought to maintain that whatever course of science was best for one sex was best for the other. She was strongly opposed to the science work of girls being done in departments in which there exists only vague and empiric knowledge, or in which, if theoretic explanations are known, they require a preparation impossible for the beginner. She was entirely opposed to science teaching being made ancillary to the teaching of the domestic arts. Well, so am I. But she also disliked a narrow science course unrelated to the phenomena which the environment of the pupil provides.

Hitherto, with an examination-driven school system, the individual teacher has not been free to make the selection of his or her topics. In the future I trust that we shall have not only "science for girls," but "mathematics, history, and French" for girls. For this will mean that "free" teachers are studying the needs and interests of their pupils, and are seeking to make their experience available for the guidance of others. In the future, too, I hope we shall recognize more fully difference of type in girls' schools, and give up running the lower middle-class girls' schools on the high-school plan, as though the only girls who really matter are the few who will go to the University.

It was not because I think that there must be a difference in the science teaching of boys and girls that I called my book "Science for Girls," but because I have taught girls and know

their needs and capabilities, and have enough common sense to recognize that the training which suits little girls may not be the most suitable for little boys.

JESSIE WHITE.

49 Gordon Mansions, London, W.C.,
September 7, 1914.

TEACHER RESERVISTS.

To the Editor of The Journal of Education.

SIR,—It seems likely that two or three months hence there will be a serious shortage of teachers in boys' and elementary schools in consequence of masters being called to the war. I would suggest that, when the supply of substitutes now existing among elementary teachers becomes exhausted, the vacant posts might be filled by those experienced secondary teachers whom the present war has thrown out of work, and who would be thankful for temporary posts, and that, if the supply of these is insufficient, then retired teachers, whether secondary or primary, men or women, might offer to fill the gaps still left. These might take whatever salary is offered to substitutes, but give either all, or the greater part of it, to the dependents of those masters called away.

Such volunteers might offer themselves to the Educational Authorities in their own counties as a reserve force, to be called upon when and if needed.—Yours truly,

ALICE WOODS (late Principal Maria Grey
Training College).

18 Lancaster Gate Terrace, Hyde Park,
September 13, 1914.

REIMS CATHEDRAL: AN ADDRESS FROM TEACHERS.

To the Editor of The Journal of Education.

SIR,—It is proposed that an address from the teachers in this country should be sent to their fellow-workers and others in France in the following terms: "The undersigned teachers in Great Britain and Ireland desire to express their deep sympathy with the teachers and people of France in the loss of their great Cathedral."

Forms for signature will be ready in a day or two, and it is hoped that one teacher in every University, college, and school (of whatever kind) in the country will make himself (or herself) responsible for obtaining as many signatures as possible from the institution with which he (or she) is connected. Requests for forms (stating the maximum number of signatures obtainable) should be sent to the address below.—Yours obediently,

CHARLES DAVISON, Sc.D., F.G.S.

King Edward's High School, Birmingham,
September 24.

THE DALCROZE COLLEGE AT HEILERAU is closed, having been appropriated by the Government as a military hospital. The Director of the London School had advertised that M. Dalcroze would take an active part in the teaching at the London School during the ensuing term, and our readers will sympathize with the London Director, who has now to announce at the eleventh hour M. Dalcroze's decision to remain in Geneva during the war, and not quit neutral territory. It should be noted, however, that full training courses for the Certificate and Diploma in Eurhythmics will be held in London, as well as the necessary examinations. The London School will be specially well equipped for this work, in spite of the absence of M. Dalcroze, as it has secured the services of several Hellerau teachers, and in particular of Miss Annie Beck, the leading teacher of the college.

THE CAMBRIDGE TRAINING COLLEGE.—Sixteen students passed the examination held last June by the Cambridge Syndicate in the Theory and Practice of Teaching; one was placed in the First Class, with distinction in the history paper; thirteen in the Second Class, and two in the Third Class. Two students obtained endorsement—one for French and the other for Botany. Of the twenty-four students who have entered the College this term twenty-three have graduated at a University; fifteen in honours, and four of these in the First Class. Miss J. I. Hetherington, who joined the staff only for a year, has been succeeded by Miss H. C. Thompson, B.A. Trinity College, Dublin, Honours Modern Languages, Class II; Certificat d'Etudes Phonétiques, Haute Ecole, Sorbonne.

SAFE NOVELS.

GEORGE MEREDITH: *Evan Harrington*; *Sandra Belloni*.
Standard Edition. (Each 6s. Constable.)

This column is an attempt to help our readers who are at a loss to decide what books to enter in their Mudie or *Times* Book Club list, and the appearance of two old favourites is a confession that the reviewer has been seduced from the path of duty, and put aside for a more convenient day the task of tasting some dozen novels to read for the fourth or fifth time, in this sumptuous edition, two by a past master, both in his earlier manner, and not to be ranked with "The Egoist" or "Lord Ormont and his Aminta," but each in its way of enthralling interest. "Evan Harrington" is confessedly autobiographical—that is to say, the author's parentage and his early experiences supplied the clue of the story, as did Lassalle for "The Tragic Comedians" and Mrs. Norton for "Diana of the Crossways;" but Meredith in each case gives his imagination free play and uses the bare facts as Shakespeare used an Italian *novelle* or Plutarch's "Lives." So, too, "Sandra Belloni" is greatly inferior to its sequel, "Vittoria," which has an historical background and takes a wider range. Mr. Pericles reminds us of Disraeli's heroes, and Mrs. Chump is Dickens at his worst. And yet, as we lay down "Sandra" to take down "Vittoria" from an upper shelf, we exclaim, "Verily the old, even at its worst, is better than the new."

The Judgment House. By Sir GILBERT PARKER.
(6s. Methuen.)

Sir Gilbert Parker has written nothing so good since "The Seats of the Mighty," and we prophesy that "The Judgment House" will also reach its nineteenth edition. The plot is well knit, the situation strong, and, like a skilled juggler, the author keeps all the leading characters introduced in the first chapter in swift motion, crossing each other, acting and reacting to the end. Redyard Byng, the central figure, is a Rand magnate, the clearest brain, the boldest, and the least self-seeking of the company, evidently modelled on Cecil Rhodes. Jasmine Grenfel is the Helen, the Delilah, the Vivian of the novel. A spoilt child of fortune with the world at her feet, she has engaged herself to Ian Stafford, an aspiring diplomat in the Foreign Office, but has bargained for a year of probation, in which to have her fling, but youth and promise stand no chance against power that has arrived, and "three millions at thirty-three" carries the day. Homer, as Lessing has remarked, leaves all to the imagination, and the witchery of Helen of Troy, who launched a thousand ships, is known to us only by its effects. This is not the way of the modest novelist, and of Jasmine we know every lineament and feature—the dresses she wears, the delicate perfume that clings to her like an aura and intoxicates her lovers. But her attractions are not only physical, and it is in his portrayal of her intellectual qualities that Sir Gilbert Parker shows his power. He is not content with telling us she is clever and nimble-witted—he gives us specimens of her wit and readiness, and, whenever she appears on the scene, we are sure of brilliant dialogue, sparkling epigram, keen cut-and-thrust, and infinite variety and tactfulness. We have sketched in outline the two leading characters which stand out like old masters in a modern gallery. A third, Ian Stafford, is not so convincing, and we cannot believe that the "verray parfit gentil knight" would have allowed himself to be twice besotted by the "delicate perfume." The villains of the novel, too, are somewhat stagey. Jasmine was too clever to have given herself away to a blackguard like Adrian Fellowes, who has nothing but his good looks to recommend him, and no Hottentot could have carried on for years an intrigue such as Krost is credited with. To set against these comparative failures there are a host of lifelike personalities, all drawn in strong outline—the magnates of the Rand, Almah (the American *prima donna*), Lady Torrington, and, above all, Jigger, the newspaper boy, who lives and dies for Ian, who has rescued him from the gutter.

THE Association for the Teachers' Study of the Bible have arranged for a course of five lectures by Rev. J. Moffatt, D.D., on "The Early Church in its Historical Setting." The lectures will be given on Wednesdays, beginning October 21, at King's College, Strand, at 6.15 p.m. The first will be a free introductory lecture by Canon Scott Holland.

COLONIAL AND FOREIGN NOTES.

GERMANY.

It is too early at this stage to attempt to gather up the lessons of the War, even as they concern education. Thus to some it will serve as a conclusive argument in favour of conscription; by others in support of

The War.

Territorials, Cadet Corps, and Boy Scouts. It is not for us to range ourselves on the side of Lord Roberts or Lord Haldane, but we may without prejudice express the hope that the result of the War will be a military system after the model of Switzerland rather than of Germany. Moreover, the War will enforce those lessons from Germany which the most enlightened of our statesmen and educationists, Lord Haldane and Dr. Sadler, have so long preached in vain—in particular, continuation schools and systematized technical education.

War will make havoc this autumn with the attendance at the German academies, the students of which commonly do their year of military service in the course of their residence. In the last winter

The University Population.

half-year the total number of duly matriculated students at the twenty-one Universities was 59,601, of whom 3,686 were women. The largest registration was at Berlin, which had an attendance of 9,593 students; the smallest was at Rostock, with 914. Of the whole body, 54,586 were from the various German States; 4,427 were from other European countries; whilst 588 were from America, Asia, Africa, and Australia. Russia, as usual, sent the largest number of foreign students—2,252. From North and South America there came altogether 348 students, more than half of whom, 175, were at Berlin. The registration by Faculties was in Theology, 5,842; in Law, 10,987; in Medicine, 16,642; in the Faculty of Philosophy, which is invariably the largest, 26,130. Women students appeared in the four Faculties as follows: Theology, 11; Law, 93; Medicine, 892; Philosophy, 2,690. In addition to the matriculated students there were enrolled at the various Universities as "hearers" 5,458, of whom 4,003 were men and 1,455 were women. These "hearers" included, the total University population in the winter half-year, 1913-14, numbered no less than 65,059. We shall be astonished if this winter half-year it is 20,000. During the great War of Liberation the newly founded University of Berlin had to be closed owing to the rush of its students to the battle-field. But that was in a nobler cause.

FRANCE.

The widened scope of the modern French University is shown by the establishing at Besançon of a *brevet de*

Un brevet de régleur.

régleur, or Diploma of Regulator. It will be conferred in the Faculty of Sciences from the beginning of the academic year 1914-15, and will be given either to Frenchmen or to foreigners. No University degree is required from candidates, but they must, in general, have studied for two years. The tests consist of a practical test, an oral examination in theory, and an Observatory test. As the practical test, a candidate during his second year must regulate at the Laboratory of Chronometry three chronometers accepted by the Board of Examiners. The examination in theory is on prescribed subjects: mathematics, mechanics, conservation of energy, &c. For the Observatory test two chronometers regulated by the candidate (and chosen by him) must be deposited at the Observatory and approved by the Examiners. The scheme of study laid down indicates the large amount of mathematical and scientific knowledge required for the exact regulation of a chronometer.

UNITED STATES.

We have now received detailed reports of the meeting of the National Education Association at St. Paul in July. President Swain, of Swarthmore College, delivered the Presidential Address. He made

The Meeting of the N.E.A.

four demands: (1) The teacher must be paid a living wage. (2) The State should provide a system of retiring allowances on which the teacher might live in modest comfort in old age. (3) The teachers in schools should have a Sabbatical year's leave of absence for travel and study on at least half pay, as is now the custom in many Universities and Colleges. (4) Since the great body of American teachers consists of women, there are things which should be done especially for them. More positions as Superintendents, Principals, and on Boards of Control should be open to women. The best person for each position should be chosen regardless of sex.

There should be equal pay for equivalent services. Embryo American citizens should be trained by American citizens, and all teachers, men and women, should have the rights and duties of citizenship.

From the papers read we will extract but a single paragraph. It gives the experience of a teacher in the Morris High School, New York, with regard to sex instruction; "As a teacher of biology in the first year high school classes I find the discussion of the reproductive functions of flowering plants, and of animals (with the exception of mammals) entirely satisfactory, even in mixed classes, and believe that many a youth has found in this instruction the long-sought-for answers to many of his questions. In the elective courses the instruction becomes more detailed, and includes a study of mammalian reproduction as well. No part of the course arouses more genuine interest than the consideration of heredity, environment, and training as factors in human life."

In 1915 the National Education Association will sit at Oakland, and somewhat later in the year than has hitherto been the usage—from August 16th to 22nd. As the next President the St. Paul's meeting elected David Starr Jordan, Chancellor of the Leland Stanford University.

We dare not at the present moment write of the German *Abiturienten-Examen* in French and English. We report, however, an oral test, suggested in the *Educational Review* (xlviii, 2), for pupils of the standard of the *Abiturienten*. It should consist, says the proposer, of three parts:—(1) A 15-minute exercise in writing moderately difficult French or German from dictation, with special reference to orthography and punctuation and to the distinction of words of similar sound. (2) Written reproduction in French or German of the content of a short passage in prose or verse read by the examiner (30 minutes). (3) A 15-minute individual test of the candidate's ability to read and pronounce ordinary French or German, and to answer in the foreign language questions on familiar subjects involving no unusual words. We should make sure that a learner can hear the foreign language. The tale is told of an examiner who, having put a long question in German to a young examinee, received as an answer, "Was sagst du?"

The Eighth Annual Report of the Carnegie Foundation for the Advancement of Teaching shows the total of the General Endowment fund to be 14,075,000 dols., yielding for the fiscal year concerned an income of 694,195 dols., of which sum more than 600,000 dols. was paid in retiring allowances and pensions to University and college teachers. By far the most significant event of the year, says the Report, was the establishment as a separate department of the work of the Foundation of what is to be known hereafter as the Division of Educational Inquiry. This has been made possible by the additional gift by Andrew Carnegie of a capital sum of 1,250,000 dols., to be held as a special fund, apart from the general funds of the Foundation, for the study of education and educational institutions. The Report calls attention, in a special chapter, to the great progress made with medical education in the United States. The weak and unnecessary institutions are being eliminated: in 1910 there were 162 medical schools; now there are only 115. Another chapter deals with the State regulation of higher education. Would you learn why there are so many academies of dubious standing in the United States? In practically all of the States of the Union, with six exceptions, Michigan, Massachusetts, Pennsylvania, Maryland, New York, and New Jersey, says the Report, the right to incorporate Colleges and Universities, with the power to confer degrees, except those in medicine, is open to everybody under a general law, which rarely contains any restrictions whatever. "The privilege of founding a University is as freely accorded in most States as that of opening a grocery store, and the University frequently has the smaller resources."

INDIA.

It is always pleasant to receive the Education Report of Baroda; for Baroda is a progressive State with a system of compulsory education. The Report for 1912-13 is divided into three sections: English Education, Vernacular Education, and Libraries. A few figures will show the growth of the English institutions. The number of students in Baroda College in 1909 was 225; in 1913 it was 410. The high schools for boys contained 1,445 pupils in 1909 and 1,775 in 1913. In the same four years the number of pupils in the Anglo-vernacular schools rose from 2,149 to 3,310, and the number in Aided schools and classes from 1,294 to 2,509. It was found

possible to admit boys of the Antyaja, or unclean, untouchable, caste to the high school without grave offence to the rest. As to Vernacular Education, the increase in the primary schools was from 175,156 in the previous year to 193,923. Special vernacular schools, day or boarding, are provided for the children of the untouchable Antyajias, of whom there are 175,000 in Baroda. The education of girls is improving; but the Department has to face a constant difficulty in its inability to find women teachers. Until the end of the year under report the compulsory age for boys was twelve, and that for girls eleven, and the compulsory Standard was the Fourth; but it was laid down that from August 1, 1913, the compulsory age limit for girls should be twelve, and the compulsory standard the Fifth. In the Library Department Baroda is strong, and it makes provision for the due training of librarians. Kinematographic exhibitions in the villages attracted crowds of fascinated spectators.

QUEENSLAND.

Changes have recently been made in the system of scholarships.

From January 1, 1915, a scholarship for two years will be given to every candidate under fourteen who gets not less than 50 per cent. of the marks in the annual scholarship examination. The scholarship will be extended for two further years if the holder, at the end of the first two years, does creditably in the Queensland public examination, and again for one year if that examination be satisfactorily passed at the end of the two years' extension. It will be seen that continuous effort is required for the retention of the scholarship. The scholarships entitle the holders to tuition at the expense of the Government at any State high school, technical high school, grammar school, or other secondary school approved by the Governor in Council. Besides free tuition a holder, if the circumstances of his parents demand it, receives an allowance of £30 or £40 should he have to live away from home, of £12 or £16 if he can remain at home. Moreover, his Excellency the Governor, with the advice of the Executive Council, has been pleased to approve that twenty open scholarships to the University of Queensland be granted as from January 1, 1915. The scholarships will be given in open competition by examination on the results of the Senior Examination of the University. Candidates for the scholarships must not be less than sixteen and not more than twenty-one years of age on December 31 next. The scholarships will be tenable for a period of three years as from January 1, 1915, and will entitle the holders to free tuition at the University of Queensland, subject to good behaviour and the pleasure of the Government, and will be awarded to the candidates, not exceeding twenty in number, who attain the highest places at the examination, and whose papers are of sufficient merit. An allowance not exceeding £52 per annum will be paid to each successful candidate who must live away from home to attend the University, and an allowance not exceeding £26 a year to those who can do so without leaving home.

The scheme yields in effect the "educational ladder," to fashion which has been the policy of the Education Department. The brighter child may look forward to free education from Kindergarten to University. Queensland provides free primary education for all, free secondary education for five years for all who qualify, and free University education for those who gain University scholarships, with liberal sustenance allowances in the secondary schools for the scholarship holders in need of monetary assistance, as also substantial sustenance allowances for the winners of University scholarships.

CAPE OF GOOD HOPE.

At the front of the "Guide to the Educational Institutions of Cape Town" (just received) there is a portrait of Dr. Muir, Superintendent-General of Education for the Cape Province, whose work we have

watched now so long that we seem to have learned to know the man. The "Guide" speaks of the Cape Peninsula with high praise for its beauty. "It is adorned by noble mountains. Two oceans lave its clean and sandy shores. Beneath its sunlit skies lie shady glens and open greens, sweet-smelling gardens and stately avenues. Moist with ozone, or aromatic with the clean pure pine, its temperate breezes carry health to all." The educational institutions of the peninsula, as here described, are not unworthy of it. We notice with peculiar satisfaction the concessions made to scholars and teachers by the South African railways. The Roman Empire carried everywhere its law; the German bears with it its bureaucratic system; the British is at its best when it is generating and developing the school.

UNIVERSITIES AND SCHOOLS.

LONDON.

Two new University Professors have been appointed to chairs tenable in schools of the University, Prof. D. A. Slater for Latin at Bedford College and Mr. T. S. Moore for Chemistry at the Royal Holloway College. It is generally recognized that the University is exercising by means of such appointments a most useful influence on the educational work of colleges which are technically known as "Schools of the University." Prof. S. D. Adshead has been appointed to a part-time Professorship in Town-planning, tenable at University College, to control a new department at the University School of Architecture located in that college. The title of Emeritus Professor of Chemistry has been conferred upon Prof. J. M. Thomson, Professor of Chemistry at King's College since 1887.

An important new development of University work has not yet received the attention it deserves. For many years the diploma in Pedagogy, known as the Teacher's Diploma, has been the only diploma awarded in connexion with the teaching and examinations for degrees. Recently a diploma in Fine Art has been established, and at the last meeting of the Senate regulations were adopted for the award of academic diplomas in Geography and in Sociology and Social Administration. For either of the last-named diplomas a course of study in the University must be taken and examinations passed. The diploma in Geography should become a valuable qualification for secondary-school teachers, who are often unable to include this important school subject in their ordinary degree course. For social workers, the course for the diploma in Sociology and Social Administration will provide the right kind of training.

OXFORD.

It is usual at this time to describe prospects for the October term. These are ordinarily prospects of University legislation or of the development of new studies. This year, however, no one knows what the forthcoming term will be like, except that it will be very different from anything we have ever known before. The War broke out at a time when most members of the University had left Oxford. The Modern History Examiners had just brought out their list. The Greats Examiners were later than usual this year, and Greats "vivas" went on till Wednesday, August 5, though both examiners and examinees must have found it hard to concentrate their attention on the details of logic or ancient history in those momentous days of the first week of August. On the last day of Greats "vivas" the schools were being transformed into a hospital, and well known Oxford medicos, in unfamiliar khaki uniform, poked their heads in. Territorials were billeted in several colleges, and Balliol still contains the recruiting office for Oxford and is still lodging recruits.

The Officers' Training Corps has been in continuous camp at Churn, training and sending off to their regiments—first, the members of the Corps who applied for commissions, practically the whole corps, and then a large number of University men who applied but who had had little regular training. It is difficult to find out how many men will be left next term. Mr. Phelps has published in the *Times* some striking figures about Oriel College, showing that, out of 129 men in residence last term, 95 have volunteered in some form or other. Inquiries from the different colleges show that something like this proportion have volunteered throughout the University. It must at the same time be remembered that Mr. Phelps's figures do not apply to next term's freshmen. A far smaller proportion of these have had any training, and, so far as I can find out, there will be in residence a much larger proportion of freshmen than of men of the other years.

The Vice-Chancellor wrote an interesting letter to the *Times* on September 2, in which, after pointing out that 1,113 men had been already nominated for commissions, he went on to say that, inasmuch as the need for officers is much greater than the need for men, the University could best serve not only the general needs of the nation, but immediate military needs, by going on and training for commissions all men who are fit. A good many men, however, who would have come up in October seem to have been told by some of those in authority that they are more likely to get commissions by enlisting at once in the new army than by coming up to the University and joining the O.T.C. It looks from various signs as though the War Office had not quite made up its mind whether to go on using the Officers' Training Corps or to train all officers with their regiments. If it definitely resolves on the latter,

the University will be still further depleted. We shall not really know how many men we shall have till term begins. According to present information most colleges will have between a third and a fourth of their usual numbers. A certain number of the younger tutors have also got commissions.

The financial result of this condition of affairs in the University and colleges will be very serious. The University will lose most of what it gets from dues and from examinations fees, a quite considerable part of its income, and yet be obliged to keep its educational machinery going on as large a scale as usual. The colleges will have their rooms empty and their tutorial funds depleted.

Meanwhile the Faculty of Modern History has risen to the occasion and produced a small booklet on "Why we are at War," which is more worthy of Oxford than the manifestoes of German professors are of their distinguished Universities. The Clarendon Press is also issuing a series of tracts on the War. One by Prof. Sanday, two excellent and characteristic tracts on Germany by Mr. Fletcher, and one by Prof. Osler have already appeared. Many of us are also being "mobilized" by the Workers' Educational Association for lectures on the War. The *Times*, in the first week of August, contained much silly correspondence on the necessity of educating the working classes about the War. I call it silly because the one most obvious thing about working-class education is that working men are not ready to believe what superior people come and tell them, that they do not want to be the subject of missions, and that they will choose their own teachers. The Oxford Tutorial Classes' Summer School went on through the first three weeks of August, acknowledging the new situation only by studying the political and economic problems roused by the War. Up till now the Tutorial Class students have paid little attention to foreign politics and little to the Empire. The seriousness and thoroughness with which these subjects are now being studied up and down the kingdom is a hopeful augury for democratic foreign policy in the future.

The Examination School, as I have noticed, has been turned into a hospital, and now contains some two hundred of our wounded soldiers and some sixty Germans. The former may be seen enjoying their convalescence on the sheltered lawn of New College Garden. The wounded Germans are said to include two German Rhodes scholars, who must have visited the schools before on very different occasions. University Examinations are to be conducted in the Town Hall.

Oxford will probably be most unlike itself in the absence of games. At least practically all who are capable of playing games will either have got commissions or be drilling. There will certainly be no rowing. The American Rhodes scholars may throw the hammer against one another in the running ground or play baseball in the parks.

But these are all surmises. By next month we shall know where we are, and, let us hope, see some prospect of the War finishing soon in the way we all hope.

CAMBRIDGE.

It cannot be complained that the Long Vacation lacked interest in Cambridge. The Declaration of War was followed by the massing of soldiers here on or about August 15, and the pitching of camps on all our commons till we had, it was said, some 30,000 troops about us. After some days the magistrates induced the publicans to close their houses at 8.30 p.m., with a marked gain to the order of the town. Our streets seemed always full of khaki. In the mornings the men were marched off in different directions for considerable distances, many being reservists and out of practice at such exercise, and some looking pretty spent by the time they got back. In the main they were cheerful and good tempered. Tents on the commons were set up by friendly people, where letters could be written, buns and tea bought, and fruit had for nothing. It is pleasant to record that officers and men spoke with warmth of the kindness they had here. On September 7 the whole of them vanished at once; it was said that seventy-one special trains ran from here that night. Your correspondent, you will notice, does not hazard any guess as to where they went, and he leaves other things vague. He knows, but he will not tell, what regiments were here. You cannot be too careful in war. He came near arrest as a spy himself for discussing in a train with a reservist the location of a farming village a bit west of the Ottawa; and, as your readers know, all really serious fighting has been so far a good deal to the east of that river.

Meanwhile, the O.T.C. has been busy. Rumour says two thousand members of the University applied for commissions, and up to some time ago (not to be particular, and also to conceal ignorance of the exact facts) some three hundred had received them. Speculation was rampant as to whether there would be

a term at all; that was very quickly decided by a letter from the Vice-Chancellor. Then a correspondence broke out in the *Times*, and it appeared that the continuance of University terms would secure the continuance of the O.T.C. and the supply of officers; and we learn now that for the present the War Office is telling men to come up and go on with their studies and be trained. So term there is to be. The next great rumour saddled us with another big camp of recruits; and how it would blend with town and gown no one could tell; nor can I tell whether or not it will be here. Guesses are made as to how many men will come up. At one College, rumour says, eleven men are left; at another, one tutor is said to be likely to have forty-five out of seventy. Average these—you haven't, of course, enough figures to average them yet; but do it all the same—and you may hit the current fancy, which is that we may have anything between one thousand and one thousand five hundred instead of our usual three thousand.

Pembroke and Trinity Colleges have been put to new uses. Pembroke became a sort of barracks for the O.T.C. men, where they slept three in a room (each having, in fact, a room of his own elsewhere), while they fed in St. John's and Caius. Trinity, or one of its courts, has been, it is said (for the public were carefully excluded), a hospital for wounded soldiers, who, as term comes on, will be shifted to new quarters in course of erection on one of the playing fields.

We all know a great deal about the War, of course; but, as knowledge grows from more to more, a good deal of what we know proves more than doubtful. The Russians used to keep going through by night in trains with the blinds down. What a curious contribution to the study of history they have made on their journeys through England! It is about all they have done for us in all their long train rides.

WALES.

A special meeting of the Central Welsh Board has just been held at Shrewsbury to discuss the reorganization of the work of the clerical staff. The Executive Committee had drafted recommendations as to the duties of the clerks in the different departments, but it was resolved, after some discussion, that a Special Committee should be appointed to co-operate with the Executive Committee and that an exhaustive report should be presented at a future meeting. It is, therefore, premature to pass any opinion just now on the scheme of reorganization which has been suggested. It is, however, evident that the Board is resolved to take all necessary steps to prevent the recurrence of the malpractices which were revealed at the recent Assize trial at Swansea.

It is only by radical changes that the Board can expect to justify the confidence of the public, and it is therefore extremely satisfactory to know that they are prepared to deal with the situation in a thoroughly businesslike way. It will be recalled that three members of the clerical staff were convicted of misappropriating an estimated balance of £2,000, and it was shown at the trial that the frauds had been going on for seven or eight years, and that the auditors had been totally deceived. But, painful as these revelations were, it is, however, important to state that the efficiency and integrity of the Board's examinations and inspections were in no way affected. It is only its financial administration that has been involved. The credit of the Board's educational work stands as high as ever in the estimation of the public.

As Dr. Arnold points out in his circular, the educational system of Wales "is now on its trial," and the present occasion will show whether its representatives are ready to rise to their opportunities and become pioneers in a truly national movement. It is for us to show that learning does not enervate, but stimulate, and that education means a clearer vision, a higher sense of responsibility, and a stouter heart. The response to this appeal has so far been satisfactory, and it is expected that with the active co-operation of the head masters of the secondary schools, a great many Old Boys of military age will be induced to come forward. The battalion will probably form one of the units of the new Welsh Army. Its motto is "Remember Louvain"—a very appropriate one for a University Corps.

The proposal to form a battalion for active service of members of the University, St. David's College, Lampeter, and of the Secondary Schools of Wales, has been taken up with enthusiasm. Both primary and secondary teachers are giving the movement their whole-hearted support.

Mr. Ivor B. John, M.A., has been appointed Principal of the Caerleon Training College.

SCOTLAND.

The Universities will be considerably affected by the War. It is as yet uncertain whether, or how far, the number of entrants will be reduced; but there will be a considerable loss of present students who have offered themselves for service at home or abroad. Every possible consideration will be given to these students when they return to the University, and it has even been suggested by the St. Andrews University Court that the Universities should co-operate in obtaining a special Act of Parliament to enable them to modify or suspend existing ordinances in so far as they apply to students whose course of study is interrupted by military service. University income will be greatly reduced by the loss of fees, and this will cause special difficulty to the smaller Universities. It has been suggested, in order to reduce this loss, that the Carnegie Trust should be asked to pay to the Universities the same amount for fees as was paid last year. This, of course, would not cover the whole loss; but it would considerably lighten it, and as the money, if not paid in this way, would ultimately go to the Universities in the form of endowments, the proposal seems a reasonable one.

At St. Andrews over a hundred students have offered themselves for commissions in the Army, and about one-fourth of these have already been accepted. Twenty women students have offered themselves for Red Cross service, and several members of the teaching staff and laboratory attendants have also offered their services. At Glasgow between six and seven hundred students have joined through the Officers' Training Corps and the Students' Special Committee, in addition to many others who have entered the service independently of the University organizations. At Aberdeen twenty graduates and students have received commissions in the Army, and about sixteen medical graduates have been accepted for temporary commissions in the Navy. At Edinburgh about five hundred senior students and graduates are engaged in military duties. The number would have been greater had not senior medical students been advised to complete their course first. An Edinburgh University troop has been raised for the Scottish Horse.

In the middle of August Glasgow University held a special final medical examination for candidates who desired to volunteer for active service, and nineteen candidates received the degrees of M.B., Ch.B. Edinburgh University Court has taken the somewhat doubtful step of asking all the German members of the staff to resign; but as the result of representations against this action an exception has been made in the case of Dr. Otto Schlapp, Lecturer in German, on condition that he submits to the Court before the end of September a certificate of naturalization, which, it is understood, the Home Office is prepared to grant. Some of the French members of staff in the Universities are serving in the French army, and several lecturers and assistants are detained as prisoners of war in Germany and Austria.

Numerous lecturers and students under the Provincial Committees are on active service, and the Committees have agreed to recommend that, subject to the approval of the Education Department, the following resolutions be given effect to:—(1) "That in the case of students taking a two, three, or four years' course, a period of service in the Army or Navy up to a year be reckoned as time given to training"; (2) "that in the case of students who were about to enter upon a year's course of training a period of service in the Army or Navy up to six months be reckoned as time given to training"; (3) "that holders of the general certificate who have qualified for admission to the shortened course of training, leading to recognition under Chapter 5 of the Regulations, be exempted from this course in the event of their joining the Army or Navy"; and (4) "that students who have completed the course of training qualifying as teachers of modern languages, except as regards the year of study abroad, be relieved from the requirements of foreign residence, subject to evidence of oral proficiency. Satisfactory arrangements are also being made regarding the salaries of lecturers on active service. Many teachers have also joined the forces, and it has been arranged that their posts shall be kept open for them, and that they shall be paid the difference between their military pay, exclusive of allowances for dependents, and their present salary. The Educational Institute has asked its members to contribute regularly a percentage of their salaries, to be given through a Committee to the various relief funds, &c.

The University Court has appointed Mr. David Waterston, M.A., M.D. (Edin.), to succeed Prof. Musgrave in the Bute Chair of Anatomy in the United College. Prof. Waterston is at present Professor of Anatomy at King's College, London. The appointment to the Lectureship in Geology has been deferred, and Mr. R. M. Crag, M.A., B.Sc., and Mr. David Balsillie, B.Sc., Assistants in the department, have been appointed Lecturers in Geology for one

year, as a temporary provision—Mr. Craig to conduct the classes in St. Andrews, and Mr. Balsillie the classes in Dundee. Dr. Henri Cottin, Assistant in French, has been appointed Lecturer in French at McGill University, Montreal, and Mr. W. C. Wicks, B.A., L. ès L., has been appointed to succeed him. Mr. Albare G. Widgery, M.A. Cambridge, has been appointed Assistant in Moral Philosophy, in succession to Mr. G. A. Johnston, M.A., who has been appointed Lecturer in Moral Philosophy at Glasgow.

On account of the War it has been decided by the Liberal, Unionist, and Socialist parties to withdraw their candidates for the Rectorship and to unite in nominating a candidate who is not a prominent

Glasgow.

politician. Sir Ernest Shackleton has appointed Mr. Alexander Stevens, M.A., B.Sc., Assistant to the Lecturer in Geography, to be geologist and geographer to the Weddell sea party of his expedition. Mr. James M. Wordie, B.A., B.Sc., of Glasgow University and St. John's College, Cambridge, is already attached to the expedition as geologist.

Dr. Theodore Sherman, pathologist to the Edinburgh Royal Infirmary, has been appointed by the Crown to be Professor of Pathology, in succession to the late Prof. Dean. Prof. Sherman is an Edinburgh

Aberdeen.

graduate, who has for nearly twenty years devoted himself exclusively to pathology, and has worked in various laboratories at home and abroad. He has made considerable contributions to the literature of the subject. On his retirement, after thirty-six years' service, Dr. William Stephenson, Emeritus Professor of Midwifery, has been presented by his colleagues, former pupils, and others with his portrait, of which a replica has been presented to the University. In connexion with the visit of the British Medical Congress to Aberdeen at the end of July, the Senate conferred the honorary degree of LL.D. on Mr. Archibald E. Garrod, M.D. London; Mr. William T. Hayward, M.R.C.S., Adelaide, South Australia; Sir Victor Horsley; Sir John Bland-Sutton; and Mr. Thomas J. Verrall, M.R.C.S., Brighton.

Dr. Julius Eggeling, Professor of Sanskrit and Comparative Philology, has resigned his chair after a tenure of thirty-nine years. He has done valuable

Edinburgh.

research work in Sanskrit and published many important books. The number of matriculated students in the University during the present academic year was 3,282, a decrease of 70 as compared with the previous year. Mr. E. G. McAlpine, M.A., an honours graduate in English and Classics, has been appointed Professor of English in the Central College, Bangalore, India.

In order to avoid a political contest Sir Edward Carson and Sir John Simon have both withdrawn their candidature for the Rectorship of the University. Lord Kitchener, in accepting the nomination, writes, "I shall be proud thus to be associated with a University of which I am already an LL.D., and of whose students many have joined the profession to which I am privileged to belong."

IRELAND.

The shadow of War, which has fallen across the sunshine of August and September and darkened the enjoyment of our holidays, is being felt in education no less than in other fields of work. More than

The Universities.

one professor from an Irish University who went to Germany for his holidays at the beginning of the summer, is at present detained there. The election to the Chair of French in the National University has been unavoidably postponed owing to the claims made by their country on certain of the candidates who are of French birth. Both Trinity College and the National University held extraordinary meetings in August for conferring degrees in Medicine on candidates who had volunteered, or wished to enter the service in Army or Navy, and who, in the ordinary course of events, would not have been qualified till the autumn session.

Numbers of students have volunteered or received commissions, and in Trinity College, at any rate, it is likely that some of the classes will be almost empty this winter. A camp of instruction for training young infantry officers has been established at Queen's University in Belfast. One of the early victims of the War has been a member of the teaching staff of Queen's, Lieut. K. T. Frost, who was Lecturer in Archaeology since the foundation of the University, and on the outbreak of the War was gazetted to the 1st Battalion Cheshire Regiment.

The destruction of Louvain by the German Army called forth a protest signed by leading members of the governing bodies of the Universities, academies and learned societies, libraries and museums

in Dublin, and the Senate of the National University also drew up a resolution expressing its sympathy with the University of Louvain.

Trinity College has lost another distinguished scholar of the older generation—Dr. Robert Yelverton Tyrrell, who died at Grey-stones, co. Wicklow, on September 19. Dr. Tyrrell, who was in his seventieth year, entered Trinity College in 1860 at the age of sixteen, won the Classical studentship in 1864, and four years later was elected to a Fellowship. He was successively Professor of Latin, Regius Professor of Greek, and Professor of Ancient History, and for a time also Public Orator to the University. In 1904 he was co-opted as Senior Fellow to the vacancy caused by Dr. Traill's appointment as Provost. He was one of the original fifty Fellows of the British Academy of Letters, and held many honorary distinctions from other Universities. His literary work as an editor of the classics and as a translator—notably in his edition of Cicero's "Correspondence," produced in collaboration with Prof. L. C. Purser—and in such original works as his volume on Latin poetry, secured him recognition outside his own country; at home he was also known as a brilliant and stimulating lecturer and a genial personality, gifted with a ready wit and resourcefulness in repartee and epigram.

The results of the Intermediate Board Examinations held this summer have been published during the month.

Secondary Education.

The total number of boys examined was 6,346 (849, 1,637, and 3,860 in the Senior, Middle and Junior Grades respectively), of whom 3,715, or 58.5 per cent., passed; of girls, 3,830 (452, 981, and 2,397 in the respective grades), of whom 2,330, or 60.8 per cent., passed. 200 exhibitions were awarded among boys, 122 among girls. An analysis of the results based on the total number of awards (exhibitions, prizes, and medals) to each school gives the four highest places among boys' schools in order of merit, to the Christian Brothers' Schools, Cork; Clongowes Wood College; the Christian Brothers' Schools in North Richmond Street, Dublin; and the Royal Academical Institution, Belfast; among girls' schools, to Loreto College, Dublin; Dominican College, Dublin; Alexandra College and School and Victoria College, Belfast. The schools of the Christian Brothers and the Christian Schools (managed by the De la Salle Brothers) figure prominently in the boys' lists, being especially successful in mathematical and scientific subjects. As generally happens, several of the successful candidates have won exhibitions in more than one subject-group, though, of course, in such cases, they are entitled to hold only one.

The Intermediate Board has just issued its report for the year 1913. The tables and statistics furnished therein show a steady rise in the number of candidates who presented themselves for examination, from 9,166 in the year 1904 to 13,858 in 1912; an apparent falling-off last year, when the number was 10,827, being due entirely to the abolition of the Preparatory Grade. The percentage of passes during the same period has somewhat gone down (63.3 in 1904 against 55.6 last year), but this is probably due to the inevitable tendency of annually recurring examinations to raise their standard. The amount of the School Grant paid to managers of schools in 1913 was £50,076. 11s., in which 322 schools participated (161 boys', 123 girls', and 38 mixed schools). Of this grant £18,508 odd fell to Leinster, £14,572 to Ulster, £13,000 to Munster, and £3,895 to Connaught. A further sum of £1,997 odd was allocated in bonuses to schools for choirs and orchestras on the results of a practical examination.

While there has been a continuous rise in the number of schools and scholars dealt with, there has been a serious diminution in the Board's income. The amount now received from the Local Taxation Account (the "whisky money") is £46,566, as compared with £71,400 in 1900. The Board state that more money is urgently needed, the sum allotted at present for distribution being totally inadequate to relieve the schools from the financial difficulties under which many of them are struggling. An additional grant, to be paid on inspection of the upper classes in the schools, would do incalculable good educationally. Additional money is also needed for holiday courses for teachers and for organizers in certain districts. The Board emphasize the necessity of developing and extending the system of inspection. The abolition of the Preparatory Grade, it is stated, has already borne good fruit, as testified by the reports of Inspectors.

Tables are given showing the totals of entries and passes in different subjects in the various grades in 1913. Among boys the total numbers examined in the following languages (all honour subjects)—Greek, Latin, French, German, and Irish—were respectively 1,069, 4,254, 5,196, 246, and 3,932. Among girls the corresponding figures were: 7 (no failures in Greek), 696, 3,411, 1,551, and 1,910. It will be seen that German is confined largely to girls' schools.

One curious effect of the present War, which has shown itself

since the resumption of school work in August or September, is the large reduction in the number of pupils taking German. Is this due to a hazy notion of what loyalty to the British Crown involves? or to the hope that by some occult means the arms of the Germans may be weakened by the disrespect shown to their tongue? or to the belief that at the end of the present struggle Germany will be blotted from the map of Europe and no vestige left of her literature? Whatever the motive, it seems short-sighted policy. One may feel pretty certain that the War will not lead to the study of English being dropped in German schools.

PRIZE COMPETITIONS.

HOLIDAY COMPETITIONS.

The following Prizes are awarded:—

DRAWING.

1. No award.
2. "Liège," £1. 1s.; "E.M.C.," 17s. 6d.; "Britannia," 15s.; H. E. Hutchings, 15s.

PHOTOGRAPHS.

1. "Gulval," 10s. 6d.; "Gothicus," 7s. 6d.
2. "Euphemia," 10s. 6d.; "Norway," 5s.; *παίς*, 5s.; S. Ingham, 5s.; "O.L.," 5s.; "Tramp," 5s.

LITERARY.

1. Critical notes on Gray's "Elegy": "Albus an ater," £1; S. Cunningham, 10s. 6d.; "Clito," 5s.
2. Specimen letter: L. Johnstone, 5s.; "Lance," 5s. "Judy," 5s.
4. Epigrams: "Berenguela," £1. 1s.
5. Recipe for a Faultless Dominie: "L'Ardent," 5s.
6. Motto: "Rolobo," 5s.

The competition in Art was much stronger than in Letters 1 was the most popular subject, but the Critical Notes were generally either notes for lessons or replicas of what had been said by M. Arnold or other great critics.

2. None quite rose to the occasion. Fancy the letter that Becky Sharp would have written to Miss Crawley.

3. A blank. Only two dialogues were sent in.

4. We hope to publish later some of "Berenguela's" epigrams.

NOTES ON GRAY'S "ELEGY."

By ALBUS AN ATER.

The Elegy marks the transition between the Classical and Romantic age of English Poetry.

Classical.—It has all the merits and some of the defects of Pope. (1) The quatrains rival Dryden's (his master in metre); nervous and dignified as Dryden's; some (e.g. the opening four) with a delicate music that is all his own. (2) Personification. Not so obtrusive as in Collins's "Ode on the Passions," but still excessive. (3) Inversions. Amount almost to a mannerism and sometimes cause ambiguity (*vide infra*). (4) Echoes of Greek and Latin, and borrowings, conscious or unconscious, from English poets. For these, consult any good edition, and note that in each case but one they have been absorbed, not transferred. There are no purple patches. In this he resembles Virgil and Tennyson. (5) The sentiments are commonplace, or rather common to the human race; but these have never been more perfectly expressed. In this the "Elegy" may be compared with the Greek Anthology.

Romantic.—(1) Gray is picturesque, but he attempts only broad effects. Unlike Pope, he is a true *ruris amator*, and, like Milton, in "L'Allegro," he paints, or rather indicates, the beauty of an English landscape; but this only serves as a background for the "silent con-

WILLIAM RICE, 3 Ludgate Broadway, E.C.

A TEXTBOOK OR READER FOR SCHOOLS. HOW THE WAR CAME ABOUT.

By J. HOLLAND ROSE, Litt.D.,
Fellow of Christ's College, Cambridge.

PRICE FOURPENCE.

Dr. Rose has undertaken a work of National importance in the preparation of this little book, designed for use, not only in all PUBLIC and SECONDARY SCHOOLS, but also in the Higher Classes of ELEMENTARY SCHOOLS. Briefly, but interestingly, he traces the history of Europe from the later years of the 16th Century to the present day, dwelling especially on the position of our country as the defender of the liberties of Europe at the time of the Armada, and in the days of Louis XIV and those of Napoleon. The events of 1870 are explained, and the story is then brought down to the opening of the present War.

Ready 15th October.

Orders will be filled in rotation, according to their receipt.

JOHN M. PROCTOR & CO.,

St. Ann's Ink Works, Island Street, Nottingham.

templation." He did not write with "his eye on the object," like Wordsworth or Tennyson, nor did he bring to Nature "the philosophic mind." (2) "The short and simple annals of the poor" is no new note in English poetry: witness "The Deserted Village," but it precludes Burns and Crabbe. (3) So, too, the self-portraiture and final Epitaph are a foretaste of Byron and Werther.

In spite of its elaboration and constant revision, the "Elegy" is not a faultless poem. Any who have committed it to memory will have discovered how hard it is in parts to remember the order of the stanzas. The omitted stanza on the redbreast, a faultless gem in itself, might have been inserted in more than one place.

Appended are notes on some of the difficulties and obscurities.

Line 1: The Dante original shows that "knell" is a cognate accusative, not in apposition to "curfew."

Line 2: "Wind" is the reading of the MS. Gray is as careful as Tennyson to "turn out the cackling geese."

Line 20: "Their lowly bed." The epithet and the previous stanza suggest the grave, but the following stanza points to the literal sense.

Line 35: The MSS. vary between "await" and "awaits"—the latter probably an inversion that Gray rejected. Stanza 13 is Augustan (Tennyson has borrowed "noble rage"). Stanza 14, though a classical echo, is Romantic.

Line 60: "Guiltless of his country's blood." Did Gray consider Cromwell guilty or guiltless? The "mute, inglorious Milton" points to "guilty," but the description of Hampden to "guiltless." If Horace Walpole confessed himself unable to understand Gray's political opinions, we must leave it an open question.

Line 68: A reference to Shakespeare's "Henry V" shows that an Attila or William II is intended.

Line 78: "Still" must be temporal, not adversative, and "erected" is loosely used for "standing." "Teach," in line 84, is also incorrect in syntax.

Line 85: "To dumb forgetfulness a prey." Whether in apposition to "who" or to "a prey" is a vexed question. Gray's love of inversion tells in favour of the latter.

Line 89: "Pious drops," not a happy rendering of *piæ lacrimæ*; no better than Pope's "kind, domestic tear." The epitaph sustains the subdued melancholy of the poem, but the second stanza is a conceit and the last will not bear analysis.

MOTTOES FOR LONDON.

The competition was disappointing, and the various suggestions made in the public press show how hard, if not impossible, it is to find or frame a motto that shall be distinctive, adequate, yet not boastful, and original, *i.e.* not hitherto employed. These, out of some century submitted, seem to us the best: "Circumspice"; "Civitas Dei" (or "A City of God"); "Now this world's greatest" (Tennyson); "Prima inter omnes Divom domus" (Ausonius); "Resort and mart of all the earth" (Cowper); "Britain's heart and home."

A Prize of One Guinea is offered for the best translation of the following extract from Claudian:—

Haec est, in gremium victor quae sola recepit
Humanumque genus communi nomine fovit,
Matris, non dominae ritu; civesque vocavit
Quos domuit, nexuque pio longinqua revinxit.
Huius pacificis debemus moribus omnes
Quod veluti patriis regionibus utitur hospes:
Quod sedem mutare licet; quod cernere Thulen
Lusus, et horrendos quondam penetrare recessus:
Quod cuncti gens una sumus.

A Prize of One Guinea is offered for the best translation of the following extract from Anatole France:—

C'était le premier jour de l'an. Par les rues blondes d'une boue fraîche, entre deux averse, M. Bergeret et sa fille Pauline allaient porter leurs souhaits à une tante maternelle qui vivait encore, mais pour elle seule et peu, et qui habitait dans la rue Rousselet un petit logis de béguine, sur un potager, dans le son des cloches conventuelles. Pauline était joyeuse sans raison et seulement parce que ces jours de fête, qui marquent le cours du temps, lui rendaient plus sensibles les progrès charmants de sa jeunesse.

M. Bergeret gardait, en ce jour solennel, son indulgence coutumière, n'attendant plus grand bien des hommes et de la vie, mais sachant, comme M. Fagon, qu'il faut beaucoup pardonner

THE JOINT AGENCY FOR WOMEN TEACHERS.

74 GOWER STREET, LONDON, W.C.

Teachers seeking Posts in Public and Private Schools and Training Colleges

for January 1915 should apply at once to the Registrar. **Governesses seeking Private Posts** are also invited to enter their names on the books of the Agency.

The following are selected from the posts vacant:—

ENGLISH and GENERAL POSTS.

Mistress wanted at once, for the term only, to teach History and some English in a Boys' Preparatory School in Sussex. Salary at the rate of £45 to £75 resident, according to qualifications. 10336

Mistress wanted at once to teach English Language and Literature and some History, all to Senior Cambridge standard. Good qualifications essential. Churchwoman. Salary up to £80 non-resident. 10337

Mistress wanted at once for Boys' Preparatory School in Kent, to teach ordinary elementary subjects, including Latin, French, English, and Elementary Mathematics. 10340

Mistresses wanted in January for Boys' Preparatory School in Middlesex. (1) to teach French mainly to boys of 13 and 14. Phonetics needed. German desirable. Residence abroad essential. (2) To teach mainly boys of 5 to 8 years. Salaries about £90 non-resident. 10279 & 10280

Mistress wanted in January in a Private School on the Sussex Coast to teach History, Geography, Drill, Nature Study, Elocution. Desirable: Music, Games. Training or experience needed. Salary £50 to £60 resident. 10295

Mistress wanted in January in a High School in Herefordshire. Special subject, English. Desirable: Latin, History, Scripture. Salary £100 to £120 non-resident, rising to £150. 10320

HISTORY POSTS.

Form Mistress wanted at once, with special qualifications in History, in a Girls' Grammar School in Lancashire. 10341

Mistress wanted in February to teach History in a good Private School in New Zealand. Good qualifications and experience essential. Salary up to £130 resident. 9784

SCIENCE and MATHEMATICS POSTS.

Mathematics Mistress wanted in Swaziland in January. French or German also needed. Churchwoman. Salary £80 resident. Passage paid. 9524

Science Mistress wanted at once for Public School in Scotland, to teach elementary Chemistry, Physics, Botany, and some Arithmetic and Mathematics. Degree, training, experience desired. Salary £120 or £130 non-resident. 10264

Science Mistress wanted at once for Dual School in Monmouthshire for one term. Salary at the rate of £100 non-resident. 10315

Science Mistress wanted in January for High School in Herefordshire. Geography and some general subjects also needed. Salary £100 to £120 non-resident, rising to £150. 10322

Senior Science Mistress wanted at once in Public School in North of London. Chemistry, Physics, Applied Mathematics. Games very desirable. Degree and experience essential. Initial salary £120 non-resident. 10345

CLASSICAL POSTS.

Wanted, in October 1914 or January 1915, a **Classical Mistress** in a High School in the West of England. Ancient History needed. Degree or equivalent essential—Oxford or Cambridge preferred. Salary £120 to £130 non-resident. 10326

Wanted, at once, in a Welsh Intermediate School, a **Mistress** to teach good Latin, some English, and one of the following:—Elementary Geography, Drawing, Needlework, Singing. Salary about £105 non-resident. 10343

MODERN LANGUAGES POSTS.

Mistress for French and some German wanted at once in Boarding School on South Coast. Good qualifications and residence in France needed. Salary £60 to £70 resident. 10202

Mistress wanted at once to teach French in a High School in Yorkshire. Degree, training or experience, and residence abroad essential. Salary £120 non-resident. 10330

Mistress wanted in January, in a High School in Herefordshire, for Modern Languages. Other subjects desirable. Salary £100 to £120 non-resident, rising to £150. 10321

Modern Languages Mistress wanted, in February, in a good Private School in New Zealand, to teach French. German is desirable. Salary up to £130 resident. 9964

Wanted, at once, in large School in North Wales, an **Assistant French Mistress**, chiefly for Conversation. Elementary Music desirable. Post suitable for French, Swiss, or Belgian Lady (Protestant essential). Salary up to £40 resident. 10346

There are a few "au pair" posts in Private Schools suitable for **Young French, Swiss, or Belgian Teachers** (Protestants).

MUSIC, DRILL, DRAWING, DOMESTIC ECONOMY POSTS.

Wanted, in a Girls' Grammar School in Lancashire, a **Form Mistress** whose special subject is Drawing. 10342

Wanted by 3rd November, in a High School in the Midlands, an experienced **Gymnastics and Games Mistress**. Junior Form subjects desirable. Salary £120 non-resident, rising to £150. 10338

Wanted in February, in a Girls' Collegiate School in Natal, a **Mistress** to teach Piano. L.R.A.M. or A.R.C.M. needed, and a knowledge of the Matthey and Stewart Macpherson Methods. Salary £100, £110, £120 resident in three successive years. 10335

Wanted at once, a **Mistress** to teach Cookery and Needlework in a Public School in London. 10339

Teachers who would like to apply for any of these posts should write at once for the Regulations of the Agency. No Registration Fee is charged to Members of the following Societies:—

**The Teachers' Guild,
Association of Assistant Mistresses,
The College of Preceptors;**

and the Commission on the first year's salary is 1 per cent. for a non-resident, and 1½ per cent. for a resident post. Teachers who are not Members of one of these Associations are charged a Registration Fee of 2s. 6d., and the Commission on the first year's salary is 3 per cent. for a non-resident, and 3½ per cent. for a resident post.

Registrar: Miss ALICE M. FOUNTAIN.

à la nature. Le long des voies, les mendiants, dressés comme des candélabres ou étalés comme des reposoirs, faisaient l'ornement de cette fête sociale. Ils étaient tous venus parer les quartiers bourgeois, nos pauvres, truands, cagoux, piètres et malingreux, callots et saboulex, francs-mitoux, drilles, courtants de boutanche. Mais, subissant l'effacement universel des caractères et se conformant à la médiocrité générale des mœurs, ils n'étaient pas, comme aux âges du grand Coësre, des difformités horribles et des plaies épouvantables. Ils n'entouraient point de linges sanglants leurs membres mutilés. Ils étaient simples, ils n'affectaient que des infirmités supportables. L'un d'eux suivit assez longtemps M. Bergeret en clochant du pied, et toutefois d'un pas agile. Puis il s'arrêta et se remit en lampadaire au bord du trottoir.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by October 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill. E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

FROM a letter addressed to us by the Chairman of the L.C.C. Education Committee we learn that the L.C.C. is making every effort to meet the crisis. Classes in First Aid and Nursing and in Invalid Cooking have been started; in the History, Literature, Geography, and Economics Classes the causes and results of the War will be dealt with; and Day Continuation Classes have been established for young workers who have been thrown out of employment. Last year 5,500 students enrolled themselves in the Junior Technical Institutes for a course of six hours per week.

THE Froebel Society have engaged provisionally the Birkbeck Hall for Dr. Montessori's lecture on October 29.

No name in the scholastic world will carry more weight than that of ex-President Charles W. Eliot. In a letter addressed to the *New York Times* (September 3) he writes: "Should Germany and Austro-Hungary succeed in their present undertakings, the whole civilized world would be obliged to bear continuously, and to an ever increasing amount, the burden of great armaments, and would be in constant fear of sudden invasion, now here, now there, and a terrible fear against which neither teachers nor professors of peaceable intentions could offer the least security. Although the people of the United States mean to maintain faithfully a legal neutrality, they are not, and cannot be, neutral or indifferent as to the ultimate outcome of this titanic struggle. It already seems to them that England, France, and Russia are fighting for freedom and civilization."

MISS RUTH HOLLAND is establishing a school in West Kensington for Belgian boys and girls of the better class. The teachers engaged will, of course, all be able to talk French, and one can speak Flemish as well. Miss Holland has the offer of a house capable of holding a hundred children, and promises of support, both in money and kind, are coming in freely.

WITH the gracious permission of Her Majesty the Queen, H.R.H. the Princess Mary has consented to become Patroness of the Girls' Patriotic Union, which has been organized by the Association of Head Mistresses for the purpose of spreading information among girls throughout the United Kingdom as to how they may render help to their King and country during the War. The Association invites the co-operation of all head mistresses of girls' secondary schools, whether public or private. Information may be obtained from the Hon. Secretary, Girls' Patriotic Union, 61 Great Ormond Street, W.C.

Candidates desiring to apply for any of the above or other suitable vacancies should write fully to MESSRS. GABBITAS & THRING, stating their age, qualifications and experience, and enclosing copies of their Testimonials.

A Prospectus will be forwarded gratis on application. NO CHARGE FOR REGISTRATION, and no Fee of any kind is due unless an Appointment be obtained through the Agency.

SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of BOYS' and GIRLS' SCHOOLS on the books in their Transfer Department. On learning a Purchaser's qualifications and requirements, they will send notices of opportunities likely to prove suitable, without making any charge to Purchasers.

These School and Teachers' Advertisements are continued from page 674.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

REFERENCES

permitted to Lord Kinnaird, the Right Hon. Viscount Gladstone, the Hon. and Rev. E. Lyttelton, D.D., and others.

Prospectus from the Secretary.

THE INCORPORATED GYMNASTIC TEACHERS' INSTITUTE.

(Founded 1897.)

Offices: 25 CHALCROFT ROAD, LEE, LONDON, S.E.

THE Institute is an Examining Body of Teachers of Gymnastics, &c., and Fencing, and its Membership, obtainable by Examination only, consists of Fellows, Members, and Associates.

The Institute also holds Examinations for Elementary School Teachers' Certificate for Physical Training.

Students are Trained as Teachers and for the Institute's Examinations.

Full particulars of the Examinations, &c., may be obtained from the Hon. Secretary, Mr. T. WILLIAMS.

Principals of Schools and Colleges requiring Trained and Certificated Teachers of Drill, Gymnastics, &c., or Fencing, should apply to the Hon. Secretary.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal: Miss STANSFELD.

(President of the Ling Association of Gymnastic Teachers).

The object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Laerosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

For Prospectus apply—37 Lansdowne Road, Bedford.

Literary Supplement to THE JOURNAL OF EDUCATION.

No. 543.

OCTOBER 1, 1914.

Cambridge University Press

Naval Warfare. By J. R. THURSFIELD, M.A. Royal 16mo. Cloth, 1s net; leather, 2s 6d net

"Everyone who desires to understand the inwardness of the strategical and tactical questions involved in this naval conflict should read Mr. J. R. Thurfild's excellent little treatise on Naval Warfare."—*The Naval Correspondent of The Times*, Aug. 21, 1914.

This is a volume of the Cambridge Manuals Series. Volumes uniform with the above and of special interest at the present time are:—

The Royal Navy. By JOHN LEYLAND.

Military History. By the Hon. J. W. FORTESCUE.

The Modern Warship. By E. L. ATTWOOD.

Berkeley and Percival. By BENJAMIN RAND. The correspondence of George Berkeley, afterwards Bishop of Cloyne, and Sir John Percival, afterwards Earl of Egmont. Demy 8vo. With 5 plates. 9s net

A School Electricity. By C. J. L. WAGSTAFF, M.A. Demy 8vo. With 136 figures. 5s net

The Electron Theory of Matter. By O. W. RICHARDSON, M.A., D.Sc., F.R.S. Demy 8vo. With 58 figures. Cambridge Physical Series. [Ready shortly.]

The Propagation of Disturbances in Dispersive Media. By T. H. HAVELOCK, M.A., F.R.S., D.Sc. Demy 8vo. 3s 6d net Cambridge Mathematical Tracts.

A Picture Book of British History.

Compiled by S. C. ROBERTS, M.A. Volume I—From the Earliest Times to 1485 A.D. With 190 illustrations. Royal 4to. 8s 6d net

This book contains a series of pictures of archaeological relics, coins, seals, brasses, and manuscripts, together with photographs of historic sites, statues, and buildings, as they appear to-day, illustrating the periods of British history. Brief notes are given, which do not, however, take the place of a history book, the aim of the work being to encourage the student to turn with increased interest to his textbook. An illustrated prospectus, giving full particulars, will be sent post free on request.

A History of Modern Europe from the middle of the Sixteenth Century. By J. E. MORRIS, D.Litt. Crown 8vo. 8s 6d net

An endeavour to present the history of Modern Europe as a whole, showing the intimate connexion between the politics of England and the Continent.

A Short History of Rome for Schools.

By E. E. BRYANT, M.A., Assistant Master at Charterhouse. Crown 8vo. With 24 illustrations and 24 maps and plans. 3s 6d net

Intended primarily for the use of middle and upper forms in Public Schools. It attempts to tell the story of Rome as the growth and decay of a living organism, till it is born again in the new form of an empire.

Cambridge Greek Testament for Schools and Colleges. General Editor: R. ST. JOHN PARRY, D.D.

Two new volumes now ready:—

The Epistle of Paul the Apostle to the Ephesians.

Edited by the Rev. J. O. F. MURRAY, D.D. 3s 6d net

The First Epistle General of Peter. Edited by the Rev. G. W. BLENKIN, M.A. 3s 6d net

STANDARD TEXT-BOOKS

LATIN and GREEK

Prima Legenda. First Year Latin Lessons. By Miss J. WHYTE, M.A. 1s 4d

A First Year Latin Book. By J. THOMPSON, M.A. 2s

Silva Latina. A Latin Reading Book, chosen and arranged by J. D. DUFF, M.A. 2s

A Grammar of Classical Latin for use in Schools and Colleges. By A. SLOMAN, M.A. 6s

An Elementary Latin Grammar. By the same author. 2s 6d

An English-Greek Lexicon. By G. M. EDWARDS, M.A. 7s 6d net

A Greek Vocabulary for the use of Schools. By T. NICKLIN, M.A. 2s 6d net

Graduated Passages from Greek and Latin Authors for First-Sight Translation. Selected and supplied with short notes by H. BENDALL, M.A., and C. E. LAURENCE, M.A. Part I, Easy. 1s 6d Part II, Moderately Easy. 2s Part III, Moderately Difficult. 2s Part IV, Difficult. 2s

Latin Passages. As above. 1s each part.

FRENCH and GERMAN

Random Exercises in French Grammar. Homonyms and Synonyms for advanced Students. By LUCIEN BOQUEL. 3s 6d

French Verse for Upper Forms. Edited by FREDERIC SPENCER, M.A., Phil.Doc. 3s

THE LONDON MATRICULATION DIRECTORY,

No. 68*. SEPTEMBER, 1914.

CONTENTS:—Abstract of the Regulations, Textbooks, Papers set September, 1914, Criticism of the Papers, Solutions to Examination Papers by the following Tutors of

University Correspondence College.

- A. J. WYATT, M.A. Lond. & Camb., First of his year in Branch IV (English and French), First Class with distinction in English in Medieval and Modern Languages Tripos.
- A. G. CRACKNELL, B.Sc. Lond., M.A. Camb., F.C.P., Sixth Wrangler in the Mathematical Tripos.
- F. ROSENBERG, B.Sc. Lond., M.A. Camb., Sixteenth Wrangler in the Mathematical Tripos.
- B. J. HAYES, M.A. Lond. & Camb., First in First Class Honours in Classics at Inter. and B.A., Gold Medallist in Classics at M.A.
- F. G. PLAISTOWE, M.A. Lond. & Camb., Gold Medallist in Classics at M.A. Lond., late Fellow of Queens' College, Cambridge.
- L. J. GARDINER, M.A. Lond. (with Distinction in French), First Class B.A. Honours in French and German.
- E. R. ADAIR, B.A. Lond. & Camb., First Class Honours in History at B.A., and in English at Inter. Arts, First Class Honours in the Historical Tripos, Cambridge, Parts I and II.
- J. W. SHEPHERD, B.Sc. Lond., First in First Class Honours in Chemistry at Inter. and B.Sc., Honours in Geology at B.Sc.
- C. W. C. BARLOW, B.Sc. Lond., M.A. Lond. & Camb., First Class Honours in Physics, First in First Class Mathematical Honours at B.A. Lond., Gold Medallist at M.A., Sixth Wrangler in the Mathematical Tripos.

* The MATRICULATION DIRECTORY was first published in January, 1887, and has been issued continuously since that date.

University Tutorial Press, Ltd.,

25 High Street, New Oxford Street, London, W.O.

A DIRECTORY OF EDUCATIONAL ASSOCIATIONS

will be found in the MARCH issue of "THE JOURNAL OF EDUCATION," price sixpence, post free eightpence.

⚡ This "DIRECTORY," corrected by responsible officials, extends over fifteen columns of the paper. It includes (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

REVIEWS AND MINOR NOTICES.

The Cambridge British Flora. By C. E. MOSS, D.Sc., F.L.S., assisted by Specialists in certain Genera. Illustrated from Drawings by E. W. HUNNYBUN. Vol. II: *Salicaceae to Chenopodiaceae.* (Cambridge University Press.)

The appearance of "The Cambridge British Flora" has been awaited with interest for some time, and the second volume, which has just been issued as the first instalment of the whole work, shows clearly enough that it is destined to form a striking landmark in the history of our knowledge of the plants of Britain. The work, when complete, will occupy ten large volumes, and it seems that Dr. C. E. Moss assumes responsibility for the greater part as author rather than as editor, although he will be assisted by specialists in certain genera.

An important feature of the "Flora" consists in the illustrations drawn by Mr. Hunnybun from actual specimens. Many of these illustrations, which are line drawings, admirably convey the character of the plant as a whole, and they will be of great use in portraying those distinctive features of the nearly allied forms which so often elude description. We could have wished that the details of flower and fruit had been better given. These drawings, which in some respects are quite as important as the large illustrations, leave much to be desired in definiteness, and rather resemble the efforts of an amateur who does not realize the difference between important and trivial details.

The volume just issued opens with a general introduction, in which the plan of the "Flora" is outlined and the scheme of classification is explained. The system followed is that of Engler, and thus marks a departure from the arrangement familiar to English field botanists since the days of Bentham and Hooker. The subdivision into sections and series within the families (or orders) is somewhat minute and will doubtless provoke criticism, inasmuch as the advantage of such subdivision tends to vanish as the number of sections approximates to that of the species.

Matters of nomenclature come in for a full share of attention, but we think it a pity that, whilst the Vienna Rules are followed for the most part, Dr. Moss has not seen fit to adopt the genitive form recommended for specific names derived from proper nouns. An excellent feature of the work, as a whole, lies in the illustration of the distribution, within the British Isles, of each species by means of a map. This is not only valuable in itself, but should serve to stimulate further research into the facts and causes of distribution. It often happens that the omission of plants from a district is quite as interesting as its presence—e.g. *Saxifraga aizoides*, so common in the Lake District, does not occur in the mountains of Carnarvonshire, while *Lloydia*, locally abundant in Snowdonia, is unknown elsewhere in the British Isles.

A work of the magnitude of "The Cambridge British Flora" demands courage and skill on the part of those responsible for its production. It could hardly, perhaps, have been committed to better hands than to those of Dr. Moss, who has, with considerable courage himself, tackled some of the difficult groups—e.g. the willows. Of course, there can be no finality in the treatment of such forms. Specialists differ, and will continue to differ, as to the limits of species no less than as to the hybrid origin so often attributed to apparently intermediate forms. The most that can be expected is that, at any rate, the groups of such species shall be defined as clearly as possible, the forms enumerated and distinguished, and the way pointed out in which further research may illuminate what still remains obscure. Sometimes, indeed, one experiences a doubt as to whether the numbers of new forms—species or what not—which are first recorded within the pages of the "Flora," are not rather overdone. Local differences of climate, soil, and the like exercise an influence, and, in any event, even when the differences appear to be hereditarily fixed, it is not always

very certain that the mean has been hit between "splitting" and "lumping" of forms. One is rather appalled at the prospect of subdivision on the lines of Jordan's sub-species (or species) of whitlow grass, and, without desiring to suggest that any such extreme course is intended, it will not be at all easy to draw the line beyond which further splitting should cease. Of course, it often comes to be largely a matter of personal judgment, and, whatever course Dr. Moss elected to pursue in the more "difficult" families, although he might anticipate support in some quarters, he would not expect to escape criticism in others.

But, whilst we may concede full liberty of judgment in dealing with these matters, we cannot avoid entering a protest against the occasional employment of a kind of polemic such as that which disfigures one of the pages (page 188) devoted to the Salicornias. Whatever errors Bentham may have committed, he was a great man, and we think Drs. Moss and Salisbury will not advance the cause of science by any such attempt to asperse the memory of a botanist who is no longer with us in terms which might have provoked amusement a century ago, but arouse quite other feelings at the present time.

In turning over the pages of the "Flora," one notes with satisfaction the excellent historical information so abundantly embodied in the text. Indeed, it becomes very plain that we have here a vast mass of valuable information quarried from the mine of the older literature, sifted and brought together in such a way as to place the reader at once in contact with the main sources of information, and this is all additional to that other kind of knowledge which depends on first-hand acquaintance with the plants themselves. Full references to literature are given in the text, and the practical utility of the volume is enhanced by an extremely good index. The Cambridge Press, as well as the authors concerned in the work, have well earned the gratitude of everyone who desires to know fully his way about the flora of the British Isles.

Wings and the Child. By E. NESBIT.
(6s. Hodder & Stoughton.)

Mrs. Nesbit has led us to expect charm in her writing, and it is doubtful whether any book of hers surpasses this one in delightfulness; its delicate humour, psychological insight, and sweet reasonableness make an appeal to all. The first part of the volume is the expression of thoughts on educational methods held by a "lay" mind, but it is dedicated to elementary-school teachers, "as a small token of a great admiration for their high courage, their steadfast perseverance, and their unflinching patience, love, and service." The second part is devoted to a description of the making of magic cities, both for rich and poor children, and is written in a style that is of interest to both children and grown-ups.

The author is happily in accord with modern educational tendencies in the matter of liberty. She says:—"Liberty is one of the rights we claim for ourselves . . . and liberty is one of the rights that a child above all needs—every possible liberty, of thought, of deed, of word. The old systems of education seem to have found it good to coerce a child for the simple sake of coercion . . . It did not much matter what you made a child do, so long as it was something against the grain."

We scarcely agree with the next extract, for it appears that one faculty, possessed by those who really understand children, has been omitted in the list: "You cannot hope to understand children by common sense, by reason, by logic, nor by any science whatsoever. You cannot understand them by imagination—not even by love itself. There is only one way: to remember what you thought and felt and liked and hated when you yourself were a child." There is another way, and that is by intuitive feeling, which in its ultimate analysis probably resolves itself into unconscious observation—a sensitiveness that cannot yet be gauged. We suspect that Mrs. Nesbit herself possesses a large share of intuition in addition to her remembrance of her childhood.

The chapters on "Taking Root" and "Beauty and Know-

ledge" are an appeal against modern modes of life with its incessant worthless change, and the ugly cheap ornaments that litter houses: "If we would make beauty the clear rule of a man's life, and ugliness the hated exception, we should make beauty as familiar to the child as the air he breathes, and if we associate knowledge with beauty the child will love them both." The basis for morality discussed in chapters on The Moral Code and Praise and Punishment is scarcely broad enough, and the One Thing Needful will be agreed to by only a section of the community of teachers and parents. But there are good things said, and charming examples given as illustrations to the discussion. An excellent point is made here: "The vast mistake, both in the education of children and government of nations, is the heavy stress laid on the negative virtues." An instance of the teaching of *positive* virtues and its result occurs later in the book: "The child to whom quite early the lesson of human solidarity has been taught will, when he shall be a man, know very well what he wants, and will be able, however humbly, to help in his day and generation to remould the world to the fashion of his desire."

Corresponding to the suggestion of inculcating positive lessons is the advice given to increase the use of praise as a factor in the education of children: "Praise to the face seems to them natural, right, and altogether desirable. See that they get it. . . . Be generous of praise—it is the dew that waters the budding flowers of kindness and love and unselfishness; it is to all that is best in the child the true Elixir of Life." Mrs. Nesbit does not pretend to have written a complete manual on child psychology, but what she does say evinces in general both sanity and understanding.

Of the chapters in Part II concerned with the building of Magic Cities we cannot speak too highly. The ingenuity, inventiveness, and artistic sense displayed can only be understood fully by reading the chapters and gazing at the beautiful photographs of cities in being. Unless the secret was unfolded no one would suppose that they were composed of such materials as cotton reels, wooden bricks, inverted cups, chessmen, and other odds and ends. We will not spoil the chapters by quotation, but we wish that every one who has had to deal with young children could read them.

The Church Revival. By S. BARING-GOULD.
(12s. 6d. net. Methuen.)

"Reminiscences and Thoughts on the Church Revival," to give the fuller title, is a wonderful book for an octogenarian to have composed and another proof of his versatility and facile style. It has not indeed the charm of his "Old Country Life," now announced in a cheap popular edition, for the personal note is less dominant. The scope, and also the bias, of the book are best shown in the author's own words. "In the first two chapters I have endeavoured to show how that Puritanism was a foreign element introduced into England. I have endeavoured also to show how that the Church has been like a cask half-full of generous wine, into which the State, like a dishonest host, has poured, so as to fill the cask, the water of Latitudinarianism charged with evil as much as it would hold; and how that the Church movement has been the fermentation of the noble liquor endeavouring to clear itself of its impurities." Mr. Baring-Gould is a clerical Cavalier, and to him Puritanism is "the abomination of desolation," and the Evangelical clergy are "the bilge-water of the Conformists of 1661-2." The Revival dates from "Tracts for the Times"; it was Newman, Pusey, and Keble who bruised the head of the serpent. To Matthew Arnold Puritanism was hardly less repugnant, but the liberty of prophesying for which Arnold contended is here regarded as, if possible, a worse evil than Puritanism. Broad Churchmen treat the doctrines of Christianity as boys do eggs, blow out the contents and preserve the shells as curiosities for the colour and mottling. But this new form of agnosticism, we are told, is confined to a very narrow circle, "tango dancers, scholars, students, college tutors, and schoolmasters who have little knowledge of human nature." Consistently with this theory there are but two or three

passing allusions to "Essays and Reviews" and the prosecutions of the Essayists, while the persecution of the Ritualists occupies several chapters. The brutal attack on Mr. Prynne and the Eldad Sisterhood is touchingly told. As an anti-Puritan, Mr. Baring-Gould rivals Dr. Johnson in his prejudice against Scotchmen. He finds in a current Crockford 471 names beginning with "Mac" (all presumably Scotchmen), of whom 36 are Church dignitaries, and bitterly complains that the aggressive Scot is ousting our modest English curates from livings and benefices. Victorian Bishops fare hardly better at his hands. In a *chronique scandaleuse* after the manner of Suetonius, Bishop after Bishop is dissected and convicted of pluralism, nepotism, intolerance, gross ignorance—every sin, in fact, except gross immorality. It is a relief to be told that the Church Revival has changed all that, and that the present Bench of Bishops, "except in the far North and a few Western dioceses," is all that could be wished. This reformation, however, has not extended to the clergy, who are reported as underbred and sadly deteriorated in character.

The book, as we said at starting, is an amusing medley. We have refrained from the temptation to pick out the plums—the reminiscences of the author's forbears, his own experiences (he naively pleads guilty to the sermon tub), and his racy character sketches, preferring to send the reader to the volume itself. To criticize the dogmatic premises is also beyond our province, but we cannot forbear in conclusion from indicating how wholly, in our opinion, Mr. Baring-Gould has mistaken the signs of the times. If we read them aright it is only a small section of the public that takes any interest in the questions that seem to him of supreme importance—vestments, ritual, daily services, theories of the sacrament. What seems to him a side issue that interests only dons and dilettanti—the relation of religion to science, the belief in miracles and inspiration—is the supreme question of the future. One word more. Erastianism is here accounted a deadly heresy, but the author does not see that the only radical cure for Erastianism is Disestablishment.

Bergson for Beginners. By D. B. KITCHIN.
(5s. net. Allen.)

M. Bergson himself writes of this book: "It is a simplified survey, remarkably well done, of the whole of my works," and this in itself is sufficient recommendation. The introduction arouses interest, but the reader must be more than a beginner in philosophy to appreciate its value or even to comprehend it fully. It traces the course of philosophical thought with the object of showing the need for such work as M. Bergson's; it accounts for the occasional misunderstanding of his philosophy; and it offers a few criticisms. Through the rest of the book Mr. Kitchin is content to be a disciple expounding his master's views.

Perhaps too much space is given to the analysis of Time and Free Will and Matter and Memory in proportion to Creative Evolution, which is undoubtedly the greatest achievement and also the least difficult to grasp. What has been called Bergson's secret—Duration—is well explained, as far as explanation is possible for a conception that Mr. Kitchin sees can only be apprehended immediately as an intuition. If M. Bergson is right in saying that "a philosopher worthy of the name has never said more than a single thing; even this he has not so much really said as tried to say," then his own contribution is that of the idea of Duration and all its consequent deductions. His insistence on the value of intuition as complementary to intellect is also one of the influences that philosophers later in the century will acclaim more than is done at present. And the philosophies arising from his *method* will be such that they will always progress but never be completed, for with creative evolution there is no set goal and no final completion, which would imply stagnation. It is in the possibilities which he opens out that M. Bergson has done service to philosophical thought as much as in his actual contributions to the advance of philosophy. As Mr. Kitchin says, evolution becomes vastly more rapid when man takes a

hand in it, and philosophy, which is something different from science, declares that man is free to take part in it.

The chapter entitled "Conclusion" states concisely the main trend of the philosophy, and is valuable as a summary even to those acquainted with all the works mentioned. But we think that overmuch stress has been laid on M. Bergson's conception of God. The only approach to a definition which he gives is "God . . . has nothing of the already made; He is unceasing life, action, freedom"; and this scarcely warrants the statement that "Bergson's conception of God . . . is anthropomorphic." In fact, Mr. Kitchin has introduced God into the philosophy to a greater extent than his master has done. We heartily agree with the estimation of the manner of expression used by M. Bergson: "For Bergson's literary style no praise could be too high. It is at once picturesque and precise, stimulating the imagination and yet rarely leaving the mind in doubt as to the meaning he wishes to convey. He is a true poet-philosopher . . . uniting the creative genius of the artist with the power of nice analysis of the psychological and metaphysical expert."

The following is a just appreciation of the side issues connected with M. Bergson's thought:

But, apart from these ultimate questions, Bergson has given us . . . much food for thought in the solutions he offers of the classic puzzles of life and mind. . . . He vindicates science, rescuing it, in part, from the relativity alleged by agnosticism, while he limits the sphere within which it can be said, with any sort of truth, to be in touch with reality. The difficulties of idealism, realism, dualism, materialism, nominalism, and conceptualism, and of a host of others, seem to vanish at the magic of his touch. Perhaps the most striking result of Bergson's philosophy is that these oppositions need not arise at all: they are seen to be artificialities of our own contriving.

Education and Psychology. By MICHAEL WEST.
(5s. net. Longmans.)

The title is well chosen, for psychology is only the scaffolding which serves the author to erect his scheme of education. Psychology is classified as Analytic, Physiological, and Dynamic, and it is with the last division that the present work is mainly concerned. "It is the question 'What to do!' in a limited form. It attempts to tell the laws of the mind's action." The author starts with the postulate, as axiomatic, that *doing* is the alpha and omega of education. "Man's one desire is to know what to do," and he defines Science as "a body of organized accurate knowledge for the purpose of correct and efficient action." We join issue on this fundamental assumption, and we cannot help being prejudiced against a writer who informs us that the first two of Comte's famous stages were Empiricism and Naming, and who quotes the title of Molière's famous play as "Le Médecin malgré lui." Man, as Aristotle tells us, is a contemplative no less than an energizing creature, and the child who asks questions about the moon does not think it may be made of green cheese and that he can play with it or eat it. "En forgeant on devient forgeron" is a sound proverb, which is now being applied more systematically and thoroughly in all schools, but the rule laid down that "every lesson should teach the child to do something—something which he *knows* he will have to do in later life," would debar all but budding authors and poets laureate from lessons in pure literature.

Dr. Montessori herself could not preach with more fervour the duty of respecting the individuality of the child and allowing him to follow his own natural bent. Classroom work, we are told, which compels the child to work against the grain is the most uneconomical possible, and "nothing is morally or hygienically more pernicious than an automatically ventilated schoolroom." It follows that compulsory school age, which restricts personal liberty and retards wage-earning, should be reduced, and not, as modern educationists urge, be further advanced. Here is Mr. West's scheme for the ideal school of the future. Up to the age of ten, infant school or kindergarten. From ten to eleven, preparatory trade school for the purpose of selection. The scholar will be given the choice of one of six trades adapted to the locality. The after-

noons will be devoted to literature, art, music, and civics. In the second year the technical occupations are reduced to three and the liberal occupations to two. This process of sifting continues till, at fourteen, the boy passes into the commercial or technical school. The scheme is confessedly not practical. It supposes a *tabula rasa*: but Mr. West believes that with our present machinery we might approximate to it. The scheme is based on a generous error, but an error none the less, that each child is born with distinct physical and mental characteristics which it behoves the teacher to discover at the earliest stage and to treat him accordingly. The logical application of such a theory would be a return to Rousseau's "Emile" and his tutor. There is no need to argue the point. One deduction of the author seems to us a sufficient *reductio ad absurdum*. He considers the correspondence colleges far superior to our schools as at present constituted. Our final verdict must be *infelix operis summae*, but the book is pleasantly written and contains much sound doctrine by the way—for instance, on Boredom as distinguished from fatigue, and on the respective values of the Classics and Modern Languages.

The preface is dated from Dacca, and it is evident that the author is not acquainted with the reforms in national education that this century has witnessed. We only wish it were true that by the free-place system the majority of children continue their education to the age of sixteen.

The Man of Genius. By HERMANN TÜRCK. (Black.)

This is a translation from the sixth edition of the German original, made by the late Prof. G. J. Tanson, with the addition of the seventh edition, translated by Mr. E. C. Deibel, and the whole revised by Mr. George F. Payn. We have not compared it with the original, but we can testify that it satisfies the first requirement of a good translation: it reads like English.

We are not, however, prepared to endorse all the four pages of complimentary press notices, which remind us too much of testimonials. It is not, as the title would lead us to suppose, a philosophic or psychological treatise on Genius, but a miscellaneous collection of essays illustrating the central idea, which recurs in each as a refrain. Genius, as defined by Schopenhauer, is the completest objectivity; or, as Goethe puts it more simply, genius is love of truth. There is nothing new in the doctrine. Self-sacrifice, *entsagen sollst du, vivre pour autrui*, to lose one's life to save it, and the "single eye" of the Gospels, are all facets of the same central truth, and the originality of Dr. Türck's work lies wholly in the application. But when Shakespeare, Goethe and Byron, Alexander, Julius Caesar and Napoleon, Christ and Buddha, are chosen as illustrations, the plain man revolts at such glaring paradox, and suspects a generalization which includes such disparate and antagonistic individuals. We seem to detect the same confusion of ideas that we find in Bacon's first essay, the confounding of intellectual and moral truth, of *Wahrheit* and *Treue*. Dr. Türck would not deny to Bacon himself the distinction of genius; yet his eye was not single; he had not expelled *den hässlichen Tyran, das Ich*. In theology Dr. Türck is an outspoken pantheist. Not only is God in everything, but God is everything, "quodcunque vides quocunque moveris," and genius consists in the apprehension of this omnipresent divinity and the love that inspires it and that it in turn enkindles. Christianity and Buddhism are here presented as two parallel expositions of the same doctrine, and the differences between the creeds of "these two supreme men of genius," mainly due to their different nationalities, are reserved for a future essay.

The wildest paradox of all is reserved for the last lecture, when the Greek myth of Pandora is represented as a various version of the Hebrew myth of the Fall of Man. We have, it would seem, all misread the parable. Hope that remains at the bottom of the jar is not the divine sister of Faith and Charity, but the bane of human nature, care for the morrow, the fluctuation between hope and fear that keeps man from the "passionless bride," Nirvána.

From much that is extravagant and one-sided, the study of Hamlet stands out as an original and illuminating contribution to literature. Hamlet, as Dr. Türck reads the play, is not the dreamer incapable of action, but a man of firm resolve and purpose. What keeps him from action is his genius, his objectivity. He sees life steadily and sees it whole. What will it profit him to take vengeance on one adulterous usurper if all kings are like Claudius, to send Ophelia to a nunnery if all women are like her and his mother? The clue to the character he discovered in our Lord's saying "Whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother." A strange text to choose for a sermon on the Prince of Denmark; but in the sermon itself there are, as Bishop Blougram puts it, "new points in the soul of Hamlet."

The Influence of Monarchs. Steps in a new science of History. By FREDERICK ADAM WOODS, M.D. (8s. 6d. net. Macmillan.)

In 1902 Dr. Woods collected the main historical statements concerning some thousands of members of royal and noble families. He published the summary of the results of his researches in twelve papers, which appeared in the *Popular Science Monthly*, and subsequently in book form. In those papers he first outlined a system of analysis of historical causation which is in the present volume applied to the larger questions of national growth and decline. The name bestowed upon this system is "Historiometry." It is an unfortunate example of the modern craze for cumbrous, high-sounding names, which often serve to conceal a very simple subject. In the present instance it will assuredly lend colour, at least in this country, to the suggestion that "historiometry" is but one more amongst the many "Pseudo-sciences." The suggestion would contain a germ of truth, but not the whole truth. Dr. Woods must be given credit for a vast amount of research directed towards proving, what to any common-sense person was obvious apart from all proof, namely, that, *ceteris paribus*, a country will have a better chance of thriving and progressing under a good king than under a bad one.

But a very cursory examination of two or three typical reigns in the history of any European country will serve to demonstrate the truth of the proposition that national progress and prosperity are not associated with the goodness or badness of the monarch reigning over it in the relation of effect and cause. It is a gratifying tribute to the substantial accuracy of a merely common-sense judgment to find that all Dr. Woods' statistics go to support it. We are indebted to the learned author for such a confirmation, but at the same time we are inclined to deprecate what is a somewhat excessive use of the statistical method. The fallacy that science means measurement, that exact knowledge is impossible in the absence of exact measurement, is so widespread and so pernicious in its effects at the present day that it is highly undesirable to encourage it in the manner of this present study. We are at one with Dr. Woods in insisting upon the importance of heredity as compared with environment. No greater service could be rendered to posterity than that of exposing the sham of the philanthropist.

In this respect "The Influence of Monarchs" is an extremely powerful appeal in behalf of the eugenist. Dr. Woods proves, what needed no proof, namely, that in the past, if at no other time, the men of such types as Cromwell or Gustavus Adolphus have by the sheer force of personality profoundly modified the course of contemporary events; that it was they who caused the conditions of their times, and not the conditions which produced them.

With regard to details, the work is so highly controversial that it is impossible in the space at our disposal to criticize the author's conclusions. Whatever our views may be upon a variety of topics dealt with, we are driven to confess that the work is, if nothing else, an extremely stimulating one, and we trust that Dr. Woods will find time to pursue his inquiries in this and in other fields. We do not at all approve of his

arbitrary spelling, his split infinitives, his mixed metaphors, or his passion for long and unwieldy epithets. And, finally, we think his plus and minus signs are fallacious and dangerous in the extreme.

The Problem of the Continuation School. By R. H. BEST and C. K. OGDEN. (1s. net. P. S. King.)

The settlement of the continuation school in England has yet to be made, and therefore any accounts of its successful working elsewhere should be welcomed. This description of the solution of the problem in Germany can help those interested in this country as well by warning as by suggesting. The authors represent between them the commercial and academic aspects of education, and there is an introduction by Dr. Kerschensteiner, who considers that all States are suffering from the lack of an adequate system of national education that shall consider the needs of the community as a social group. In his opinion continuation schools should weave their teaching with the trade of the pupil, and should then lead him to moral and civic teaching, for the end of all education is the production of the citizen of the State who consciously places his work at the service of the community. The main part of the booklet details the system of continuation schools compulsory in Munich, which is called "the Mecca of all the school reformers of Europe and America." Here there is a four years' course of seven or eight hours weekly, which includes trade arithmetic and book-keeping, business composition, drawing, information about trades, practical work, citizenship, and hygiene. The illustrations give some idea of the imposing buildings and their equipment for a dozen different trades. The whole conception, however, appears to be too vocational, and an improvement would consist in the addition of some such courses as were suggested by an L.C.C. memorandum on non-vocational institutes. The steps by which Germany has reached her present educational position are sketched together with the underlying principles upon which Dr. Kerschensteiner acted in revolutionizing the old system, and a consecutive policy suitable for any large town in England is outlined. The book is extremely useful.

Public Education in Germany and the United States.

By L. R. KLEMM. (5s. net. Harrap.)

Essays, lectures, and articles, prepared during the last twenty years, have been collected by Dr. Klemm to form this volume, which he designates his last sermon. Descriptions of schools and methods of teaching in Germany and America are given; various suggestions for teaching different subjects appear, among which is a not very illuminating paper on teaching Civics; and discussions as to results of teaching show much of the inadequacy and unreality that used to be far more common than at the present day. But very many of the chapters are vitiated by a quite extraordinary animus against women. It is true that the woman teacher predominates in America to an extent that is disparaging to the fullest development of both girls and boys, and that this is being recognized in modern times, but Dr. Klemm is not satisfied with stating this fact; he continually inserts remarks detrimental to woman's capacity and character: "Women rarely if ever possess the faculty of transferring themselves in their thoughts back into remote ages and into distant space. Women . . . are scarcely able to teach history and geography. In history woman is apt to kill the wrong man, at the wrong date, in the wrong place, for no valid reason whatever. . . . In geography she makes her pupils memorize names, stuff their memory pockets, and thus prepare for an examination. Scientific chains of cause and effect play no part in her teaching." In the chapter on Co-education the writer objects to that method of education, as he states mixed schools tend to become girls' schools, and the boys are repressed so that the nation has become great "in spite of its schools." He also makes the entirely unjustifiable statement that "it is one of woman's dearest accomplishments to make the man her slave, and to see boys in a school that has lost all characteristics of a boys' school fall behind the girls, and thus give the woman teacher an opportunity to triumphantly point to the inferiority of the male sex, is her delight."

The Medical Inspection of Girls in Secondary Schools. By CATHERINE CHISHOLME, M.D. (3s. 6d. Longmans.)

Miss Chisholme is Medical Inspector to the Manchester High School for Girls, and this book has been written at the instigation of Miss Burstall, the Head Mistress. It is addressed primarily to head mistresses, and it covers wider ground than the title would indicate, treating of the health of schoolgirls in so far as this can be supervised and tended by the teachers acting in concert with the school doctor. "We have found," writes Miss Burstall, "that a good deal more can be done than merely measuring and weighing the pupils, drawing up tables of results, advising parents as to eye defects or the need of special gymnastics." Remarkable instances

are given of the special inspection of a stupid class, the diagnosis of the causes of stupidity, and the cure by reducing the number of subjects and enforcing, through the parents, early hours. It is not an easy thing to alter the time-table in the middle of a term, and few head mistresses (still fewer head masters) would have the courage and magnanimity to submit to the prescription of the Medical Officer. Nor could they always do so if they would; straitened means may compel them to acquiesce in what they know to be wrong. Yet Dr. Chisholme, whose advice is always sound and sober, will at least show them what to aim at, and this manual should be in the hands of every secondary head mistress.

Methods in Teaching. A Textbook for Sunday-school Teachers. By the Rev. A. R. OSBORN. (2s. Oxford University Press.)

This is a praiseworthy attempt to instruct Sunday-school teachers how to apply the methods of Froebel and Herbart. After a brief introduction on the theory, the author devotes himself to the application, points out pitfalls, suggests better ways, and provides some excellent model lessons. He shows the futility of attempting to teach dogma to infant classes, but he does not face the problem of how to deal with the miraculous element in the Bible, a difficulty that he must have encountered as a teacher of adult classes in Australia.

Select Passages on Duty to the State. Arranged by J. G. JENNINGS. (2s. 6d. Oxford University Press.)

These passages are said to be for "reading, analysis and translation in schools and colleges," but we hope that this use will generally be limited to reading, for "analysis and translation" will spoil the beauty and teaching exhibited in the admirable selection. The extracts are arranged in order of difficulty, but the book appears to us to be of greater value to the teacher than to the taught. For civics and history lessons much material may be gathered, as the writers contributing their wisdom range from Plato and Marcus Aurelius to Comte and Ruskin. Mr. Jennings remarks that all agree in "the one perennial conviction, common to all lands and times, that we, and all that we hold dear, live by others, and to love and protect our neighbours is an essential part of duty and religion." The subjects include Civic Life, Duty, Co-operation, Manners, Rewards, and many other aspects of social life, and all emphasize the ideal of service.

Intensive Studies in American Literature. By ALMA BLOUNT. (5s. net. Macmillan.)

The sensible teaching of Literature, as a study that enhances life and does not consist chiefly of annotations, is advocated in this volume. Dr. Blount divides her treatise into two parts: the first a rhetorical introduction dealing with prosody, diction, qualities of style, &c., and the second detailing methods of studying some of the American masterpieces of literature. Although the author addresses students in her chapters, the work is more suitable as a handbook for teachers, and both English and American members of the profession will find much of use in the intensive studies here included. But Dr. Blount knows that books are only secondary in furnishing the atmosphere necessary for the most complete and profitable study of any work of art: "The ability to bring an inspiring atmosphere into the classroom is a *sine qua non* for a teacher of art. A mechanical instructor teaches nothing really worth while in literature, and no textbook can do for his class what his personality should be able to do." Good points of the book are the lack of formal definitions, the plentitude of illustrative examples, and the author's intention of making the student more sensitive to the form and content of works of literature, which will be fulfilled if her directions are followed. In such a book the illustrations are unnecessary and somewhat irrelevant.

Greek Sculpture and Modern Art. By Sir CHARLES WALDSTEIN. (7s. 6d. net. Cambridge University Press.)

We have here two lectures delivered to the students of the Royal Academy. They are well worth reproducing in a permanent form, and it is no disparagement of the lecturer if we say that the illustrations will attract more interest than the text. The majority of these are admirable copies of Greek and Greco-Roman statuary, with some examples of Rodin's work and two of Meunier's by way of contrast. These have been chosen by the lecturer to illustrate, in the first place, the development of Greek art and the traces it bears of the primitive artists' material, wood or clay, but, secondly and chiefly, to establish the thesis that classical art at its best and highest was content with the normal: sought to portray only what was beautiful, or, if not physically beautiful, "what dissolves itself into the harmonious expression of some greater idea." This is true of the plastic arts, and we agree with Sir Charles Waldstein that Villon's "*La Heaulmière*" is not a subject for the sculptor. It is not true of poetry, and Lessing's epoch-making "*Laocoön*" (to which the lecturer might have referred) explains the reason.

Essays by Matthew Arnold. (1s. 6d. net. Oxford University Press.)

This volume of reprints includes "Essays in Criticism" (First Series), the Lectures on "Translating Homer" (with F. W. Newman's reply) and five magazine articles now for the first time collected. At the price of three *Spectators* the public are offered Matthew Arnold at his very best, and even at his worst he is still worth reading. The preface to the second edition contains the splendid apostrophe to Oxford—"Home of lost causes and forsaken beliefs," &c.—and is a model of that "sweet reasonableness" that Arnold preached, but did not always practise. Admirable, too, is the first essay on "The Function of Criticism." We are pleased, too, to have in its complete form the famous controversy on translating Homer. Mr. Newman is no match in the arena for a matador who pricks his flanks and slips aside from his heavy charge. Few will read Mr. Newman's reply, fewer still his translation, but it serves to bring out Arnold's strength as a critic and his weakness as a constructive artist. He has not given us the doctrine of the English hexameter, nor could we gather it from his own specimens.

Prisons and Prisoners. By Lady CONSTANCE LYTTON. (3s. 6d. net. Heinemann.)

After the confusion over the struggle for the suffrage for women has died away, and the names of those who suffered imprisonment for the cause are forgotten, one deed will shine in its true perspective. The finest thing accomplished by Lady Constance Lytton is perhaps less connected with women's rights as such than she suspects. When she disguised herself as a poor woman and underwent the treatment meted to the unimportant, she was emphasizing the distinction, not between the sexes, but between the classes; it was a more far-reaching sacrifice than she knew. This book tells that story and of her conversion to militancy and the consequent imprisonments. The obvious sincerity and high motives animating all the author's actions must be apparent to every reader, and a quiet dignity pervades the recital of much that is revolting. The book is absorbing in its interest and very seldom descends to banality. It is felt, however, that Lady Constance is an ardent spirit that has been caught in the toils of the unreal logic used by narrow enthusiasts for the suffrage, and a want of the sense of proportion appears in the exaggerated estimate of the power of the vote. The conditions in our prisons to-day, as revealed in this account, will cause a shock to many.

The Elements of New Testament Greek. By the Rev. H. P. V. NUNN. (3s. Cambridge University Press.)

This book is intended for students who began their study of Greek with the New Testament. It follows the ordinary method of Greek sentences to be turned into English and *vice versa*, but, very judiciously, verbs and their conjugation are introduced from the very first. The differences of Hellenistic and Classical Greek are only incidentally mentioned. It will serve as a useful manual for adults, but the English grammar of the appendix seems a superfluity.

The Gospel of St. Matthew. Edited by the Rev. T. WALKER, M.A. (University Tutorial Press.)

This edition contains the text of the Authorized Version, preceded by an introduction and followed by notes. These are well arranged and will be found useful for elementary purposes.

Sallust's Catiline. Edited by S. E. WINBOLT. (1s. 6d. G. Bell.)

We doubt whether Sallust's rhetorical and artificial style lends itself to a "Simplified Classic." The "Conspiracy" is here presented in thirty-two lessons, each consisting of some half-dozen sentences. Will it be possible for the pupil at the end of the term to have gathered from his reading a clear notion of "the main course of the narrative"? Assuredly some more help is needed than what is given in the headlines and the short notes at the bottom of the page. So with the language. "Animus impurus, dis hominibusque infestus, neque vigiliis neque quietibus sedari poterat" will, if the pupil trusts to the vocabulary and exercises, be rendered, "His impure mind, hateful to gods and men, could be quieted neither by sleep nor by sleepless nights." To convey in English the full force of the Latin would tax a ripe scholar.

"Oxford Elementary Latin Readers,"—Anecdotes from Pliny's Letters. Edited by W. D. LOWE. (1s. 6d. Clarendon Press.)

Pliny's "Letters" are rich in *Realien*, and therefore a most suitable book for beginners, when, as here, the stories are simplified and graduated. The notes are mainly grammatical, and grammar rules are prefixed to the English exercises. We have noted a few *corrigenda*. "After verbs of doubting, *quin* with the subj. is used." Only, of course, in negative sentences. "The verb *must* is translated in the passive voice by the gerundive." Latinisms like "The horse being killed," "I will go away," should not be propounded as examples.

A Dictionary of Classical Names for English Readers.

By W. T. JEFFCOTT. (1s. 6d. Macmillan.)

This is mainly a dictionary of mythology, but includes a few casual names of famous characters, authors, and places. As these may be found in any standard dictionary, we fail to see the *raison d'être*. It may help the non-classical reader of Milton—nine-tenths of the references are to Milton—but for Chaucer or Keats it is much to seek. Pandarus, Lamia, Thea, Melpomene, Colonus are lacking, and the list of desiderata might be endlessly multiplied. Instead of duplicating the name, the direction "pronounce as in English" would have sufficed. Quantities are marked, but the mistakes or misprints are numerous: Mānius, Lŷdia, Rēgulus, Rūbicon, Elēctra, Eurīpides, Plāto. Mecaenas (*sic*), and Alpheus (Al-fluse) can hardly be set down to the printer.

The Story of Jeanne d'Arc. By E. M. WILMOT-BUXTON. (1s. Harrap.)

Miss Wilmot-Buxton has been very successful in giving a vivid and attractive account of the wonderful maid. This book is the best we have seen for children, and tells the heartrending story simply yet penetratingly. The author gives prominence to the many difficulties that lay in the path of Jeanne d'Arc; pictures her as a human girl in spite of her mission, and draws the characters surrounding her in such a manner as to arouse a sense of reality. A good introductory chapter gives the condition of France at the time and the causes of those conditions, and throughout the book the varying and clashing motives are indicated. The constant repetition of the word "boyish" is irritating, and is, besides, not a very true epithet. A bibliography, even of a limited number of books, would have been a useful guide to the young people who will wish to extend their knowledge.

"Hachette's Popular French Authors."—Le Petit Gars.

By P. FIRCH. (8d.)

A pretty little story in easy French of the revolution in Brittany. There is a vocabulary, but notes or an introduction is sadly needed to explain the situation. *Ci-devants* is not given, and "gift" does not explain *obole*. The exercises for retranslation are an abridged version of the story.

Balzac's Gobseck and Jésus-Christ en Flandre. Edited, with Introduction, &c., by Dr. R. T. HOLBROOK. (3s. net. Oxford University Press.)

These two short stories, we are informed, are suitable for pupils who have had a year of good training in French. We can only say that the standard of French must be vastly higher in America than in England, and the notes, which occupy more space than the text, are assuredly better adapted for the University than the school. Sometimes they are philological dissertations suggested by a phrase. *Fumer sans flamber* is a peg for half a page on the art of translation, and *de plus haut qu'ils ne la voient* provokes another half page. The Introduction is an excellent résumé of Le Breton's "Balzac, l'Homme et l'Œuvre."

Une Cinquantaine de Morceaux de Poésie Française. Choisie par ALEX. ED. DELÉPINE. (1s. Murray.)

These fifty poems are intended for learning by heart, and a *questionnaire* is added to serve for conversation. Fables of La Fontaine and Florian form the first section, and every boy and girl should commit to memory something of La Fontaine. The other poems do not seem to us very happily chosen. Lamartine's two "Hymns" and Racine's "Last Confession" will not appeal to the young any more than Lemierre's "Invocation of Sleep" ("Livré au tourment de l'infamie le lâche Zoila, tombé Dans le marasme de l'Envie") or "The Sun" and "The Last Judgment," by obscure rimesters, which follow. In a book for repetition nothing but what is first-rate should find a place.

L'Oncle Scipion. Par THEURIET. Edited by JAMES P. PARK. (8d. Blackie.)

An excellent short story of a young scapegrace who is expelled from school, runs away from home, and falls on his feet in Paris. Here it is cut short rather abruptly. The notes are confined to explanations of words and phrases, and we do not see the use of notes, phrase-list, and vocabulary. *Pilon*, "drumstick" *commanditaire*, "sleeping partner," do not need the addition of "the tough sinewy leg not so palatable as the white meat of the breast," "partner who supplies the capital and leaves the management to others." On the other hand, for *velléités*, a hard word to render, there is no help given in either, nor for *le prix de revient*. "French style demands that no clause should terminate with a verb" is a bold assertion. A stove does not "purrr"; *quoc-part* is not pronounced *ko-par*, and *pain-rôtie* is a slip.

French Phrases for Advanced Students. By EDWARD KEALEY. (1s. 6d. Pitman.)

We welcome a slightly enlarged edition of this well selected and well arranged book of phrases. "Advanced" is a relative

term, and it is more elementary than Mr. Payen-Payne's popular book of French idioms. We happen to notice *fou* twice translated "fool," and "You'd always be stuck at his house" is a phrase with which we are not familiar.

Die Erhebung Preussens gegen Napoleon im Jahre 1813. By GUSTAV FREYTAG. Edited by OTTO SIEPMANN. (2s. 6d. Macmillan.)

This narrative of the War of Liberation is taken from the fourth volume of "Bilder aus der Deutschen Vergangenheit." To this the editor has appended an interesting selection of contemporary documents and poems—letters of Queen Luise to her father, of Blücher to his wife, the official German bulletin of the Battle of Leipzig, and Arndt's patriotic poems. The volume comes most opportunely, for nothing can be more wholesome for English boys at this hour than to read how a nation, downtrodden and crushed as Belgium is to-day, rose as one man and overthrew the oppressor, how women threw their wedding rings into the common stock, and professors like Niebuhr learnt the goose-step. They may learn, too, for them a harder lesson, that *der Deutscher Vaterland* is

Wo Eide schwört der Druck der Hand,
Wo Treue hell vom Auge blizt
Und Liebe warm im Herzen sitzt,

and that the Germany of to-day is but a temporary aberration—a *corruptio optimi* like the Empire of Napoleon. The introduction gives a full account of Freytag and his works. The notes are mainly philological. We wish the appendix had also been annotated with plans of the battlefield.

Direct German Course. By H. J. CHAYTOR.
(2s. 6d. W. B. Clive.)

This provides a first year's course for pupils who are beginning German at the age of fourteen or fifteen. Mr. Chaytor sees that a mere adaptation of his French would not be suitable for pupils of this age, whose progress should be suitable to their years, but in the matter he has not consistently observed this difference. What self-respecting teacher would ask, "Liebe ich meine Schüler?" "Ist euer Vater stark oder schwach?" "Wer ist höflich?" There is nothing in the course to suggest that German is a language worth learning, that it is the key to a great literature. Yet there are lyrics of Heine, *Volkslieder*, and cradle songs as beautiful as any of Herrick's or Blake's or Burns's, and simpler than many in the "Additional Exercises." *Vorlesen*, for instance (page 148), will stump some teachers. The vocabulary gives no assistance and there are no notes. The pictures would look an afterthought, and there is no reference to them in the questions. Is "Wenn er es täte, würde der Lehrer ihn strafen" an example of "a condition the fulfilment of which is regarded as impossible"?

Vilman's Analysis of the Nibelungen Lied. Edited by G. E. HUGELSHOFER. (1s. 6d. Harrap.)

An analysis cannot have the charm of Morris's verse, but all should know the story of Siegfried and Kriemhild, and Vilman tells it in spirited prose. The notes, otherwise satisfactory, give too many translations where there is no difficulty—*konnte es getrunken haben*, "he could have been finished with his drinking." There are long connected passages for retranslation.

Mathematical Problem Papers for Secondary Schools. By CHARLES DAVISON, Sc.D. (2s. 6d. G. Bell.)

This is a collection of 1,600 problems, arranged in 200 carefully graded papers, dealing with pure geometry, algebra, and trigonometry. The distinctive feature of this collection is its suitability for class use, and not merely for training those boys who will eventually enter for mathematical scholarships. Because of this and because of its moderate price it is certain to be very widely used in schools, and is likely to have a much greater influence upon mathematical teaching than one might suppose. We are of opinion that this small book deserves an extensive circulation, and it is this that makes the following criticisms necessary. There is too much stress upon the geometry and trigonometry of the inscribed and escribed circles of a triangle, nine-points circle, &c., so that a class is likely to be held back from more profitable work on elementary conics and projective geometry. Some of the problems which occur as isolated examples in separate papers should have been collected to form the heads of essays as in the author's "Higher Algebra." A few problems, only a few, are merely tricks and depend upon remembering comparatively unimportant results (e.g. CI, 2; CIV, 2, 6). Three misprints have been encountered (pages 16, 77, and 169). In a second edition we should welcome problems on elementary calculus in place of some of those we have here criticized.

Tables for Statisticians and Biometricians. Edited by Prof. KARL PEARSON, F.R.S. (9s. net. Cambridge University Press.)

These tables are issued with assistance from the grant made by

the Drapers' Company to University College, London, and this accounts to some extent for the extraordinarily low price. The whole work is an eloquent testimony to the self-effacing labour of a body of men and women who desire to save their fellow scientists from a great deal of irksome arithmetic; and the total time that will be saved in the future by the publication of this work is, of course, incalculable. There is an introduction of eighty pages, but it is assumed that students using these tables are acquainted with their applications, and have a working knowledge of the underlying theory. Some of the tables—e.g. those of the gamma functions—will be of value in many departments of applied mathematics, but to the statistician these tables will be indispensable.

Differential Equations. (Fourth Edition.) By Prof. FORSYTH, F.R.S. (14s. net. Macmillan.)

This edition differs from its predecessors chiefly in the addition of paragraphs upon the conditions governing the existence of regular integrals and of normal integrals of linear equations of the second order; upon methods of integrating total equations when the condition of integrability is not satisfied; and upon complete homogeneous linear systems of partial differential equations of the first order. Each of these additions seems to be perfectly natural, and serves to make the book still more useful as a working textbook on formal methods of solution. The author still refrains from inserting any discussions upon existence theorems, referring the more mature student to his "Theory of Differential Equations." It is superfluous to add that this textbook remains the standard introduction to this important branch of mathematics.

Arithmetic. By H. FREEMAN, M.A. (2s. 6d. G. Bell.)

The examples in this book will be found helpful, because they are based on statistical information which makes them both real and interesting. The book-work is slight, and, in the case of decimals, likely to do more harm than good, for rough checks are there used apparently as a substitute for the true understanding of the working.

"Rainbow" Music Reading Ladder for Beginners. By ERICA LOSH. (3s. 6d. net. Novello.)

Miss Losh has tried to simplify for children the difficulties of learning to read from staff notation by means of a series of diagrams, in which each note of the octave is assigned a special colour. Her system is worked out clearly and logically, and would no doubt prove a successful method of passing "from keyboard to music staff." Those children, however, who are accustomed to singing from the modulator, pass easily to staff notation and would hardly need this colour system to help them.

A Guide to Historical Fiction. By ERNEST A. BAKER.
(21s. net. Routledge.)

This is rather a cyclopædia founded on, than an enlarged edition of, Dr. Baker's well known "History in Fiction." Novels are classified in the chronological order of the period or events dealt with. A copious index of 150 pages enables the student to find at once any novel or novelist he has heard of, and, on turning to the text, he will get sufficient information as to the scope and contents to discover whether it is likely to serve his purpose. No pains have been spared to secure absolute correctness. It will be an indispensable book of reference for every school library and also for any bookseller who would be up to date.

A History of Germany. By H. E. MARSHALL. (7s. 6d. net. Frowde and Hodder & Stoughton.)

This is a parallel volume to Mr. Marshall's popular "History of France" and "Our Island Story." "No simple history of the German Empire," says the preface, "exists in the English language," for the simple reason, we would add, that no simple history is possible. The Germany of history is a loose federation of independent States, and the German Empire, as we know it, dates from the Franco-German War, and the supremacy of Prussia is the point at which this history ends. We have here a plain narrative of the wars, treaties, and alliances under each reign, but there is no attempt to portray either the life of the people or the literature. It is easier to interest children in German sagas, ballads, and songs, in Hans Sachs, Father Jahn, and even Goethe, Schiller, Lessing, and Heine, than in pragmatic sanctions and wars of succession. The author evidently holds that children should not be troubled with dates, but a table of dates (it need not be learned by heart) would greatly aid an intelligent reading of the history. Thus at starting we read of "Aquæ Sextiæ or Sextilian Waters," but there is no indication of the century in which the battle was fought nor, for that matter, that the name survives in Aix.

The Threshold of History. By H. R. HALL. (1s. Harrap.)

Scholarship and imagination have combined to make this little book as rare as it is valuable; it is one of the few that teaches history in the right way. Mr. Hall weaves his knowledge of the ancient objects of the Bronze Age into a story of those early days

both vivid and human. His aim, in which he succeeds remarkably well, has been to show the conditions of the period—the division of the people into warring tribes differing in various characteristics, the precarious nature of the food supply, the belief in magic, the arbitrary power of the chief, the commencement of trade intercourse, and the development of tools and weapons. This he has accomplished by relating the adventures of a boy, Bran, both in his own village and with various other tribes. By bringing in three generations, and by causing the boy to come into contact with some tribes more backward and some more advanced than his own, the various stages of improvement in the axe and methods of agriculture are skilfully introduced. The story is itself full of adventure; the language is simple, but not childish; and the information is given when the reader's mind is conscious of the lack. In the hands of a teacher who emphasizes the points of importance the book will create a taste for the true history of a people that we hope Mr. Hall will continue to satisfy. The illustrations are out of the common, and subtly suggest an atmosphere of antiquity. We doubt, however, whether a girl of that period would have a border to her skirt.

Reading Aloud and Literary Appreciation. By HARDRESS O'GRADY. (G. Bell.)

Mr. O'Grady is not a professional, nor does he pretend to have written a treatise on education, but those who have enjoyed the privilege of hearing Mr. O'Grady read French poetry know that he is himself a proficient in the art. Like M. Legouvé in his famous "L'Art de la Lecture," he gives the rules that he has elaborated and practised himself. There is a preliminary chapter on phonetics, with a few useful hints on voice production, and here we seem to have too much or too little. There is a diagram to show the position of the tongue for four vowel sounds (why only four?) which looks like a man swallowing a mouse. We are warned against the terrible consequences of pronouncing "pedagogy" "with a 'gug-gee' instead of a 'gug-gug,'" and told to "give the vowels in 'child' clearly as two sounds," but without a phonetic alphabet the directions are obscure. We may sigh for "a standard English taught everywhere," but it needs a finer ear than ours to detect the difference between the cultured English of Oxford and the cultured English of Cambridge. But these are only the prolegomena, and the body of the book is an exposition of reading aloud as an interpretation of literature. The main elements of good reading are considered under the heads of the pause, the stress, and the pitch or intonation. Various passages are thus analysed with a true feeling for the poetry. One or two are not well chosen for the purpose. No reader could make anything of the *saccadé* passage from Carlyle ending with the qualifying afterthought "for the most part." The advice to search for the key-word is dangerous doctrine. In Keats's "Ode to a Nightingale," Mr. O'Grady finds the key-word in "forlorn"; but, though the ode ends in a minor, we might, with equal justice, maintain that "ecstasy" is the dominant chord. One point is passed over on which direction is much needed. How far in reading verse should metre and rime be accentuated? The tendency of the young reciter is to beat time like a bandmaster, rimes playing the part of the drum; and this childish error is rightly corrected, but there is a tendency in our actors to fall into the opposite extreme, wholly disregarding the natural pause at the end of a line and aiming at veiling, rather than accentuating, the rhythm.

A Course of Practical English. By E. JAMES BAILEY. (1s. 6d. G. Bell.)

The writer informs us that this manual is the outcome, not of theory, but of the practical work of years as a master in a secondary school. We take it that his classes consisted mainly of candidates for Local Examinations, as the course follows the lines of the Oxford and Cambridge papers, specimens of which are given in an appendix. Grammar preponderates and the course provides answers for questions such as "Under what circumstances have English words both a masculine and feminine form?" "Give the masculine of 'filly,' 'vixen,' 'witch.'" "Give all the uses of 'do,' with examples." "Composition" is restricted to its form; the matter, it is ruled, cannot be treated in a textbook. "Punctuation" occupies a large space. It seems illogical to put it as the first section. How can a boy who cannot tell the parts of a sentence be expected to punctuate? We note some questionable statements. "He walked a mile" is not a cognate object. "I saw John as well as Thomas" does not equal "I saw John as well as I saw Thomas well." "Somnambulist" is not a hybrid of Latin and Greek. The book is not bad of its kind. Our quarrel is with "Practical English"—a survival fostered by the Locals.

"Days with the Great Novelists."—*Eliot, Dickens, Thackeray.* (3s. 6d. net. Hodder & Stoughton.)

An unpretentious volume, giving personal descriptions of the famous trio, under the form of a day's life at The Priory, Gad's

Hill, and in Onslow Square respectively. Passages from the novels, letters, and the biographies are skilfully interwoven. There are no shadows to the pictures, or any attempt at a critical study. There are a few slips, as *hors-d'œuvres* and "faultily null" in the first few pages; and we decline to believe that George Eliot read forty or fifty pages of manuscript to Mr. Lewes as her morning's work. There is a fine painting by C. E. Brock of Colonel Newcome among the Old Cods, but the illustration does not agree with the text.

The Complete Works of Shakespeare. Oxford Edition. Illustrated. (4s. 6d. net. Oxford University Press.)

The illustrations (16 coloured and 34 black and white) are mostly by old masters, but they include three pretty water-colours of Stratford scenes by W. W. Quatremain. An index of characters is a new and useful addition. The print is clear, but it is a pity that the margins are so scant.

Boys who became Famous. By F. J. SNELL. (1s. Harrap.)

Twenty-one boys, ranging from Bertrand du Guesclin to Mark Twain, are represented in these pages, and their stories are told in a manner likely to cause a desire for further information on the particular subject. But, while the incidents selected are such as to represent very human boys, the language and phrasing employed are not suitable for young readers. The author has forgotten that the book will probably fall into the hands of children who have not yet reached their teens, and the style will be unattractive to them. This is a pity, for the matter is an improvement on the ordinary collection of accounts of heroes and heroines. In its present form the book should form a storehouse for the story-teller who can reproduce what he reads in sufficiently simple language. There is a certain stiffness about the illustrations that is displeasing.

"Literary Reading Books."—*Masterfolk.*

(1s. 6d. Edward Arnold.)

A series of extracts from various well known English writers, each descriptive of such famous personages as Alfred the Great, Columbus, Wolsey, Bonaparte, &c., are gathered together to form a reading-book for schools. There is one woman—Joan of Arc—among them. The authors include Scott, Dean Stanley, Prescott, Froude, Carlyle, and Thackeray, beside lesser names. It is a serious lack in the list of contents that these authors are not given with the title of the different pieces. The name of the book is not the most happy: Turner, Oliver Goldsmith, and one or two others can scarcely be included in the term "masterfolk," which gives an unpleasant impression of domination. But the idea of introducing famous personages by means of literary English is a good one, and we hope this series will supersede the poor style so often met with in the usual reading-book.

Three Plays for Schools. By G. H. ALINGTON.

(1s. 6d. Bell.)

These plays are arranged in inverse order of merit. The first, "Alexander the Great," is amusing in parts, but does not evince good taste in its treatment of Alexander himself and Aristotle. The name "Big Little Sum" savours of an American Indian rather than a Hindu. The second play is a skit on Suffragists, into which some of the Knights of the Round Table are introduced. We doubt the wisdom of taking liberties with great names of the past whether in history or literature, and question whether the loss of reverence that results is in any way beneficial. The last play, "The Magic Cigar," does not show this defect, and is good fun throughout. Mr. Alington will be well advised to keep to this method, which provides pleasure without any questionable reserves. The plays have been produced in various schools.

Early English Classical Tragedies. Edited, with Introduction and Notes, by JOHN W. CUNLIFFE. (7s. 6d. net. Oxford University Press.)

This volume will be a welcome addition to the library of any serious student of English literature. Besides the elaborate Introduction, it gives the text of four early plays, "Gorboduc," "Jocasta," "Gismond of Salerna," and "The Misfortunes of Arthur." The first two are familiar, by name at least, to Macaulay's schoolboy as the first and second English tragedies written in blank verse. The other two are not named even in Henry Morley's cyclopædic "History of English Literature." The Introduction is a learned and elaborate history of tragedy in Italy, France, and England from the Augustan age to the times of Elizabeth. That a second-rate rhetorician like Seneca should for centuries have ruled supreme on the stage so that a great scholar like Scaliger put him a little higher than Euripides, in his eyes the greatest of tragedians, is one of the most extraordinary facts in the history of letters. The first part of the Introduction, recounting the blunders and absurdities of the Italian commentators on Seneca, is somewhat tedious, but we are grateful for the analyses of plays that few have time or patience to read, and as we pass to English moralities and the earlier plays of Shakespeare, including "Titus Andronicus,"

which Prof. Cunliffe is inclined to think Shakespearean, the interest grows.

Keats: Hyperion. Edited by MARGARET ROBERTSON.
(2s. Clarendon Press.)

Prof. de Sélincourt's masterly edition of Keats has left little for subsequent annotators to add, and Miss Robertson, who frankly acknowledges her indebtedness, does not profess to do more than make his learning available for school use. One aspect of the poetry is scarcely touched by either; yet Keats's prosody deserves careful study, as forming a link between Milton and Tennyson. Such a line as "Thea, Thea, Thea, where is Saturn?" should not be passed over in silence. The posthumous "Fall of Hyperion" is given in an appendix, but its relation to "Hyperion" is not discussed. For a sixth form (it would be unwise to attempt it at an earlier stage) Miss Robertson's edition will serve as a valuable classbook, but they should be able to consult Dr. de Sélincourt. A study of Keats's alterations would serve as a model introduction to the art of poetry.

"Oxford Garlands."—(1) *Patriotic Poems.* Selected by R. M. LEONARD. (2) *Sonnets.* Same Editor. (Each 7d. net. Oxford University Press.)

The first of these volumes was on the eve of publication before the War broke out, but it is introduced by the Poet Laureate's poem that appeared in the *Times*. It would be an invidious task to select from the innumerable *vers d'occasion* which have since appeared; but, so far, the occasion has produced few poems that will live in future anthologies. Mr. Leonard has given us most of the classical masterpieces, but we miss some favourites, and think it a mistake to include the late Poet Laureate's "Is Life worth Living?" and Gray's "Elegy" (abridged). Questions of copyright presumably account for the exclusion of Mr. Rudyard Kipling.

A Book of English Prose. Part I. By PERCY LUBBOCK.
(1s. 6d. Cambridge University Press.)

This reader is arranged for preparatory and elementary schools, and the extracts range from Sir Thomas Malory down to R. L. Stevenson. The passages are well chosen, of sufficient length to be intelligible apart from the context, and most of them by masters of style. The notes might be somewhat fuller. Thus, in "The Passing of Arthur," which stands first, there are word-phrases ("eft," "but if," "had into") no child will understand, and Tennyson's splendid version should have been referred to or noticed.

An Anthology of English Verse. By A. J. WYATT and S. E. GOGGIN. (Clive.)

This second edition has been considerably enlarged, and advantage has been taken of the last Copyright Act to add specimens of Swinburne, Meredith, Patmore, R. L. Stevenson, and others. These are judiciously chosen and greatly enhance the value. We would suggest that in a third edition selections from earlier poems be added. English poetry does not begin with Wyatt and Surrey.

The Mother Tongue.—Book I: *The Practice of English.*

By J. W. ADAMSON and A. A. COCK. (2s. 6d. Ginn.)

This is an adaptation for English schools of the corresponding volumes in the American series, wherein Grammar and Composition are treated in separate volumes. The recommendations of the Grammatical Terminological Committee have been throughout adopted. We are a little doubtful whether this combination is an improvement. Will the grammar really help the composition? The earliest exercises are founded on model narratives of some considerable length, and the pupil is required to find the central point of the story, to point out how the writer has brought out the action, and then to frame similar narratives. Will he be helped by studying at the same time the analysis of simple sentences and the rules for forming plurals? This is a moot point on which teachers differ, and those who agree with us should not be deterred from giving the book a trial. They may ignore the grammar or use it independently, and they will find a copious and varied provision of theme for essays, narratives, descriptions, and expositions, carefully graduated and accompanied by directions and hints intended both for the pupil and the teacher.

Shakespeare's Stories. By STANACE and MARY MAUD.
(1s. 6d. Arnold.)

The stories of Shakespeare's plays as told by Charles and Mary Lamb are scarcely modern enough in style, and form difficult reading for younger children. A really literary version in simple modern English would be a boon, but the authors of this reading book have not succeeded in providing it, as throughout the style is unworthy of the subject. Such a phrase as "Ariel, quaking in his shoes . . ." is incongruous. Wherever possible, the conversations are constructed with Shakespeare's own words, and sufficient of the thought-processes are related to make the motives of each character clear; but the personal descriptions and details of colour of cloth-

ing, &c., which are given seem scarcely necessary. The illustrations are reproductions of famous paintings, and the general appearance of the book is attractive.

"Cassell's Modern School Series." Geographical Section.—
Book IV, *Scotland, Ireland, and Canada.* By T. W. BERRY. (1s. 4d.)

The obvious link between these three countries is emigration, but of this there is hardly a word. The preface dwells on the advantage of associating history with geography, but, while we have sketches and portraits of notable Scotchmen and Irishmen, including Mr. Carnegie and "Lord Beresford" (*i.e.*, Lord Charles), it would seem that Canada has no worthies. Recent history, too, is ignored. "The tide in the fortunes of Ireland has turned"—that is all, and Home Rule is never once mentioned. The black-and-white illustrations are a good feature, but the colour plates (see page 156) are crude.

A Short History of London. By KENNETH H. VICKERS.
(2s. 6d. Macdonald & Evans.)

This is a matterful and masterly resumé in two hundred pages of the history of London down to the end of the eighteenth century. It is, of course, easy to point to omissions, and the literary side is the weakest. Chaucer is not in the Index, and there are but two casual references to Dr. Johnson. In an enlarged edition of which the author holds out hopes, we should like to see a few plans and maps of old London.

Illustrations to British History, 55 B.C. to A.D. 1854. Edited by J. TURRAL. (2s. 6d. Clarendon Press.)

This companion volume to Edward and Rait's "Short History of England" is an excellent compilation by the joint editor of "Lyra Historica." The extracts hardly touch constitutional questions, and deal with social life and manners, monasteries, the peasantry, players, the Plague in London, factory riots, and so forth. The sources are most varied. We begin with Caesar (translated) and end with W. H. Russell of *The Times*. We hope the book will find its way into elementary as well as into secondary schools, where it is sure to be welcomed.

Pax Britannica. By H. S. PERRIS. (5s. net. Sidgwick & Jackson.)

This historical work, by the ex-Secretary of the Universal Peace Congress, was published last year, before there was a thought of War, and this tardy notice may seem ironical. Such is far from our intention, and we think it well, when all our thoughts are on war, to be reminded that the main current of English history has set towards peace, both internal and external. Thus we are reminded by the author that the organized peace movement dates from the year that saw the downfall of Napoleon, and that two years later came the agreement with America which has secured the peace of the Canadian frontier for a century.

Naval Warfare. By JAMES R. THURSFIELD. (1s. Cambridge University Press.)

It is enough to note the fact that the War has already called for a second edition of this manual, written by one who, as Admiral Sir Charles Otlley testifies, is second to no civilian as an authority on naval matters. The problems that he here treats theoretically and in the light of history are now being worked out before our very eyes, but without some such guide it is impossible to read with understanding the daily reports of what is going on in the Baltic, the North Sea, and the Channel.

The Inner Life of Animals. Edited by ERNEST BELL. (G. Bell.)

An excellent collection of stories old and new, illustrating animal intelligence. Most of them naturally concern dogs, and most are vouched for by their owners. We do not profess to be anti-vivisectionists, but the book should strengthen the case for the Bill exempting dogs from surgical experiment. The story of the dog who could add, subtract, and divide, and spell the French and German for "dog," is hard to credit, but it is vouched for by the editor of the *Animals' Friend*, and accounted for as an instance of thought transference.

SCIENCE, &c.

The Quaternary Ice Age. By W. B. WRIGHT.
(17s. net. Macmillan.)

The literature dealing with glacial geology has always been extensive, and in recent years it has attained still greater proportions. Mr. Wright has rendered a valuable service to geologists in writing a comprehensive general work, which not only sums up the present state of our knowledge and serves as a guide to the literature, but also stimulates the reader to a renewed interest in the amazing and still insoluble problems which are wrapped up in the last great chapter of the geological record. The author deals very fully with glaciers and ice sheets and the drifts for which they are responsible, and then proceeds to describe in turn the glaciation of the British Isles, Europe, the Alps, and

North America. Chapters on Quaternary Lakes, the Loess, Quaternary Mammals, and Quaternary Man lead up to a discussion of the various theories which have been advanced to account for the remarkable departure from the uniform sequence of geological evolution represented by the Great Ice Age. Unfortunately, none of these theories are tenable, and we are as far as ever from a complete understanding of the conditions which lead to extended glaciation. Late glacial oscillations of level are then described, and the author attempts to explain these by a development of the isostatic theory, which assumes that the earth responds to a change of surface load—in this case the ice load—as a balance does when weights are removed from or added to its pans. The volume concludes with a discussion of post-glacial changes of climate. The author has added to glaciology a most valuable contribution—well written, well printed, and beautifully illustrated. Geologists who have hitherto been discouraged by the difficulty of keeping up to date in a subject which expands visibly every month may now grasp the modern position with the minimum of trouble and the maximum of pleasure.

The Elements of Chemistry. By H. LL. BASSETT, B.A., B.Sc. With an Introduction by Prof. W. J. POPE. (4s. 6d. Crosby Lockwood.)

The production of a new book of this kind is usually prefaced with an apologetic explanation of the gap in chemical literature which it is designed to fill. In the present case the author's excuse for having recourse to print seems to us to be more adequate than is generally the case. The book is intended to meet the requirements of medical and dental students. It often happens that the unfortunate student who is not specializing in chemistry is obliged to purchase separate bulky works on the various branches of the subject, and then to sort out the particular portions which fall within his course. Mr. Bassett has realized the inconvenience of such a procedure, and his book is an attempt—and, we may add, a successful attempt—to present all the chemistry, general, inorganic, organic, and practical (including qualitative and quantitative analysis), such as is required for the Conjoint Board and the First Medical Examinations, in a single volume. The book is well and accurately written, and the printing and diagrams leave nothing to be desired. That the author has received an introductory benediction from Prof. Pope, one of England's most brilliant chemists, will in itself be a sufficient guarantee of the value of his book. In conclusion, it only remains to add that in secondary schools such a book ought to be of special service in the training of students for such examinations as the Senior Locals. The principle on which it is based—the elimination of large treatises for elementary science training—is one which deserves to be welcomed.

An Introduction to the Study of Organic Chemistry. By H. T. CLARKE, D.Sc., F.I.C. (6s. 6d. Longmans.)

This book has been written to meet the demands of the new syllabus of the Lower Examination in Organic Chemistry as revised by the Board of Education in 1912. A preliminary knowledge of inorganic chemistry is assumed, but the reader is not expected to be familiar with the nature of organic substances. As an introductory textbook this latest example appears to be a satisfactory, authoritative, and well arranged exposition of the "orderly principles and structural unity" which characterizes the subject. In organic chemistry the immense mass of experimental data which require to be marshalled before the student in order that he should realize its essentially practical basis is apt to confuse the very principles which they serve to illustrate. Dr. Clarke meets this difficulty by omitting practical details which would unnecessarily cut up the thread of the argument. This treatment will commend itself to most teachers of chemistry, for proficiency in laboratory work can be attained only in the laboratory under personal guidance. The book is therefore essentially theoretical and is written with the special object of displaying the symmetry and classification of a gigantic subject. The author may be congratulated on his success. A valuable feature which occupies the last sixteen pages is a summary of the principal classes of compounds dealt with. The text is well printed and structural formulae are clearly expressed. Teachers and students alike may be safely encouraged to base their work on this wholly admirable book.

A Textbook of Geology. By Prof. JAMES PARK, F.G.S. (15s. net. Griffin.)

Prof. Park has written with some success on the geology of New Zealand and on mining and economic geology, for in these cases he had something fresh to say which was not unworthy of the permanence of print. We cannot, however, commend the practice of expanding any University course of lectures into a textbook unless there be some circumstance, be it literary style, originality of outlook, or capacity to arouse enthusiasm, which distinguishes it

sufficiently to make a strong appeal to a wider audience than that of the lecture theatre. In the present instance, Prof. Park has published a book which has none of these redeeming attributes. Doubtless in New Zealand it will find appreciative readers because of the numerous examples drawn from local geology, but elsewhere it will be felt that, while the book contains no serious errors and gives the material facts of the science, yet it must be put in the same category as the poets whom Horace banned. It has been written essentially for mining, engineering, and agricultural students, but, except in the first case, there is no more application of the principles of geology to the requirements of such students than would be found in any ordinary textbook. Recent developments of geology due to the discovery of radium find little mention, and Prof. Park is wrong in attributing to Joly (which he spells "Jolly") an age of 2,000,000,000 years for our slowly cooling planet. The most valuable feature of the book lies in its excellent series of plates and diagrams. There are 70 of the former, including a large number of beautiful illustrations of fossils, and 264 drawings in the text. We are sorry that Prof. Park has written what is little more than a compilation instead of using some of the vast amount of new material still outside the pale of the textbook, and thereby rendering a service to geologists in countries other than New Zealand. We feel that the book is too conservative and scarcely worthy of the date upon its title-page.

Methuen's "Textbooks of Science."—*A Third Year Course of Organic Chemistry.* By T. P. HILDITCH. (6s.)

Two books, entitled respectively "First Year Organic Chemistry" and "Second Year Organic Chemistry," written by Dr. Dunstan and Mr. Thole, have preceded this volume, and deal with the aliphatic and benzene compounds. This volume, the third of the series, is more advanced in character, and is concerned with the heterocyclic compounds and a number of aliphatic and carbocyclic compounds, which presented difficulties too great for their inclusion in the earlier volumes. Amongst many other bodies, the following may be mentioned as receiving treatment: lactones, thietes, betaines, furfuran, pyrrol, indigo, the azoles, pyrones, alkaloids, cyclic derivatives of urea, carbohydrates, terpenes, pyridine, and quinoline. It is to be regretted that the type used for formulae is so small that it is rather difficult to decipher. The book should be of great service to advanced students of organic chemistry.

The Theory of Relativity. By L. SILBERSTEIN, Ph.D. (10s. net. Macmillan.)

This introduction to an important development of modern mathematical physics is partly based upon a course of lectures given at University College, London, a year ago. After the first chapter a thorough knowledge of the principles underlying the work of Clerk Maxwell, Lorentz, &c., is assumed, and the book therefore appeals to a somewhat narrow circle. To the well equipped student, however, who has not had the opportunity of attending one of the very few courses of lectures which have been given in this country upon what may become an essential part of mathematical physics this volume will be very welcome. It is comparatively self-contained, the initial chapters summarizing the results and any special methods required later in the course of the argument.

Definitions in Physics. By KARL EUGEN GUTHE. (3s. 6d. Macmillan.)

We agree with the author that to write a book of this kind is not an easy task. Let us hasten to add that the task has been extraordinarily well performed, and we commend the work to science teachers on account of its logical arrangement and the careful accuracy of the individual definitions. It would facilitate speedy reference if the index gave the number of the page as well as of the paragraph. Also the index, although fairly good, could be improved—e.g. it would be well to give "anisotropic" as well as "isotropic." Multiple references are provided where required. Line and tube of induction are adequately defined, but line of force is a useful concept which we could not trace. We mention these points in the hope that a new edition will soon be called for. The book should be a help to teachers and students of physics, provided it is used as an aid to critical formulation of concepts and not as a compendium of definitions to be memorized for examination purposes.

Introduction to Modern Inorganic Chemistry. By J. W. MELLOR. (Longmans.)

This book deals with the chemistry of the non-metals and metals up to a standard approaching that required for an Intermediate Examination in Science, and it also contains a short section describing a few important organic compounds. The author points out that his larger work on Modern Inorganic Chemistry represents the sequel to this book. It strikes one as very suitable for school purposes, and the author's original style makes it distinctly interesting reading. The illustrations are very numerous, and one is

glad to recognize that many of them are new. At the end of each chapter a selection of questions, culled from various sources, should afford excellent tests of the student's progress. More care should have been taken in reading the proofs in order to avoid statements which tend to be obscure or misleading. On page 76 an experiment on electrolysis is described, and the diagram shows a *voltmeter* inserted *in series* with an accumulator and an electrolytic cell. This would lead a student to believe that a voltmeter measures current strength. Moreover, the high resistance of the voltmeter would reduce the current to a very small value. On page 419 a statement is made that "the amount of electro-decomposition is not affected by the strength of the current, the time the current is passing . . ." The context states that "the quantity of electro-decomposition is exactly proportionate to the quantity of electricity which has passed," but, unless the reader happens to know that "quantity of electricity" is equal to the product of current strength and time, he will not be likely to reconcile the two statements. On the same page the author speaks of electrolyzing aqueous solutions of several salts, amongst which is included *cuprous chloride*. The formula for disodium phosphate on page 540 has been misprinted, and the paragraph on page 622, dealing with the use of platinum in making electric-light bulbs, is not entirely satisfactory. On the next page the student is told that "osmium is used for staining and hardening organic tissues in histology." On page 644 the formula $C_{14}H_{50}O_{10}$ is assigned to cellulose. The statements with respect to optical rotation on pages 646 and 647 are very misleading to students who are unfamiliar with the subject, for it can hardly be maintained that "dextrin solution *bends* a ray of polarized light to the right." The formula of naphthalene on page 657 is given as $C_{10}H_{10}$.

A SCRAP OF PAPER.

A SCRAP of paper! just a ragged scrap
Of yellow parchment, fly-blown, musty, rotten!
Who but an Englishman would care a rap
For an old treaty—obsolete, forgotten?
Shall we be bound because a Prussian king
In a weak moment did a foolish thing?

"Ein Mann ein Wort," the German proverb ran,
A German's word was good as English credit;
That was before the battle of Sedan;
We needs must lie; our Chancellor has said it.
If Belgium we plunder, ravage, sack,
With English gold we mean to pay her back.

We still are pious, still the God of Hosts
Beside the Kaiser stands in our dispatches,
And in His cause the righteous Uhlan roasts
Housewives and sets to church and minster matches.
Our Nietzsche preached the gospel of the fist,
And Eucken is our new evangelist.

Our God is still the Hebrew God of Might,
The righteous end the means unrighteous hallows,
For big battalions Providence will fight,
'Tis writ in Heaven "Deutschland über alles."
So let us pray each day "Thy Kingdom come,"
Till dawns the German made millennium."

The Association has special facilities for supplying particulars of the newest openings for girls and for finding posts for those desirous of obtaining work.

MADAME

**BERGMAN ÖSTERBERG'S
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT,
FOR RESIDENT STUDENTS.**

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

**BERGMAN ÖSTERBERG'S

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

teaching profession.

The Agency, which is under distinguished
patronage, has been established 40 years.

Prospectus will be forwarded gratis on
application.

NO CHARGE FOR REGISTRATION.

No fee of any kind is due unless an
appointment be obtained through the
Agency.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS

Messrs. GABBITAS, THRING & CO. have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. **TRANSFER** of excellent Boarding and 5,350. Day School for Gentlemen's Daughters, in a healthy residential district near London. Average annual receipts and profits of last 3 years about £2,800 and £860 respectively. Vendor retiring for private reasons. Prepared to transfer on **EASY TERMS**. **EXCEPTIONAL OPENING, STRONGLY RECOMMENDED.**

No. **TRANSFER** of **OLD ESTABLISHED AND SUCCESSFUL** Boarding and 5,348. Day School, with Boys' Preparatory Department, in **HEALTHY COUNTRY TOWN** near London. 6 Boarders, fees 48 to 54 guineas, and 46 Day Pupils. Gross receipts over £700. Part purchase money accepted in first instance.

No. **TRANSFER** of **OLD-ESTABLISHED BOARDING AND DAY SCHOOL** for Gentlemen's Daughters, at South Coast Resort, containing 8 or 10 Boarders and nearly 40 Day Pupils. Prospectus fees 95 to 105 guineas, and £11 to £40, respectively. Gross receipts over £2,000 per annum.

No. **TRANSFER** of **BOARDING AND DAY SCHOOL, WITH KINDERGARTEN DEPARTMENT, IN SUBURB OF AN INLAND MANUFACTURING CITY**, containing about 20 Boarders and 50 Day Pupils. Prospectus fees 65 guineas, and from 3 to 15 guineas respectively. Gross receipts of last 12 months nearly £1,500. Profits about £600. **GOODWILL** £500.

No. **TRANSFER** or **PARTNERSHIP WITH** 5,315. **A VIEW TO SUCCESSION**; flourishing School for Gentlemen's Daughters, at South Coast Resort, containing 25 Boarders and about 20 Day Pupils. Fees 75 to 87 and 24 to 30 guineas per annum. **PROFIT NEARLY £1000, AND INCREASING. EXCEPTIONALLY BEAUTIFUL PREMISES, SPECIALLY ERECTED.**

No. **TRANSFER** of exceedingly flourishing 5,289. **DAY SCHOOL** of the highest class, in one of the best residential Suburbs of a **NORTH-EASTERN CITY**, containing between 30 and 35 girls, all Day Boarders. Prospectus fees 42 to 60 guineas. Gross receipts about £2,000, and **PROFIT OVER** £700. Goodwill £1,500.

No. **TRANSFER** of **SMALL, GOOD** 4,982. **CLASS BOARDING AND DAY SCHOOL**, on the South Coast. Vendor retiring for reasons of health. Containing about 15 Boarders, and 8 or 10 Day Pupils. Prospectus fees 36 to 48 guineas, and 6 to 12 guineas. **EASY TERMS** would be made.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars before** arranging introductions to their clients. No charge is made to Purchasers.

GEORGE GILL & SONS, Ltd.

The Oxford and Cambridge Edition.

Lists of the prescribed books and "Guides and Syllabus Extracts" for the 1915 University Local Examinations post free.

A NEW FRENCH READER.

LA GUERRE.

Being articles by members of l'Académie Française and extracts selected from the leading French and Belgian newspapers on the present war. With notes on the idiomatic phrases by TAYLOR DYSON, M.A. Crown 8vo, 128 pp. ... 10d.

The extracts have been, as far as possible, arranged in sequence, and are carefully chosen. The retaining interest of the book will widen the vocabulary and impress modern French constructions upon the mind of the student much more readily than the hackneyed "unseens" from which the master, hitherto, has had to choose.

A NEW READER FOR JUNIOR FORMS.

GREEK AND ROMAN GODS AND HEROES.

By P. C. SANDS, M.A., late Fellow St. John's College, Cambridge. The aim of the writer is to introduce to pupils of 12 to 14 years of age the stories of the Greek and Roman Gods and Heroes, and some account of Greek and Roman beliefs, and so not only to bring them into contact with a most beautiful series of legends, but to **enable them to understand allusions to classical lore in their later reading**. With 9 full-page reproductions of world-renowned pictures and numerous other illustrations. Crown 8vo, 128 pp. ... 10d.

LAY OF THE LAST MINSTREL. (Introduction and Cantos I, II, and III.)

Edited for Preliminary Candidates by Rev. F. MARSHALL, M.A. ... 8d.
(The complete book is issued at 2s.)

THE STUDENT'S WORD BOOK. By F. A. GINEVER, B.A. With Introduction by Professor W. W. SKEAT ... 4d.

The great difficulty in teaching spelling is overcome by "The Student's Word Book." This is not the usual disconnected and meaningless list of spelling words, but a comprehensive and classified arrangement which excites the curiosity and creates a live interest in the subject.

FIRST AID IN ACCIDENTS. By Sir J. COLLIE and C. F. WIGHTMAN, F.R.C.S. 9d. net.

"It deals with really 'First Aid.' The directions are very good and so clearly written that anyone of ordinary intelligence cannot fail to understand them."—LANCET.

NURSING AT HOME. By Sir J. COLLIE and J. D. MORTIMER, F.R.C.S. 8d. net.

"The information is given in a simple and practical manner, but is thorough and up to date."—NURSING TIMES.

MUNICIPAL SECONDARY SCHOOL FOR GIRLS.

Wanted, for January next, a **MISTRESS** to teach some Science, Mathematics, and English subjects to Junior Forms. Ability to teach Class Singing a recommendation. Degree and teaching experience in Secondary School essential.

Salary £100 to £140 according to qualifications and experience.

Forms of application, &c. (which should be returned not later than Friday, 6th November), may be obtained on application to THE DIRECTOR OF EDUCATION, Town Hall.

By order,

L. HEWLETT,

Town Clerk and Clerk to the Local Education Authority.

Town Hall, Barrow-in-Furness.

20th October, 1914.

TYPEWRITING.

MANUSCRIPT, 6d. per 1,000 words. Testimonials, 6d. per dozen. Examination Papers. Perfect work.—MAUD GLENISTER, 3 Friern Park, North Finchley, N.

BRADFELD COLLEGE, BERKS.

The **HEAD MASTERSHIP** becomes vacant at Christmas next. Applications for the post should be addressed, on or before December 1st, to—

Mr. OWEN M. POWELL,

7 Lincoln's Inn Fields, W.C.

(Clerk to Warden and Council),

from whom information as to the conditions may be obtained. Candidates must be members of the Church of England, but not necessarily clergymen.

RIPON AND WAKEFIELD DIOCESAN TRAINING COLLEGE FOR SCHOOL MISTRESSES.

Applications are invited for the position of **LECTURER** in History and Geography. Salary £80, increasing by annual automatic increments of £5 to a maximum of £130, with board, lodging, and medical attendance during term.

Applications, on forms to be obtained from the Rev. THE PRINCIPAL, Training College, Ripon, to be returned on or before November 14th, 1914.

CUMBERLAND EDUCATION COMMITTEE.

WORKINGTON COUNTY TECHNICAL AND SECONDARY SCHOOL.

Applications are invited for the vacant post of **PRINCIPAL** of this Dual Technical and Secondary School, which was opened in September, 1912.

The School is "recognised" by the Board of Education for Grants, and consists of three main divisions:—

The Secondary School of 280 pupils;

The Trades School of 75 pupils;

The Evening Technical School of over 400 students.

The whole Institution has been given a strong technical bias in sympathy with the Iron and Steel and Mining Industries of the district, while providing at the same time a sound Secondary School education. The Secondary Department earned a very favourable report at a recent full inspection of the Board of Education. The Trades Preparatory Department will in future be organized as a "Junior Technical School," but the bulk of the advanced technical work takes the form of Evening Classes and the Principal is expected to organize and supervise this side of the work. Domestic Science is a highly developed part of the curriculum for girls.

The School is liberally staffed and excellently equipped. The staff includes a Second Master and a First Assistant Mistress. The latter is responsible to the Governors in matters affecting the health and welfare of the girl pupils.

While the Principal will be responsible to the Governors for the institution as a whole, it is expected that the three main departments of the School will be under the charge of experienced principal Assistants to whom details of organization and curriculum will be delegated.

Applicants must hold a degree in Honours in Mathematics or Science of a University in the United Kingdom, or an equivalent qualification, while being in full sympathy with the literary side of education. They must not be under 30 nor more than 50 years of age. Experience in a similar post will be a recommendation. Preference will be given to a married man.

Commencing salary of £550 per annum, rising by two yearly increments of £25, to a maximum of £600.

The person appointed will be required to come into residence at Workington when the School reopens in January, 1915.

Further particulars, School Prospectus, and forms of application may be obtained from the undersigned, by whom applications, accompanied by copies of not more than three recent testimonials, will be received up to the 16th November, 1914.

C. COURTENAY HODGSON,

The Courts, Carlisle. Clerk to the Governors.

26th October, 1914.

TESTIMONIALS.

EXPERT WORK. POST FREE.

15 copies each of three (no carbons), 2 6.

30 of one, 1 6.

All Uniform Copies. Applications, &c.

The Vincent Typewriting Bureau

Manager: Mr. F. VINCENT (Lond. Univ.).

25 Doverfield Road, Brixton Hill, London, S.W.

WANTED, after Christmas, a MUSIC STUDENT. Pianoforte lessons given by Academy Professor. Small premium. Good general education essential. Apply—PRINCIPAL, St. Helena's College and School of Music, Harpenden, Herts.

OCCASIONAL NOTES.

IT is evident that the War will give a rude blow to German as a school subject. Already we hear of schools in which the "Germans" have all taken to Latin or Greek. Already the fight over the corpse has begun, or, in plainer language, suggestions about the language which is to take the place of German are coming from various quarters. Mr. H. G. Wells, writing to the *Times*, pleads for the study of Russian. Mr. Alington, in his little volume, "A Schoolmaster's Apology," puts in a plea for Italian, mainly on the ground that Dante is better worth study than any other modern poet, except Shakespeare. The claims of Spanish as the tongue which is most needed for commercial purposes have long been urged.

WE do not think that the case for any of these languages, as a language to be generally learnt, is very strong, though there may be good reasons why individual boys and girls here and there should learn Italian or Russian, and a good many boys in commercial towns ought certainly to be learning Spanish. But a modern language which claims the second place in the linguistic curriculum (French, we presume, will retain the first) must have many and special qualifications for its high function. Its literature must be of worldwide influence and contain a great deal that is of real educative value. It must introduce us to a people whose history, civilization, and methods of life are worth study. It can hardly be held

that such a combination of virtues resides in any of the three tongues mentioned. So far as we know, neither the literature of Spain nor that of Russia is specially valuable to growing minds. The old age of the one country and the youth of the other prevents their history from being suitable for the young. Boys and girls will not gain very much by studying a nation which has fallen into decay or one which is only half formed and in many respects backward. The history of Italy, too, fascinating as parts of it are, is almost a blank for some centuries. Germany, and especially Prussia, deserves study because its national life contains so many elements which are foreign to our own. Even the present aberrations of the German mind and conscience will not destroy the value to ourselves of a study of those elements, and their value will remain the same whether in the future we are enemies or friends of the Germans. Indeed, proposals to neglect the study of German come rather curiously at a moment when German methods and ways of thinking are exciting more interest amongst the general public than they have ever done before.

SOME years ago Mr. P. J. Hartog opened his book "The Writing of English" with the sensational statement that "the average English boy cannot write English," and no less a person than Lord Morley of Blackburn was persuaded to give his imprimatur to this sweeping condemnation. To judge, however, by the letters from soldiers at the front with which the daily newspapers are crowded, either there must be a vast number of boys above the average in our army or training in composition must be part of the recruit's course. Neither of these explanations seems probable. The fact rather seems to be that Mr. Hartog's assertion was based on a misapprehension of the psychology of his fellow-countrymen. The Englishman can write well enough, when he has something to write about and some one to whom he wants to say it; he cannot write gracefully about nothing, like the Frenchman, nor spin cobwebs out of his brains like the German. He will not write for the mere sake of writing, and, on the whole, we think that is not a bad quality, though it causes some inconvenience to his teacher. No doubt the writing of English is still neglected in many of the big public schools, but we see no particular reason to believe that as a body young Englishmen cannot express themselves on paper.

THE first lesson to be drawn from these soldiers' letters, then, is that English men and boys can write when they have something that they want to say, and it was one of the great merits of Mr. Hartog's book that it urged that school children should be given exercises in composition of a real and practical kind, in addition to themes which require the play of imagination or the exercise of abstract thought. The second lesson to be derived from the newspaper columns is that the English boy—and, we doubt not, the English girl also—writes better when he is addressing a definite audience, a characteristic pointed out by Canon David in an address to the College of Preceptors some time ago. Letter-writing, therefore, might well form a larger element in composition than it does. Such letter-writing should not be confined to the recital of personal experiences or personal views. The purely objective treatment of a sub-

The Future
of Modern
Languages.

The Case
for German.

Hints
for Teachers.

ject is a very necessary exercise, and one much neglected, as far as our experience goes. One of the happiest of Mr. Hartog's suggested themes is the description of a bicycle or fishing-rod for the benefit of a person who has never seen one.

ST. LEONARD'S SCHOOL, St. Andrews, is offering free education to a limited number of daughters of officers of the army and navy who have been killed or incapacitated in the war. Christ's Hospital can admit seven sons of fallen soldiers. The Head Master of Malvern College suggests that a scheme for admitting soldiers' orphans to the public schools at a low cost should be drawn up by the Committee of the Head Masters' Conference. Such suggestions will meet with universal approbation. We may add that whatever is done in this way must be done for the rank and file as well as for the officers, and the county secondary schools must join in the movement. We are glad, too, to hear from the Chairman of the Private Schools Association that there are many private-school masters who are finding it possible to take boys at reduced fees. At the same time, we think that the suggestion made by a retired Admiral in the papers that such examples might well be generally followed is just a little cool. Private-school masters will suffer considerably from the War: it is an old story that, when an Englishman has to cut down expenses, the first item to be reduced is his bill for education. We would rather hint that the proprietors of private schools may need some help—possibly a little later rather than at this particular moment—for the education of their own children, and that generous minded Boards of Governors might bear them in mind. In this connexion we may note that the City of London College is offering six free scholarships to students whose parents, owing to the War, find it difficult to pay the usual fees, without any restriction as to class. This is an excellent example.

THERE will be a great opening for education of the lighter kind at the military training centres during the coming winter. The recruit's day is over at five or six in the afternoon, and from then till ten his time is his own. Sing-songs cannot fill up all the long evenings. The Board of Education has issued a circular to the Local Education Authorities, suggesting the provision not only of formal instruction and systematic classes, but also of lectures and discussions of an educational character. The University Extension Board are also, we believe, considering the same problem; in fact, it will be a great chance for continuation schools on a considerable scale, with a bias towards "recreative" education. Probably many keen young fellows, with their eye on winning their stripes, will be anxious to bring their rusty three R's up to a respectable level. Audiences for lectures, with or without lantern slides, in history, geography, light science, and natural history would certainly not fail.

WE associate ourselves most heartily with the protest which Miss Burstall and others have made against the organization of a "Children's Army" of collectors for the Prince of Wales's Fund. Children have been exploited far too much already by philanthropic societies. The objections to encouraging young people to collect

money are numerous. It is impossible to be sure that the young collectors feel a genuine interest in the cause for which they solicit alms; in most cases, probably, they beg simply for the fun of the thing and the novelty of playing the game of sturdy beggars. A peculiarly objectionable feature in the present proposal is the suggestion that the children should be given "rank" according to the amount collected. This is to offer rewards, not to those who work hardest, but to those who have the best social position. But if collecting money is demoralizing, earning it is not. Let children get up little concerts and entertainments in their schools for the relief funds; or let them, as is being done in some cases, sacrifice some little pleasure—sports or an outing to provide money.

IT is so constantly asserted, and often by people who ought to know better, that the education given in an elementary school is wholly "bookish," that it may be worth while to give some exact figures. The writer of this note, happening to be in one of the classrooms of a girls' department the other day, analysed the weekly time-table. To History and Geography four periods of thirty minutes, or two hours, are assigned, and to Literature and Reading five periods of thirty minutes, or two and a half hours; Grammar, one period of thirty minutes. This is the whole of the work which was connected with books; indeed, it is really more than the whole, for Geography, as it is now taught, can hardly be considered a "bookish" subject. The rest of the time is given to Arithmetic, which gets three and a half hours a week, Science, Drawing, Singing, Housewifery, Needlework, Laundry, and so forth. So vanishes the phantasm of a "bookish" curriculum. Equally remote from the truth are the gibes of so many platform speakers and newspaper writers about school education being nothing but cramming children with facts. The truth is that boys and girls in elementary schools do not spend more than four or five hours a week in assimilating new knowledge.

SHOULD the usual educational meetings be held during the winter? The question has been mooted in various associations, and, so far as we can hear, generally answered in the affirmative. And indeed why should not these meetings be held! If they were merely play, they might well be dropped, but their supporters presumably regard them as something more than play, a serious business, a States General of the profession more representative than Section L of the British Association. The omission to hold them this year would be a confession that they are no more than play. No doubt all self-interested agitations, even of the most legitimate kind, it is quite right to suspend. The National Union of Teachers has shown right feeling in ceasing its salaries campaigns, the sameright feeling as the working men showed in settling their strikes the moment War was declared, but no association should let the War interfere with its purely educational activities. If they are useful, they are just as useful now as at any other time.

SINCE the above Note was written we have heard of a movement for transferring to the Registration Council the organization of the Week of Conferences.

A Wrecking Motion.

This, in our opinion, would be simply a wrecking motion. The Joint Committee has for some time been sitting, consulting constituent associations, and discussing ways and means. We cannot swap horses in mid-stream. Moreover, it is most unlikely that the Registration Council would undertake a task for which it is not specially adapted and which lies outside its proper function.

THE statement of the London Teaching staff sub-committee made to the Education Committee on October 14 shows how the War is affecting the staffing of elementary schools. Over a thousand assistant masters in London schools are on active service, being, we believe, no less than 50 per cent. of those eligible for military service. The number of men teachers available for these vacancies has proved inadequate, and 250 women have been appointed to boys' departments. The heavy demand thus made on the supply of teachers will make it necessary to appoint 250 additional "unattached" teachers in the immediate future. The Committee would like all these to be men, but it does not expect that more than 200 schoolmasters will be forthcoming; the number must therefore be made up with women. We may add here that the London Education Committee is also holding out a helping hand to the Belgian Refugees by granting free admission to the secondary schools of any children who have attended similar schools in their own country.

THE Board of Education has issued a brief, but useful, circular on the teaching of European history in connexion with the War. The time, as they well say, calls for knowledge as well as devotion and courage. The Circular is supplementary to that issued in 1908, and begins where the latter left off. A year's course on European history in the nineteenth century for the upper forms of secondary schools is outlined. The first obvious difficulty is the immense mass of material. The growth of nationalities must be the guiding thread. The separation of Holland and Belgium, the unification of Italy, and the foundation of the German Empire, will be the great landmarks. The history of the Balkan peninsula must be dealt with, and, fortunately, it is a history which lends itself to treatment on a large scale. The world-politics of the last forty years, too, cannot be ignored. Another course is suggested for lower and middle forms, and this we think errs through excess of matter. The best syllabus for such forms would be probably one based on the great struggles of England against the powers that have sought to dominate Europe—Philip II, Louis XIV, Napoleon. Belgium comes in every time.

WE have before us the authorized version of Mr. Norman MacMunn's address to the Montessori Conference at West Runton. We pass over the panegyric of the Dottressa as the first who has "confirmed along a line of pure and positive scientific reasoning the conclusions of the philosopher and sage as well as of the empiricist," and come to Mr. MacMunn's extension and application of this universal theory to the secondary school. He starts with the assumption that for the child all play is work and all work is, or ought to be,

A Montessori Disciple.

play. We are on the eve of the greatest intellectual renaissance in the history of the world, and the "Open Sesame" of this new Utopia is Partnership. All the teacher has to do is to match the pupils of his class in pairs and provide them with copies of Mr. MacMunn's little textbooks. At present these are available only for teaching French, but, if these pay, we are promised at least a hundred little volumes to cover four or five of the principal subjects. The method is as follows. There are two textbooks composed on parallel lines, consisting of questions and answers. A. questions B. from his red book, and B. questions A. from his blue book. What part, if any, the master plays, and whether any record is kept of the performance, is not explained. As to the result, however, Mr. MacMunn is prepared to go before a Commissioner for Oaths and swear that a small boy of ten has refused picture books because he could not leave his French verbs. If perchance a translation of this address should reach Dr. Montessori, we wonder whether she will acknowledge her evangelist. To us the new method seems a combination of the worst forms of empiricism—Mangnall's Questions and pupil-teacherdom. The pronunciation of a class self-taught or mutually taught French on this method would be a curiosity.

MR. J. H. E. CREES, the Head Master of the Crypt Grammar School, Gloucester, has written a long letter to the *Times Educational Supplement* on the Board of Education's Circular on Examinations. Much of it he apparently likes, but he is naturally very much annoyed at the proposal of the Board to restrict the right of Head Masters and Mistresses to send in boys and girls for the Junior Examination. He very much overstates the case, by the way, when he speaks of the "proposed abolition of examinations of the Junior Local standard." All that is suggested is that the Board should have the right to forbid a school to take a junior examination. Mr. Crees has found the Junior Locals a valuable incentive to the young barbarians of the fourth form, and so they undoubtedly are in schools where these youngsters can work for them and pass them without being prepared by illegitimate means. But in too many schools working for examinations means cramming, and in such cases a higher Authority must have power to prevent harm being done to the children. In other schools, where the principal does not approve of examinations for any children under sixteen, the prohibition would be felt as a boon, as it would be an irrefutable answer to the clamours of parents and governors. There are many head mistresses who take this view of junior examinations and an increasing number of head masters. Why will not Oxford and Cambridge show the way by abolishing the Preliminary, an examination that even Mr. Crees would hardly defend?

MR. CREES also raises the very important question of what body is to be the co-ordinating authority. In the Circular the Board proposes to reserve that position for itself. Mr. Crees strongly objects to this arrangement, on the ground that the officials at Whitehall are amateurs. He proposes the Registration Council as an alternative. Though we have no great love for Government departments, we suggest that it is hardly fair to condemn all the officials as amateurs. After all, there

The Co-ordinating Authority.

are now a large number of Inspectors who have had experience of school work. Nor do we think the Registration Council could undertake the work at present. It has a big job on hand, quite sufficient for its energies. It must be remembered, too, that the Registration Council will be represented, along with the Local Education Authorities and Examining Bodies, on the Board's Advisory Committee, and through this representation teachers ought to be able to make their weight felt. There remains the suggestion which has been put forward in some quarters that a Statutory Examination Council of teachers should be formed to superintend the whole examination system; but we doubt whether such a Council, formed as it would be of representatives of every class of school, would be found to be a very practical working body.

LOCAL AUTHORITIES.

Board of Agriculture. OPINIONS may differ as to the advisability of allowing the Board of Agriculture and Fisheries to control agricultural education, but there can be only one view, as far as Local Authorities are concerned, as to the essential inequity of the conditions upon which the large funds at its disposal are administered. During more than twenty years Local Authorities, with varying degrees of efficiency and success, have made themselves responsible for agricultural education without receiving much assistance from any Government Department. At the same time, a considerable proportion of that expenditure has been applied in the establishment and maintenance of collegiate centres. The Board of Agriculture desired to bring these centres into existence, but with the limited resources then at its disposal it was powerless either to establish or maintain them without the co-operation of Local Authorities. When, therefore, large additional funds for educational purposes were provided, it might have been expected that the Board would relieve the Authorities of their obligations to collegiate centres. By so doing, local funds would have been released for other developments of agricultural education.

A Vexatious Policy. UNFORTUNATELY all Government Departments appear to hold, as axioms of intelligent administration, that under no circumstances, if they can prevent it, shall the weight of a local burden be diminished, or any additional grant be made by Parliament, without an additional contribution from the rate-payer. Consequently the Board of Agriculture and Fisheries, instead of considering how it might best assist Authorities (which had not neglected agricultural education), and at the same time encourage them to develop their work in certain directions, says in effect, Whatever you are spending you must continue to spend, and unless you spend more, for such purposes as we may direct, you will receive no benefit from the available grants. This policy is entirely inequitable as between the different Authorities, for some have incurred a large expenditure and some have expended very little: it is economically unsound, as tending to perpetuate the maintenance of grants, or forms of instruction, which may not be required; it may also tend, as the Board imposes particular "developments" throughout the country, to the multiplication of unnecessary officials and institutions.

Dislocation of Existing Machinery. THE Report of the Education Branch of the Board of Agriculture and Fisheries on the Distribution of Grants in 1913-14 contains a useful survey of the various developments in progress. The statement that the county "proved to be too small a unit within which to develop a complete system of agricultural instruction" suggests some inquiry as to the particulars in which agricultural instruction differs from other branches of pedagogy. It requires, it seems, a province for its adequate development, while for education generally the county area is large enough. This new departure in administrative machinery is either necessary for all forms of education or not necessary for agricultural instruction. It is not necessary for agricultural instruction. Unless the "Advisory Council" in each "province" is endowed with the power to grant or withhold money, and has a detachment of

officials and inspectors, it is not likely to influence effectually the work of the autonomous units which it is supposed to "co-ordinate." To divide the country into twelve provinces and to secure that in each province there shall be a centre for higher agricultural education and research, serving the area of the province, appears to be a sound principle. And the Board might have made itself responsible for the maintenance of these centres and dealt directly with the county units regarding other developments of a "complete system." If this had been done, the objectionable features of the Board's present policy would have been avoided.

It may be gathered from the Board's report that, whatever other departments of learning may lack in the matter of financial encouragement, the science and art of agriculture is now to be substantially endowed. In 1909-10 the Board distributed £12,900, in 1913-14 £67,939. By far the larger proportion of this sum—viz. £53,876—has gone to institutions of University rank, advisory and research work, grants to farm schools, technical classes and local lectures accounting for the modest sum of £8,125. The average net expenditure of County Councils in England on agricultural education appears to be about £72,037, and of this amount probably nearly £30,000 will be applied in grants for the maintenance of collegiate centres and advanced branches of agricultural teaching. In view of the large additional subsidies now provided by the Board for these centres, a considerable part of this £30,000 ought now to be released and rendered available for other purposes.

Pursuit of Agricultural Science. THE Board of Agriculture is commendably anxious to co-ordinate educational effort and to prevent waste which, it somewhat rashly declares, is "inseparable from isolated effort." The general assumption is, of course, that the great Local Authorities do not know their own business or what it is expedient or necessary to do in the areas for which they are responsible. Regarding the waste alleged to be inseparable from isolated effort, however, it may be observed in the Board's report that there is a tendency to create self-contained Departments for agriculture and rural economy at collegiate centres. It appears as though, having started with the idea that the administration of a complete system of agricultural instruction must be, as a preliminary, separated from the Board of Education, the Board of Agriculture desires to inaugurate not only a new system of local control, but a new staff of instructors in science who must all be labelled "agricultural." This zeal for supplying students in agriculture with botanical, chemical, and zoological knowledge, known as agricultural, may be easily overdone, and occasion both an uneducational specialization and a waste of effort.

Leeds Finances. IN the Annual Report of the City of Leeds Education Committee interesting tables are given showing the growth of educational expenditure in the city between the financial year 1904-5, the first complete year after the "appointed day," and the financial year ended March 31, 1914. The following are the figures:—

ELEMENTARY EDUCATION.

			Increase
	1904-5.	1913-14.	per cent.
Gross Expenditure, Revenue	£282,600	£331,868	17.43
Account	129,458	163,369	26.19
Drawn from Rates	146,489	157,866	7.77
Exchequer Grants			

It is noted that since the Education Act of 1870 no less than £1,644,843 has been expended in providing school accommodation and equipment in Leeds. The outstanding debt for both elementary and higher education is now £1,097,593.

Higher Education. BETWEEN the years 1904-5 and 1913-14 there has been a great development of higher education in Leeds, involving an increase of no less than 253.23 per cent. in the expenditure. The figures are as follows:—

HIGHER EDUCATION.

			Increase
	1904-5.	1913-14.	per cent.
Gross expenditure, Revenue	£35,558	£125,603	253.23
Account	9,108	39,281	331.27
Drawn from Rates	24,040	49,415	105.55
Exchequer Grants			

The rate for elementary education for the year was 1s. 6½d., and for higher education 4d., in the £. It is satisfactory to note that there was a slight increase in the number of candidates in Leeds for pre-

paratory training in teaching, although, it is stated, the supply of intending scholars is still very inadequate. In reference to the proposals of the Board of Education that liberal allowances should be given to intending candidates during the time they are attending secondary schools, it is suggested that such proposals may possibly attract additional candidates, but they will not provide a permanent solution to this difficult problem.

Supply of Teachers. "To ensure an adequate and permanent supply of candidates it is necessary to improve the financial prospects of the profession." This is unquestionably the one thing needful. When it was determined that the preparatory training of the teacher should take place in secondary schools, and that a broader, if not higher, standard of educational attainment should be demanded, it was inevitable that various avenues of remunerative employment would be available for the pupils educated under the new conditions. If the inducements of the teaching profession do not compare favourably with those offered in other occupations open to them, there can only be one result. The economic effects of the educational reform are now obvious. Local Education Authorities, as the Leeds report says, are keen to co-operate with the Board in dealing with the difficulty, but it involves large financial considerations, and the only way to meet the difficulty is to give larger salaries to teachers, which can only be done by very substantial aid from the Imperial Exchequer.

Higher Education Rate. THE Derbyshire Education Committee, in their last report of the County Council, direct attention to a question which is of some importance to Local Authorities. It has been generally understood that the rate of 2d. in the £ which the Council of a county may raise for the purposes of higher education was independent of any rate levied on special areas. Section 18(1)(a) of the Act of 1902 provides that the County Council may, if they think fit, charge any expenses incurred by them with respect to education other than elementary on any parish or parishes which in the opinion of the Council are served by the school or college in connexion with which the expenses have been incurred. It is difficult to reconcile the expression "any expenses" with the statutory limitation. The Local Government Board, however, hold that rates levied on special areas must be included in the amount of the 2d. rate.

SCIENCE NOTES.

Transit of Mercury. GIVEN fine weather, one of the most interesting observations for which small telescopes can be used with complete success will be possible on November 7, as on that day will occur a transit of Mercury across the sun's disk. The external contact at ingress is timed for 9h. 15m. 15s. a.m., and at egress for 2h. 9m. 28s. p.m. The least distance between the centres will happen between three and four minutes after twelve o'clock. The diameter (angular) of the planet will be about one two-hundredth of that of the sun, so that it will be advisable to project the sun's image on a good white surface in a darkened room. For direct visual observation through a telescope it is, of course, necessary to use proper light-reducing apparatus. Ingress will occur 156 deg. from the north point.

Intellectual Boldness. BY timing the observations—or, should circumstances prohibit actual observation, by the inferior device of using the predicted figures—it would not be difficult to infer the approximate distance from the earth to the sun, treating the orbits as circles and using Kepler's Law relating to periodic times. A boy or girl who follows the argument will learn something more than a few geometrical principles, for the imagination which does not shrink from applying these principles to million-miled celestial distances has learnt something of the intellectual boldness with which Greek astronomers were so splendidly endowed.

British Association's Australian Meeting. NOTWITHSTANDING the shadow of war, the first meeting of the British Association in Australia was a notable success. The number of members exceeded all previous records, and much solid work was done. Grants to local research were larger than usual, while the brilliancy of the principal addresses and lectures is being

revealed to those of us who stayed at home as full reports come to hand. Sir Douglas Mawson arrived just in time to open the discussion on Antarctica, and Prof. David produced the newly discovered Darling Downs skull at the right psychological moment with dramatic effect.

From Liège and Louvain. PERHAPS the most far-reaching discovery into the nature of living things was the cell-theory of Theodore Schwann. Born in 1810, Schwann went to Louvain in 1838 as Professor of Anatomy, and it was in 1839 that he gave to the world his "Microscopical Researches into the Accordance in the Structure and Growth of Animals and Plants," which was translated (under the above title) for the Sydenham Society eight years later. In 1847 he left Louvain for a chair at Liège, and in 1854 designed an apparatus for rescue work in mines, the precursor of those used to-day, in the form of a respirator with self-contained provision for absorbing carbon dioxide and liberating oxygen. It is well that we should bear in mind that the science of histology was founded by Schwann of Louvain.

Lectures to Recruits. SIR A. SELBY BIGGE has drawn attention to the opportunity for instructive lectures and classes for the recruits during the long winter evenings. It is not always easy to find the appropriate subject, so we would point out one course of lessons which would undoubtedly be welcomed by the men. We refer to electricity, to be dealt with in relation to telegraphy and telephony. It appears feasible to start with a field telephone, and to work in somewhat heuristic fashion to elementary principles and thence back to modern applications in a broad manner. The electric torch would be a possible subject for an isolated lecture. We should be glad to hear from any of our readers who may be taking part in giving scientific instruction to Kitchener's men during their hours of recreation.

A Good Example from Paris. ON our table there lies a short report of a meeting in Paris of the Académie des Sciences, which took place on October 5. We had previously received reports of weekly meetings in September, including one of a meeting on the day when the German Army made its nearest approach to the city. Doubtless the savants are continuing to meet regularly, and it would be well if the example were taken to heart by the Committees now meeting to make arrangements for London meetings and conferences during December and January. Unless for a very exceptional reason, educational meetings especially should be vigorously maintained. The need for doing our best for the citizens of the future should be more evident to-day than ever before; and work, time, and money devoted to improving educational methods and administration are efforts towards national service which it would be wrong to neglect.

THE BRITISH ASSOCIATION (SECTION L).

PROF. PERRY presided over Section L (Education) of the British Association, and his Presidential Address, now published in full, in spite of its liveliness, is depressing reading. He takes as his subject "The Science of Education," and begins by telling us that the thing does not exist. There is a Science of Engineering, but the Science of Education has still to be created; and he ends by apologizing for delivering an address containing no idea that he has not already published time after time in the last thirty-five years. All honour to Prof. Perry as a pioneer and veteran reformer of mathematical teaching, but man cannot live by mathematics alone; and when he discourses on the theory and practice of teaching in general he appears, like the Bourbons, to have learnt nothing and forgotten nothing; or rather, like Dr. Johnson, he boasts that all that is to be known about education is already known by him. In education, he pronounces, we are still in the observational stage, and so far our observations have not succeeded even in simplifying the phenomena to be studied. Nor would it profit much if the first principles of the science were established; our pedagogues are such a hidebound race that they would still keep to the old ruts.

For anything that appears in the Address it would seem that our public schools had changed no whit since Prof. Perry

began his crusade thirty-five years ago. "Every clever man who has gone to a public school, or to Oxford or Cambridge, worships the system which has taken from him his spiritual birthright, his individuality, his initiative, his common sense, his power to think for himself." And the steam-roller that has produced this dead level is, we need hardly add, Prof. Perry's *bête noire*, the classics. The clever boy is kept at school till twenty or twenty-one grinding at the classics, and proceeds to the University with a scholarship, "stale and tired with the reception of ancient learning, of other men's thoughts," and stays there for another three or four years with his nose to the grindstone. Sir Frederic Kenyon's Address to the Classical Association is held up to ridicule. Prof. Perry pays no attention to anything his classical friends say, because he knows that the greatest classical scholars only devote themselves to re-editing some Greek text that has been edited over and over again.

We regret to see a distinguished man of science on such an occasion descending to such clap-trap rhetoric. Prof. Adams, in his "Evolution of Educational Theory," has stated clearly and judiciously the claims of Education to rank as a science, and several of our contributors have shown in recent articles what has been done and is doing in experimental psychology; but our President says all this is naught. We fully agree that the classics still occupy too large a place in the secondary curriculum, that Latin is begun too early, and that Greek should be reserved for boys who will continue the study at least to the age of eighteen; but Prof. Perry grossly exaggerates both the numbers of the Classical Side and the time devoted to classics. In most schools the age for superannuation is fixed at nineteen, and the limit of age for entrance scholarships at Oxford and Cambridge is nineteen. All literary study may be described as "the reception of other men's thoughts," and to brand on this ground the study of Homer and Plato as soul-destroying, while commending the study of Shakespeare and Milton, is illogical and unscientific. Does every public-school man "worship" the rock from which he was hewn? The leading reformers of the system, some wise and some unwise, have been public-school men. We name at random Dr. E. A. Abbott and Sir John Seeley (English Literature); Edward Thring and R. H. Quick, Mr. A. C. Benson and Mr. Oscar Browning (Eton). And Prof. Perry, himself sometime a Clifton master, should not have forgotten what science teaching in public schools owes to Canon J. M. Wilson. The gibe about re-editing for the hundredth time some Greek text, and the ignorance displayed by classical scholars of their own literature, only reveals the critic's ignorance. The names of Jebb, Verrall, Butcher, Pelham, W. W. Fowler, and Gilbert Murray are sufficient refutation.

It would be tedious to expose all the exaggerations, illogicalities, and misstatements that we have noted in the Address, and we will only add a few of the most glaring. "Poor boys are most frightfully handicapped for the race of distinction, but, in spite of this, nearly all our best writers have been boys of the common people"; yet in the same paragraph we are told that the worst thing that can befall a boy is to get a scholarship and pass to a secondary school or thence to the University. There he will learn nothing worth knowing; whereas in the primary school "every boy does laboratory work in mathematics and natural science." "There can be no doubt that poor boys have now an enormous advantage over the sons of rich men." Where, then, is the handicap?

In the ideal school of the future for boys of eleven to sixteen English subjects will predominate. The teacher of English "ought to know enough Latin and Greek and Celtic and Old English and modern languages to be able to illustrate the derivation of English words through their roots." How many professors of English could satisfy this first qualification? And are there any English words, except place names, derived from Celtic roots? There will be no Classical and Modern Sides, but "some boys will take to history and philosophy, some to poetry and imaginative literature." We can readily believe that the boy of the future who has learnt decimals in an hour at the age of eight and at fifteen easily

gets to understand the infinitesimal calculus will at the same age be found browsing on Kant's "Critik" and Herbert Spencer's "First Principles." In the ideal school there is to be no censorship of books. "If I saw a boy reading a 'penny dreadful,' I would not stop him; nor if he were reading Paine's 'Age of Reason' or any wretched treatise on psychology or logic." Women, we are told, are naturally clever and, if left to themselves, "have more capacity [than men] for acquiring mental power," but, by reason of the vicious cramming of the high schools, they have relapsed into stupidity. "The education of men is in a bad way, but that of women is becoming much worse." And yet Prof. Perry has always advocated higher education for girls.

"In ancient times," we read, "only very old and exceptionally clever men were allowed to study geometry." This hardly agrees with the inscription over the doors of the Academy; but let that pass. Prof. Perry is exceptionally clever, and, if in no other respect, he resembles the Greeks in the gift of perpetual youth. It is not too late for him to begin the study of psychology, to read some more recent pedagogic literature than "Sandford and Merton" and to make himself acquainted with what is being taught in the Universities and public schools and what is not being taught in primary schools. Let him join the newly founded Society of Education, and by the next meeting of the British Association he may have learnt to speak less superciliously of schoolmasters and schoolmistresses and of those researchers who are laying the foundations of a science of education.

THE MUNICH TRADE CONTINUATION SCHOOLS.

A BOOK of remarkable topical interest ("The Schools and the Nation," trans. by C. K. Ogden; Macmillan, 6s.) has been placed at the service of English educationists and of social and industrial students by the issue in English dress of various addresses of Dr. G. Kerschensteiner, the Director of Education since 1895 of the City of Munich, collected under the title of "Grundfragen der Schul-Organisation." He is the world-famous author and organizer of the system of continuation trade schools of that city, by means of which all boys leaving the elementary schools at fourteen years of age are provided not only with the means of continuing their general education, but with express facilities for acquiring an intimate technical knowledge of their trades or occupations conjointly with systematic instruction bearing upon their daily life and duties, and in relation to their future responsibilities as citizens.

The system has been gradually developed, but always in the closest co-operation with the trade guilds, and its final success has been assured by the adoption by the municipality of compulsory measures ensuring the attendance of apprentices and others up to the close of their seventeenth year at the continuation trade schools. In the present year girls will also come under the provisions of the same law. These schools for boys are managed by the municipality and the trade guilds jointly. Special buildings of large size (of which there are now seven, with three more in course of erection at a cost of £100,000) have been erected in various parts of the city, and suitably equipped for practical instruction in the various trades, numbering some fifty-six, for which provision has been made. These in Munich are chiefly handicraft in character, some of them requiring considerable artistic ability and training.

The conspicuous outstanding feature of the system is that the instruction is given virtually within working hours at least prior to 7 p.m., and extends from six to nine hours per week over a period of at least nine months for four years. The course of instruction has achieved a marked influence for good and has secured the entire confidence and support of

(Continued on page 750.)

The
Liberty Bodice
TRADE MARK
(Knitted Fabric)

For Pupil and Mistress!

All who wear the "Liberty Bodice" (Knitted Fabric) obtain the fullest benefit from exercise.

Its pliability, with the adequate support given to the body, makes the "Liberty Bodice" an indispensable garment for wear in games and drill.

Another important feature, especially for the growing child, is the flexible strapping which supports the entire weight of underclothing from the shoulders

Leading Physical Drill Instructors recommend the "Liberty Bodice."

Made in WHITE and NATURAL Colours.

For Boys and Girls, 1 to 3 years, 1/3s.; 4 to 8 years, 1/6s.; 9 to 13 years, 1/9s. Also for Young Ladies, 1/11s. Small, Medium, and Women's (deep-fitting), 3/11s. Large and Outsize, 4/6.

If unobtainable in your district send P.O.:

HORACE MARSHALL & SON'S NEW BOOKS.

NOW READY.

PRECIS WRITING FOR SCHOOLS. By C. L. THOMSON. Price 1s. 6d.

The book contains about a year's work in Précis for beginners. The exercises are all of a literary character, and are adapted to the needs of pupils in the fourth year of the ordinary Secondary School Course.

POEMS FOR COMPARATIVE STUDY. By J. EATON
FEASEY, of Rammoor County School (the University Demonstration School), Sheffield. Price 1s. 6d.

PROSE TEXTS FOR JUNIOR FORMS. Edited by
C. L. THOMSON. Price 9d. each.

THE PILGRIM'S PROGRESS. Pt. I.

GULLIVER'S TRAVELS.

LEGENDS OF EARLY SCOTLAND.

SIR ROGER DE COVERLEY.

RIP VAN WINKLE AND SLEEPY

HOLLOW.

LIVES FROM PLUTARCH. (Dry-

den's Translation.)

LEGENDS OF EARLY ENGLAND.

(Chiefly from Freeman's "Old English History.")

LEGENDS OF EARLY ROME.

(Chiefly from Arnold's "History of Rome.")

THE PILGRIM'S PROGRESS. Pt. II.

ROBINSON CRUSOE.

ENGLISH: A MODERN GRAMMAR. By G. H. CLARKE, M.A., and G. T. UNGOED, M.A. A work based on recent studies in the Grammar of Modern English, and useful for middle and upper forms. Price 2s. 6d.

CHILDREN'S SINGING GAMES. Music by ALBAN DOBSON, B.A. Words by LETTICE THOMSON. A Collection of Songs with Action, suitable for use in Kindergartens. Price 1s. 6d.

A FIRST BOOK IN ENGLISH LITERATURE. By C. L. THOMSON. A simple History of English Literature, with typical passages from that Literature. Much care has been given to the many illustrations. In 6 Parts. Price 2s. and 2s. 6d. per volume.

THE NEW LATIN DELECTUS. By W. JENKYN THOMAS, M.A., and E. P. DOUGHTY, M.A. Beautifully illustrated. Part I. price 1s. 6d. Part II, price 2s. 6d.

The Delectus is intended for the earlier reading of boys and girls who learn Latin, especially in schools with a leaving age of about sixteen.

New Illustrated Catalogue post free on application.

TELEGRAMS: EURHYTHM, LONDON.

A BOOK THAT "MAY BE USED WITH ADVANTAGE WITH ANY FRENCH GRAMMAR."

EIGHTH EDITION. With Supplementary Easier Exercises.

Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on French Syntax.

By **FRANCIS STORR**, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

LONDON: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

all classes engaged in the various industries. The system is rapidly spreading all over Germany.

The book contains an interesting chapter on the right policy and methods for the conduct of the elementary school, in which attempts at vocational training are condemned, and a most suggestive account as to the course taken for both boys and girls in the eighth or final year with a view to interest the pupils in the realities of life and as a preparation for their future. The place of science in the curriculum, both in respect of the method of presentation and the scope to be covered, is carefully considered, and all through the whole course of training handwork—the learning by doing—is regarded as a vital necessity.

As a result of these wise measures it is stated that in this great city of 600,000 inhabitants all boys, with the exception of 8 per cent., leaving the elementary schools, go straight to definite trades. It is also remarked, as showing the democratic character of education in Munich, that the children of *all classes* attend the elementary schools from their sixth to their tenth year, and that there are only 396, or 1 per cent., of the children in private schools. The book has other interesting chapters dealing with the Duty of Municipalities, the Organization of Higher Schools, and the Training of Teachers which are well worthy of attention, and Lord Haldane contributes a pregnant introduction.

J. H. REYNOLDS.

JOTTINGS.

WE regret that, in consequence of the duties that have devolved on him in consequence of the War, Prof. Campagnac has been unable to contribute his promised article on Latin to "Idola Linguarum," and we have to thank Mr. Strong, an Emeritus Professor of the same University, for filling the gap at very short notice.

THE War has its lighter side. A widow lady undertook to receive two Belgian refugees, preferably a mother and daughter. One evening two spinster ladies arrived and were told with apologies that they would have to share one bedroom, her own that she had given up to them. In the night she heard them moving about and went to see whether they were ill or wanted anything. There was a bright light in the room, and it occurred to her before knocking to peep in and see what they were doing. She fetched a chair, looked through the fanlight and detected them ("je vous le donne en cent")—shaving.

THE REV. H. COSTLEY-WHITE has announced his intention of resigning the Head Mastership of Bradfield College at Christmas. Mr. Costley-White was a scholar of Balliol College, and an Assistant Master at Rugby from 1903 to 1910, when he was appointed to Bradfield in succession to Dr. Gray.

At the last meeting of the Registration Council it was decided that a provisional list of registered teachers be printed for publication, giving only the name, professional address, registration number, and date of registration of each registered teacher, and that all titles be omitted. The number of applications up to date was 4,297, composed as follows: Universities, 162; elementary, 945; secondary, 2,436; specialist, 754.

THE *Schoolmaster* boldly advertises "our personally conducted tours," *inter alia*, for Paris at Easter and Belgium at Whitsuntide.

AFTER forty-four years of fine work as Head Master of Saxlingham Schools, Mr. Walter George Fillmore passed away on October 7 at his residence at Saxlingham. On retiring from school some time ago he was the recipient of a testimonial subscribed by scholars in all parts of the world. If he had lived till January 1915 he would have completed fifty years' residence in Saxlingham.

WE regret to announce the death of the well known East Anglian schoolmaster, Mr. C. D. Pridden, M.A., late of Roslyn House, Felixstowe, which took place in the first week of October. The deceased, it appears, was cycling from the Coast Development Offices towards his new residence, Gulpher, and when near the

cricket pavilion he dismounted and a moment after fell down dead. Mr. Pridden had been put to much inconvenience and worry owing to the War. Shortly after the commencement of hostilities, Roslyn House, his home and school, where for many years he carried on a flourishing school, was taken by the military authorities. After several weeks of incessant worry, a generous friend placed a newly acquired residence at the deceased gentleman's disposal, and thither he transferred his school. Undoubtedly the strain and anxiety brought about his death, and he dies a civilian martyr of the War. He leaves a large family, for whom deep sympathy is felt.

THE L.C.C. announces that, in consequence of the large number of London teachers who have volunteered, there is a pressing demand for temporary teachers. Any person, male or female, who possesses the necessary qualifications for teaching in an elementary school could be of service. The demand is greatest for men, but in some cases women are being employed in boys' departments.

By way of a foot-note to our remarks in another column on private-school masters and the War, we may mention the formation of the Professional Classes Relief Committee, news of which reaches us as we go to press. Amongst the numerous bodies represented on it are the Head Masters' Association, Head Mistresses' Association, Assistant Masters' Association, and Assistant Mistresses' Association, and representatives of other societies are to be added.

CHRISTMAS BOOKS.

Discoveries and Inventions of the Twentieth Century. By EDWARD CRESSY. (7s. 6d. net. Routledge.)—This is a sequel to the well known volume by Robert Routledge dealing with the nineteenth century, but it is hardly an exaggeration to say that the work to be recorded in the last twenty-five years (the author has wisely taken a backward glance) surpasses in bulk and importance that of the previous seventy-five. We need only mention at random wireless telegraphy, aircraft, electric traction, motor-cars, submarines, radium and Röntgen rays, and the cinematograph. All these subjects and many more are here treated with full scientific knowledge, but with as few technicalities as is possible, so that the non-expert can follow most of the text though he has only a rudimentary knowledge of mechanics and physics. The illustrations, many of them full-page, are as good as they are numerous, and readers like Mrs. Sparrow will find oases—e.g. the provisions consumed on a voyage of a giant modern liner.

"Romance of Reality."—(1) *The Man-of-War.* By Commander E. HAMILTON CURREY, R.N. (2) *The Aeroplane.* By GRAHAME-WHITE and HARRY HARPER. (Each 3s. 6d. Jack.)—These are the first two volumes of a new and promising series. Each subject is approached from the historical point of view, and the achievements of the science of to-day are realized by tracing it down from its origins, while a human interest is given by a record of the lives and adventures of pioneers and discoverers. The books are handsome in appearance, profusely illustrated, and surprisingly cheap. Commander Currey is more popular than scientific. We looked for pictures of the dug-out and war-canoe, or, to pass to the Deluge, of the Greek trireme and the "long ships" of Caesar. Instead, we start with the adventures of a middy who catches dolphins—which are not dolphins—in the Mediterranean, and other strange wildfowl in the Persian Gulf, and we end with the submarine and sea-plane, which are polished off in half a page. Those in search of good sea yarns will find what they want in "The Man-of-War," but serious students must still consult Mr. Thursfield and the *Times* "Naval Warfare." To discover the meaning of a "crare" and "to bouge" needs no more recondite source of information than the Oxford Dictionary, and Campbell was not the author of the poem on the "Royal George." (2) Mr. Grahame-White's book is of very different calibre. His task was easier, for the aeroplane is comparatively an invention of yesterday. What would have been the most thrilling chapter on "airy navies grappling in the blue" is necessarily wanting, but up to that point the amateur will find all that he needs know of airship lucidly told by a master of the craft.

Wild Life in the Woods and Streams. By C. A. PALMER. (3s. 6d. Black.)—Talks about common birds and beasts in the form of letters from a father to his small son. The first letter, describing a pair of squirrels burying beechnuts, is just such a one as a clever naturalist father would write, and will delight the boy, apart from the postscript (a P.O. for half-a-crown). The pretence

A NEW

**COMMERCIAL ATLAS
GEOGRAPHY.**

By **THOMAS FRANKLIN, A.C.P., A.R.S.G.S.**
(late Lecturer in Commercial Subjects, London County Council),
and **ERNEST R. SHEARMUR, B.Sc., London**
(late Lecturer in Geography, London County Council).

THE COMMERCIAL ATLAS GEOGRAPHY CONTAINS
87 SPECIAL MAPS AND 29 DIAGRAMS.

Each area is illustrated by

- (1) A map showing the chief trade routes by land and sea and the position of the chief route towns and seaports.
- (2) Four Climatic Maps showing the distribution of summer and winter temperatures, pressures, and rainfall.
- (3) Two Vegetation Maps—one showing the natural vegetation regions and the other the distribution of the cultivated products together with the chief agricultural centres.
- (4) Two Mineral and Manufacture Maps—one showing the distribution of minerals and the chief iron and steel manufacturing areas, the second showing the distribution of the chief manufactures and the position of the chief manufacturing towns.
- (5) A Population Map showing the density of population by means of shading, and a Political Map showing the chief boundaries with the towns printed in different sizes according to their population.

Now Ready.**Price 5s. 6d.****ECONOMIC HISTORY
OF ENGLAND.**

BY

M. BRIGGS, B.A.,*Cantab., B.Sc. (Econ.) Lond., F.R.Econ.S.*

Object:—This book is an attempt to give, within reasonable space, an elementary account of the economic development of England down to the present day.

The need for such a book is admitted on all sides. Textbooks on Economic History in this country have hitherto treated mainly of medieval times, though the information we can obtain of such times is scanty and untrustworthy, and the knowledge is of little direct value in connexion with problems of the present day.

Recent developments.—A special feature of the work is the attention paid to economic developments in the last 150 years, which is the particular period that has had most effect on England of to-day, and one that has so far been comparatively scantily treated in general textbooks.

of father and son is not sustained throughout, and the vulgar boy is likely to skip the letter on the different kinds of hawks in hopes of finding a postscript, but generally the didactic element does not obtrude, and the bird-nester will find his account; but the angler will complain that there are no fishes in the streams.

(1) *The Romance of Piracy*. By E. KEBLE CHATTERTON. (5s.) (2) *Stories of Polar Adventure*. By H. W. G. HYRST. (2s. 6d.) (Seeley.)—(1) Most of us have gained our notions of pirates from novels ranging in verisimilitude from Scott's "Pirate," and "Treasure Island," to shilling dreadfuls. Mr. Chatterton's chronicle exemplifies the old saw that truth is stranger than fiction. He brings from his treasury things new and old—Captain Kidd and Paul Jones, and the almost miraculous escape of John Foxe after fourteen years of captivity with the Turkish pirates of Alexandria. The last narratives carry us down to the present day. The reviewer can remember seeing in the window of a Bond Street gunsmith a rifle with the label, "With this weapon the Bishop of Labuan shot the pirates of Borneo." (2) Mr. Hyrst has wisely refrained from serving up the *crambe repetita* of the "Erebus" and "Terror," and drawn his materials from the adventures of forgotten worthies and obscurer explorers, men who nevertheless "made the greater part of the map of the Arctic Continent." Mr. Hyrst is a skilled narrator, and knows how to mingle humour with pathos. The last story in the book, of the bear with a yard of whalebone inside him, may have suggested the crocodile with the clock in "Peter Pan." The illustrations are good, but we should have preferred a few maps.

A Hero of the Afghan Frontier. The splendid Life Story of T. L. Pennell retold for Boys and Girls by ALICE M. PENNELL. (2s. 6d. Seeley.)—The story of this missionary hero cannot fail to be interesting, but we are bound to say that here it loses much in the telling. We have a series of stirring adventures loosely strung together, but there is no attempt to weave them together in a consecutive narrative. In Chapter I we read that, while still at Eastbourne College, "he attained his full stature and gained the vigour and vitality that was so strong a characteristic"; but, when he started for India, "neither Mrs. Arthur Pennell nor Dr. Pennell were very strong," and, in the same chapter, "he then invited his special friends to hear the story and to exhibit his pictures with great pride." It will be seen that English is not the author's strong point.

The Lost World. By Sir A. CONAN DOYLE. (7s. 6d. net. Frowde and Hodder & Stoughton).—A new edition of Sir Arthur's penultimate romance which appeared in 1912 makes a splendid Christmas present. The *terra incognita* of South America serves this time as the Utopia or Erewhon for the author's inexhaustible imagination and fancy. Photographs of the hero and faked photographs of the landscapes heighten the illusion.

Round the Wonderful World. By G. E. MITTON. (7s. 6d. net. Jack.)—Mr. Mitton is careful, like the author of "Eöthen," to assure his young readers that from all sound and religious knowledge, and facts geographical, political, and statistical, the book is warranted free, and he is as good as his word. It is a genuine story of travel; but the boy who studies it with his toes on the fender will, with the help of the numerous woodcuts, gain more real knowledge of the world and its inhabitants than his less fortunate comrades who have learnt by rote countries and capitals, lengths of rivers, and heights of mountains.

"The Fairy Book Series."—(1) *The Blue Fairy Book*. (2) *The Orange Fairy Book*. (3) *The Strange Story Book*. (4) *The Annual Story Book*. (Each 3s. 6d. net.)—All the year, and at least at Christmas time, we miss "that kind magician, Andrew Lang," and we welcome this *resurgam* in a cheaper edition.

The Brown Book for Boys. Edited by HERBERT STRANG. (2s. 6d. Frowde & Hodder.)—This volume will be as welcome as its predecessors. The stories are not all new, but they are well chosen and give plenty of variety. Battles by sea and land, tales of adventure and discovery a century or more ago, alternate with the feats of airmen and details of the floating docks prepared for great battleships of the present day. There are numerous illustrations in colour and black and white.

(1) *The Red Book of British Battles*. (2) *The Blue Book of British Naval Battles*. Edited by HERBERT STRANG. (2s. 6d. each. Frowde & Hodder.)—(1) Fourteen battles have been chosen here as examples of how "in Europe, in America, in the East, our soldiers have fought and died, contending sometimes against enormous odds, suffering temporary defeat, but fighting on with dogged tenacity until victory has crowned their arms." There could be no more inspiring reading for our young soldiers than these records of daring and heroism, beginning with Blenheim and ending with Omdurman. The coloured illustrations vary in merit; those by Cyrus Cuneo are conspicuous for their spirit and action; the Balaclava Charge is also good, and Mosley's black-and-white drawings are most suggestive. (2) The "Blue Book" covers a long period of time, since it begins with sea fights between

Alfred and the Danes and ends a year after Trafalgar. The pages in our history on which the achievements of our sailor heroes are inscribed, are thrilling as any sensation novel, and many of our most famous engagements are related here. The large illustrations show some fine effects of colour. Unquestionably in picturesqueness and splendour of appearance the ships of the present day cannot hold a candle to those of the seventeenth and eighteenth centuries. Many of the head and tail pieces in black and white are very good.

A Gentleman-at-Arms. By HERBERT STRANG. (6s. Frowde & Hodder.)—This volume contains a series of adventures in the life of Christopher Rudd. With part we are already acquainted, but are glad to fill up the gaps in his changing fortunes. Being bent on following in the steps of Sir Francis Drake, he starts life as a stowaway on a ship bound for the Spanish Main. He is of good birth, and, possessing some wits and good store of courage, he makes his way, and finds favour with high personages. His exploits are described with skill and spirit, and will be followed with interest. The book is well illustrated in colour by Cyrus Cuneo, and has many small pictures in black and white.

Herbert Strang's Annual, 1915. (5s. net. Frowde & Hodder.)—This year's Annual consists of stirring tales of adventure and danger, and school stories supply an amusing element. "Some New Developments in Shipping" and "The Fishing Fleets of Britain" have a special interest just now. The Story of Waterloo, as is perhaps natural, seems to appear in many collections of stories this year. There is an excellent "True Account of the Heroic Incident of Yeu-ning," by Captain Charles Gilson, and an interesting paper on "Priests' Holes and Hiding-Places," with sketches of various examples. Cyrus Cuneo and Stanley Wood both supply capital illustrations, and "Mackerel Fishing" comes out very well. L. Mosley's effective black-and-white sketches adorn the first pages. A very good five-shillings' worth.

We have received from Messrs. Frowde & Hodder new editions of *The Young Franc-Tireurs*, by G. A. HENTY (1s. net), a most appropriate book for the time; *The Story-Book Girls*, by CHRISTINA GOWANS WHYTE (1s. net), a popular story; *Round the World in Seven Days*, by HERBERT STRANG (9d. net), the thrilling expedition of an aeroplane. The postscript seems new, and completes the story nicely.

(1) *Mother Molly*. By F. M. PEARD. Illustrated by M. V. WHEELHOUSE. (2) *Alice in Wonderland*. By LEWIS CARROLL. Illustrated by ALICE WOODWARD. These are additions to the "Queen's Treasures Series." (2s. 6d. net each. G. Bell.)—Miss Wheelhouse's dainty illustrations just suit Miss Peard's delightful story. The pictures in "Alice in Wonderland" show some skill, but the story is too much identified with Tenniel's illustrations to lend itself easily to any others. These are very nicely got up books with excellent print.

A Voyage on a Liner. By ARTHUR O. COOKE. (1s. 6d. net. Frowde & Hodder.)—A readable little volume of a voyage to the Canary Isles. Mr. Cooke manages to make the minute details as to the arrangement of the ship, her engine room, the routine duty, and the commissariat quite interesting. There are numerous photographs and some coloured pictures. "The Officer of the Watch" is impressive.

The Violet Book for Girls. Edited by Mrs. HERBERT STRANG. (2s. 6d. Frowde & Hodder.)—We find this the least successful of Mrs. Strang's books. It is perfectly wholesome and harmless, and no doubt will be read quite eagerly, but we think girls might be given something of more intrinsic worth.

The Story of Peter Pan. Retold by DANIEL O'CONNOR. Illustrated by ALICE WOODWARD. (1s. 6d. net. G. Bell.)—We welcome the reissue of this favourite nursery book at less than half the original price. Coloured prints, black-and-white illustrations, music—nothing is missing.

BOOKS FOR CHILDREN.

The Story of Hiawatha in Prose. By FLORENCE SHAW. (9d. Bell.)—The adaptation could not have been better done, and Miss Woodward, in her illustrations, has caught the spirit of the poem. We question, however, whether the thing was worth doing. There is nothing in the poem, except the Indian names, beyond the comprehension of a child.

Workers in Nature's Workshop. By W. J. CLAXTON. (1s. Harrap.)—The scheme of these talks on natural history is to classify plants and animals under human trades and occupations. The child is invited, before reading a chapter, to guess who in the animal and vegetable world represent "the advertisers," &c. In three cases out of four, we wager, he will fail. Carnivorous plants are "cannibals," perennials are "bankers," parasitic plants are "beggars."

(Continued on page 754.)

BLACK'S HISTORIES

By **M. W. KEATINGE, M.A.** and **N. L. FRAZER, M.A.**
(Reader in Education in the University of Oxford) (Head Master of Batley Grammar School)

YOUR KING AND COUNTRY Need Another 100,000 Men at Once.

In the present grave national emergency another 100,000 men are needed at once to rally round the Flag and add to the ranks of our New Armies.

TERMS OF SERVICE

(Extension of Age Limit).

Age on enlistment 19 to 38. Ex-Soldiers up to 45. Minimum height 5 ft. 4 in., except for ex-soldiers and those units for which special standards are authorized. Must be medically fit. General Service for the War.

Men enlisting for the duration of the War will be able to claim their discharge, with all convenient speed, at the conclusion of the War.

PAY AT ARMY RATES.

Married men or Widowers with Children will be accepted, and if at the time of enlistment they sign the necessary form, Separation Allowance under Army conditions will be issued **at once** to the wife or other dependants.

HOW TO JOIN.

Men wishing to join should apply in person at any Military Barrack or at any Recruiting Office. The address of the latter can be obtained from Post Offices or Labour Exchanges.

God Save the King.

It is a mistake in a book for children to insert a violent tirade against fox-hunting, however much we may disapprove of it.

(1) *The Adventures of Robinson Crusoe in his Island*. (2) *Kingsley's Water-Babies*. (1s. 6d. net each. Dent.)—Part I of "Robinson Crusoe" is illustrated by J. A. Symington. The coloured illustrations are boldly conceived and well drawn, but the artist has failed to portray the aspect of unkempt wildness of the hero. As he stands on his raft he looks as if he had been clean shaved. M. M. W. Tarrant's illustrations to "The Water-Babies" are dainty in design, and the faint colours suit the fairy realm of waters.

Three Little Gardeners. By L. AGNES TALBOT. New Edition. (1s. 6d. net. Frowde and Hodder & Stoughton.)—Practical directions for the work in a garden month by month which will serve a double purpose—tell the mother what tools to supply, and the children how to use them. A very old gardener is the Mentor of the play, and the dialogue is simple and natural.

The Story of the Plants. By F. M. and L. T. DUNCAN. (1s. net. Same publishers.)—This is the first volume of a series and an introduction to physiological botany. The author has done all that is possible to reduce the subject to its simplest elements, but we doubt whether it is advisable to attempt it before considerable progress has been made in descriptive botany. The child can find out little for himself without the aid of a microscope.

"Little Stories of Great Lives." Edited by HERBERT STRANG.

(1) *Joan of Arc*. By EVELYN WARD. (2) *Francis Drake*. By H. RUSSELL FORD. (1s. net. Same publishers.)—Both these stories are familiar in our ears as household words, but they will bear retelling, and both are here told in a way that will bring them home to the youngest. Miss Ward has the harder task, but she wisely steers clear of disputed points—the trial and the miraculous element—and is content with a plain narrative.

Sunday and Every-Day. (3s. Wells Gardner.)—This is a wonderful three-shillings' worth. It contains one long serial, full of stirring adventure; shorter serials, one of schooldays, one of cavalier times; and the Sunday element is introduced in "The Story of St. Paul," which runs through the volume. Besides this, there is a multitude of short stories and anecdotes, historic and scientific. We note with pleasure Gordon Browne's illustrations to the long serial. The articles on "In a Sunday Kindergarten" seem rather out of place, and not specially successful. Sun-wheels and toy seas will no doubt prove "simply fascinating," but we should prefer not to pretend they had any moral significance; and we feel the marching hymn will stand a poor chance if it is to follow on these delights.

The Tiny Folks Annual. Edited by Mrs. HERBERT STRANG. (2s. net. Frowde & Hodder.)—"Naturalness and simplicity without condensation" is the aim of this "Tiny Folks Annual," and it fulfils its purpose very well. Simple stories and verses of homely things and bright illustrations fill the pages, and we find no discordant note, except for the occasional presence of the objectionable golliwog.

Mrs. Strang's Annual for Children. (2s. 6d. net. Frowde & Hodder.)—"The Tiny Folks Annual" undergoes a subtle psychological change, and behold we have the "Children's Annual." Calves, kittens, dolls, and birds give way to fairies, lions, elephants, and foxes, with sufficient connecting links in the shape of dogs and ducklings not to break the law of continuity. When the first annual is ended the second had better be begun; it is quite as good as its forerunner.

The Bobtail Puppy Book. By CECIL ALDIN. (2s. 6d. net. Frowde & Hodder.)—Mr. Cecil Aldin has evolved for himself a special kind of animal book, and we look forward with pleasure to each new one. "The Bobtail Puppy" comes along this year, as alive and vigorous as his fellows. Everyone laughs at him, from the pig to the cat; and, if such universal laughter should prove infectious, the book will be more than ever welcomed in these gloomy times.

Chatterbox. (3s. Wells Gardner.)—*Chatterbox* is quite up to its usual level and young folk had better put in a plea for *Chatterbox* at least this Christmas. The long serial "Tangled Trails" has remarkably good line illustrations.

Leading Strings. (1s. 6d. Wells Gardner.)—A little book of stories and verses with many illustrations. The illustrations are not always as simply treated as is advisable in a book for tiny children.

The Children's Corner. Rimes by R. H. ELKIN. Illustrations by H. WILLEBECK LE MAIR. (3s. 6d. net. Augener.)—Miss Le Mair has already made a name for herself, more especially, perhaps, in connexion with her illustrations to the Schumann children's pieces. This new volume shows the same originality and delicate charm. The children are drawn as only one who has studied and loved them could draw them. Occasionally the decorative setting overpowers the figures, and every now and again the attitudes of the children are forced and savour of the popular fashionable droopings, as in "The Dove's Dinner Time";

but, for the most part, the children are natural and real, and the book makes a very pretty Christmas gift-book.

Swollen-headed William. By E. V. LUCAS and GEORGE MORROW. (1s. net. Methuen.)—This adaptation of the immortal "Struwwelpeter" is sure to take the town. The idea was pretty obvious; in fact, "Fidgety Phil" appeared recently in a delightful supplement to *Punch*, "The Rake's Progress." George Morrow is in the first flight of our caricaturists, but in the text we miss the patness and mordant wit of E. V. L.'s partner, C. A. G. Perhaps the best hit is Willy Head-in-Air gazing at the Stars:

"Which, as every German knows,
Aren't the twinklers we suppose,
But rewards the Kaiser's given
As encouragement to Heaven,
Medals of the second class
For assistance in Alsace."

SAFE NOVELS.

Two Women. By MAX PEMBERTON. (6s. Methuen.)

"This book relates the emotional adventures of Gertrude Wynne and Doris Holt." So the publishers' announcement on the cover informs us, and true enough. Book I relates the flirtations (something more than flirtation in one case, and less in the other) of two "bachelor girls" at a fashionable French watering-place. The picture is artistic, and Mr. Max Pemberton is equally at home on a yacht and on the golf links; but we seem to have read the same thing before, and the emotions left us cold. Our advice to readers is to start with Book II, where the real adventures begin. It is evident that the story of the two Englishmen who were caught exploring the island of Borkum, tried as spies, and imprisoned in a German fortress, suggested the plot, but the escape is wholly the author's invention, and from this point the interest never flags. The two women are a part of the machinery, and of course at the end the Duesse is unveiled and Una finds her Red Cross Knight.

A Crooked Mile. By OLIVER ONIONS. (6s. Methuen.)

Frankly, we do not like this book, and there is not one of the characters we were not glad to bid a hasty farewell to. But then the author gives one the impression that he does not care about them either, and always pops up at your elbow with his tongue in his cheek just as you are going to try to like one of them. Well, the War will have given most of them something to do, and perhaps they have got nicer. Perhaps the author himself has enlisted. Who knows? There is a review on the cover to help reviewers who do not want to read the book very carefully, so we will gratefully quote from it: "This is the story of a very modern marriage. . . . In it two *ménages* are contrasted—the one run on new and liberal and enlightened lines, the other still dominated by the ideas of the benighted past. What the difference between them comes to in the end depends entirely on the interpretation put upon the story, but the comedy note speaks for itself." It does. "A Crooked Mile" deals with the vagaries of a certain airy amateurism in Imperial politics. We are much obliged for the help so gratuitously given, and will only add that the paper and printing are of very good quality.

The End of her Honeymoon. By Mrs. BELLOC LOWNDES. (6s. Methuen.)

Jack Dampier and Nancy return to Paris after a three weeks' honeymoon, and before settling into their flat turn for the night into a hotel in a quiet quarter. The visit of the Czar and Czarina has filled Paris from roof to cellar, and they are obliged to accept the proffered accommodation of a garret for Monsieur and a tiny closet bedroom adjoining the host's bedroom for Madame. Monsieur quits the stage, never to return, though it is not till the last page that the mystery of his disappearance is solved. You must not be so tiresome as to inquire why Nancy allowed a fortnight to elapse before paying a visit to Jack's garret, and why, finding the door plastered up, she so politely accepted the explanation offered. It is the only loose stone in the structure, and Mrs. Belloc Lowndes deserves of us that we should keep it in its place, for she has constructed quite an ingenious story, with a genuine thrill to it. There is nothing to say about the characters, except that they play the game, and Nancy is provided with a nice new husband in time for the last page. Full information about the Morgue, the Paris police, &c., is interspersed à la Victor Hugo. The book would, however, have gained by condensation, and might have appeared more appropriately as a novelette.

NEW BOOKS FROM HEINEMANN'S LIST

OUR GLORIOUS HERITAGE.

An Anthology of Patriotic Verse, compiled by C. S. EVANS, Editor of *The Storied Past, The Tree of Empire, &c.* With an Introduction by the Very Rev. H. C. BEECHING, D.D., DEAN OF NORWICH.

Crown 8vo. Cloth. Price 1s.

This book, which contains a collection of some of the finest patriotic poems in our literature, is divided into four parts:—

SONGS OF THE MOTHERLAND—poems, new and old, expressing national feeling and love of country.

THE PAGEANT OF BRITISH HISTORY—poems relating to, or describing great historical events, from the earliest times to the present.

SONGS AND BALLADS OF THE SEA—including some of our finest sea-songs and ballads.

THE MOIHER AND THE SONS—poems, chiefly by modern writers, relating to the Colonies and the Empire generally.

¶ A special feature of the book is the large number of poems by contemporary writers including, among others, R. L. Stevenson, A. C. Swinburne, W. E. Henley, Mr. Rudyard Kipling, Mr. Henry Newbolt, Sir A. C. Doyle, Mr. Laurence Binyon, Mr. Edmund Gosse, Mr. Walter de la Mare, Sir Owen Seaman, Mr. Austin Dobson, &c., &c.

A full list of Mr. Heinemann's educational publications will be sent on application.

FRENCH TRANSLATION AND COMPOSITION.

By Rev. H. J. CHAYTOR, M.A., Head Master of Plymouth College, and E. RENAULT, B.A., Lecturer in the University of Liverpool. Crown 8vo. Price 2s.

Under the present examination system, practice in difficult unseen translation is a necessity for candidates. This book, which is intended for upper forms, presents an original and effective method of teaching French translation and composition. About thirty different subjects have been chosen, and each subject is represented by two or more passages from classic French writers, followed by an extract from a standard English writer on the same theme. Before attempting the translation of the English passage, the pupil studies the French pieces dealing with the same subject, and so well are the latter selected that this exercise supplies him with a suitable vocabulary and phraseology, and enables him to translate fluently and idiomatically. The final step is the writing of a free composition on the same subject.

KEY to the above, by E. RENAULT, B.A. Containing a French version of all the English passages. Crown 8vo. 5s. net.

(N.B.—The Key is supplied only to Teachers or bona-fide private Students, and no specimen copies are available.)

London: WILLIAM HEINEMANN, 20, 21 Bedford Street, W.C.

A SERIES OF ARTICLES

Written by Medical Men and Women,

Under the General Title of

'SANE SEX TEACHING,'

Commenced in the April Number of

The Educational Times.

Price 6d., or 7d. by post.

Annual Subscription 7s., including postage, or 6s. 6d. if paid in advance.

FRANCIS HODGSON, 89 Farringdon Street, London, E.C.

TELEPHONE: CITY 4871.

MODELLING MONTHLY.

Edited by E. J. S. LAY, Head Master, Chadwell Heath Council Schools. A publication written by Teachers for Teachers, dealing with Plastic Modelling, and full of useful and up-to-date hints.

Send for specimen copy and samples of Plasticine.

HARBUTT'S PLASTICINE, Ltd., 225 Bathampton, Bath.

NATURE STUDY AND BOTANY.

Instructive Nature Study cases and specimens for class work, as supplied to the Universities, Colleges, and Higher Grade Schools. Birds, mammals, shells, crustaceans, butterflies, &c., carefully mounted for painting studies.

Lists from

NELSON'S NEW GIFT BOOKS

Handsomely Bound

Illustrated in Colours

- 6/- THE PAGEANT OF ENGLISH LITERATURE.** By Sir EDWARD PARROTT,
Net. M.A. With 32 Colour and 32 Black and White Plates.
This Volume is designed as a companion to the Author's popular "Pageant of British History."
- 3/6 NEW TALES OF OLD TIMES** By W. E. SPARKES.
A book of stories of British civilization, including Colomba, Aidan, Cuthbert, Chad, Patrick, &c.
- 3/6 A BOOK OF THE SEA** By ARCHIBALD WILLIAMS.
Copiously Illustrated with Photographs and Diagrams.
- 3/6 THE DUKE OF WELLINGTON** By J. WALTER BUCHAN.
A Biography of the "Iron Duke," with 16 Illustrations.
- 3/6 THE STORY OF THE "VICTORY"** By GEOFFREY CALLENDER.
With many new Illustrations.
- 3/6 THE DAUNTLESS THREE** By THEODORA WILSON WILSON.
A delightful story of Boy and Girl playmates and their pranks.
- 3/6 DRAGON OSMUND** By C. W. WHISTLER.
A tale of Viking times for older boys.
- 2/6 HOW I TAMED THE WILD SQUIRRELS** By ELEANOR TYRRELL.
With 6 Coloured Plates and numerous Line Illustrations.
- 2/6 LICKLE TICKLE** By JEAN LANG.
With numerous Illustrations in Colour and Line.

Nelson's Favourite Annuals.

- | | |

Messrs. METHUEN'S New Educational Books

Messrs. METHUEN have pleasure in announcing the publication during November of the following three books. Applications are invited from Heads of Schools for specimens of the first two. When applying, please state the number likely to be required in the event of adoption. Specimen copies of Junior Scripture Examination Papers supplied post free on receipt of 7d.

THE LITTLE HOUSEWIFE. By A. M. PHILLIPS AND C. L. DEAN. Crown 8vo. 1s. 6d.

This book is intended to serve as a reader on Domestic Science for girls in elementary and secondary schools. To be used as an adjunct to the practical work of a centre, it is also adapted to the requirements of schools where no practical work is done. It supplies the reasons and simple scientific explanations, of the operations involved in housecraft generally.

PREPARATIONS AND EXERCISES IN INORGANIC CHEMISTRY. By W. LOWSON, B.Sc., F.I.C., Assistant Lecturer and Demonstrator, University of Leeds. With many Diagrams. Crown 8vo. 2s. 6d.

This book supplies sufficient detail for the preparation of a number of common and theoretically interesting inorganic substances, with the aid of apparatus usually to be found in school and college laboratories. Problems are suggested in connexion with the preparations, and a number of simple quantitative experiments, such as the determination of equivalents, are introduced.

Salts of one or two of the more common organic acids are included, and, with the object of combating haphazard methods of working, great emphasis is laid throughout on quantitative relationships and yields.

JUNIOR SCRIPTURE EXAMINATION PAPERS. Vol. II. New Testament. By A. G. WALPOLE-SAYER and Canon W. WILLIAMSON. Fcap. 8vo. 1s.

[Junior Examination Series.]

These examination papers on the New Testament, which will be found useful in checking progress at any stage, and for recapitulation just before the end of term or at the approach of an examination, are based very largely upon the kind of questions candidates have had in the past, and may be used either for written or *viva voce* answers. It is suggested that it might often be found convenient to take a half of a paper at a time. They are the sequel and completion of a similar little book on the Old Testament.

METHUEN & CO. LTD., 36 ESSEX STREET, LONDON, W.C.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	£5 10 0	One Column [$\frac{1}{2}$ page]	£3 0 0
Half Column [$\frac{1}{4}$ page]	1 15 0	One-Eighth Page	0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—
6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after; 6d.; *prepaid rate*.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after 6d.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE: Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating *full name and address* of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

IDOLA LINGUARUM.

LATIN.

By Prof. H. A. STRONG.

THE numerous claimants for a place in the curricula of our schools and colleges, and the fierce competition incident to modern life, must inevitably compel our educational authorities to reconsider the value attributed to the various subjects of study.

Some subjects may be profitably dropped or relegated to a few specialists; others may be retained under new methods of instruction whereby a learner may attain his goal in less time and with a less expenditure of effort. In particular, the time has now come when the classical languages are challenged, and, indeed, a classical education as a whole is put upon its defence. It is perfectly plain from the report of the last general meeting of the Classical Association that many of our leading teachers are highly dissatisfied with the results attained by the present methods of teaching the ancient languages, and are questioning whether these, more especially Latin, should be retained in our schools as an integral part of the curriculum; in the second place, whether the study of Latin should be compulsory on all the pupils of our secondary schools; and, in the third place, what standard should the pupil on leaving school have attained? These questions then suggest the further one, viz. Wherein consists the educational value of an ancient and dead language, considered as such, independently of its literature, and has it indeed any value as an educational factor?

My view on this point is that of the Russian professor Zielinski, whose book I translated with one of my colleagues. He points out the enormous value of Latin as a factor in education, and this expression of opinion is particularly interesting, coming as it does from a Russian, whose country owes

so little to Rome in comparison with our Western nations. This value consists first and foremost in the method employed in learning a dead literary language such as Latin. Languages may be learnt in two ways, by two methods, and these two methods correspond to the two fundamental activities of our intellect—viz. what are known by psychologists as *association* and *apperception*. Both processes alike aim at the reception and the reproduction of material by our intellect; but the latter of these two processes entails a greater and more fruitful effort than the former. If a word which we happen to have heard under certain definite circumstances rises spontaneously to our memory, then we ascribe this result to *association*. I master the word by the merely passive process of attention. I know that such combinations of sounds stand as the expression of certain objects or ideas, and I can reproduce these combinations whenever I wish to refer to such objects or ideas in the full confidence that I shall be understood. It is evident that a language learnt in this way teaches the learner nothing of its structure nor of its characteristics. It can be easily learnt; couriers and waiters in continental hotels can prattle in several languages, but the soul of the language is unapprehended by them. Of course we all learn our mother tongue by the method of association, nor could any other system be possible at an age when the mind is undeveloped. It is, too, plain that as the main object in learning modern languages is to be able to master them readily and easily, they are best learnt by this method of association.

The method of *apperception* is the opposite to that of association. It is sufficient for our present purpose to say that apperception implies the grasping of a new idea after reflection, and the modifying or changing of the idea as experience progresses. By this method we first study the structure of a language; we master after reflection the peculiarities of its etymology, vocabulary, and syntax, and step by step we learn to understand and to form at first simple sentences, then progressively harder ones, and finally periods and combinations of periods. We learn something of the character of the people who speak the language by their phraseology and by remarking the differences of meaning in synonyms.

The Latin language itself is a model of simplicity, terseness, and dignity. As Heine remarked, "the language of the Romans can never belie its origin. It is the language for commanders in the field, for administrators in their decretals, the language for the inscriptions of the adamantine people." Of course, it is also the key to a magnificent and dignified literature which describes, in clear and logical language, the chronicles and jurisdiction on which most of our Western civilization is based. Anatole France laments the decay of Latin studies in France as tending to destroy the dignity of French literature. He writes: "I do not exaggerate when I say that a man ignorant of Latin ignores the supreme lucidity to which speech can attain. All tongues, when compared with Latin, are obscure. Latin literature surpasses all others in its power of forming the intellect. Rome possessed ideas at once simple and powerful; but these ideas were not numerous. It is owing to this fact that she is an incomparable educator."

Besides this it should never be forgotten by Latin teachers that the language which they are teaching is merely the ancient form of the Romance languages, and any teacher of these languages should be a good Latinist. Such, then, being the characteristics of Latin, it seems to me that it should be used generally as a vehicle of instruction in our secondary schools and in our Universities.

I would not, however, begin the study of Latin before the age of ten, or even later. Let pupils learn a little French first, and let them learn this orally by the so-called "Direct Method," which may be employed by a *bonne* or a governess. As it is hardly possible at the present day to find a Latin nurse (though an advertisement for one appeared lately in the daily press), Latin must, in my opinion, be taught mainly, though not exclusively, by the apperceptive method, and, therefore, should not be begun until thought in the pupil has attained a certain development. Assuming, then, that all boys

in secondary schools are expected to start learning Latin, I think that those who show an obvious distaste or incapacity for the study should be gradually weeded out and transferred to other classes. This process of weeding out is, of course, a very delicate one and requires great insight and care on the part of the master; but I am perfectly sure that a large percentage of the boys and girls who now learn Latin merely to pass examinations are not merely wasting their time, but actually acquiring a distaste for all learning whatsoever. In the case of girls I would not make Latin a compulsory subject at all, as I think that girls should not have as many subjects as boys to study, and I have seen but too often the evil effects of the strain put upon girls preparing for examinations. For girls who have leisure to devote much time to Latin as a main subject, the study of this fine language and its literature offers the same intellectual advantages as for boys, but my belief is that a different curriculum should be prescribed for their sex. Most girls should learn more mathematics and logic for a generation or two, and the accuracy which they would thus attain would enable them to fight the battle of life which awaits them in the future better than the study of the tongues. I may note here that one of the objections from my point of view to dual education is the strain on the intellect of the girls produced by their eagerness to vie with their male co-students; but that is another story.

A word must be said about the methods of teaching Latin. These have no doubt been greatly improved, and are capable of further improvement, but the old method cannot be said to have been completely unsuccessful, since it has given to the world the refined scholarship of Conington, Calverley, Jebb, H. M. Butler, Gibert Murray, Mackail, and the late Prof. Tyrrell—a type rare among the pundits of Germany, for all their erudition.

The first point to be insisted on is that Latin pupils should not be set to read Virgil and Horace until they are of an age to appreciate the beauty and the dignity of such authors. The disgust which Byron expressed at the remembrance of Horace as taught at Harrow is still a common complaint, and is due to the same cause. Nor should the great Latin classics be used as subjects for the teaching of parsing, grammar, metres, &c., but should be reserved until the pupil is able to understand the "grand style" of the "Aeneid" and the *curiosa felicitas* of the Odes. The textbooks for beginners should contain something of intrinsic interest to English pupils, such as dialogues and stories from the colloquies of Erasmus and the dialogues of old Corderius, which might well be issued in a modern version. "Faked" stories may be used with advantage for pupils in the early stages of Latin, such as "The History of the Boer War," by Prof. Sonnenschein, or "The History of Robinson Crusoe," by the late Prof. Newman. From the very beginning the pupil should be taught the structure of the language and made to frame sentences on the models provided by his textbook and to commit simple dialogues to heart, always upon the understanding that these early lessons are lessons in the grammar and structure of the Latin language. As his studies proceed, the boy should gradually, but surely, be made to breathe a Roman atmosphere created for him and around him by the inspiration of his instructor, on whose sympathy with the subject he is teaching all depends.

He should be orally instructed in the main facts of Rome's history, her immense influence on present civilization, her manners and customs, her legends, and her national genius. Not till he has caught something of the spirit which made a Roman proud of *Roma immortalis* should the pupil be set to read the authors whose inspiration depends on their pride in the race and their country. I know nothing more dispiriting than to read Virgil with an unsympathetic class, and I believe that it is perfectly possible, if real enthusiasm be thrown into the work, to elicit from even a generation of footballers some kind of enthusiasm in their turn. It is not possible to suggest here a curriculum for every year of the Latin career of pupils in a secondary school; the ground covered must, of course, vary with the varying capacity of the pupils and the time devoted to the study of Latin; but a few

suggestions from my own experience may prove interesting to some teachers.

First and foremost, the passages set for translation must be interesting in themselves, and must not merely be read because they happen to be good Latin. This remark applies especially to the junior classes, who are not capable of appreciating the refinements and beauty of style of a great part of Livy and Cicero. I think, therefore, that interesting extracts from the classical authors should be picked out by the teacher—at all events, in the junior forms, and the sequence and connexion of these fully explained. Latin verse seems to be more popular with pupils than prose, and passages from Ovid's "Fasti," "Metamorphoses," and "Tristia" should be committed to memory. The best plays of Plautus and Terence are at once easy and amusing, and there is no reason why pupils of fourteen years old should not read these with real enjoyment.

Much of the dialogue in the Plautine plays is simply the Latin equivalent of our everyday conversation, and the simplicity of the characters and of the plots renders them well within the comprehension of Latin scholars in the third year of their course. Simple exercises in framing Latin sentences should be given orally from the very beginning, and for more advanced pupils simple pieces of English should be set based on models of prose passages taken from classic authors. It has been maintained that exercises in Latin composition are waste of time—"mere intellectual gymnastics." I think, on the contrary, that translations into Latin prose are one of the best methods of compelling a scholar to regard language and thought from a Roman point of view; to teach him to reduce complex into simple ideas, and to imitate the swing and harmony of the Latin period. The French author Fouillée had good reason to say "Chaque leçon de latin est une leçon de logique," and this applies in particular to lessons in Latin composition. All pupils should, of course, be taught to scan, but Latin verse should only be encouraged in the case of pupils who obviously show promise of becoming real scholars. By the time a pupil has reached the age of sixteen he should be capable of reading into English at sight any piece of easy Latin, and turning an easy piece of English into passable Latin. He should have read portions of Virgil, Horace, Plautus, Terence, Juvenal, Ovid, and a few extracts from less read authors such as Ausonius. In prose he should have had time to read a good portion of Caesar's Commentaries; two or three books of Livy, the more descriptive kind; Cicero's "De Officiis" and "De Senectute"; two or three of his speeches, and a few of his more interesting Letters. He should also have read some extracts from the younger Pliny and from other authors not commonly read in schools, such as Frontinus and the elder Pliny. He should have read also one or two books of Tacitus' "Annals." But it is very important to take care that the pupil shall be made fully conversant with the circumstances under which each work was written and should have mastered the history of the period of his author.

If leisure can be found for the purpose, no better method of imbuing pupils with the Latin spirit can be devised than by encouraging them to act a Latin play. I found the "Captivi" of Plautus excellent for the purpose. The Latinity is very simple, the plot interesting, and the play has no female characters. The "Rudens," also, is a good acting play; and Father Newman's versions of some of Terence's plays are admirable for this purpose.

I must repeat that it is desirable that the Latin teacher should never allow his pupils to forget that Latin is the old form of the Romance languages, and there is no better introduction to the study of philology than in instruction on the connexion of Latin with its daughter languages. If the teacher's pupils come to his class equipped with some knowledge of French, they will take great interest in discovering for themselves the different developments of the forms of the parent language into those of its daughters. I do not think that nearly enough notice is taken in our schools of this particular service of Latin, and I have been surprised by the rareness of the cases in which pupils who have been learning French and Latin for many years have perceived and ap-

preciated the connexion between the two languages. Such a book as Darmesteter's "Historical French Grammar" should be in the hands of every advanced Latin student.

Mr. Livingstone, at the meeting of the Classical Association held in Bedford College last January, told a melancholy tale of his experiences as a teacher of classics to his pupils.

They are like tame animals brought up by hand, accustomed to be fed at regular hours, and helpless when turned out to forage for themselves. . . . They have read their books in a vague, passive, otiose way, not without enjoyment, but without scrutiny or criticism. They have seen, to adapt a phrase of Newman's, the tapestry of literature from the wrong side, and it has told no coherent or intelligible story. And if this applies to undergraduates, it applies *a fortiori* to schoolboys. Take any ten schoolboys who have had a classical education, and are on the verge of University life, and ask them what was the religion of Horace. From six, I suspect, he will get no answer; one or two may quote some passages from the "Odes"; he will be lucky if he finds 20 per cent. who have noticed that Horace of the "Odes" and Horace of the "Satires" are for the most part two distinct people, expressing two distinct views of life. . . . In spite of lectures, interest in the classics, stimulating teachers, and the rest, we do not succeed in really getting the contents of the classics inside our pupils' heads.

Canon Cruickshank stated that he had taught the "Aeneid" many times and had always found that the story of Dido "excited the risible faculties of boys more than any other part of Virgil. The death of Dido was the anti-climax—it always amused them (!)" If such are the results of some ten years' teaching of Latin, as is avowed by our best teachers, the ordinary parent who pays taxes and wishes his hopeful to absorb some useful knowledge for the money laid out on him may well deem that the study of the classics, including Dido, is somewhat superfluous. The question is how to find a better way.

I quite agree with the remarks made by my friend Mr. Livingstone on the great use that may be made of translation on paper at sight of Latin into English. We are as teachers too ready to accept from our pupils hideous travesties of the original Latin, possibly what we may with more or less truth call accurate, but whose accuracy is in itself a terror. "The complete recasting and rearrangement of the sentence, the quest for equivalents, the adaptation to a changed linguistic atmosphere and climate and scenery, are as great in translating Cicero into Burke as in translating Burke into Cicero." The task of translating the concise, simple, and concrete Latin into good English as used by our best authors cannot but demand reflection on the modern employment of abstractions, on the great difficulty of clothing old-world terms with approximately corresponding synonyms, on the delicate process of breaking up Latin sentences and leaving out connecting particles, on the reasons for the order in the English sentence being necessarily different from the order in a Latin sentence, and on the difference in stress laid upon parts of speech like the noun and the verb respectively by the writers or speakers of Latin and English respectively.

The complaint which is now made as to the very small results attending "a classical education" are nothing new. In the seventeenth century a violent and general revolt was declared by the great teachers of the world against the ridiculous method in which grammar was taught. Complex rules of grammar were committed to memory by the scholars before they could read the Latin text, and, as Latin was even as late as the middle of the seventeenth century the language of lectures, the language of examinations, and supposed to be the language used between student and student, it was natural enough that wide discontent should be felt at the result of this plethora of grammar. J. A. Comenius (quoted by Foster Watson)* put the case for reform in grammar teaching very incisively: "The very beginners in grammar are so overwhelmed by precepts, rules, exceptions to the rules, and exceptions to the exceptions that they are stupefied before they begin to understand anything. . . . No one has ever mastered any language or art by precept alone." Mr. Richard Carew† relates that, after some sixteen years of grammar

* "English Grammar Schools," page 262.

† *Ib.*, loc. citat.

learning, he found his knowledge quite inadequate for speaking Latin when abroad. Locke advocated Latin teaching without a grammar in the first instance, "for, if you will consider it, Latin is no more unknown to a child when he comes into the world than English, and so might he master Latin, too, as Tully did if he had somebody always to talk with him in this language."

Dr. Webbe* insists rightly that "language to be learnt aright must be learnt from clauses regarded as whole, and not from the grammatical study of word by word." Common sense, of course, tells us it is ridiculous to learn rules until you have learnt somewhat of the subject to which they are to be applied; but the fact that Latin teaching was even recently not taught in accordance with the dictates of common sense has caused what is perhaps too sweeping an indictment to be made against grammar teaching in general. In acceptance of what is called "the direct method" of teaching modern languages, this method has been applied to the teaching of Latin as well, and there is no doubt that it can be so taught that a pupil can learn to speak it up to a certain point, as Locke said, provided he be brought up in an atmosphere where Latin is habitually spoken. But there are not many head masters of the Perse school in the kingdom, and Latin is no longer the "freemasonry of learned men." Latin is no longer spoken in the schools, and pidgin-English and Esperanto are claimants for the position of the language of universal communication. My opinion is that it is best to adopt the system advocated by Hoole, in his "New Discovery" (1660).† "The readiest way to the gaining of Latin is to join assiduity of speakers, and reading and writing, and especially double translating, to the rules; for, as the one affordeth us words and phrases, and the other directs us how to order them for a right speech, so the exercise of both will at last beget such a habit in us that we may increase our ability to speak and understand pure Latin, though perhaps the rules of grammar may be forgotten by us."

I think that beginners should be made to get by heart short and easy phrases, and should be made to frame other analogous phrases on the model of those which they have learnt. The exercise should go *pari passu* with the lesson in accordance which these phrases are intended to illustrate, and the teacher should call the attention to the difference between the English and the Latin idioms and explain the words of the phrases learnt, showing their relationships, where such exist, to French or English. I repeat that it is possible, after the rudiments of the language have been mastered, to create for the pupil somewhat of a Latin atmosphere, and this will become even easier when he comes to read interesting extracts illustrating different aspects of Roman life. The great advantage which we possess over the teachers of the Middle Ages is that we know now in a scientific and orderly way the connexion between Latin and the Romance daughters of Rome, and surely it is a pity that this knowledge is not more utilized in our teaching of Latin. It is on this and on the necessity of making the pupil acquainted with all the circumstances under which each passage was written that I wish to insist.

I have not referred to the new interest imparted to the study of the language of the Roman world by the discoveries of the archaeologists and excavators. The museums found in most of our large towns afford abundant *Realien* to enable young scholars to realize more vividly the commonplace objects of Roman life and to help to create for him the Roman atmosphere of which I have spoken. I have to refer with the greatest gratitude to my late colleagues in the Liverpool Institute of Archaeology, who lightened my labours by their illuminating lectures on the classical treasures exhibited in their museums. If every school in the kingdom could be provided with a small museum of its own, as several of our public schools already are, a powerful stimulus would be given to advanced students to continue the researches of their predecessors, and it has been generally found that, when

a demand exists for such aids to learning, local benefactors are generally forthcoming to supply that demand.

It is worth while to note that, as was noticed by Prof. H. Browne at the meeting of the Classical Association, that educational casts and models representing the *Realien* of ancient Roman life—nay, and even of originals—can be procured at small cost and are actually supplied to the museums and schools of Germany, Austria, and the United States. My own Latin classroom at Liverpool University is furnished with admirable busts of Roman emperors and with pictures of Roman scenery and Roman life. These were presented to me for the use of my students by a merchant of the town, and I am sure that there are many other patrons of learning in other colleges who would act in the same spirit towards other educational institutions.

CORRESPONDENCE.

PROF. CRAMB'S "GERMANY AND ENGLAND."

To the Editor of *The Journal of Education*.

SIR,—I think others of your readers besides myself must regret that your October issue gives but one brief note—somewhat in the trenchant style of the old *Saturday Review*—to Prof. Cramb's "Germany and England," instead of one of your reasoned reviews, so judicious and so judicial. I am sure that in such a review *The Journal* would not have dismissed this book as merely "a brilliant pamphlet in favour of conscription" (of which idea, I confess, I can find no trace in the book itself), nor have cited as the only sample given of the lectures an intentional red rag flaunted—no doubt with provocative, but also with stimulating, design—in the eyes of British self-sufficiency. Considering what the book is, it is wonderful it should be so presentable and that the blots and blemishes are so few. As the introduction tells us, "Mr. Cramb did not write his lectures, . . . and no shorthand report of his words exists. What is printed here has been put together from his own partial reconstruction, from scattered indications in his notebooks, and from full notes of the lectures taken by one of his hearers." A book so compiled cannot be judged fairly without constant mental reserves and allowances.

The work is, no doubt, a very conspicuous bit of the current War literature. All the same, that was not its origin nor its intention. When these lectures were delivered, the idea that Germany really hated us and meant to make war upon us at the first good opportunity seemed to the general British public as impossible as it now seems certain. The lectures were desired to be "soul-animating strains"—a counterblast to the teachings in every German lecture-room. They failed, as every other attempt to "wake up Britain" failed. Had they not failed, had British manhood realized in time what a call might be made upon it and consented to a course of "training" (not "conscription"), it need have taken but one month instead of six to provide a voluntary "Kitchener's Army," and we might have been spared the bitter self-reproach of being unable to give Belgium the support we had covenanted till too late to save her from ruin.

These lectures were never finished nor revised; and it is perhaps a pity that a little more editing was not done before they were given to the public. Especially a note here and there seems desirable to point out when the lecturer is stating his own views and when he is merely trying to place the German view before the British reader. All the same, the vivid exposition of the German military spirit and the startling, but scrupulously fair, statement of the teaching of Treitschke and Bernhardt, give the exact presentment of that side needed to enable us to understand how this War could be; and, with the dreadful orchestra of war thundering in our ears, this book seems placed in our hands as the libretto of the awful opera, enabling us to follow it intelligently.—Yours, &c.,

F. W. B.

[We kiss the rod so gently administered, and can only

* See Foster Watson, page 285.

† See Foster Watson, *loc. cit.*, page 271.

plead that we were not reviewing the book, but only recording our general impression. All credit to Prof. Cramb for being wise before the event; but we still maintain that conscription (for which compulsory military training is a euphemism) is the moral of the lectures. Why else is Lord Roberts held up as the saviour of the country, our sole military genius?—ED.]

[Other Correspondence is held over.]

HERE: AND THERE.

SEPTEMBER, 1914.

HERE.

SOFT benediction of September sun;
 Voices of children, laughing as they run;
 Green English lawns, bright flowers and butterflies;
 And over all the blue embracing skies.

THERE.

Tumult, and roaring of the incessant gun;
 Dead men and dying, trenches lost and won;
 Blood, mud, and havoc, bugles, shoutings, cries;
 And over all the blue embracing skies.

F. W. BOURDILLON.

THE BOARD OF EDUCATION'S CIRCULAR 849.—The Association of Head Mistresses desires cordially to welcome the general policy as to Examinations set forth in Circular 849. Head Mistresses are particularly gratified to find that the Circular embodies certain principles for which they have long contended—namely, the simplification in character and in number of examinations in schools; the stress laid on the course of study rather than on the examination test; and the co-operation of teachers. While reserving its right to independent judgment on details, the Association will heartily support the main proposals, and trusts that it may be possible to carry them into effect. The Association desires, however, to state very clearly that it would not wish to see all girls who remain in school beyond the age of sixteen subjected to compulsory examination; nor would it wish to see the Higher Examination made compulsory on older scholars. As already stated, it values the stress laid on the course of education, on training rather than on examination tests.

REVIEWS AND MINOR NOTICES.

The Thinking Hand; or, Practical Education in the Elementary School. By J. G. LEGGE. (8s. 6d. net. Macmillan.)

This book has been written for the general public, and gives an admirable account of the manual work carried on in some of our large city schools. The author evidently thinks that the pathological side of education has received more than its fair share of attention lately, and he claims that, for the real welfare of the child, we must have co-operation between doctor, teacher, and parent. The cant and dullness of official educational literature receive rather drastic treatment, and the three main charges brought against the advocates of manual instruction in elementary schools are very quickly disposed of. The great educators—Pestalozzi, Froebel, Montessori, "for the realization of their ideals . . . come back to the work of the hands." Manual training is something much more important than "the weekly turn nicely calculated to earn the Government grant." The suggestion that the boys should have a "turn" in the domestic centres, and that the girls should learn to hammer and nail in the boys' workshop is excellent, and is carried out in smaller schools, where the practical difficulties are not so great.

Amongst the virtues claimed for manual work are that it is self-corrective; that it makes children observant, precise, honest, and self-reliant. We owe Mr. Legge a deep debt of gratitude for reminding us so charmingly of Fourier's "Dream." This chapter alone is well worth reading, though the "Plain Facts" of the following chapter seem somewhat of a descent from the heights.

In the Schemes of Work it is good to find an "Alternative Scheme of Cookery for Schools in Poor Neighbourhoods." One of the most marked advances in education in elementary schools to-day lies in the more thoughtful adaptation of the work to the needs of the district. "The work of the centre should be in accord with the home environment" (page 75). Yet it is not so very many years ago since the writer of this review protested to the Board of Education that the same scheme of cookery lessons served for Deptford, where poor children ran home from school to buy a penny herring or a pennyworth of "leavings" for dinner, and for Plumstead, where were the homes of well-to-do artisans!

To teach the children of the very poor to flavour puddings with vanilla was no uncommon thing in those days, and it is cheering to find how far we have progressed since then. Another hopeful sign is the effort now being made to continue manual work through all standards and to connect it closely with the other work of the school. The "communal" work suggested by the author has great advantages. Much might be done in this way in town schools, in connexion with pageantry, *fête* days, &c.; in country schools, in the planning of gardens and paths, the making of gates or trellis work or cricket pavilions and even of chicken-houses and pigsties. The models suggested on page 91 are good, but all children should have opportunities for making *real* things as well.

Illustrations of the work carried on in the schools form a large part of the book and are most interesting. But *must* children in large schools still sit in rows, doing the same thing at the same time? And where are the school doctors, who allow little children to damage their eyesight, as they are so evidently doing in some of the illustrations? Which last remark brings us back to the point from which the author started—the necessity for co-operation between doctor, teacher, and parent.

Roman Ideas of Deity in the Last Century before the Christian Era. By W. WARDE FOWLER. (5s. net. Macmillan.)

These six lectures, delivered at Oxford for the Common University Fund, serve as an appendix to Mr. Warde Fowler's masterly work on "The Religious Experience of the Roman People." Mr. Fowler presents the rare combination of wide and profound learning with the gift of popular exposition.

The subject is exceedingly complex, and, as the author frankly confesses, admits only of a conjectural and approximate solution. "Roman" is interpreted in the strictest sense of the word, and, before we can discover what were the genuine native beliefs of the Roman people in the first century B.C., we have first to eliminate the foreign elements of Greek mythology and philosophy, and this means that we must set aside or use with the greatest caution our chief sources of information—the Augustan poets and philosophic writers like Cicero, who are content, for the most part, to expound the doctrines of their Greek masters. The only sure foundations on which to build are the fragments of ritual and public formulae preserved in histories and public records, the traces of primitive observances enshrined in antiquarian poets like Virgil, and, lastly, the "Corpus Inscriptionum." The conclusion reached is that the most primitive and most deeply rooted of Roman beliefs was the sanctity or spirituality of the home. An Englishman's house is his castle; a Roman's house was his temple or altar, and what the *Lares* were to the family, that the *genius* was to the individual—a most elusive word ranging in meaning from the Socratic *daemon* to the vulgar use in *indulge genio*, "have a good time of it." Though neither of these beliefs quite rose to our idea of Deity, yet undoubtedly they exercised an elevating effect on life and conduct and helped to generate and sustain Roman *virtus* and Roman *pietas*.

We cannot follow Dr. Fowler in his argument that monotheism was an earlier stage of humanity and polytheism a corruption or degradation. It may be true that among savages and primitive races we find the sense of a "something not ourselves"—a "Mumbo-Jumbo worshipped in the Mountains of the Moon," a Setebos, a mysterious power or entity without form or substance, and that the differentiation and crystallization of this instinctive sentiment such as we see in the Homeric mythology was of later date, but we can find no traces of this primitive religion, if such it may be called, in Latin literature. The Jupiter who absorbed and survived the other Olympian deities, the "Jupiter est quodcumque vides, quodcumque moveris" of Lucan, whose influence in the direction of monotheism is so well traced in the second lecture, has nothing in common with fetish worship.

For Dr. Fowler's exposition of hero worship ("man worship" he calls it) and its special development at Rome in the Apotheosis of the Emperors, we must be content to refer our readers to the volume itself. He is careful to distinguish State religion from the popular creed. The cultured Roman, like Gibbon's magistrate, maintained religion as an indispensable policeman, and Ovid exactly expressed his view in the often quoted line, "Expedit esse deos, et, ut expedit, esse putemus," and the gods of Olympus served the poets as poetical machinery, like the fairies of "Midsummer Night's Dream" or the sylphs in "The Rape of the Lock." We venture to think that the cult of the Caesars began earlier and had taken deeper root than Dr. Fowler will allow. The child of the Messianic Eclogue is born, so to speak, in the God-head, and Nature recognizes his Divinity. The pious farmer of Horace, "Laribus tuum miscet numen [the name of Augustus] et alteris te mensis adhibet deum." Nor can we accept *bibes* as a certain emendation in the line "Purpureo bibit ore nectar." Is not this, too, a "proleptic anticipation"?

The notes give full references to ancient and modern authorities. We wish, however, that Dr. Fowler had made the few alterations necessary to turn the lectures into essays.

The Conduct of Life, and Other Addresses. By Viscount HALDANE. (2s. 6d. Murray.)

The title is unfortunate, in so far as it inevitably reminds us of the proverbial philosophy of a late noble lord, but it would not be easy to suggest one that would cover the subjects of these four remarkable addresses; and we have only to open the volume to discover that there is nothing here of the trite or commonplace. The title Address delivered to the students of Edinburgh has, indeed, much of old-world wisdom, but it has the savour of personality. It sums up the lessons learnt

in the course of a long and varied life, and the chief lesson is to expel betimes "der hässliche Tyran das Ich." Most will turn to the last Address on "Higher Nationality," delivered before the American Bar Association in the autumn of 1913. We quoted lately an unfortunate remark of Lord Haldane, made in the spring of this year, to the effect that from Germany in war we had nothing to fear; it was as our rival in industry and commerce that she was formidable. He would now have expressed himself differently, but the War, so far from disproving, has rather emphasized the ideal here expounded of a higher nationality. Lord Haldane is no visionary, and he cannot foresee, like Mr. Norman Angell, any reign of universal peace. But he does contemplate an extension of that unwritten law of conduct that now governs societies and communities. It is unfortunate that there is no word in English to express this (the Latin *mores* comes very near it), and we have to resort to the German *Sittlichkeit*. *Corruptio optimi fit pessima*; witness German *Kultur*. Notwithstanding, there is between Great Britain, Canada, and the United States a community of sentiment on questions of right and wrong—a common conscience, as it were. This sentiment, which every year strengthens, may, without written treaties or alliances, bind together a group of nations as firmly as it now does societies or countrymen of a single nation, so that a war between them will be inconceivable; and we may add, though Lord Haldane does not go so far, they may be led to take common action against an aggressor who violates the *jus gentium*. Of Lord Haldane's inaugural address as Chancellor of the University of Bristol in 1912 we spoke at the time, and need only add that it is a *κρῖμα ἐς αἰεὶ* worthy to rank with J. A. Newman's "Idea of a University" and J. S. Mill's Address at St. Andrews.

"Truth in History" discusses the burning question whether history is a science or an art, and concludes that it is both. One sentence is typical: "If, a hundred of years after this, an historian, desiring to describe the relations between Great Britain and Germany, or between the former country and France, in the commencement of the twentieth century, were to confine himself to the State papers of particular years, he would be misled."

We have noticed some misprints—two in the French quoted on page 35.

(1) *Highways and Byways in Lincolnshire.* By W. F. RAWNSLEY. With Illustrations by FREDERICK L. GRIGGS. (2) *Highways and Byways in Shakespeare's Country.* By W. H. HUTTON. With Illustrations by EDMUND H. NEW. (Each 5s. net. Macmillan.)

(1) The first of these volumes might well have been entitled "Tennyson's County," for, assuredly, the chief interest in Lincolnshire attaches to his name. Mr. Rawnsley, however, devotes almost as many pages to "a mute, inglorious Milton," the Shepherd of the Lonely Field, as to Tennyson. So thoroughly has the early home of Lincolnshire's poet been explored that it is not surprising, if disappointing, to find nothing that may not be read in the "Life" or in monographs. Of Louth Grammar School nothing but the names of two or three distinguished pupils is given. It is not clear whether the description of the Orbilius, on page 344, refers to the Head Master or to Dr. Tennyson. It serves for a peg on which to hang the author's experiences of Thring at Up-pingham and a story of the Duke of Wellington at Eton. We should like to know which were the "four hamlets" whose voices Tennyson so fondly recalled. An appreciation of the various editions of the poems is indeed a Byway.

(2) Archdeacon Hutton's work is of very different calibre. It has been on the stocks, so he tells us, for the last four years, and he has known Warwickshire intimately for the last forty. He is distinguished no less as an antiquary than as a historian. The literature about Shakespeare is in inverse proportion to our knowledge, and it might seem as hopeless, as in the case of Tennyson, to find even a stray feather in the happy hunting ground; but the Archdeacon has examined on the spot all he writes about and presents places and monuments in a new light. Thus, a visit to Charlecote shows him

how little foundation there is for the poaching story. Here is the inscription over Anne Shakespeare, which is new to us :

Vbera, tu mater, lac vitamq. dedisti,
Vae mihi : pro tanto munere saxa dabo
Quam mallet amoveat lapidem, Angel' ore'.
Exeat Christi Corpus imago tua
Sed nihil vota valent, venias cito Christe, resurget
Clausa licet tumulo mater, et astra petet.

The first and fourth lines are easy to emend, but the third gravels us. Perhaps some of our readers will be able to solve the puzzle. The index gives some hundred references to Shakespeare, his family, and connexions. We cannot help contrasting the character of Dr. Parr with that of the Wesley family in the companion volume. The scenes for illustration in both books are well chosen. If we may venture to criticize, Mr. New's drawings are neat and elaborate, architectural rather than artistic, and leaving nothing to the imagination. Mr. Griggs's sketches show much more poetry and feeling. Their only defect is that they are generally too even in tone, so that the distance is not thrown back as it should be.

Bannockburn. By J. E. MORRIS. (Cambridge University Press.)

We welcome another volume from the pen of the only assistant master (we think we are right in putting it so precisely) who has ever won distinction in the field of history. Mr. Morris's monograph on Bannockburn will add to the reputation which his "Welsh Wars of Edward I" won for him. It shows a rare combination of the vivacity of the story-teller and the patient research of the dry-as-dust. Not that we think he has established all the theories which he puts forward. He has indeed demolished the legend of the army of 100,000 English, but that is merely slaying the slain. He has further made it clear that Sir James Ramsay's view that the Scots were drawn up in circular formation is untenable, for no body of troops can march in such a formation, and if there is one thing clear about the battle, it is that the Scots advanced to the attack. But we do not think that he has proved his point about the site of the battle. His theory that the fight took place on the Carse—that is, the low ground near the junction of the Bannock and the Forth—can hardly be reconciled with the plain statement of Gray, our best authority, that the defeated English Cavalry fell back into the Bannock, and that of the *Lavercest Chronicle*, probably on second best authority, that before the battle the English had to cross a great ditch called the "Bannockburne." Nor can we find any authority for his view that the "battles" of the Scots advanced *en échelon*, the chroniclers' expressions being "in a line" and "two marching abreast." The story of the pits is rejected by our author, and certainly there is not much authority for it. The part played by the English archers remains a mystery; all that can certainly be known is that it was very small, owing either to Edward I's bad generalship or the headstrong impetuosity of the English knights; the battle was in the main a struggle between a solid body of pikemen and a disorderly mass of feudal cavalry, in which the latter came off very badly. A tribute of praise is due to the Cambridge Press for the beautiful typography which enhances the pleasure of reading an eminently readable volume.

The Industrial Training of the Boy. By W. A. MCKEEVER. (2s. net. Macmillan.)

Prof. McKeever is Professor of Child Welfare in the University of Kansas, and has written other books on the training of boys and girls, which are all marked by a certain practical common sense, combined with idealistic tendencies. He sees a movement in the social order, especially of America, towards the raising of common industry into something cultural and spiritual, and he advocates that every boy and girl, of whatever class, should be trained in one of the industries as part of their school discipline. This is not necessarily in order to gain a living, though he believes that "self-support may be regarded as a necessary and happy incident of every forceful, rightly developed personality," but in order that life and character may become the best. For this purpose teachers and parents should confer, that each may profit. A

sketch of a boy's career from infancy onwards provides interesting reading, and some of the methods described could with advantage be followed in England. Prof. McKeever regards vacation tasks as essential to a boy's healthy growth, and he advises that each lad should have definite employment during the holidays, under the parents' supervision, but not necessarily at home. Thus, he gives instances of boys who tended cows or worked on farms; of others who delivered papers or raised vegetables, &c. The book is well worth careful perusal, and the bibliography of American books is excellent.

An Introduction to Logic. By L. J. RUSSELL. (2s. 6d. net. Macmillan.)

Mr. Russell gives the sub-title "From the Standpoint of Education" to his volume; but this appears to be too large a claim for it. Such a treatise would deal far more extensively with the principles of education and the psychology of the child mind than the author attempts. The applications of his subject-matter to the process of educating are not sufficiently numerous or enlightening. But, as a primer of logic, the book fulfils all requirements, though it does not go beyond the scholastic conception of the subject. In one sentence, however, the author indicates that he realizes "that formal logic does not claim to discuss the whole nature of reasoning," and he acknowledges that it does not "adequately represent the living processes of thought." We venture to assert it is in this direction that work needs to be done in the realm of logic instead of along the lines of the medieval formalities. Especially is this the case with regard to the connexion between education and reasoning. The exercises given require thought, since they bear only indirectly on the preceding chapters, and the various lists of books recommended cover a wide field.

The Foundations of International Polity. By NORMAN ANGELL. (Heinemann.)

Mr. Norman Angell has taken notice of the criticisms levelled at his thesis in "The Great Illusion," and in this new book, which consists mainly of addresses delivered to various important bodies, he faces and answers the detractors of his theory. He introduces the argument that material well-being and morality are not opposed, and the moral factor does not cancel the economic in the consideration of national policy. He attempts to prove that the ideas at present shaping the conduct of European States are erroneous and at variance with the facts. Co-operation between nations has become essential for the very life of their peoples, through the dependence between one another for sustenance, and through the decline in the effectiveness of physical force. The political and economic boundaries of countries no longer coincide, and this must be recognized by political authorities, and the habit of "thinking in States" must gradually be superseded by one that realizes the true interdependence of all States. But this cannot be done without more thoroughness of attention than is usually given to politics, and a clearer understanding of what is meant by social forces. Mr. Angell remarks: "Most governments are to-day framed far more as instruments for the exercise of physical force than as instruments of social management." The fundamental assumption of the militant philosophy is that war comes upon us, that it does not appear, nor can it be prevented, by intelligent volition, a doctrine which the author classes not only as anti-social, but anti-human, and fatal to better international relations. To this philosophy he opposes another: "that in man there is that which sets him apart from plants and animals, which gives him control of and responsibility for his social acts—which makes him master of his social destiny if he but will it; that by virtue of the forces of his mind he may go forward to the completer conquest, not merely of nature, but of himself, and thereby, and by that alone, redeem human association from the evils that burden it." It is hardly fair for the reviewer, wise after the event, to prick this iridescent bubble that Mr. Angell has blown. What he has failed to see is that men are governed not by logic but by sentiment, that the highest culture is no safeguard against passion, that the most pacific nation must arm itself if it is to keep its goods in peace, and that so long as there is one great nation in the barbarous stage still adhering to "the good old rule" of robbery, there can be no general disarmament.

The Main Springs of Russia. By MAURICE BARING. (2s. net. Nelson.)

This book is very opportune. After a century of antagonism more or less pronounced, we find ourselves again, as in 1814, fighting with the Russians as our allies against a power which seeks to dominate Europe. We are pledged to one another not to make a separate peace, but to stand or fall together; and it concerns us to know what the Russians are like. No one is better able than Mr. Baring to give us a vivid and sympathetic picture of them. His object in writing this book is to make us better acquainted with them, believing that "between the Russian and the English peoples there are curious possibilities of sympathy, curious analogies, and still more curious differences which complement one another." He

deliberately passes by some important factors of Russian life, such as commerce and industry, the army and navy, and the Jewish question. This enables him to deal more fully with other factors—the peasants, the nobility, the professional classes, and the machinery of government. Nobility, as he points out, has a special meaning in Russia; it is, broadly, officialdom past or present. Peter the Great and Catherine II turned the country into a bureaucracy such as exists nowhere else; and the work of political reform is to recover for the people some share of self-government. The official class resists, and when concessions are made it tries to reduce them to a dead letter. Nevertheless there has been progress of late. There is a great movement towards better education, which receives Government support, but is marred by the meddling of reactionary officials.

The Iliad of Homer. Translated into English Prose by E. H. BLAKENEY. Vol. II: Books XIII–XXIV. (3s. 6d. G. Bell.)

In a graceful preface, dated Granada, reminding us (*longo intervallo*) of Gibbon's *envoi* to the "Decline and Fall," Mr. Blakeney introduces this translation, which has occupied all his leisure hours for the last seven years. He leaves it to others to compare it with the works of his predecessors, and we must be content to say that it will undoubtedly supersede the earlier version in "Bohn's Classical Library." He has taken for his model the Authorized Version of the Old Testament as (to us) "archaistic without preciousness, old-fashioned though without affectation," and he has succeeded in producing a smooth and not unrhymical prose narrative, at once faithful to the original and intelligible to readers who know no Greek. The notes at the foot of the page are discursive, and consist mostly of apt literary parallels from Virgil, Milton, Scott, and the Bible. Mr. Blakeney invites corrections, and we have drawn by a *sors Homérica* the famous passage in Book XVI on the death of Sarpedon: "He washed him in the river stream and anointed him with sweet unguent and wrapt him in ambrosial vestures; and gave him the twin gods, Sleep and Death, for swift escort, who speedily set him down in broad Lukië's pleasant land." Read "with waters from the river," and "sweet unguent" for "ambrosia" is a weak and needless paraphrase. Much of the beauty is lost by not preserving the order of the Greek: "and delivered him to swift pursuivants to bear, Death and Sleep the twins; these will quickly set him in *Lycia*, that broad and happy land." "Lukië" is to us a terrible eyesore. To be consistent, Mr. Blakeney should have written "Apollon" and "Troës in Lukioi."

Matriculation Latin Course. By B. J. HAYES and A. J. F. COLLINS. (4s. 6d. Clive.)

This course is well adapted for its purpose, and will furnish the matriculant with a *quantum suff.* of Latin. We should be slow, however, to recommend it for general use in schools. Grammar occupies 266 pages, and translations (unseen) and exercises 73 pages. The exercises, moreover, are not based on the Latin extracts, but consist of independent and disconnected sentences. This proves to us that the examination itself needs reforming. Instead of sentences a passage of continuous prose should be set, as in Oxford Responsions, or else a free composition.

The Essentials of French Grammar. By C. W. BELL. (2s. Harrap.)

Most teachers have wished at some time or other that they could compile and use their own textbooks, but in most cases the Fates, in the shape of head masters or lack of time, block the way. Mr. Bell has had the good fortune to test this grammar for six years at the King's School, Canterbury, before presenting it in its present shape to the public. The experience thus gained has enabled him to supply some deficiencies in the popular school grammars; to treat, for instance, more fully the relative and demonstrative pronouns and the uses of prepositions. Mr. Kirkman has by anticipation taken up the bold challenge launched at the reformers, and here we need only enter a mild protest against the old list of exceptions, *e.g. cals, poux, baux*. These are all in large type, and therefore intended to be "elementary." It is a pity, too, that what we may now call the authorized grammatical terminology has not been followed.

(1) *La Souris Blanche.* By HÉGÉSIPPE MOREAU. Edited by MARC CEPII. (2) *La Canne de Jonc.* Adapted and edited by THOMAS KEEN. (Each 1s. Bell.)

(1) A prettily told story of the Dauphin's imprisonment in the Castle of Plessis-lez-Tours, where his pet mouse is converted into a fairy. The notes are perfunctory, and instead of tags of grammar we want explanations of *lez* in the name and of *Amphitryon*. (2) This, perhaps the best known of the three stories in De Vigny's "Servitude et Grandeur Militaires," is here somewhat abbreviated, and the notes are in the form of a glossary, partly English and partly French. This seems to us a happy compromise. Thus for *lueur, lumière faible* is adequate; but *canne de jonc*, "Malacca cane," would need in French a lengthy definition.

Second Year Direct French Course. By G. A. ROBERTS and H. J. CHAYTOR. (2s. Clive.)

The course consists of the life of a French boy, first at a primary school, then at a *lycée*, told in short chapters, with a visit to Paris, and accounts of the Law Courts, the Post Office, &c., interspersed. Following each chapter are sentences for retranslation, questions and exercises. The short French grammar in French is excellent, giving all the essentials, and nothing more. The Course, with a competent teacher, should ensure a mastery of the elements of French. Our only criticism is that Henri shows no trace of French *esprit*.

Steps to the Writing of French Free Composition. By M. L. HART and HARDRESS O'GRADY. (9d. Blackie.)

The scheme of this manual is a Reader composed partly of suitable extracts, partly of compositions written *ad hoc*. These serve both for questions grammatical and semantic, and also as material and models for similar compositions. In the first half of the book the pupil is required to rewrite the passage with a change of gender, number, or tense. In the second he has to change indirect speech into direct, verse into prose, and to compose fables, &c., in imitation of the model. The plan is well carried out, and Mr. O'Grady proves himself a no less competent teacher of French than of English composition. To pick out all the hard words and ask for an explanation might well have been left to the teacher.

A Grammar of the German Language. By ERNEST CLASSEN. (Longmans.)

This grammar is frankly Old Style, and to adherents of the *ancien régime* it may be commended as thorough and well printed. The author does not indicate how he means it to be used. Thus, in the first chapter, the lists of irregular genders (all in the same type) occupy seven pages. "In the exercises an effort has been made to make all the sentences bear on a central theme." What is the central theme in Exercise 6?—"The coachman's hands are very large. The admiral's son reads three novels every week. Crocodiles have large teeth."

German Grammar. By G. H. CLARKE and C. J. MURRAY. Second Edition. (5s. Cambridge University Press.)

This admirable German grammar for higher forms has been revised in the second edition, and a few oversights have been corrected.

Willkommen in Cambridge, third enlarged edition, by KARL BREUL (1s. 6d. net, Cambridge University Press), gives full and up-to-date information on all that a German *Gast* is likely to require. No man has laboured more strenuously than Prof. Breul to promote a cordial understanding between his native and his adopted fatherland, and it is the "cursed spite" of the times that his invitation will appear for the moment a mockery. We would, however, commend the pamphlet to American and English students as the best pocket guide we know to the University, its history, libraries, and other institutions. It tells the inquirer where he will find answers to all the questions he is likely to ask.

"Britain and her Neighbours."—Book V, 1485 to 1688: *The New Liberty*. Book VI, from 1688: *The Modern World*. (1s. 8d. each. Blackie.)

A good feature of this historical series is the provision of certain leading incidents and great figures in the history beyond our shores. These are, wherever possible, connected with English history, and thus the pupils' imaginations are directed to other nations, and a far truer conception of their own country's position and achievements is obtained. The method of telling the story is, however, unchanged, and concentrates on battles and kings; but could some account of social conditions have been included the value of the books would have been much enhanced. Book VI contains this element to a certain extent in its chapters on the Industrial Revolution, the Reform Bills, and the Heroes of Peace. The tendency of to-day is inclining towards the account of the people in general, and the history of the future must bestow attention on this important aspect. The illustrations, consisting of reproductions of famous paintings as well as smaller sketches, are particularly good, and the maps and charts useful.

A Source-book of London History. Edited by P. MEADOWS. (1s. 6d. net. Bell.)

Books of this kind should be the indispensable companions of all history textbooks, for they give a reality to the meaning of a nation's story that no other material or method can give. From the earliest times to the end of the eighteenth century are here dealt with by extracts from not only documents and charters, but also contemporary descriptions, sermons, and chronicles. Each set of extracts is preceded by an introductory paragraph giving the necessary historical details, and comparisons between different periods are suggested. In this way Mr. Meadows has made the volume very helpful to young students. To illustrate the variety of material we may mention the various charters of William I,

Henry I, John, &c.; a letter from Edward III after the Battle of Crécy admonishing the youth of London to become properly trained in the use of the bow and arrow; one of Lydgate's poems; regulations concerning strangers in London in 1485; a view of London written by a German traveller in 1600; the complaint of Evelyn against London smoke (!); the postal arrangements of 1681, wherein it is claimed with pride that in five days an answer can be obtained from three hundred miles away at a cost of 6d. if each side sent one sheet; and the book closes with an account of London's trade in 1791. The editor hopes that the chronological arrangement and the selection of passages dealing with events and circumstances that have a definite importance to the City will make his volume more than a collection of historical scraps. We can assure him that a vivid picture of the growth of London and the surroundings of its citizens can be obtained by students who use his book when they read history.

Heroes of Exploration. By A. J. KER and C. H. CLEAVER.
(1s. 6d. Blackie.)

There is good method in the arrangement and choice of the personages discussed in this volume; the series is chronological, and all parts of the world are covered in the travels recorded. The hardships and braveries of explorers, from Pizarro to Captain Scott, are recounted in a straightforward manner, though not always with imagination. The paragraphs descriptive of the highway formed by the St. Lawrence in the account of Cartier are some of the best, and had this been typical of all the book our praise would have been unstinted. But too often the narrative is a mere relation of facts, and of such volumes there is already a surfeit. However, an adequate idea is obtained of the main features in the history of exploration and of the sacrifices it has entailed.

Germany and the Present Day. A Short History. By A. W. HOLLAND. (2s. net. Murby.)

It is perhaps an advantage that this second and revised edition appeared before the War broke out. History sees things in perspective, and the War is apt to magnify the foreground and distort the vision of the past. Mr. Holland has written a brief and impartial history of Germany, and it hardly needed the Foreword of Mr. Norman Angell to correct our anti-German prejudices. By his statement of the German case, put into the mouth of a German friend, a travesty of past history and a gross slander on England, Mr. Norman Angell provokes an angry retort, which is the last thing the author would desire. If, as is probable, a third edition is called for, we would suggest that the Foreword be omitted and a table of dates substituted.

"The World's Romances."—*Dante and Beatrice and Aucassin and Nicolette.* Retold from the Old Chronicles by W. E. SPARKES. (2s. 6d. Nelson.)

The object of compiling these two romances is not obvious; the one is a narrative of mystic love and suprasensual passion, the other a pastoral idyll. "Old Chronicles," too, is a strange designation of the "Vita Nuova" and the twelfth century "Fabliau," which are, of course, the only two available sources. Mr. Andrew Lang's translation of the latter is deservedly praised, but the more faithful version in Mr. F. W. Bourdillon's scholarly edition assuredly deserved a mention.

British Sailor Heroes. Series II. (Heinemann.)

We are glad to see these lives of "Admirals All," from Boscawen to Nelson, first published in 1899, now included in the "Hero Readers Series." For the accuracy of the history the name of the editor, Sir J. Knox Laughton, is a guarantee, but we must enter a protest against the slipshod English that he has allowed to pass. One sentence may serve as a sample: "Arriving at this point, and making it quite clear that there were plenty of friends who omitted nothing to make the early steps of the naval career easy and assured, a word is wanting on the question of pennilessness."

Economics for Commercial Students. By ALBERT CREW.
(3s. 6d. net. Jordan.)

A brief political economy, drawn up in paragraphs with black type headlines. At the end of each chapter are questions, and an appendix gives hints for answers. The teaching is clear and impartial, and on burning questions such as Tariff Reform, Trade Unions, Nationalization of Railways, the arguments on both sides are stated. The work has been brought well up to date, and there is a page on the Moratorium.

A First School Calculus. By R. WYKE BAYLISS, M.A.
(4s. 6d. E. Arnold.)

Suitable for use in schools owing to the method adopted, which is largely that of questions in sequence, the answers being at the end of the book and occupying over one-third of the pages. Incidentally one may suggest the advisability of publishing an edition without these answers. There are three parts, the third

containing only ten pages. The first part deals with differentiation and one of the chief points worth mention is an ingenious and at the same time intelligible method of dealing with the exponential and logarithmic functions without using higher algebra. The presentation is clear and the questions well graded. No stress is laid upon results. The second part is concerned with integration and the two parts can be taken concurrently by those teachers who wish to do so. The third part is on Taylor's Theorem. While understanding the temptation to include these few pages, it seems unsound, in our opinion, to introduce this theorem until the question of convergency has been discussed.

Plane Geometry. By A. W. H. THOMPSON, B.A.
(7s. net. Cambridge University Press.)

A new analysis of plane geometry, finite and differential, containing 112 pages of very condensed material, in the nature of a memoir, and presupposing a high degree of mathematical training on the part of its readers. Using the author's terms, there are two ways of regarding geometry. One is by sight or figure and the other by a symbolic representation of the figure. It is the second method that is used here. One advantage of the new method is its automatic treatment of sign, leading for instance to a new treatment of the trigonometric functions. There is a large collection of exercise examples, most of them leading to new and in some cases interesting results.

"Blackie's Experimental Arithmetics."—*Teacher's Guide to Book VII.* (1s. 6d. Blackie.)

The Guide supplies on the opposite page to each exercise either the model working of a sum, or hints for working, or cautions against pitfalls. These are excellent, but we hope some caution is taken against the book falling into the hand of pupils.

The London Matriculation Directory (No. 68, September, 1914).
(1s. W. B. Clive.)

The University Correspondence College continues to prosper under the direction of its capable Principal and distinguished staff of tutors. Of the Matriculation candidates who passed in the last academic year, 335 were U.C.C. students, and of the 114 B.A. Honours gained in 1913 the College claims 78. The Directory gives fourteen of the papers set last September, with solutions of nine. These, in particular the Science solutions, are very helpful. We do not see the use of giving answers that may be found in any grammar. In the Latin sentences *haud scio an* does not mean "I am in doubt," and, in No. 8, for *possis* read *poteris*. Attention is called to misprints more numerous than should be found in University examination papers.

Wild Flowers as they Grow. By H. ESSENHIGH CORKE and G. CLARKE NUTTALL. Sixth Series and Seventh Series.
(Each 5s. net. Cassell.)

In reviewing the earlier series we have called attention to Mr. Essenhigh Corke's work as among the best samples we know of coloured photography. In the two latest series we may select as specially effective a beautiful Spring Gentian, Butterfly Orchis, Stinging Nettle, Henbane, Sea Holly, Pasque Flower, Green Hellebore. Mr. Nuttall supplies a pleasant running commentary, partly technical, calling attention to fertilization, arrangement and uses of parts, &c., and partly plant lore derived from the old herbals and similar sources. Thus, an unnamed author about the middle of the seventeenth century records that the meadow saxifrage may be found "on the back side of Grayes Inne, where Mr. Lambe's conduit head standeth." We can discover no principle in the selection of the flowers, or the order in which they are arranged. Some are common weeds, and some among the rarest in the British flora. Though not suitable for textbooks, they should find a place in school libraries as books of reference.

"Perse Playbooks."—No. 2, *Poems and Ballads.* No. 3, *Dramatic Work.* By BOYS OF THE PERSE SCHOOL. (1s. each. Heffer.)

There are unquestionably some boys at the Perse School who can write very pretty verses. The best of the poems are, perhaps, the ballads, some of which have the real ballad ring. This fact will be of interest to those who hold that the intellectual development of the individual follows in broad outline the intellectual development of the race. Mr. Caldwell Cook, the editor of the Playbooks, is a genuine enthusiast, who evidently has the gift of stimulating whatever creative gift a boy possesses. His introductions should be read and pondered by teachers who believe in the educative value of self-expression. He holds that 70 per cent. of schoolboys between ten and fourteen can write creditable poetry if they are given the chance. His remarks on the nature of the childish poetic faculty are especially valuable. Of the two dramatic pieces, "Thor's Hammer," written by boys in Form IIIB, is the more attractive. "The Cottage on the Moor" is ostensibly a historical piece—presumably one of the pieces of which Dr. Rouse is thinking when, in

the Foreword, he says that history can be learnt by acting it; but in reality it contains only a trace of history. There is a rather pompous list of the "Perse Players," with the names of five distinguished actors and literary men as honorary members. Surely children can act plays without flummery of this kind. It is also a nice point whether it is good for boys of twelve years of age to see the admiration of the world demanded for their little productions, however good they are.

A Garden of Girls. By MRS. THOMAS CONCANNON, M.A. (3s. 6d. Longmans.)

"I offer this little book, which aims at a reconstruction as faithful and accurate as careful research could achieve, of the *real* school-life and education of *real* little girls in many ages and in many lands to all those interested in the education of Irish girls of to-day—the women of a great and splendid to-morrow." This is the author's dedication, and we congratulate her on the way she has fulfilled her task. The nine flowers in her garden are very fresh and charming. There are Darlugdacha (a schoolgirl of St. Brigid) St. Elizabeth, Cecilia Gonzala, Margaret More, Marie Jeanne d'Aumale, two schoolgirl diarists of the eighteenth century (Hélène Massalski and Anna Green Winslow), Pamela (Lady Edward Fitzgerald), and Marjorie Fleming. The stories are delightfully told, and deserve better printing and binding than has fallen to their share.

Piers Plouman Histories. Junior Book VII. By E. H. SPALDING and PHYLLIS WRAGGE. (2s. G. Philip.)

This is the concluding volume of the series, carrying the story from 1485 to the present year of grace, and we congratulate Miss Spalding on accomplishing a task that needed sound judgment and understanding of the mind of a child. In a previous notice we explained the plan of the series and commended the illustrations, drawn mainly from contemporary sources. The nearer we approach the present the harder becomes the work of selection. The authors have wisely abandoned the temptation to aim at completeness, and have omitted whole provinces—for instance, Ireland and India. The style is plain, and there is no attempt at word painting; in fact, we should have liked a little more colour. It is the personal traits, the historical *mots*, the epigrams, that stick in a child's memory.

The Country's Call. A Short Selection of Patriotic Verse.

By E. B. and MARIE SARGANT. (2d. Macmillan.)

The editors have been fortunate in obtaining the permission of publishers to include many copyright poems. Lionel Johnson, Edmund Garrett, and Brunton Stephens are names so far unknown to the anthologist, and Browning's "Soldiers All" will be new to many. We wish that, in place of "Rule Britannia," as faulty in sentiment as in grammar, room had been found for one poem of Tennyson's.

The "A. L." Welcome Readers.—Book I to Book V. (From 6d. to 10d.)

The popular "A. L." Bright Story Readers have been continued, several in a volume, strongly bound in cloth. The tales and narratives are graduated so as to cover the ages of five to thirteen. The selection is good, and the printing is all that can be desired.

COLONIAL AND FOREIGN NOTES.

FRANCE.

Such news as trickles through from France is mostly coloured with war. The ordinarily peaceful *Bulletin administratif* of the Ministry of Public Instruction publishes new laws relating to the cumulation of military pay with civil salary during service with the colours and to the allowances for families whilst the supporters are in the field—1 fr. 25 c. with an addition of 50 c. for each child under sixteen years of age. The personal news gains peculiar interest. Thus the *Bulletin* reports that M. Gérardin has been appointed *professeur d'histoire et lettres* at the *collège* of Verdun, and will enter on his duties after the long holidays. About the time when M. Gérardin should be mounting the cathedra, we read a German official statement: "Verdun has been successfully bombarded." Teachers, like booklets, have their fates.

We gave recently an illustration of the fees for attendance of a boys' secondary school in France. Let us turn to the girls. A new *lycée national de jeunes filles* has been established at Caen (Calvados), and was to have been opened on October 1. It is situated in the Rue Pasteur on land formerly belonging to a now dissolved con-

gregation of Ursulines. Both day pupils and boarders will be received, the scale of payments to be made being fixed thus:

Classes.	Externat simple.	Externat surveillé.	Demi-pension.	Pension.
Secondary classes:				
{ 1st period	162 f.	216 f.	270 f.	576 f.
{ 2nd period	135	189	270	576
Primary classes:				
1st and 2nd year ...	90	135	252	522
Infants' class	63	108	252	522

The figures differ somewhat according to local conditions. A similar *lycée*—France is looking after the girls—has been established at Limoges (Haute-Vienne), where the scale of payments will be as follows:—

Classes.	Externat simple.	Externat surveillé.	Demi-pension.	Pension.
Secondary education:				
{ Higher period	126 f.	180 f.	378 f.	684 f.
{ Lower period	108	162	360	666
Primary classes	72	126	315	594
Infants' class	54	99	288	558

A big French girl preparing herself in a *lycée* for the *baccalauréat* would cost her parents for school fees, on an average, if a day pupil, £6 or £7; if a boarder, from £24 to £30; and some of the new boarding houses are handsomely equipped. Young girls, it will be seen, cost much less.

The armies that are fighting for the safety of France include

Education to go on. twenty-five thousand *membres de l'enseignement public*, or State teachers. The *recteurs d'académie* are bidden, in co-operation with the

Inspectors, to keep lists of those who distinguish themselves and of those who fall, dead or wounded, on the field of battle. In this way is to be compiled a Golden Book of academic heroes. Besides the teachers who have obeyed the call to arms many others, not liable to service, have offered themselves for posts of action. Schools have opened their doors to receive the wounded. Some examinations have necessarily been postponed. But the work of education is to be continued with all possible energy. Temporary buildings are being rented where the schools have been turned into hospitals, and old teachers have been recalled to fill the gaps that mobilization has caused. The resolve of France is expressed by the words of a recent ministerial circular: "Bien que son capital effort s'emploie, à cette heure, à tendre toutes les énergies vers la lutte sacrée où la Patrie est engagée, le Gouvernement de la République se préoccupe aussi d'assurer, dans les manifestations essentielles, la continuité de la vie nationale." That is in the spirit that gives victory.

GERMANY.

Is Frankfurt-am-Main famous for the Römer? As the birthplace of Goethe? It is nought; Frankfurt is more

A Latin Journal.

notable as having a journal appearing regularly ten times a year and written wholly in the Latin tongue. *Scriptor Latinus*, so it is called, is published by Herr Hans Lützenöder, and costs four shillings a year, a small sum for much brightness and learning. Here you may read, in Latin which, if not Ciceronian, is what Cicero might have written had he been at a German Gymnasium, an essay on the Futurists, the "fair copies" that F. C. Baur, founder of the Tübingen School, dictated to his boys when he was a schoolmaster, or a version of a long passage from Sir Walter Scott's "Antiquary." To show your own skill as a Latinist, you are invited to translate a highly technical description in German of a Zeppelin airship. Renderings, old and new, into Latin verse, are contained in the journal; perhaps it is national prejudice that makes us think English scholars do these things better. Says a German Review: "He who has allowed himself to be guided for a year by this *Scriptor* will look at his Cicero or Virgil with different eyes." Any teacher or schoolboy that opens it will find, we believe, something to amuse him. Let us give a specimen of the enigmas with which it quickens the wits of the *Gymnasiast*:—

"Me clamant Troes mala passi, teste Marone:
Litterula brevis me spectant, urbe cadente."

UNITED STATES.

In the *School Review* (XXII, 7) a writer on "Standards in American Education" makes some incidental remarks on the German primary school. We reproduce them without comment. "The American observer who fails to visit the *Volksschule* and who comes back advocating a wholesale adoption of the German plan of education has missed one of its most char-

acteristic elements. The German *Volksschule* is literally an instrument of social suppression. It destroys initiative and limits the horizon of its pupils. It is the home of dogmatic conservatism. If there are two institutions in the world which we do not want in this country, they are the German Army and the German *Volksschule*."

With what eyes our readers view the transformation that is going on in American education we do not stay to inquire. Let us illustrate, however, the nature of it by means of an able article on "Education Modernly Speaking" in the New England *Journal of Education* (LXXX, 6). "To-day," says the author, "you will see boys pruning and spraying apple-trees in the schoolground, and that as part of their school work. At East Boston they may be found binding books, whilst the girls learn to make fires and beds, to sweep and to cook, or to weave rugs on primitive looms. In some counties of the West and South schoolboys are encouraged to organize pig clubs, through which they learn to select and raise pigs, the boy who raises the biggest and the best receiving a prize. All this is done under the direction of the County Superintendent of Education, encouraged by the United States Department of Education. It was not always so. When I was a boy," continues the writer, "we played leap-frog on the way to school, but it was not counted as a part of our education. I learned to sew at home and hemmed towels and made holders and braided rags for mats. I cut and dropped potatoes in the spring and picked squash-bugs later, and apples later still. Some of the neighbours' boys, having pigs in the family, fed them and sometimes milked the cows. The girls did much housework, but never knew they were studying domestic science. None of these things were thought of as education, and a man who had done them all his life instead of going to school was spoken of as having been deprived of an education." Nowadays these miscellaneous duties are being fused into the work of education, in which schooling, in the old sense, is but an incident. Another article in the same journal, on "The School of the People," enables us to indicate the effect of the transformation on the training of the American teacher. Of the teachers prepared by the State Normal School, Wisconsin, we learn that they must not only have a mastery of the subject they are to teach, but they must know the subject in its relation to the work of the home and to the life of the community. Those sent to the rural or State graded schools must be able to do such things as these: to pick the best seed corn ear out of a bushel of ears, to splice a rope, to choose the best milk cow out of a dairy herd, to tie the hitch rein to a post and also to a rail, to measure and find the number of bushels of wheat in the bin or of corn in the crib, &c. In other words, the product of the Normal School should be able to establish the points of contact between the work of the school and the work of life. Teachers must have a mastery of books, but they must possess as well common knowledge and use common sense in their teaching.

In all this we see the danger that æsthetic education may suffer. Be it not forgotten, however, that much Old Education still flourishes in the United States beside the New. Let it never be supposed that we underestimate the peril of generalizing, and of all countries the United States is the most dangerous to generalize about. Towards whatever end, there is zeal for education, and increased outlay for it. In the 195 American cities having more than 36,000 inhabitants the average expenditure a head for education was 5.02 dols. in 1912, an increase in eleven years of more than 39 per cent. Salt Lake City spent 7.01 dols.

NEW SOUTH WALES.

The educational system of New South Wales is well organized. Let us exhibit the position of teachers in primary schools. They are divided into three classes I, II and III, each class being subdivided into two grades, A and B. There are, in addition to teachers classified in this way, a considerable number of teachers ranked as "Unclassified" and as "Junior Assistants." Before being definitely appointed in any of these capacities a person must give evidence of good character and physical fitness. With some exceptions candidates for appointments as teachers must have satisfactorily completed a course of Training in the Teachers' College. The pupil-teacher system has lately been abolished. He who would become a teacher must first succeed in a competitive examination, open to those not under fifteen years of age, and success makes him a Probationary Student in one of certain selected District Schools, where he goes through a course of preparatory instruction and training. Probationary Students, at the end of their courses, submit themselves to a competitive examination for

admission to a Teachers' College, where most of the places are reserved for them, only a few being left for those who have had a good secondary education or have graduated at a University. In the Teachers' College the ordinary course is a two years' course, qualifying for a Class II Certificate, but the College also provides other kinds of course of shorter and longer periods qualifying for other classes of certificates. Not immediately on leaving the Teachers' College are students classified and certificated. They are temporarily graded as ex-students of the First or Second Class for a period which varies from one to two years according to the nature of the course taken at the College. At the expiration of this period the ex-students become eligible for permanent classification, and this is determined after consideration—(1) of their college record; (2) of the result of their examination at the College at the end of their course; (3) of their teaching record of one or two years as shown by the Inspectors' reports during the prescribed period. Their classification once determined, promotion to a higher class or division of a class depends, with certain exceptions, on their satisfying the requirements of the Education Department—(1) as to "efficiency," by obtaining a certain number of marks, assigned upon the consideration of Inspectors' reports on their work in the schools; (2) as to "attainments," by passing in the prescribed manner the Teachers' Examination held annually by the Department.

Primary schools are divided into seven classes, and the principal teachers must have a specified qualification. We give the salaries and classifications for the first three classes:—

Salaries.

Class of School.	Principal.		Misses' Girls'.		Misses' Infants' Department.		1st (Man) Assistant.		1st (Woman) Assistant.

English classic (to be improved by the Inspector) may be used instead of the Sixth Reader and the school paper, and for the same class. In the needlework for girls of the fifth and the sixth class, the sampler—pride of our grandmothers!—has been abolished. Yet the sampler has been dignified by being enlarged into a curtain for "Peter Pan."

A teacher writes in the same journal of his first school in Queensland. For a man (with a wife) the salary was £100, with a capitation of £28 and a house valued at £13. Arrived after an exhausting journey from Brisbane at his destination, the teacher found a school reserve of twenty acres closely and heavily timbered, and unfenced—the usual little school building and residence of that day, set in an oval clearing three chains by two, walled in on all sides by heavy timber, the whole on a little tableland, strewn with blocks of basalt, on the west slope of and almost at the top of the Main Range. The local settlers had not been many months on the land. They were busy building huts, and fencing in their land, going off at intervals to do some shearing in order to earn bread meanwhile. There were only thirty children on the roll of the school; but outside there was labour in plenty. An unfenced paddock the teacher converted into a garden, clearing off the surface wood and removing basaltic blocks from the subsoil. Shrubs planted in this garden were destroyed by opossums. Bush cattle congregated on the lee of the house and mice innumerable swarmed into it. Amid such distractions had the early Queensland teacher to do his chosen work.

In Queensland, as in some other British colonies, and notably in South Australia, there are many Germans. Last July a deputation waited on the Minister for Public Instruction to complain of the injury done to the State schools by the withdrawal of children from them to attend German schools. On certain days the pupils are taken away for half a day to receive religious instruction and to learn the German language in special German schools. Sometimes the teacher is left with only six or seven pupils, and he is prevented by this from gaining a higher classification for his school. The Minister promised to weigh the difficulty—weighing it perhaps now with different scales.

CAPE COLONY.

In the domain of education, as in other domains, the War is making itself felt. The Education Department announces the withdrawal from its Office of ten members of the staff for military service, so that, deprived of one-fourth of its officials for an unlimited time, it must ask for indulgence in respect to the answering of letters. Again, many teachers have also been called on to fulfil their obligations in connexion with the Citizen Defence Force, and school work has in this way been injured. Yet the patriotic self-devotion of the teacher is, with its example, a compensating value to his pupils.

The commentary on this paragraph—we give only the facts—must be supplied by our readers for themselves. The School Board for the Cape Division has recently adopted the following regulation regarding the employment of married women teachers:—"A woman teacher on her marriage will be considered by the Board to have terminated her appointment under the Board from the date of her marriage. Notification of the date of her intended marriage should be given at least one month beforehand. The appointment may, however, be continued provisionally at the discretion of the Board and be terminable at short notice."

UNIVERSITIES AND SCHOOLS.

LONDON.

Somebody observed years ago that it is difficult to write hexameters when six-footed barbarians are at your gates. Nevertheless, the business of the University is proceeding as usual, except for a dearth of students, which is particularly noticeable in the second and third years of the course. Many have taken commissions or joined the ranks. No official statistics are available, but I understand that nearly a thousand applications for commissions in the Army have been forwarded to the War Office through the University, and about half of these have already been gazetted to commissions.

Among others, the Vice-Chancellor, Colonel Sir Wilmot Herringham, has gone to the front as Inspector of Military Hospitals. Another Army medical officer, Sir Alfred Pearce Gould, is to act for him during his absence. As to the students who remain, the Officers' Training Corps is busy training them for active service. The Vice-Chancellor has given an assurance, through the columns of the *Times*, that the Senate will do all in its power to render it easy for members of the University, and especially for cadets of the Officers' Training Corps, to offer their services to the Government. The War has dwarfed our domestic quarrels, and will probably have the further effect, in view of financial stringency, of retarding any reorganization of the University on the lines of the Royal Commission Report or otherwise.

The new University of London Club opened in August with formality at 19 and 21 Gower Street.

OXFORD.

We have now had two weeks of term and are getting used to our strange conditions. There are about fourteen hundred undergraduates in residence—rather less than half the usual numbers of the University. Quite half of those have joined the Officers' Training Corps and will probably go to take commissions. The corps is taking none who does not declare his willingness to take a commission, but cadets are divided into two classes, according as they are willing to take one now or at the end of term, or as they are unable for any reason to take one till later. The first class are being put through a more thorough training, with more frequent drills and lectures, and probably few of them will be here next term. Of the others some will be ready at Easter, and others, for various reasons, cannot go till summer. If the War lasts over the year—which Heaven forbid!—we shall have no undergraduates except Americans and invalids, and most of the graduates under forty will be gone also. If I may generalize from the College I know, everyone has joined the O.T.C. who possibly could.

Meanwhile drilling is the order of the day, and those wonderful works, "Infantry Training" and "Field Service Regulations," are more studied than texts prescribed for schools. Games are played because no one drills every day in the week, but only with scratch sides, for on every day in the week someone is drilling. The Union has given up its formal debates—its junior officers are all at the front—but is holding informal fortnightly debates. There are to be no University rowing events—no Fours this term and no Torpids next. Colleges are doing a little rowing, but are not having any races. Curiously enough, work has not suffered as far as I can judge. It is a relief to turn away from the papers and telegrams to a remote and quiet problem like the Deduction of the Categories, and, though few can do so without some form of gentle compulsion, if the compulsion is provided in the shape of an essay, they seem to do it well.

We shall probably not see much legislation this term, partly because most legislation involves expenditure, but mainly because Council will be so much occupied with keeping the University going that they will have no time to try to improve it. We are indeed to have one more, and we hope a final, attempt to reform Council. Three Heads of Houses, six Professors, and nine M.A.'s is the new plan, but that proposal had no doubt been considered and drafted before the present distress came upon us. In the meantime Council is probably discussing the financial position and how to cut down expenditure. In examination and matriculation fees, in dues, in college contributions, in proctorial fines, the University will lose thousands. The loss has been estimated by some at £10,000. It will be difficult to devise many economies. The payments made by the University are in many cases so regulated by statute that they will not easily be able to follow the line taken by some colleges of reducing all their salaries proportionately. It looks as if some exceptional means of raising money will have to be adopted.

We are not, like Cambridge, establishing Louvain in our midst; but we have with us several of the Louvain professors and a considerable number of students. French is becoming almost the ordinary language of high table. I cannot resist recording the indignation with which a distinguished philosopher and theologian from Louvain, who himself suffered at the hands of the Germans at Louvain, related that, after he had written an account of his sufferings to a Belgian paper, the *Kölnische Volks Zeitung*, a great Catholic paper, sent him a bulletin called a *Wahrheitsnummer über Louvain*, telling him, with German truth and exactness, what had really happened to him. "Ça dépasse tout!"

The University, and Balliol College in particular, are mourning the death of Sir William Markby. He combined the wisdom of a great lawyer with extraordinary political freshness and courage.

and a goodness and beauty of character that won the hearts of all who met him.

CHERWELL HALL.—During the year ending June, 1914, twenty-three students have obtained the Cambridge Teacher's Certificate, four being placed in Class I. Eight students obtained the Cherwell Hall Certificate for junior form teachers, of whom three had distinction in practical teaching. Fifty students have entered for the year beginning October, 1915, but of these, some who were coming from India, were unable to obtain passages, and so will postpone their arrival until January, 1915.

CAMBRIDGE.

A very short letter will more than cover all there is to say after a fortnight of term. We are said to have about thirteen hundred men in residence, of whom seven hundred are being trained by the O.T.C. Men are getting commissions or leaving us for one sort of service or another every day—not in masses, but in units that mount up. By the end of the term, if the ideals held out by Colonel Edwards are realized, a great many of his seven hundred men will be qualified to be officers, and, it is to be feared, there will be only too many gaps for them to fill. The Government, of course, may take to promoting N.C.O.'s, but in any case it seems clear we shall have fewer men next term. Sports are necessarily much in abeyance, especially rowing. The O.T.C. occupies its men five afternoons a week.

Most controversial business is being postponed by the Council—the "Little-go" proposals and the compulsory military training in particular. The new Divinity degree ordinances were to be discussed the other day, but there was no opposition of the least significance. One suggestion of a minor kind was offered by a friendly critic. Probably the ordinances will be carried very shortly. It is possible that the vacancies in the Council may be filled by agreement between the parties. Efforts are being made to do without filling as many posts as can be managed. We are a proctor short, and examiners will be fewer—as, indeed, they may be with so few candidates. Where will the Classical Tripos be? Probably, proportionately, it has contributed more men than any other.

The *Cambridge Review* has issued a 6d. supplement giving lists of all Cambridge men serving, so far as is known. It may be of interest to your readers. Dr. John R. Mott is to be here for three busy days at the beginning of November. Dr. Holland Rose is giving open lectures on "The Origins of the War." Four lectures on "The Relations of Christianity and War" are arranged for, to be given in turn by Colonel H. J. Edwards, C.B., Messrs. T. R. Glover and Edwyn Bevan, and Prof. Burkill. Mr. A. A. Jack is giving the Clark Lectures on English Literature at Trinity College. His subject is Chaucer.

The town is considerably hit by the War. Lodging-house keepers and booksellers are the classes most affected; for both it looks disastrous. A good many Belgians have come, but the general invitation to Louvain is complicated by fear as to what the Germans may do with what is left of the University's outfit if the invitation is officially accepted.

SCOTLAND.

Principal Sir James Donaldson's address at the opening of the session was concerned mainly with the War and German culture. He emphasized the tyranny of the Prussian autocracy in education and

St. Andrews.

scholarship, taking as instances the "Bible and Babel" controversy, in which the foremost German theologians had to yield to the ideas of the Emperor, and the series of Teubner classical texts, to which only Germans were allowed to contribute, although recently one Scotchman, Prof. Lindsay, had been admitted into the number of editors. The German culture, of which we had heard so much, had its origin and its growth solely in the kingdoms and princedoms which were outside Prussia, and Prussia could scarcely boast of a single man who occupied a high rank in German literature, philosophy, or science.

Glasgow.

The undergraduates have unanimously elected President Poincaré as Lord Rector for the usual term of three years. It is hardly necessary to say that the election has given the greatest satisfaction. This is the only occasion on which the head of a State or a foreigner has been Rector of a Scottish University. In 1843 the students of St. Andrews chose in pique the Tsar of Russia as Rector; but this was merely an incident in a quarrel, and it was not a valid election. The Chancellor, Lord Rosebery, has given £2,000 to the University for the purpose of endowing a Rosebery Studentship in Scottish History. The conditions of the award of the Studentship are under consideration by the University Court and the Senate. The Egyptian Explora-

tion Fund has presented to the University some valuable specimens of papyri from Oxyrhynchus, including one of the oldest manuscripts of any part of the New Testament in existence. The University Court has appointed a Committee to consider whether it is possible to improve the existing diploma in education.

More definite figures are now available regarding the contribution of the University to the War services. Over three hundred members of the University have obtained commissions. Of these, 84 were obtained by members of the O.T.C. before the War began, 190 by members of the O.T.C. since the beginning of the War, and the remainder by members of the University who did not belong to the O.T.C. More than five hundred members and ex-members of the O.T.C. applied for commissions, and commissions are still being given. About a hundred and fifty men enlisted as privates in the University contingent of the Cameron Highlanders, and more than this number have joined other regiments. In addition to these, many members of the University are serving in the Territorial Army, the Army Medical Corps, and other services. The figures given do not, however, adequately represent the response made by the University to the appeal for War service, and there is the best authority for saying that they may safely be increased by 20 per cent. The effect of the War on the number of students attending the University has been less than was expected. At the close of Matriculation for the current term, the number of matriculated students was 2,275, as compared with 2,510 at the corresponding date last year. The decrease in the number of men is 224, and in the number of women 11. In some departments the decrease is large, while in others (e.g. in Chemistry, Zoology, &c.) there is a very considerable increase. This seems to be due mainly to an increase in the number of students beginning their studies in Medicine, and it is, no doubt, owing to the great demand for doctors resulting from the Insurance Act and the War.

Mr. Alfred W. Stewart, D.Sc., has been appointed Lecturer in Physical Chemistry, in succession to Prof. Soddy, who was recently appointed Professor of Chemistry at Aberdeen. Dr. Stewart is a graduate of Glasgow, and he has since 1909 been Lecturer in Organic Chemistry at the University of Belfast. A portrait of the late Rev. James Seaton Reid, D.D., who was Professor of Ecclesiastical History from 1841 to 1851, has been presented to the University by his daughter.

Aberdeen.

Mr. F. E. Smith, having withdrawn his candidature for the Rectorship, it is understood that Mr. Winston Churchill will be unanimously elected Lord Rector. Mr. Churchill intimated that he would not continue his candidature in any political sense, and his election will thus be non-political. The General Council at its autumn meeting considered the new Draft Ordinance on the Preliminary Examinations and reaffirmed its view that it would be more reasonable to discuss with the Education Department the need for a preliminary examination before setting up the machinery for such an examination. The Council resolved to renew its representation to the University Court in favour of the institution of a lectureship in Celtic. The Court in 1912 allocated £300 a year out of the new Government grant in a tentative scheme for the institution of such a lectureship, but this sum has since been diverted to other purposes. It was intimated that at least thirty-one members of the Council had obtained medical commissions in the Army, fifteen others had obtained commissions in the Regular Army or the Territorials, and sixteen members had re-enlisted as privates or non-commissioned officers. By the death of Dr. David Rennet, at the age of eighty-six, Aberdeen has lost a distinguished personality. For more than half a century he was associated with the academic life of the city. He had an unrivalled reputation as a mathematical tutor, and some years ago his pupils presented him with his portrait, painted by Sir George Reid, along with a replica which was given to the University.

Edinburgh.

Mr. Arthur Berriedale Keith, D.Litt. (Edin.), D.C.L. (Oxon.), has been appointed by the Crown to the Chair of Sanskrit and Comparative Philology, in succession to Prof. Eggeling. Prof. Keith won many distinctions at Edinburgh and Oxford. He is the author of numerous publications on Sanskrit, and he has also written a valuable work, published in 1912, on "Responsible Government in the Dominions." The new mathematical department of the University was formally opened on October 12. The building was formerly the Church of Scotland Training College, and it has been altered and equipped with a special view to mathematical research, on the urgent importance of which Prof. Whittaker spoke at the opening meeting. The new department is said to be the best of its kind in Great Britain. There is a considerable reduction in the number of matriculated students at the University, but definite figures are not yet available. Two hundred and thirty cadets of the O.T.C. have received Commissions, and sixty others form the

field ambulance of the Scottish Horse. About a hundred are territorials, and about the same number have joined the Edinburgh Battalion of the new Army. Former students and graduates have also entered the War services in large numbers, and it is estimated that the total number of members of the University who are serving runs to nearly four figures.

Emeritus Prof. Sir Henry Littlejohn died on September 30, at the age of eighty-six. He was Professor of Forensic Medicine from 1897 to 1905, and he had for many years before been a most popular teacher in the extra-mural schools. He did valuable work as Medical Officer of Health for the City from 1862 to 1908, during which period the death-rate was reduced from nearly 26 to 17 per thousand. Principal Sir William Turner has now completed sixty years' service in the University as Demonstrator, Professor of Anatomy, and Principal. Dr. Charles Sarolea, Lecturer in French, has been granted partial leave of absence from his University duties owing to his other work as honorary Consul for Belgium. The University Court has arranged that the sons of Belgian refugees who have come to Edinburgh for the winter shall be allowed to take graduation courses without fee for the winter session. The late Major-General Tweedie, C.S.I., of Lettrick, Dumfriesshire, has instituted by his will a trust to be called "General Tweedie's Trust for the Advancement of Knowledge." The income of the estate of Lettrick is to be applied by the University to the establishment of scholarships for research into the early history, development, and religion of Eastern peoples. Somewhat elaborate conditions are attached to the trust.

More than a thousand past students of the Royal Technical College, Glasgow, have joined the Imperial Forces. As a result of the War the income of the College from fees, which last year amounted to £7,000, will this year be less by £3,000. The expenses of the College this year amount to nearly £31,000. A large number of the present staff and students have entered the War services. One department alone has provided thirteen commissioned officers. Last year the number of day students was 669, and that of evening students 4,342. The affiliation of the College to the University has had very satisfactory results. Last year forty-one matriculated students were attending qualifying classes at the College, and of these twenty-eight were following a full course of study. The scheme at present applies only to degrees in Engineering, but a draft ordinance for degrees in Applied Chemistry is now under consideration. The School of Navigation has also been most successful, 1,940 seafaring students having attended the day classes last year. The school has provided thirteen commissioned officers for the Navy, and two of the teachers have been called to active service. The Aberdeen Technical College has resolved to establish a School of Navigation, with new buildings to be erected at a cost of £10,500. A principal teacher of navigation is to be appointed at a salary of £300 a year.

The revised constitution of the Provincial Committees, which has recently been issued by the Education Department, makes only one important change. Hitherto there has been no special provision for the election of women to the Committees, although there have actually been women members. Each Committee is now required to co-opt "such number of women (if any) as may be necessary to bring the total number of women members up to three," except in the case of the St. Andrews Committee, where the obligatory number is two. Owing to present conditions, the St. Andrews Committee has abandoned the proposal to hold a fifth Summer School at St. Andrews in 1915. Dr. C. W. Valentine has resigned his Lectureship in Psychology under this Committee, on his appointment to be Professor of Education at the University of Belfast. Dr. Robert R. Rusk has been appointed as head of the Psychology and Education Department. The number of students at the Training College under the Glasgow Committee is expected to be about fifty more than last year.

Prof. Burnet of St. Andrews recently addressed the Glasgow Branch of the Secondary Education Association on "the crisis of the Prussian leaving certificate." He said that there was no one who knew anything about modern Germany who could for a moment doubt that the state of mind which had made the War possible was the direct outcome of the Prussian system of education, alike in the Universities, the higher schools, and the national schools. The steady deterioration of the education given in the Prussian and other schools during the last decade was admitted on all sides. The Prussian system was no longer able to discharge the functions of selection and elimination for which it was designed, and the reason was that a system adapted to one state of society was bound to break down when it was transferred bodily to another. The system was admirably adapted to the old

Prussian State, with its single type of higher school, its Spartan simplicity, and its primitive social organization; but it failed in the era of material prosperity and of an insatiable desire for social distinction, such as always characterizes a parvenu middle class, in which no one is content to remain middle class.

IRELAND.

The past month has witnessed many changes at home as well as abroad. On October 15, Trinity College lost its Provost, Dr. Anthony Traill, who died at the Provost's House after an illness of several months, which, however, had not called for alarm till within the last few weeks. Dr. Traill, who had nearly completed his seventy-sixth year, entered Trinity College at an early age, won a scholarship in science in 1858, and subsequently a studentship; he proceeded to the degree of LL.D. in 1865, and became a Fellow in the same year; and in 1870 he took the degree of Doctor in Medicine. He was co-opted a Senior Fellow upon the resignation of Dr. Ingram in 1899, and in 1904 was appointed Provost by Mr. Balfour in succession to Dr. Salmon. He was the first medical Provost of Trinity, and fourth among its lay Provosts from the foundation of the University. Dr. Traill's Provostship was marked by some important changes, chief among them the granting of the new Charter of King George V, and the admission of women to the University. In bringing about both these changes he played an active part; and it was largely through his influence that the University decided to admit women students holding certificates from Oxford and Cambridge to degrees on the same terms as men. Perhaps it was as well for the University at this critical period that Dr. Traill's talents lay not so much in purely intellectual pursuits as in organization and administration. He possessed a shrewd sense of business, a thorough understanding of finance, unwearied industry and attention to detail, and these qualities were always at the service of the University. He took an active interest in the formation of the Officers' Training Corps, in the introduction of a co-operative store scheme for resident students, and in many kindred undertakings affecting the social life of the University. His business talents were appreciated outside Trinity College. As a member of the Representative Body of the Church of Ireland, he rendered valuable service in the management of the Church finances. He acted as a member of the Educational Endowments (Ireland) Commission, 1885-92, and of the Fry Commission on the Irish Land Acts, 1897-98. A landowner himself, he took a deep interest in all matters affecting Irish landlords, and was an active member of the Landlords' Convention. He also took a practical interest in primary education; and one of the first school clinics established in Ireland was in connexion with his schools at Bushmills, Co. Antrim. The funeral service was celebrated in the College Chapel on October 17, in the presence of a large and representative gathering of mourners.

The vacancy among the Senior Fellows caused by the death of Mr. Tyrrell has been filled by the election of Louis Claude Purser, D.Litt., who is succeeded as Junior Bursar and Registrar of Chambers by Robert Russell, F.T.C.D.

Trinity has lost about two-thirds of its men students through the outbreak of the War; these have received commissions or volunteered for service. A training camp for officers has been set up within the College precincts since the end of August, the park and dining-hall being at the disposal of its inmates for exercises and meals. The Board have decreed that no student shall lose standing while serving in the War, and a scheme is contemplated by which students matriculating in Arts and pursuing a course of military training for three terms (October to June) will get credit for their first year.

The Very Rev. Michael Barrett, Ph.D., has been appointed by the Crown a member of the First Senate of the National University, in the place of the late Canon Andrew Murphy. The elections to the new Senate, which will hold office for a period of five years from November 1914, have been held during the past month. The Most Rev. Thomas O'Dea, D.D., Roman Catholic Bishop of Galway, has been appointed a member of the Intermediate Education Board.

Through the energy of Mr. P. J. Brady, M.P., a measure for the provision of meals for Irish school-children was passed through the House of Commons in August, and comes into operation this winter. The Corporation of Dublin have struck a halfpenny rate which will realize £2,000, or about 5s. a week for each of the 158 schools under the National Board in Dublin; but this, though it leaves a good deal still to be accomplished by voluntary effort, is at any rate a beginning.

On October 11 occurred the death of Mr. J. D. Daly, M.A., Chief Clerk of the Department of Agriculture and Technical In-

(Continued on page 772.)

An OFFICIAL trial, in any School throughout the Empire, for one month, FREE of cost or obligation to purchase, will be granted.

By Royal Warrant
of Appointment

To His Majesty
King George V.

DUSMO
The Dustless Sweeping Powder

Mr. H. WESLEY VOYSEY, Superintendent of Buildings,
University College (University of London), Gower Street,
London, W.C., reports under date June 19, 1914:

"Dusmo" has been used at University College for about
two years, and has proved, when properly applied, to be
most satisfactory."

The removal of dust
prevents the spread of
infection.—Keep your
School healthy by the
use of 'DUSMO.'

**PRACTICAL.
EFFICIENT.
ECONOMICAL.**

'DUSMO' can be used any and every day of
Term. The Schoolroom is available immediately ;
there is no tedious drying or 'dusting' to wait for.

'Dusmo' is the cleanest, quickest, and most economical sweeping powder for effectively freeing your school from dust. *Dust simply can't exist where 'Dusmo' is used.* It is manufactured in two forms—'Dusmo' for use on carpets, and 'Dusmo' 'B' especially prepared for use on wood, linoleum, stone or marble floors. 'Dusmo' contains no oil or grease, and is disinfectant.

'Dusmo' absorbs all the dust, which cannot therefore rise to re-settle. 'Dusmo' not only absorbs the dust, but dryscours the floor and saves constant scrubbing and washing. 'Dusmo' used on carpets brings the colour of the carpet to its original brightness.

The 'Dusmo' method *absolutely* prevents the dust from rising *and removes it*. When the accumulated dust has been absorbed, the quantity of 'Dusmo' used daily is very small, and the cost would be even *cheaper than sawdust*. The old method of using water or damp sawdust coagulates the dust, leaving it sticking to the floor to return to dust again when dry.

DUSMO COMPANY, LTD.,

11 QUEEN VICTORIA ST., E.C.
Works: STRATFORD, ESSEX.

struction, who rendered valuable service to Irish University education, particularly as Secretary to the Commission held to inquire into that subject.

A meeting of the members of the Alexandra College Guild and the students and friends of the College was held on October 22 to consider what steps could be taken by the Guild to help in the present crisis. Mr. Justice Madden, President of the College Council, presided. It was decided to start a social club for soldiers' wives and to open a house for Belgian refugees, and a considerable sum in donations and monthly subscriptions was promised towards these projects at the meeting. A course of ten lectures on Modern European History, embracing the period 1815-1914 and having special reference to the present political situation, is being given at Alexandra College during the present term by Miss M. G. Jones (Camb. Hist. Tripos), the recently appointed Head of the Department for Training Secondary Teachers.

The Irish Colleges have all started work for the winter Session. The Leinster College, which has its headquarters at 25 Rutland Square, has opened branches at Mullingar and Navan; and the Belfast Gaelic College has branches at Downpatrick and Ballymena. The Dublin College of Modern Irish, which was established last year to give instruction in certain subjects, literary and technical, which lie outside the scope of the ordinary training colleges, entered on its second session during the month. Over eighty teachers attended the course last session. At the annual public meeting of the Belfast Branch of the Gaelic League, which was held in Belfast on October 16 and was largely attended, Dr. Douglas Hyde took the opportunity of emphasizing the necessity of adherence to what has ever been the cardinal principle of the Gaelic League—abstention, as a body, from politics and all contentious matters arising from political questions.

SCHOOLS.

HAILEYBURY COLLEGE.—The following have joined the staff this term, to fill up vacancies caused by the retirement of senior masters:—Mr. J. B. D. Joce, of St. John's, Cambridge (Modern Languages); Mr. D. J. Walters, of Brasenose, Oxford (Science); and Mr. R. W. Miller, of Trinity, Cambridge (Science). Four masters are absent on military service—Mr. C. J. Reid, Mr. G. E. Grundy, Mr. C. C. Champion, and Mr. C. H. Fair. Mr. J. D. Whyte has returned as substitute for Mr. Reid; Mr. C. E. Laurence, of Bruges, is taking Mr. Grundy's form, and Mr. T. Thomas is doing Mr. Champion's Army Class work. On Tuesday afternoons a field-day takes the place of the usual games, and on Mondays and Fridays the work of the morning is shortened by half an hour to admit of additional drill. Instructional parades and lectures on military subjects have also been arranged for those over seventeen in the O.T.C.

HAMMERSMITH, GODOLPHIN AND LATYMER SCHOOL.—On the occasion of the opening of the new School organ and the distribution of Prizes by Sir Laurence Gomme, on October 16, Sir William Bull, M.P., announced that Miss Stancomb Wills had given, in July last, £3,000 to the school, in order to found a Leaving University Scholarship in memory of her uncle, the late Lord Winterstoke, who for seven years was a Governor of the school. The scholarship will be of the value of £40 a year, tenable for three years, and will be awarded every year.

HARROW SCHOOL.—Mr. C. E. Prior, Mr. C. H. Eyre, and Mr. W. J. R. Calvert have taken commissions in the O.T.C., Mr. F. E. Edwards has joined the ranks of the Rifle Brigade, and Mr. A. Begouer de Meaux has rejoined the French Army as Captain in the 8th Battalion of Chasseurs. Nearly half the staff sent in their names, but were admonished by the War Office that they would serve their country better by staying at their posts and preparing the Cadet Corps for future service as recruits and officers.

HARROW, THE COUNTY SCHOOL.—This school, opened in January 1911, has now reached its full complement of three hundred. It has recently won Junior County Scholarships, first place in the Entrance Scholarship list at Merchant Taylors School, a Mitchell Scholarship (£40 for two years), and a Studentship (£20 for two years) at the Finsbury Technical Institute. Nine boys were presented at the last Senior School Examination of the University of London. They were all successful, and they won, amongst them, thirty distinctions. Six of the staff have received commissions with the forces, and their places have been taken temporarily by six ladies. The school winter season of lectures was opened by Miss Gertrude Bacon, the daughter of the famous aeronaut and herself a "flying woman" of some repute, with a lecture on "Flying Ships, Air Ships, and Balloons."

WINCHESTER COLLEGE.—Five of the staff have joined the Army—G. M. Bell, M. Robertson, F. M. Hicks, H. E. G. Tyndale, H. J. Altham—and the following are taking temporary work:—J. Millington Sing, A. B. K. Cook, G. T. Hellard, E. D. Marris, L. G. Fortescue. The School is taking its share in pro-

viding for some of the Belgian refugees who have arrived in Winchester.

WORCESTER, ALICE OTTLEY SCHOOL.—Examinations: In the Cambridge Higher Local the following successes were gained: S. Naylor (Honours Class I, Group A), Distinction in History of English Literature and Early English; K. Whitehead (Group B, Honours Class I). In the Higher Certificate Examination of the Oxford and Cambridge Joint Board, six complete certificates and three letters were gained, with Distinctions in Scripture (2), English (1), and French (1).

PRIZE COMPETITIONS.

The Translation Prize for French is awarded to "Bardolph"; for Latin the prize is divided between "Chris" and "Wiccamicus."

Winners of the Holiday Prizes are: Miss A. E. Ellis ("Liège"), 55 Christchurch Road, Bournemouth; Mrs. P. H. Miller, ("E.M.C."), 29 Carlingford Road, Hampstead; Miss E. Browne ("Britannia"), High School, Upminster, Essex; Miss H. E. Hutchings (H. E. Hutchings), 9 Ravenswood Road, Redland, Bristol; Miss Mary Ingham ("Gulval"), Glencoin, Cheadle Hulme, Stockport; Dr. R. L. Batterbury ("Gothicus and Rolobo"), Berkhamsted, Herts; Miss Goddard ("Euphemia"), East Street, Farnham, Surrey; Miss Ethel G. Batterbury ("Nor-roway"), Berkhamsted, Herts; Miss Evelyn E. Hewer (rais), Cambridge Training College; Miss S. Ingham (S. Ingham), Pudsey, near Leeds; Miss M. C. Haslam ("O.L."), Cintra Lodge, Reading; Miss F. Storr ("Tramp"), 12 Angell Park Gardens, Brixton, S.W.; Miss Susan Cunningham (S. Cunningham), 59 Rutland Gardens, Hove; D. L. Ketelbey, Esq. ("Clito"), 165 Antrobus Road, Handsworth, Birmingham; Miss E. Julia Horne ("Judy"), 12 Fairfax Road, Prestwich, near Manchester; Miss E. Richmond Faraday ("Berenguela"), Church Croft, Orleton, Herefordshire; W. Harrison Snell, Esq. ("L'Ardent"), 14 Nadine Street, Charlton, S.E.

Three prizes have not yet been claimed.

Haec est, in gremium victos quae sola receptit
Humanumque genus communi nomine fovit,
Matris, non dominae ritu; civesque vocavit
Quos domuit, nexuque pio longinqua revinxit.
Huius pacificis debemus moribus omnes
Quod veluti patriis regionibus utitur hospes:
Quod sedem mutare licet; quod cernere Thulen
Lusus, et horrendos quondam penetrare recessus:
Quod cuncti gens una sumus.

By "CHRIS."

'Tis conquering Rome alone that to her breast
Clasps all mankind by her own name addressed.
No mistress stern, but motherlike, to prove,
And bind her subjects by the ties of love.
To her mild rule we owe that all may roam
And still enjoy each privilege of home;
May travel ('tis mere sport) to Thule's shore
And regions, dreaded once, with ease explore.
To her we owe that all united stand
One State, one City, and one Fatherland.

By "WICCAMICUS."

Claudian.

This is our city's glory: she alone
To conquer and to reconcile hath known.
She has conferred a title to embrace
Not merely part, but all the human race.
And like a mother, not a despot rude
Has won the hearts of subjects scarce subdued,
And called them citizens, a holy name,
And bid them share her everlasting fame.
We owe our bliss to Rome's pacific sway:
No foreigner from Rome need turn away.
The stranger, whoso lists, can claim a home
Within the walls of proud protecting Rome.
He owes this licence to her gentle grace
That he at will may change his dwelling-place,
May gaze on furthest Thule at his will,
And penetrate recesses further still.
Once dreaded: and he owes to her alone,
That all her subjects henceforth are but one.

(Continued on page 774.)

Special Christmas Prize Competition.

A Prize of One Guinea is offered by the Editor of
The University Correspondent,
 Burlington House, Cambridge, for the best original
 collection of twelve "Howlers" or Schoolboy Blunders.
 Every collection of twelve "Howlers" must be in a
 separate envelope, and have the words "Howlers Prize
 Competition" written on the outside of the envelope.

Entries must reach the Prize Editor not later
 than December 16th.

"There is not one of the pieces in the book that is dull."—*The Scotsman*.

Crown 8vo, cloth, gilt top, pp. 376. Price Six Shillings.

WILLIAM RICE, 3 Ludgate Broadway, E.C.

We classify the 24 versions as follows:—

First Class.—Chris, Wiccamicus, Ardeonaig, R.L.

Second Class.—Amadan, Dann, Greenfinch, Quincunx, Martin.

Third Class.—Brodug, G.C.M., Emm F., Tralatio, M.C.S., E.C., Mrs. Gummidge, Corncrake, M.M.

Fourth Class.—Keddie, A. Hill, Marius, Mus.

Fifth Class.—Toto, Outis, P.P.

C'était le premier jour de l'an. Par les rues blondes d'une boue fraîche, entre deux averses, M. Bergeret et sa fille Pauline allaient porter leurs souhaits à une tante maternelle qui vivait encore, mais pour elle seule et peu, et qui habitait dans la rue Rousselet un petit logis de bégaine, sur un potager, dans le son des cloches conventuelles. Pauline était joyeuse sans raison et seulement parce que ces jours de fête, qui marquent le cours du temps, lui rendaient plus sensibles les progrès charmants de sa jeunesse.

M. Bergeret gardait, en ce jour solennel, son indulgence coutumière, n'attendant plus grand bien des hommes et de la vie, mais sachant, comme M. Fagon, qu'il faut beaucoup pardonner à la nature. Le long des voies, les mendiants, dressés comme des candélabres ou étalés comme des reposeurs, faisaient l'ornement de cette fête sociale. Ils étaient tous venus parer les quartiers bourgeois, nos pauvres, truands, cagoux, piêtres et malingreux, callots et saboulex, francs-mitoux, drilles, courtants de boutanche. Mais, subissant l'effacement universel des caractères et se conformant à la médiocrité générale des mœurs, ils n'étaient pas, comme aux âges du grand Coësre, des difformités horribles et des plaies épouvantables. Ils n'entouraient point de linges sanglants leurs membres mutilés. Ils étaient simples, ils n'affectaient que des infirmités supportables. L'un d'eux suivit assez longtemps M. Bergeret en clochant du pied, et toutefois d'un pas agile. Puis il s'arrêta et se remit en lampadaire au bord du trottoir.

By "BARDOLPH."

It was the first day of the year. Between two showers M. Bergeret and his daughter Pauline were wending their way through streets yellow with fresh mud to present their new year's greetings to a maternal aunt, who still eked out an isolated and colourless existence in a little bégaine's lodging in the Rue Rousselet, looking out upon a kitchen garden, and within sound of the convent bells.

Pauline felt light-hearted, for no particular reason except that these festivals, in marking time's flight, made her more conscious of the growth of her youthful charms.

M. Bergeret preserved on this red-letter day his usual indulgent bearing towards his fellow-creatures—no longer expecting much from men or life, but knowing, like M. Fagon, that Nature must be forgiven a great deal. All along the streets the beggars, standing bolt upright like candlesticks or, in divers poses, displaying themselves like wayside altars, provided the ornaments for this social festival. They had all come to adorn the middle-class districts—our paupers, vagrants, thief-trainers, shoplifters, "old soldiers," scorbutics, and malingerers of all kinds: sham cripples, sham epileptics, and those with sham sores. But, in accordance with the universal decay of individuality and the growth of mediocrity, they did not parade, as in the time of the great Beggar-Kings, horrible deformities and repulsive wounds; their mutilated limbs were not swathed in blood-stained bandages. They were plainer people, and only affected infirmities of a milder type. One of them followed M. Bergeret for some time, limping, yet with active steps. Then he stopped short and stood on the edge of the pavement again like a lamp-post.

We classify the 73 versions as follows:—

First Class.—M.M.S., Wiccamicus, Bardolph, Allobroge, Sirach, Gothicus, Truant, Louvain, Dormeuse, D.T.D.M.

Second Class.—Index, Tipperary, p.m. Blackheath, Fendall, Chingleput, Dane, M.J.R., Mrs. Gummidge, M.M., B.H.M., Ainée, Courtrai, Refugee, L.C.H., A.M.F., Colum, Armoricain, Shamrock.

Third Class.—W.H.S., Spes, Romsley, The March Hare, Francesca, Volunteer, The Mad Hatter, W.M.G., Raoul, Felice, P.Z., Primrose, V.J., Corncrake, J.P.S., A. Hill, Menevia.

Fourth Class.—Our Allies, M.H., Max, Cbislehurst, Brownie, Keddie, Jam, Jean D'Arc, Fleur de lis, Nova, Unicorn, L.D., Migs, Ana, P.M., Cadger, Jardine, Uncial.

Fifth Class.—Nescio, Aldershot, Lovis, A.W.S., Claude, H.L.C., Lola, Rover, Rus, Q.E.D.

For the French prose the entry was small, and doubtless many were put off by the *argot*. "Not in any dictionary" was a frequent (Continued on page 776.)

Half Calf Binding, 2/9

In addition to the above the E.S.A. have displayed in their **BOOK ROOM** the

The Bindings, which are very choice and artistic, include—**Calf, Tree Calf, Victorian Calf, Antique Calf, Morocco, Lambskin, Paste Grain, Half Calf, and Half Morocco**, all beautifully hand tooled in gold.

The Books—genuinely hand-bound in our Factory in London—are of guaranteed excellence in style, quality, and durability.

The Selection of **PRIZE BOOKS** made easy.

- Kindergarten Mistress** wanted for Diocesan Collegiate School in Calcutta. Drawing or Drill needed for Upper and Middle School, Higher Froebel Certificate and experience essential. Churchwoman. Salary £100 resident. Passage out paid on three years' agreement. 10388
- First Form Mistress** wanted in High School in Devon. Higher Froebel Certificate and experience needed. Salary £90 non-resident, or £45 to £50 resident. 10390

PRIVATE POSTS.

- Wanted** early in November, a **Governess** for five boys and girls, ages 6 to 12. The elder boys may go to school soon. The family will be returning to Buenos Ayres in a few weeks' time, candidates must therefore be willing to go to the Argentine. 10386
- Wanted** in Cumberland, a **French Governess** to teach a girl of 10, and to read with a girl of 17. Good linguist desired. Music and Literature needed. 10399

Teachers who would like to apply for any of these posts should write at once for the Regulations of the Agency. No Registration Fee is charged to Members of the following Societies:—

**The Teachers' Guild,
Association of Assistant Mistresses,
The College of Preceptors;**

and the Commission on the first year's salary is 1 per cent. for a non-resident, and 1½ per cent. for a resident post. Teachers who are not Members of one of these Associations are charged a Registration Fee of 2s. 6d., and the Commission on the first year's salary is 3 per cent. for a non-resident, and 3½ per cent. for a resident post.

Registrar: Miss ALICE M. FOUNTAIN.

note. This is not the fact, as a reference to Littré will show; but in assigning classes little weight was attached to such ignorance, and in the rest of the passage there was plenty to discriminate good and bad translations.

To dispose first of the *argot*. *Cagoux*: properly "leprous," so solitary thieves, not working in bands. *Piêtres* = *faux estropiés*, "cripples." *Malingreux*: "sham invalids," hence Eng. "malingerers." *Callots*: "scaldheads," from the cap of pitch (*calotte*) they wore when recovering from the ringworm, or, according to others, from their crowns shaven like priests'. *Sabouloux*: sham epileptics who did the soap trick. *Francs-mitoux*: impostors who imitated gangrene by compressing an artery, &c. *Drilles* (in Cotgrave's "beggarly clowns"): sturdy beggars disguised as old soldiers. *Courtauts de boutanche*: the army of unemployed; they begged for work in a district where they knew no work of the kind was to be had. *Le grand Coëtre*: the title by which the King of the Beggars was known in the fifteenth century.

Blondes d'une boue fraîche: "which had a light coating of fresh mud." *Mais pour elle seule et peu*: "or rather vegetated in selfish isolation"; a literal rendering is impossible. *Logis de béguine*: a cottage or almshouse, a *dépendance* of the *béguinage* or convent. *Les progrès charmants*: "the ripening charms of maidenhood." *Jour solennel*: "festival" or "anniversary," not "solemn." *Il faut beaucoup pardonner*: "we must not be too hard on Nature." *Reposoirs*: altars set up at the roadside for Church processions, "processional altars"; and *candélabres* must be standards for candles or torches. *Quartiers bourgeois*: "the well-to-do parts of the town." *Subissant*: "but they, too, have not escaped from the levelling process of the age, its conventional propriety, and distaste for eccentricities." We have to thank "Gothicus" for excellent notes on the *argot*.

A Prize of Two Guineas is offered for the best translation of the following extract from Victor Hugo:—

Il appelle, il agite son chapeau ou son mouchoir, le sable le gagne de plus en plus; si la grève est déserte, si la terre est trop loin, si le banc de sable est trop mal famé, s'il n'y a pas de héros dans les environs, c'est fini, il est condamné à l'enlèvement. Il est condamné à cet épouvantable enterrement long, infaillible, implacable, impossible à retarder ni

à hâter, qui dure des heures, qui n'en finit pas, qui vous prend debout, libre et en pleine santé, qui vous tire par les pieds, qui à chaque effort que vous tentez, à chaque clameur que vous poussez, vous entraîne un peu plus bas, qui a l'air de vous punir de votre résistance par un redoublement d'étreinte, qui fait rentrer lentement l'homme dans la terre en lui laissant tout le temps de regarder l'horizon, les arbres, les campagnes vertes, les fumées des villages dans la plaine, les voiles des navires sur la mer, les oiseaux qui volent et qui chantent, le soleil, le ciel. L'enlèvement, c'est le sépulchre qui se fait marée et qui monte du fond de la terre vers un vivant. Chaque minute est une ensevelisseuse inexorable. Le misérable essaye de s'asseoir, de se coucher, de ramper; tous les mouvements qu'il fait l'enterrent; il se redresse, il enfonce; il se sent engloutir; il hurle, implore, crie aux nuées, se tord les bras, désespère. Le voilà dans le sable jusqu'au ventre; le sable atteint la poitrine; il n'est plus qu'un buste. Il élève les mains, jette des gémissements furieux, crispe ses ongles sur la grève, veut se retenir à cette cendre, s'appuie sur les coudes pour s'arracher de cette gaine molle, sanglote frénétiquement; le sable monte. Le sable atteint les épaules, le sable atteint le cou; la face seule est visible maintenant. La bouche crie, le sable l'emplit; silence. Les yeux regardent encore, le sable les ferme; nuit. Puis le front décroît, un peu de chevelure frissonne au-dessus du sable; une main sort, troue la surface de la grève, remue et s'agite, et disparaît. Sinistre effacement d'un homme.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by November 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

These School and Teachers' Advertisements are continued from page 740.

SCHOLASTIC.—JANUARY (1915) VACANCIES.—Graduates and other English and Foreign Assistant Masters who are seeking appointments in Public or Private Schools should apply (*as soon as possible*) to **Messrs. GRIFFITHS, POWELL, SMITH & FAWCETT, Tutorial Agents, (Established 1833), 34 Bedford Street, Strand, London, W.C.** Timely notice of vacant appointments will be sent to all candidates.

COUNTY BOROUGH OF STOKE-ON-TRENT EDUCATION COMMITTEE.

HANLEY SECONDARY SCHOOL.

Wanted on 12th January, 1915, a SENIOR ASSISTANT MISTRESS, to take charge of the girls (under the direction of the Head Master). Preference will be given to one who has had experience in Secondary Schools, and who is qualified to teach some subject to the higher forms of the girls. Commencing salary £150 per annum.

Forms of application (which should be returned not later than the 7th November, 1914) will be forwarded to applicants on receipt of a stamped addressed foolscap envelope.

W. LUDFORD FREEMAN,
Director of Education,
Town Hall, Hanley, Stoke-on-Trent.
13th October, 1914.

THE KING'S SCHOOL, OTTERY ST. MARY, DEVON.

The Governors of this Educational School invite applications for the post of Temporary SENIOR MISTRESS for one or two terms. Candidates should possess a University Degree or equivalent, have special qualifications in French and English, and be not under thirty years of age. Games and Physical Exercises a recommendation. Salary at the rate of £140 per annum.

Applications should reach me not later than November 25th.

FRANK WYATT, B.A.,
Head Master.

THE Appointment of a PROFESSOR OF ENGLISH to the COLLEGE OF HIS HIGHNESS THE MAHARAJA OF TRAVANCORE AT TRIVANDRUM.

A PROFESSOR OF ENGLISH is required for the MAHARAJA'S COLLEGE at TRIVANDRUM. The Appointment is not in the Indian Educational Service.

Candidates should be University graduates in honours and not more than 30 years of age. Special knowledge of English and Philology is an essential qualification and some experience of teaching these subjects is desirable. Experience of the residential system in force in English schools or Universities is also desirable. The selected candidate should be prepared to take part in athletics and encourage outdoor games among the students.

The salary offered is Rs. 400 a month, rising by annual increments of Rs. 50 a month to Rs. 750 a month. An allowance of Rs. 50 a month as house rent will be made, and it is possible that some initial increase of emoluments might be made in the case of a specially well qualified man.

Candidates who wish to be considered for this post should submit their applications as soon as possible, in covers marked "C.A." to the SECRETARY, Board of Education, Whitehall, London, S.W. Scottish candidates should apply to the SECRETARY, Scotch Education Department, Whitehall, London, S.W.

TYPEWRITING (Certificated).—

Testimonials, 6d. per dozen copies; MSS., 8d. per 1,000 words. Promptitude and accuracy guaranteed.—Miss DEXTER, 4 Gainsborough Road, North Finchley, London, N.

BY

ELIZABETH LEVETT,

Scholar of Lady Margaret Hall, Oxford; late History Mistress, Edgbaston High School; Tutor in Modern History, St. Hilda's Hall, Oxford.

Crown 8vo. With Maps. Price 3s. 6d.

Some Press Opinions:

"A sensible, clearly told book."—*Times.*

"Miss Levett summarizes the history of every European nation since the Napoleonic era. . . . Miss Levett has succeeded well in her task."—*Morning Post.*

BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Over 100 Volumes. To be used in correlation with the study of **English Literature and History.**

THE WARWICK SHAKESPEARE.

Edited by Prof. HERFORD, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Price **1s.** and **1s. 6d.**

A NEW DEPARTURE EMBODYING THE LATEST SUGGESTIONS IN HISTORY TEACHING.

BRITAIN AND HER NEIGHBOURS.

Correlating Home and Foreign History.

With Pictorial Time-Charts in Red and Black, and a series of Reproductions of Famous Paintings beautifully printed in Colour, and numerous Illustrations in Black and White, and Maps and Plans.

IN SIX BOOKS:

Book I.—**Tales from Far and Near.** With 16 coloured illustrations. **10d.**

Book II.—**Tales of Long Ago.** With 16 coloured illustrations. **1s.**

Book III.—**The Beginnings.** 55 B.C.—1066 A.D. **1s. 3d.**

Book IV.—**Lord and Vassal.** 1066–1485. **1s. 6d.**

Book V.—**The New Liberty.** 1485–1688. **1s. 8d.**

Book VI.—**The Modern World.** 1688 to the present. **1s. 8d.**

Prospectuses giving full particulars of above books will be sent post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.

GLASGOW AND BOMBAY.

Supplement to THE JOURNAL OF EDUCATION.

No. 544.

NOVEMBER 2, 1914.

LIBRAIRIE LAROUSSE, PARIS GOOD FRENCH BOOKS

LAROUSSE DICTIONARIES

The best and most famous French Dictionaries, indispensable for study and practical use

PETIT LAROUSSE ILLUSTRÉ. The best, most complete, and profusely illustrated of all handy French dictionaries. A handsome volume of 1,664 pages, illustrated by 5,800 engravings; 130 plates, of which 4 are coloured; and 120 maps, 7 in colours. Price, cloth, 5 fr.; leather, 7 fr. 50.

LAROUSSE DE POCHE. The only strictly complete and practical French Pocket Dictionary in existence. Over 85,000 words with their definition and pronunciation, in addition to a Grammar of the French language and a short history of French literature. An attractive book of 1,292 pages, on thin paper (size $4\frac{1}{8}$ by $6\frac{1}{2}$ ins., $\frac{1}{4}$ in. thick, weight about 10 oz.). Cloth binding, 8 fr.; flexible leather binding in box, 7 fr. 50.

LE LAROUSSE POUR TOUS. Encyclopædic Dictionary in two volumes. The ideal dictionary for all who require a French dictionary more extensive than an ordinary one; with all the words of the language, pronunciation, etymology, synonyms, antonyms, a complete grammar simplified, history of literature. 1,950 pages; 17,325 engravings; 216 maps, black and coloured; 35 coloured plates. Paper, 35 fr.; half morocco, 45 fr.

NOUVEAU LAROUSSE ILLUSTRÉ. Encyclopædic Dictionary in eight volumes. The newest, most practical, and best illustrated of the large encyclopædic dictionaries, edited by over 400 eminent collaborators, with an important essay on the French language and all sciences. 7,600 pages; 237,000 articles; 49,000 engravings; 504 black and coloured maps; 89 coloured maps. Paper, 230 fr.; half morocco, 275 fr.

GRAND DICTIONNAIRE LAROUSSE. Encyclopædic Dictionary in seventeen volumes. The most comprehensive of all encyclopædic dictionaries. 24,500 pages, 2,864 engravings. Paper, 650 fr.; bound in half morocco, 750 fr.

BIBLIOTHÈQUE LAROUSSE

Masterpieces of French Literature

Fine volumes in library size (13.5 by 20 cent.). Interesting illustrations, notes, and criticisms. All great French writers, classical and modern, will appear in this new collection, the finest and most up-to-date of all.

Most Recent Volumes :

Rabelais: Gargantua et Pantagruel 3 vol.	Murger: Scènes de la vie de Bohème 1 vol.
J.-J. Rousseau: Emile (extraits suivis) 1 vol.	Alfred de Vigny: Œuvres illustrées 7 vol.
Molière: Théâtre complet illustré 3 vol.	Gérard de Nerval: Œuvres choisies illustrées 1 vol.
Stendhal: Chroniques italiennes 1 vol.	Anthologie des écrivains français des XV^e et XVI^e siècles 2 vol.
Benjamin Constant: Adolphe et Œuvres choisies ... 1 vol.	Anthologie des écrivains français contemporains (Poésie) 1 vol.

Each of the above volumes, stiff paper cover, 1 fr. 50. Finely bound, cloth gilt, blue top, 2 fr. 50.

Already Published :

Cornaille: Théâtre choisi illustré 3 vol.	Voltaire: Romans 2 vol.
Racine: Théâtre complet illustré 3 vol.	Voltaire: Théâtre choisi illustré 1 vol.
Molière: Théâtre complet illustré 7 vol.	Beaumarchais: Théâtre choisi illustré 2 vol.
La Fontaine: Fables illustrées 2 vol.	Chateaubriand: Œuvres choisies 3 vol.
Boileau: Œuvres poétiques illustrées 1 vol.	Stendhal: La Chartreuse de Parme 2 vol.
La Bruyère: Les Caractères 2 vol.	— Le Rouge et le Noir 2 vol.
Bossuet: Œuvres choisies illustrées 2 vol.	Balzac: Œuvres choisies illustrées 8 vol.
Mme de la Fayette: La Princesse de Clèves 1 vol.	Musset: Œuvres complètes illustrées 8 vol.
Saint-Simon: Mémoires (extraits suivis) 4 vol.	Anthologie des écrivains français du XVII^e siècle 2 vol.
Abbé Prévost: Manon Lescaut 1 vol.	Anthologie des écrivains français du XVIII^e siècle 2 vol.
J.-J. Rousseau: Les Confessions (extraits suivis illustrés) 1 vol.	Anthologie des écrivains français du XIX^e siècle 4 vol.

Each of the above volumes, paper, 1 fr.; flexible cloth, 1 fr. 30. Half leather bindings: Ask for the special prospectus.

EXTRA VOLUMES.—Victor Hugo: Œuvres choisies illustrées. The most beautiful edition of Victor Hugo's selected works, carefully printed on superfine paper, good type, and splendid illustrations after Raphael, Titian, Millet, &c. Two fine volumes of about 550 pages each, illustrated by 60 engravings. Price per volume, paper, 5 fr.; cloth, 6 fr.; half bound, 8 fr.

Ask for the complete catalogue of the "Bibliothèque Larousse."

HOW TO LEARN THE FRENCH LANGUAGE

COMMENT ON PRONONCE LE FRANÇAIS. Complete and practical work on pronunciation by PH. MARTINON. Most useful work for teaching the French language to foreigners. Size $7\frac{1}{8}$ by $4\frac{1}{2}$ ins. 414 pages. Paper, 4 fr.; cloth, 5 fr.

CONTES ET RÉCITS EN PROSE (XIX^e SIÈCLE), by A. WEIL and E. CHÉNIN. An illustrated literary and artistic Anthology. 31 illustrations. In boards, 1 fr. 60.

LES LECTURES LITTÉRAIRES DE L'ÉCOLE, by P. PHILIPPON and Mme PLANTIÉ. This work will give to the pupils the indispensable minimum of literary culture, and will enlarge their intellectual horizon. 41 illustrations. Part for the pupil, in boards, 1 fr. 60; Part for the teacher, in boards, 4 fr.

COURS DE GRAMMAIRE CLAUDE AUGÉ. The French Grammar used in the majority of schools in France and abroad; simplified for foreigners like no other French Grammar. Four books: **Grammaire enfantine**, for the beginners (book for the scholar, 50 centimes; book for the teacher, 1 fr.); **Grammaire, cours élémentaire** (part for the pupil, 80 centimes; for the teacher, 2 fr.); **Grammaire, cours moyen** (part for the pupil, 1 fr. 25; part for the teacher, 3 fr.); **Grammaire, cours supérieur** (part for the pupil, 1 fr. 75; part for the teacher, 4 fr.).

**All these Publications to be had from LIBRAIRIE LAROUSSE, 13-17 rue Montparnasse, PARIS (6^e)
and their agents throughout Great Britain. PROSPECTUS ON APPLICATION.**

Now Ready. A Brief School History.

4d.

HOW THE WAR CAME ABOUT.

Explained to the young people of all English speaking countries by

J. HOLLAND ROSE, Litt.D.,

Fellow of Christ's College, Cambridge.

Synopsis: I, The Wars of 1814 and 1914; II, The Importance of the Netherlands; III, The Causes of Dispute; IV, Great Britain and Germany; V, German Ambitions; VI, VII, The Crisis in July, 1914; VIII, The War, and what it may bring; also

TWO MAPS SPECIALLY DRAWN.

Send 5d. stamps for Specimen Copy, or 9d. stamps to include—

BRITAIN'S DUTY TO-DAY.

BY

EDWARD LYTTTELTON, D.D.,

Head Master of Eton.

THE PATRIOTIC PUBLISHING CO.,

Trade Agent: FRANCIS COLLAS, 3F Wine Office Court, Fleet St., E.C.

PHYSICAL TRAINING COLLEGE FOR MEN STUDENTS.

THE LONDON CENTRAL INSTITUTE FOR SWEDISH GYMNASTICS.

16, 17 & 18 Paddington Street, Marylebone W.

Anatomy, Physiology, Theory of Movements, Hygiene and kindred subjects necessary for a complete grasp of **PHYSICAL EDUCATION** are taught by **QUALIFIED TEACHERS.**

For particulars apply to the Principal, **ALLAN BROMAN.**

TELEPHONE: MAYFAIR 872.

MOTHERS' SONGS, GAMES AND STORIES.

AN ENGLISH RENDERING OF FROEBEL'S "MUTTER-UND KOSE-LIEDER."

By **FRANCES and EMILY LORD.**

Order "THE STUDENT'S EDITION."

This Edition contains ALL the Pictures and Music.

WILLIAM RICE, 3 Ludgate Broadway, E.C.

BACON'S LATEST PUBLICATIONS.

A New Atlas.

THE MAP AND ITS STORY.—A Physical and Economic Atlas containing 44 maps, with descriptive letterpress, which occupies a portion of each page. This atlas has been prepared to comply with the most modern suggestions for the teaching of Geography.

Price 1s. net.

A NEW SERIES OF Physical Wall Atlases.

This series is composed of seven complete Atlases — **EUROPE, ASIA, AFRICA, NORTH AMERICA, SOUTH AMERICA, AUSTRALIA, WORLD IN HEMISPHERES**, with seven maps in each, namely — Vegetation, Rainfall (Mean Annual and Seasonal), Temperature (January and July), Contour, and Commercial.

Price of each set—

Mounted on cloth, with hanger and metal rims, **21s.**;

or mounted, on cloth, cut to fold, in cardboard box, **26s.** each set.

Special sets of not less than Four Maps can be supplied as an Atlas to suit teachers' requirements.

Europe and Asia are now ready; the others will follow at short intervals.

RESEARCH IN EDUCATION.

By ALEX. MORGAN, M.A., D.Sc., Edinburgh.

WE hear a great deal at the present day about the progress of modern education, but it is advance along the lines of educational organization and procedure that is meant rather than in the underlying theory and principles of education. In the scientific study of these, indeed, the progress made here and in other lands has been disappointingly small. A certain amount of knowledge of the ideals, aims, and methods of education has been collected, but the method of arriving at educational principles has never been carefully studied. In our Universities and Training Colleges, and on our educational platforms, we get plenty of unproved theory, plenty of dogmatic assertion, but there is an almost total disregard of how the views so confidently expressed have been reached. It is the same with our educational literature. Take any of the works on the theory of education published during the past twenty or thirty years. Many of them are exceedingly able and highly valued, but it is no injustice to say that, with few exceptions, they show a total disregard of scientific method. Principles are assumed without proof or are supported, at most, by casual observation and introspective philosophizing, and from these insecure data conclusions are deduced without being put to the test of verification in actual practice. There has been too much juggling with theories which have been repeated so often as to seem established truths. As someone has said, "the whole educational trade does its business to-day with small coin," and, we may add, care has not always been taken to see that the coin rings true.

If more attention had been paid to the establishment of fundamentals and, if there had been more careful scrutiny and testing of results, there would have been, perhaps, less change, but more progress, in education. For want of scientific procedure we have substituted a process of trial and error, often on a national scale—a method both wasteful and slow and unworthy of an age of science. It is little wonder that we find in the history of education the same problems recurring again and again, each solution in turn having failed to stand the test of experience because of the unscientific method, or total want of method, by which it was arrived at. Take, for example, the curriculum, whether of the primary or secondary school. How many vicissitudes has it undergone even in recent years, and how far do we yet seem from a satisfactory solution of it yet? Or take any subject in the curriculum—take reading or writing or arithmetic or grammar or spelling. How many specific methods within our own memory have been advocated one after the other, or sometimes together, for teaching these subjects, and experience has proved them erroneous? So long as the discussion remains in the region of mere opinion or is based on a restatement of obsolete data, we cannot hope for the settlement of old controversies. Nothing but first-hand observations and the study of well ascertained facts can lead to their solution.

But in the study of education we are in a transition period, and are entering upon a new and more fruitful era. Workers in every branch of knowledge have begun to apply scientific method to their particular field, and this is beginning to be applied in turn to the problems of education. The old belief that the laws of mind and the processes of mental development lie beyond the reach of scientific inquiry has been proved to be erroneous by the successful application of experimental methods to the investigation of all kinds of mental phenomena. And so the foundations of a science of education are at length being laid, and a part of the superstructure is already being reared upon them. The work is going on rapidly in the psychological and pedagogical laboratories of France, Germany, Italy, Belgium, Russia, and the United States. The Universities of this country have not yet taken their due share in the work. As compared with those of other countries they were quite inadequately staffed and equipped for the modern demands of educational study.

We cannot remain content with the present condition of things.

In the scientific study of any subject there are two possible methods of procedure. We may start from certain well established general principles, deduce the applications of these to particular cases, and verify the conclusions by decisive experiments. This method, universally known as the deductive method, has been applied with great laxity to education in the past. Through it, too often, descriptive generalities, which we have been pleased to call laws, have been invented or assumed, and sometimes principles of physiology, psychology, sociology, or ethics have been pressed into the service of education without considering first their applicability in the new field. From these doubtful premises conclusions have been drawn and adopted as a guide to educational practice without having been tested under ordinary working conditions. It is little wonder that there has been such a disproportion between the amount of writing on education and of progress in education.

But now education is departing from the old *a priori* methods of deduction so loosely applied, and is adopting the surer and more scientific methods of observation, induction, and experimental testing under school conditions of the conclusions reached. We hear a good deal in these days about experimental pedagogy and pedagogical research, and we shall hear much more of them in the future. They are additions to our educational vocabulary that have come to stay. They mark the passing of the old loose empirical methods and the substitution for them of the quantitative and qualitative methods of exact science. Education has at length fairly entered upon the stage of scientific method. As Prof. John Adams very aptly said in his Presidential Address to the Education Section of the British Association in 1912, "we are passing from an appeal to experience to an appeal to experiment," and the application of mathematical methods to the statistics collected has produced a quantitative exactness that a few years ago would have been considered impossible. It is safe to say that in the near future every up-to-date University will have established full courses in experimental psychology and experimental pedagogy, with laboratory equipment on thoroughly scientific lines.

Already a large amount of work has been done and many facts in connexion with education and teaching have been established and are being correlated and organized into a science of education. Important investigations, for instance, have been made by Binet and others with a view to obtaining tests by which to determine readily the degree of intelligence of children. Convenient and reliable tests of this kind, if obtained, would be of great practical importance in enabling us to grade children in schools with exactness, and in securing thereby their fuller intellectual and moral development. For years there has been great difference of opinion regarding memory. All agree as to the importance of cultivating it, but some maintain that it cannot be trained, without being able, however, to give proof of their contention. Recently the matter has been investigated experimentally by Meumann and others, and it has been demonstrated that memory can be trained, that certain modes of learning by heart are more efficacious for this purpose than others, and that improvement of memory acquired in one subject may be transferred to other subjects also. But there are scores of other questions with regard to memory of great importance in the daily work of education that still have to be investigated by exact objective methods, and not answered merely according to individual experience or individual opinion.

Closely connected with memory is attention, and results of great value to education have been obtained in experiments carried out with a view to determining an objective standard by which to measure this power, the conditions on which it depends, the best means of furthering it, and the effect of distraction on children at different ages. Much quantitative observation has been made in connexion with the instinctive tendencies of children, the periods of greatest activity of these tendencies, and their function in education. Many methods of teaching spelling exist, and the efficacy of these has recently

been investigated. According to experiments carried out by Mr. Drever in the Pedagogical Laboratory and Observation School of Edinburgh Provincial Training College, it seems that dictation is not merely useless, but positively harmful, as a method of teaching spelling to young children, and that even as a test of spelling it is open to serious objection if employed with children before about the age of twelve. Transcription as ordinarily practised in schools is open to similar objections. Indeed, according to Mr. Drever's experiments, the fact seems to be that so long as the mere work of writing requires effort by the pupil, because of its not having become sufficiently mechanical, the use of writing as a means of teaching spelling is very slight. We need not do more than refer to the important results of the experimental work done by Mosso and others in connexion with fatigue. One of the most recent investigations on this subject is Mr. W. H. Winch's "Measurements of Fatigue in Adolescent Pupils in Evening Schools in London," and he has proved that the work done in these schools is to a large extent wasted because of the lack of freshness of the pupils.

These are only one or two illustrations of the attempts that have been made in recent times to treat the problems of education scientifically. They are little more than beginnings, but they show that we have already gone a considerable distance on our way in building up a body of well ascertained knowledge necessary for the establishment of a science of education. But more knowledge and more organized investigation of educational problems are imperatively required to give a more exact basis for the educational treatment of childhood. Hundreds of questions affecting the work of the schools are being asked every day, and to these we cannot give a reply without further scientific inquiry. We want, for example, exhaustive qualitative and quantitative observations of each of the general mental powers—of perception and discrimination, of apperception and the range of ideas, of attention and memory, of thinking and imagery, of emotion and volition; we want exact determinations of the different types of children with respect to these powers, the psychological differences in children, the differences between the normal and subnormal child, sex differences. We want to know to what extent the intellectual and moral differences revealed are dependent upon the original endowment of the child, and to what extent upon his physical, intellectual, and social environment. We still require exact knowledge of the specific psychological processes involved in reading, writing, spelling, arithmetic, &c. We are finding out that these processes are not nearly so simple as we used to imagine in our theory, and still erroneously assume in our practice. The doctrine of formal training requires further investigation, for psychologists have disturbed our naive faith in the transference of power from one field of mental activity to another, and in the value of certain traditional school subjects in furnishing mental gymnastics beneficial at one and the same time to all the powers of the mind. Again, a good deal of experimentation is still necessary to ascertain how best to teach children to study for themselves. While they are yet at school we must start them in the right way of learning things for themselves, and so render them, as far as possible, capable of self-direction in study during and after school life. We require investigations to find out what are the most effective means of study for children of various types and ages. Are there both general principles of study and special rules applicable to each subject?

One of the crying needs of present-day education is a scientific theory of the curriculum. For lack of regulating principles founded upon exact investigations, and not as heretofore upon *a priori* assumptions, we have in the choice of material for education been too much at the mercy of chance influences or prejudices, or the requirements of education codes which had to be satisfied with the least possible expenditure of time and money. Until comparatively modern times primary instruction was confined too exclusively to the formalities of reading, writing, and arithmetic. Then came the recent awakening of the public mind to the importance of education, and, in response to the demands for a richer and more useful curriculum, subject after subject has been added

to it until it has become dangerously overburdened. It is much the same in secondary education, and we have had, in addition, unending discussion regarding the respective merits of classical, scientific, and commercial education. These things will go on so long as we employ arguments based mostly on opinion and personal prejudices and have no scientifically established principles to furnish criteria for the inclusion or rejection of subjects of study. Until we have these it is futile to talk about a science of education or a profession of teaching. We shall be regarded as empiricists and not as the expounders of a science.

To establish a scientific theory of the curriculum we require (1) investigations regarding the mental, moral, and physical nature of the being to be educated. The educand, as Prof. Adams calls him, is the indispensable factor in education, and one of the prime objects of a scientific curriculum should be to present the right ideas just at the time when his mind and nature are ready for them. (2) Next we must clear up our ideas regarding the effect we are seeking to produce by the curriculum. Is it knowledge or utility or mental discipline or complete living, or is it the more mundane object of enabling a pupil to win a prize or to pass in some competitive examination? A scientific curriculum must have a definite purpose in view. The educator must know what he is aiming at. Vague general ideas regarding this have done much harm in the past. (3) To complete the scientific theory of the curriculum we must determine the subject-matter to be utilized. Supposing the nature of the child and the aims of education determined, the vital question is, What is the best form of intellectual food, and the quantity and quality of it to be administered at the different stages of growth so that it may be assimilated and successfully introduced into the intellectual circulation with the minimum of effort and waste? In the present condition of pedagogic science it is wise not to commit ourselves to abstract theories regarding the what, the when, and the how of the different branches of the curriculum. We require yet much patient investigation of the relative values and relative functions of the various subjects for the purposes of education. Until this is done we must regard much of our present belief and practice only as provisional, and as open to revision when we have been able to draw safe conclusions from a wide range of carefully planned educational experiments.

This review of the need of research into educational problems is necessarily, under the limitations of an article like the present, very incomplete. We have not, for instance, touched upon the problems pressing for investigation in the sociological, ethical, physiological, and medical aspects of education, which are certainly not less important than the psychological. Organized research is required in nearly every phase and form of education. We agree with Dr. F. H. Hayward ("The Secret of Herbart," page 19) that "education is one of the most illimitable, untrodden, and promising fields of research that can anywhere be found. Instead of there being nothing, there is almost everything for us to learn. Instead of having wellnigh reached its perfection and climax, it has scarcely yet entered upon the career that is bound to be ultimately so victorious." There is an international struggle for educational supremacy, and we cannot afford to be indifferent to the great activity in educational research abroad. In the pedagogical laboratories of Stanley Hall, Whipple, and Witmer in America, of Wundt, Ziller, Rein, Lay, and Meumann in Germany, of Binet and Ribot in France, of Messmer and Claparède in Switzerland, of Schuyten in Belgium, of Mosso, Ferrari, and de Sanctis in Italy, and of Sikorsky in Russia, results of great value to the nascent science of education have been obtained. What have we in this country to put alongside of these? Reports on the subject by a Committee of the British Association from 1910 onwards show the lamentably neglected condition of experimental pedagogy in Britain. Enthusiasts, such as Dr. Myers in Cambridge, Karl Pearson, Spearman, and Winch in London, Burt in Liverpool, McIntyre in Aberdeen, Drever in Edinburgh, Valentine in Dundee, and Watt in Glasgow, are doing their best with the totally inadequate resources at their disposal.

But a great change must come over our University Depart-

ments of Education before we can hope for a thoroughly scientific investigation of our pressing educational problems. These departments are in nearly every case insufficiently manned for the amount of teaching necessary in connexion with them, let alone research. We cannot expect one professor or lecturer in education to possess the energy to instruct the ordinary students in a systematic and thorough manner, and to be at the same time an original investigator, inspiring and guiding his advanced students in research work. And yet, unless this is done, his department is failing to perform one of its essential functions. Fichte, in his essay advocating the founding of the University of Berlin, said that a University is not a place where instruction is given, but an institution for the training of experts in the art of making knowledge, and that this end is best attained by the association of the student with his professor in the inquiries which the latter initiates and pursues. Lord Curzon, as Chancellor of Oxford University, expressed the same opinion in his work on "University Reform." "It is now," he said, "an accepted axiom that it is a portion of the duty of the oldest Universities to train their members for the exploration of the remote as well as the survey of well trodden fields." The spirit of independent inquiry should dominate all University teaching and learning, and unless a University is arousing this spirit in its students it is falling short of the University ideal.

Not only are the Education Departments in our Universities understaffed: there is an almost total absence in them of apparatus, equipment, laboratories, libraries and other facilities for research, and of Scholarships and Fellowships for the endowment of research in education. There is here assuredly ample scope for the generosity of pious benefactors of learning. Meanwhile, nearly all that is necessary could be obtained by a closer co-ordination and co-operation of the Universities with the professional colleges for teachers at their doors. This is pre-eminently the case in Scotland, where the connexion between the Universities and the training colleges is so close. With a little reorganization in each centre, the combined resources of the two institutions could furnish a fairly complete equipment, not only for research in education, but for the courses necessary for a degree in education as a basis and incentive to research.

Of course, we are not blind to the dangers and difficulties incident to research. Much that is dignified at the present time with the name of research is of no account. To rearrange and serve up in a new and, it may be, useful form results already obtained is one thing, to add to our knowledge of the subject is another. Restating second-hand data, however diligently collected and effectively presented, is not research in any true sense—it is merely the addition of a new statement of old facts to a world already overstocked with that sort of thing. Again, ability for research is not everyone's gift, or, as someone has said, "the study of origins is not every man's business"—the power to make discoveries is given to few. We could not make researchers of every student even if we tried. For the great majority of University students of education it is sufficient to teach them the subject in such a way as to show them how the principles have been derived and how they may be verified. The minority with gifts for research—and the number is larger than some suppose—must be given a careful training in psychological laboratory work and in the methods of scientific investigation. They must be taught the danger of generalizing from an insufficient number of cases, the danger of allowing the subjective element to lead them astray, and they must learn to test in every instance the results founded on their experiments and observations. Only when such tests have been applied by different experimenters, working under different conditions from the original experimenter, can the results be accepted as established. Finally, we must guard against the danger of emphasizing unduly the utilitarian side of research in education or, indeed, in any subject. Haste in drawing conclusions and in making practical application of these conclusions only brings a subject into discredit. In building up the science of education we should not limit our investigations to what is likely to be immediately profitable and practically advantageous. The researches,

while made with a definite aim, should range over a wide field, and be made only with the disinterested object of reorganizing education on a scientific basis. The real strength of every new movement lies, not in the desire for startling or profitable results, but in the devotion it engenders to the cause of truth. The cultivation of such a spirit—it is the scientific spirit—would uphold the individual workers, would influence professional sentiment, and would make educators feel one with the great body of scientific workers searching out patiently the secrets of Nature in every field.

THE HISTORY OF EDUCATION AND THE TRAINING OF TEACHERS IN OUR UNIVERSITIES.

By A. J. MONAHAN.

THE recent publication of a number of Educational Classics, edited in the main by Professors of Education in our Universities,* has raised once again a protest against the devotion of time to such antiquarian lore on the part of men whose primary function is said to be the training of students for the specific work of teaching. It is felt that this task would be better accomplished by recourse to the wisdom of the present rather than by a revival of the wisdom of the past. For the teacher as for the engineer, science, and not history, should offer a theoretical basis for the practice of his profession.

Such criticism ignores the fact that the history of education is but one branch of the training in theory which students receive. In other courses an attempt is made to give the best that our age has achieved in its thought on the manifold problems which the educator has to face. Professors do not carry on the work of training single-handed: the co-operation of colleagues is essential. If it happen that in the distribution of duties the professor himself takes charge of the history course—and it is by no means always so—that does not make a history-ridden department. The actual position is intermediate between a complete absorption in the subject and its entire suppression. The latter alternative is rejected on the ground that a knowledge of the development of educational ideals and practice in their interrelation equips the student with an insight into the meaning of education which he cannot gain so well in any other way. This brings us to two questions which critics are apt to raise: (1) Can such a development be fairly exhibited? and (2) In what way does it help the immediate business in hand?

It is not always clear what conception of development is in the critic's mind. Development may be taken as implying improvement, and then the most improved form is held to be alone worthy of practical consideration. Such is the attitude in applied science where evolution is primarily a successive perfecting of thought as an instrument for controlling and shaping forces and materials which can neither be augmented nor diminished. It is customary in many quarters to adopt a similar view in education. Mechanism and—by implication, if not avowedly—materialism are the categories of those whose educational ideal is a dossier of index numbers which, for the individual, will "measure such educational forces as the teacher's interest in his work, or the ingenuity of his questions, and such educational products as knowledge of arithmetic, enjoyment of music, ability to write English, ability to manage wood-working tools, and the like." For such a view the idea of development implies a causal series useless and, indeed, impossible to trace. That, however, does not matter, since what is wanted is not the power to trace the countless transformations of the past, but a measure of the present status of the individual, which, we are assured, will one day be capable

of exact determination. Apart from the fact that such so-called scientific exactitude of measurement is often the ascription of an arbitrary value to subjective states and the use of this as though it had the constancy of a purely physical unit, we prefer to follow Prof. James Ward in adopting the distinction of Kant between the Realm of Nature and the Realm of Ends, "assigning to the former as its characteristic mark the notion of 'empirical necessity,' to the latter that of 'practical freedom.'" The task, then, of the historian is to trace the inter-action of the two realms from age to age, and to show how one age is conditioned by another without necessarily issuing from it in any mechanical way. Now it is possible to attempt this from various standpoints, and, among them, from that of education.

Such an attempt will be organic rather than mechanical or classificatory. It is unfortunate that so far in England historians of education in their published work have preferred to avoid the enormous difficulties of such a task by tackling it on easier lines. The first tendency was purely biographical, and the connexion signalized between eminent men was in danger of being more fanciful than vital. That this tendency still persists in many quarters we would not venture to deny. But a more influential tendency has obtained currency, and has, unhappily, received the sanction of Prof. Adams in his misnamed work, "The Evolution of Educational Theory." The idea of an evolution is there frankly abandoned; Plato is apparently the great stumbling-block. In its place we are given "typical beats in the rhythm of educational theory." This involves classification, and hence labels. The work then ceases to be a history—although in a historical series—and becomes a collection of essays on current educational views with historical illustrations. A similar method is adopted by Prof. Dugas in "Le problème de l'éducation." Such treatment is not without a value of its own, but it is not history.

In order to exhibit the development of education, doctrine and practice must not be separated, and both alike must be given the setting of their times. Conditions—social, economic, political, and religious—should be examined in their bearing on ideals and practice, and the many influences which have wrought change, whether for good or for evil, should be seen as living forces in the lives of men. But does such a history of education exist? Frankly, no; but in the making, yes. There is a wealth of material available from general sources for the setting, and in German, French, and English an abundance of monographs on separate topics. In England, however, much original research is waiting to be done. Nevertheless, in our Universities, since they are especially in question, it is true to say that much more than enough is available to give to young students a valuable outline of the development of education in the sense defined.

We may next ask whether this development can be so set before students destined to teach the young as to be of value to them in the exercise of their profession. It will be agreed that the teacher stands in need of culture and of the breadth of view which culture in part connotes; for it is notorious that school work tends to a narrowness of outlook against which even the cultured man may have to make a strenuous effort, and to which men already of contracted vision contentedly succumb. Through the history of education there is exerted on the student a humanizing influence, which has the added advantage of being in close relation to his future work. In other subjects the free and large-hearted pursuit of a special interest may render irksome the well worn elements which come to be handled in the classroom with a purely habitual skill. What is needed, in order to avoid the menace of distaste and drudgery, is a deep and lasting impression of the functions of education in the life of the community, and this cannot be given as an intellectual conception. The mind of the student must be familiarized with it in so many concrete forms that it becomes at last a way of looking at education as it is embedded in the general life and institutions of any given society which makes the student alive to all its human and social aspects. Thus technical skill acquired is seen to be a means to large ends, which are not exhausted by the merely personal, however necessary or praiseworthy these

* "Educational Classics." General Editor: Prof. J. W. Adamson. (Edward Arnold.)

may be. It is an ill day for a State when educational interests are never furthered outside the narrow path of promotion.

Now, to take the situation as it is, this broader view of education, not only intellectually conceived, but absorbed into the personality of the student as an habitual attitude, can be best achieved by a study of the history of education. There many-sided conceptions of life are seen confronting and challenging one another, thwarted or furthered by conditions that can be grasped in their reciprocal relations in a manner that is impossible to observers of present-day struggles in which, though analogous elements are often involved, men are without the clue of history to their fate. It is no wordy warfare in which humanism combats realism and culture trounces vocation, and idealism dismisses mechanism with contempt, but an actual, if slow, campaign in which decisive victories are few, but in the following of which much may be learned of the limitations and possibilities of human activity and aspiration. Contrast this with the controversies of the day, where every skirmish seems a battle and every battle an Armageddon, but where to be thrice slain rarely robs a cause of its vitality. To plunge straight away into the unsolved educational questions which seem to some men the only things worth caring for is to engage at once the social, political, and religious prejudices which students have imbibed at home or elsewhere and to run the risk of a premature partisanship; for, if the professor of education simulates a cold impartiality, he is not likely to arouse the warm interest at which he aims and he may easily distil into his instruction an easy scepticism. Moreover, he cannot ignore the fact that he holds a position of trust, which precludes propaganda. He must, therefore, in some cases stultify his own sympathies or incur the wrath of the State. There has been trouble in France. It would be deplorable if here, too, the convinced believer in the solidarity of a proletariat world should be on the watch for the first opportunity to preach *l'école sans patrie*, or if the secularist should feel the rebellion of compulsorily closed lips when he would fain speak of *l'école sans Dieu*. There is the outlet of a free press and of adult discussion for private opinion, but full liberty of expression must be curtailed in training for a State service.

Truth to tell, the atmosphere of controversy tends from its very nature to be inimical to breadth of view. There are, of course, controverted points of purely professional import, and these must be dealt with as such points usually are on the frontier line which divides knowledge from conjecture or partially established truth. But, for the rest, while it is well that our youth should be intelligently alert to socialism, to new theologies, and to other developments of our surging creative life, especially as they bear on their chosen vocation, it is in University societies and in individual converse rather than in the classroom that the meaning of these movements should be thrashed out.

Are we, then, to stop short just where our studies seem to impinge upon the real interests of current life? By no means. But, if we would avoid partiality and prejudice and the clouding dust of passion, we shall approach the present gradually, through its historical antecedents, leaving vital issues well defined, but without *parti pris*. It is the method experience approves in teaching economics, political theory, and philosophy where the same difficulty is encountered and for analogous reasons. It is a thousand pities that a young student should approach the religious difficulty through the latest fracas in the religious world; that his only notions of the educational activity of the local council should come from the party differences in which his friends delight; that he should look upon the school as a place to burn into young minds the sullen sorrows of the poor or to make them forget home squalor in the glory of an imperial heritage. The *Revue Pédagogique* for September notes as a profound change in English thought the plea of Mr. Paton that "higher education is not for those who have the purse to afford it, but for those who have the brains to profit by it." This is a Platonic sentiment which may not be so acceptable to those who pay and have not been asked whether they are willing to forgo the differential advantage which payment brings them. A student

from the middle class could scarcely hear it for the first time without a bias in its favour, and would probably listen to any criticism of its truth with incredulous impatience. But he would receive it in a wholly different frame of mind when reached as the outcome of a progress in which other interests and claims are presented in their historic influence and not as serving the purpose of polemic.

So we claim as an outcome of the study of the history of education a certain balance of judgment in the presence of current problems which, perhaps, can hardly be reached so well in any other way. To go back even no further than Rousseau, and to follow the fortunes of education as doctrine and as social activity, gives an insight into the clashing tendencies of to-day which makes it easier to estimate their force and direction. The curse of modern life is the itch to be in the front line, where it is the height of good form to mete out derisive contempt to anything that has ceased to be a nine-days' wonder. Emissaries scour the world in search of something new, and many have grafted it on the old before reflection and experience have proved it true. Rome is brought to London and looks oddly out of place without Italian skies. In the cautious historical spirit, the complexity of the problem and the dangers of rash enthusiasms have become ingrained. At the same time, the rewards of prudent boldness, of critical acceptance and rejection—in short, of the open and resolute mind—are spread before the eye. This, we take it, is the true attitude to change.

It may be granted freely that the principles of education form a body of doctrine which need not be set forth with the pedantry of historical reference and parallel; but that a fresh study of original sources will be necessarily fruitless and misleading is by no means to be taken for granted. How much of value may be gleaned by an expert and philosophic mind, and then transformed into a doctrine fitting for modern times, may be realized by anyone who will read Prof. Natorp's "*Sozialpädagogik*," a work on education as profound and suggestive as any of recent times. For young students, however, the history of education serves a different purpose. It reveals to them principles as they have been variously coloured, advanced, or thwarted by the changing phases of a real world, and that alone should suffice to secure for it a place in normal training.

POST-PRIMARY EDUCATION IN WESTERN AUSTRALIA.

By V. I. CHOMLEY.

WHEN we hear so much of blind alleys in connexion with the employment of children who have passed the age of compulsory school attendance, and when so many efforts are being made to provide some further education, it may be not uninteresting to note what is doing in a new country like Western Australia. The normal age for compulsory attendance is fourteen, but children over twelve may obtain from the Minister of Education total or partial exemption on account of the poverty or sickness of their parents. Such exemptions, however, are very few. In a country with an area of 975,920 square miles and a scattered population of 300,000 it must be a costly and difficult matter to gather into the educational drag-net anything like all the children of the community. There will necessarily be a large number of small, and therefore relatively expensive, schools. It may be noted that, in schools with over twenty children, the cost per head of average attendance is about £5. 5s., as against £9. 9s. for schools with less than twenty. The Government has resort to various devices, more or less satisfactory, more or less makeshift. There are, e.g., provisional schools with between ten and twenty children, and sparsely peopled district schools with an average of about four children to each. The latter get a capitation grant of £7 per head (on the gold-fields it is £8. 10s.) on condition that the settlers guarantee enough to

bring the teacher's salary up to £60 (to which the Government may add a £10 for age allowance). The Government provides the buildings. Half-time schools are established where two communities, neither of them able to provide more than ten school children, are near enough for a teacher to divide the work between them. The State expends on education, out of a revenue of £4,000,000, about £260,000, or 17s. 8d. per head of population—a considerable increase in 1912 on the previous year.

Of the increase a part (£18,700) goes in salaries; the schools are better staffed and the teachers better paid. The minimum salary for men or women is now £110, where a few years ago it was £80 for men and £60 for women. For head teachers in schools of the first class—i.e. with 500 in attendance—salaries for men are from £380 to £450, with quarters, and for women £320 to £370. But the increased expenditure of the Department goes only in part to salaries. Children who live beyond the radius of compulsory attendance (two miles for children under nine, and three miles for those over nine) are, where possible, driven to school, and under this head there has been an increase of £1,100.

1912 saw the inauguration of a system of training for the teachers of small country schools (with only one teacher), for which it is recognized that special qualifications are needed. Applications are invited from those, whether (untrained) teachers already in the service or desirous of entering it, who wish to undertake this work. From the applicants the most promising are selected and given six months at the training college, twenty-five at a time, receiving a small allowance, or, in the case of the Department's teachers, half-pay.

Practice for such students is provided in two small model schools under specially chosen teachers. Six months is a very short time for such training, and none of the authorities is under any illusion on that point, but it is a very great deal better than nothing, and those to whom it is offered having had either the ordinary training or some previous experience in teaching, are able to profit by a course even of six months, designed especially to deal with the difficulties peculiar to these small country schools, where the children are of all ages and all grades. Moreover, the very fact that the Department specially recognizes the conditions of these schools and endeavours to provide for them, tends to make the position of teacher in them of more importance, and to force recognition of the fact that such positions are, in their way, some of the most responsible in the service. Inspectors do what they can, but in a country so vast as Western Australia their visits are necessarily rare. Another thing that has been done for the small schools is to provide a form of temporary building which can easily be taken to pieces, erected, and moved. Perhaps the utility of such a movable structure is not at first obvious to English readers, but it becomes more explicable when it is realized that thousand-acre holdings are very usual, and that the finding of a centre where a sufficiency of pupils will be within a three-mile radius is frequently a matter of some difficulty. It is no unusual thing for the removal of one family so to alter the attendance that a school has to sink to the half-time category or even to close.

Medical inspection of State schools was inaugurated in 1911, and in the Metropolitan and Kalgoorlie-Boulder districts several doctors give full time to this work, in which they have the assistance of nurses. Elsewhere the local Medical Officer of Health or the District Medical Officer is the Medical Officer of the school. The children are, as far as possible, examined twice, once soon after entry and again shortly before leaving, but the system has not been long enough in operation to have shown as yet conspicuous results.

The Departmental report of 1911 outlined a scheme of organized education beyond the elementary grades, and the latest report shows that it is being carried out. The highest of the ordinary primary classes is the sixth. Children who have successfully passed through this class (the average age is thirteen) receive a qualifying certificate. This, however, does not exempt them from further attendance unless they are at least fourteen, but is regarded as evidence that

they are fit to enter on a further course of specialized instruction. The course is determined by the time for which they can continue at school. One choice, or rather set of choices, is open to those who can look forward to a further four years, another to those who can hope only for two years, while for those whose ordinary school life ends at fourteen there are continuation evening classes. Children who can stay for four years after gaining the qualifying certificate go to a high school. When there are enough high schools in operation, the qualifying certificate will entitle the holder to a place. At present the only one available is the Modern School at Perth, and the applications far outnumber the vacancies, so that a competitive examination becomes necessary; but this is merely temporary. It is expected, for instance, that Kalgoorlie will very shortly have a high school, and other places will follow suit. Meantime, in the smaller towns, special facilities will be given to children who will remain in the upper classes of primary schools.

Having entered the high school, with the prospect of four years' further education, the pupils have no need to specialize for some time. The first two years are given to general education, and the course is fairly uniform for all; but "in the third and fourth years the future career to which the student looks forward, and his intellectual tastes and aptitudes, will decide the lines upon which his work will run." ("His" here is of common gender, for the opportunities are open to girls as well as boys.)

The Modern School, Perth, which opened in 1911 with 226 scholars, had in January, 1913, 337, and has now, or will have shortly, accommodation for 400, so that it can receive for a four years' training 100 every year in the lower classes. (Last year all fees were abolished.)

The careers for which training in the third and fourth years is provided include a University career (the school-leaving certificate, provided certain subjects are taken, excuses an entrance examination for University courses in arts or science), training at the training college for future teachers, and provision for commercial, agricultural, and domestic professions. There is, however, no narrow specialization, and much of the work is common to all; but "an attempt is made in each case to bring the school instruction into direct connexion with the work that will be undertaken when the scholars have left school and passed out into the world."

A few cannot look forward even to another two years at school. If, however, they can have two years, there are possibilities open in central schools—i.e. schools which collect for higher work the children who have passed the sixth class in all the schools of a given district, but which, having also lower classes, are statistically classed as primary. In such schools the holders of the qualifying certificate have three courses open to them—industrial for boys, domestic for girls, commercial for both boys and girls. Much of the curricula of the three courses, including English literature and composition, history, civics, and geography, is common to all. In mathematics there is considerable difference, and the commercial students give more attention to arithmetic and English. The industrial to actual workshop practice. Woodwork is done by both, but is more "directly utilitarian" for the industrial students, who also learn metal work, including practical work with sheet metals, and the use of the forge, bench, and lathe. The girls who take up domestic work give a good deal of their time to cooking, dressmaking, and millinery, hygiene, first aid, home nursing, the care of infants and general housewifery. On the satisfactory completion of any of these three courses, the student obtains a certificate entitling him (or her) to further courses at a technical school, and "it is hoped that arrangements will be made for recognition of the commercial certificate in connexion with the entrance to the public service." Still another course will be open to holders of the certificate, by the co-operation of the Department of Agriculture with that of Education, in providing schools on State farms. "The future farmer will then have the same opportunities as the future skilled tradesman or the aspirant to a commercial career of continuing his

general education and at the same time receiving practical instruction of the special nature that he requires."

There remain the boys and girls who leave school at fourteen, the limit of compulsory attendance. They can attend evening continuation classes, which provide a preparatory course for those whose primary education has been defective or who have not reached the level of the qualifying certificate, but they provide also a two years' course in commercial, industrial, or domestic subjects. The time allowed for evening continuation classes is six hours a week, and the aim of the classes is to give, as far as time allows, some of the advantages open to those who cannot secure longer school courses. It is not attempted to give technical instruction and training in any one particular trade or calling, but rather "to provide a definite course of study on as broad a base as possible, and with the limited time available." Those who complete an evening continuation course can get admission to further courses at a technical school. The matter is still in its early and experimental stages, but improvements are being made, and one of the senior Inspectors has these classes as his special care. In 1912 the enrolment was promising, twelve hundred, though many of the students did not stay throughout the year; but it is found that where the teaching is of the right kind the demand for it is increasing. The Inspectorial report notes that "when the English classes are made really attractive by the skilful treatment of literature and composition, and the more technical subjects are so treated that their practical bearing upon the pupils' outside work is evident, there is no difficulty in enrolling students in the larger centres. In one or two of the smaller towns it seems to be difficult to stir up more than a temporary enthusiasm; the counter attractions of picture shows and other amusements prove too strong. On the whole, however, the enrolments show a rapid increase."

With the establishment of the University of Western Australia, and the decision that its teaching shall be free, the education ladder, in the familiar phrase, is now complete. Primary education is compulsory and free; secondary and higher education are optional and potential, instead of compulsory, but are also free. "A boy," writes a Senior Inspector, "may step on in the primary school and may climb to the topmost rung." That is the realization of many an educational democrat's ideal. But, though such a career is potentially open to every boy and girl of Western Australia, there are, and for many a year there will be, a very large number who cannot or will not (or, at any rate, do not) work their way to the top of this ladder; and it is scarcely of any less importance to note that provision is made for those who, as the report says, "must of necessity exhaust their climbing powers while yet much climbing is to be done." "They must step off the ladder, but the commercial and industrial courses of the central schools, followed by supplementary courses in the technical schools, will make it easy for them to leave school life and to find their proper place in the world outside. In short, the State has so far extended its educational boundaries until it no longer has a stiff 'horizontal division' between the trained and the untrained."

We may be interested in or indifferent to what Western Australia is doing to educate the children "out back," but it would seem that the attempt to cope with the problem of the child after it has secured the statutory minimum of school attendance and instruction is worth considering. Always we are reminded of the difference in conditions; they are obvious and unforgettable, but the general problem is much the same in Europe and in Australia, and England can at least afford to consider these efforts, and possibly, *mutatis mutandis*, even incorporate some of the ideas.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.—The following Entrance Scholarships for 1914 have been awarded:—In Natural Science—J. O'F. Fletcher, W. F. Francis, H. E. Suter; University Scholarships—J. W. G. Phillips, T. S. Evans; Epsom College Scholarship—R. L. Walker.

CHILDREN'S LIBRARIES IN THE UNITED STATES.

By CLARA W. HERBERT,

Head of the Children's Department, Public Library,
Washington, D.C.

A CHILDREN'S department of a public library on a busy afternoon is an interesting sight. One sometimes finds difficulty in gaining admission to the room, so thronged is the charging desk at the entrance. In a congested tenement district, it is no uncommon experience to find a queue of waiting children—from the door, down the stairs, and along the street—for a square's distance. Within the room are groups of children, selecting books from the shelves, absorbed in reading at the tables, or making notes for their school work. Here a group of boys are discussing the best book on model aeroplanes or on camping; there, a teacher is getting supplementary material for her class. At the registration desk new children are becoming members, pens tightly grasped in little hands for the solemn business of filling out the application blanks. A half-dozen boys and girls of various ages are following the steps of the reference assistants with such requests as: "A book on Daniel Boone, please," "Something about the Dutch children," "Will you get me a book with a poem in it called 'October's bright blue weather'?" "Where shall I find a good account of the invention of the printing press?" "Will you tell me the name of a story that will be interesting to a girl of my age?"

There is no disorder in the room; the children are intent upon their search for the right book or, with that delightful concentration possible to children, are deep in their reading, quite unmindful of the constant coming and going of others. The children's rooms in most libraries are open during the afternoons and evenings and all day Saturdays and holidays. Without payment of any dues, except as penalties for carelessness, the children have free use of the room, and every effort is made by the assistants to cultivate the child's liking for the library and his intelligent use of the books.

As many assistants do not care for children, the work connected with them fell naturally on those members of staffs who were interested in it, and to these it soon became apparent that they needed special training if they were to deal wisely with the problems which daily faced them, problems of the evaluation of books, discipline, publicity, and so forth. To meet this need a "Training School for Children's Librarians" was started in connexion with the Carnegie Library at Pittsburg; and from that time, about 1900, the supervision of children's departments has been entrusted more and more to trained chiefs, with as many trained assistants as the salaries of the institution will command.

The libraries of which the children's departments under discussion form a part are maintained by municipal support; and, if not legally, they are at least intentionally, founded as a supplement of the public educational system. The schools teach how to read, the libraries what to read; the schools crowd into a bare eight years—in, alas! far too large a number of cases—all the formal education the child can afford; the library opens up a limitless opportunity for self-education to be continued through life and along any line for which the individual has liking or fitness.

But, if the library hopes to direct the youth just leaving school into paths of self-education, it must have made an appeal to that boy or girl earlier, or its chances of influencing him or her will be slight when the pressure of work and the demand for pleasures become absorbing. Studies were therefore made as to the most advantageous time for inculcating the library habit, with the result that it was found that the greatest enthusiasm for books and the least resistance to suggestion were to be met with in the ages between eight and eleven years. At that period children have few home duties and little preparation of studies, nor do they crave social pleasures as in adolescence. This is the library's golden

opportunity, and the children's librarian must make the most of it.

With the whole scope of library work put upon an educational basis, what precepts govern the work with children? In the first place, a public educational system must exist for all; hence efforts must be made to reach all the children of the city. One may not be content with giving out books to those who come of their own initiative to the library, but must awaken an interest in the child who does not care for reading and must bring books within easy distance of his home. This means a careful study of the city with the characteristics of the various districts, and the finding of points of distribution, unless the library has an adequate system of branches. The collections of books and the methods employed must be adapted to the needs of the special locality.

Although this aim of reaching all the children is ever before her (it is unfortunate that up to the present time the feminine pronoun is the only one to use), the librarian's more immediate concern is the selection of books and the study of the reading tastes of the children. A careful study of the tastes of young readers, undertaken by many librarians and compared, has resulted in a fairly general idea of what elements children like and at what ages they find them most interesting. Lists, subject to constant revision, have been compiled of the best books available on various subjects.

The basis of selection for fiction is, first, the moral or ethical tone of the book, and secondly the literary. Non-fiction is judged by its power to interest and its general accuracy. Libraries began by excluding poor books, sensational in plot or low in tone, but for a time believed that they had to keep as stepping stones a certain number of mediocre books, harmless enough but without value. Gradually they are learning that, by beginning their efforts with quite young children, they can in course of time do away with mediocrity and raise the standard to a high level.

A study of juvenile literature includes a knowledge of the best versions of classic legends, myths, and fairy tales. It entails a study of picture books for the younger children and of some books not classed "juvenile" for the older boy or girl. Practically no book may be added to the collection without careful examination by some one trained to discriminate.

A study of the children themselves revealed the ages at which certain types of books make the greatest appeal: for instance, it was soon learned that the average child passes through certain stages of interest—first in picture books and rhyme, later into fairy tale, then myths and legends—and that at some time between the ages of ten and twelve he begins to crave stories of real life and the experiences of other people. About this time the tastes of boys and girls diverge—the girl wanting stories of home, school, or neighbourhood life; the boy's interest covering a wider range. Indians, cowboys, pirates, war, scouting, athletics are all popular subjects at this period.

History, biography, travel, and science, if interestingly related, make a strong appeal; but the sugar-coated method of giving information by imparting it to John and Mary through questions addressed to Uncle Harry or Cousin Anne is unpopular. The constant interruption of the narrative by the inquiries confuse and tire the child, and he turns to another book, told simply perhaps, but in a straightforward way. Books of easy scientific experiments and handy books giving directions for occupation are in great demand. Librarians learn how much the make-up of the books, the print, and especially illustrations, count in a child's selection, and take pains to get the most attractive editions available of the books they wish most to circulate.

Many means are used to attract the child to the best books. Lists, according to school grade or age, with or without descriptive notes, are made on a multitude of subjects and brought out under such alluring titles as "Pirates and Treasure Hunters," "Careers of Danger and Daring," "Boys who Made their own Way," "Heroines of History," &c. Picture bulletins, carefully thought out and executed, are posted to call attention to books collected near by. Story hours are

held to serve as introduction to tales or cycles of tales, the setting of which needs explanation, such as the Norse or Greek myths, the adventures of Roland or Siegfried, the legends of King Arthur, or the tales of Shakespeare. These gatherings serve a double purpose in not only directing the child, but in keeping the librarian in touch with his point of view.

To return to the premise that the library should be part of the educational system, it is essential for library and school to work together in the interest of the child. This involves school visiting, to address pupils on the use of the library and of books, by librarians, and visits at the library by teachers with their pupils. It means a careful study of the books best adapted to supplement the curriculum, and the ordering of such material as to meet the demands as far as the book funds will allow. In many cases loans are made of a collection of twenty to fifty books to a teacher for the use of her pupils. The circulation of pictures on subjects of school study has proved popular. In brief, the relation of school and library is to be as mutually helpful as possible, and, as the librarian depends upon the teacher for a large part of her knowledge of the child and of the conditions of the neighbourhood, so the teacher learns to depend upon the sympathetic and trained help of the librarian to suggest reading that will aid a dull pupil, or to supply the supplementary material needed to make interesting an otherwise difficult lesson.

Recently, the formation of Parent-Teachers' Associations has given the librarian the chance to address many gatherings of parents on the value of good reading for their children and the benefits of training them in the use of libraries. Out of this has grown the consultation of the librarian by fathers and mothers in regard to the reading of individual children and the selection of books for gifts or for vacation use. Here, again, as in the case with the schools, the person who knows the child well, co-operating with the person who knows the books, helps to bring about the goal of the librarian, "the right book for the right child at the right time." Sunday schools, settlements, clubs, and schools also, are learning to consult the children's librarian for aid in the best expenditure of small sums of money for books or in the making of lists.

Another channel, though it seems hardly a part of library work, is found in the opportunity of bringing the attention of social workers to bear on the cases of need, physical or material, which come under the notice of library assistants. Young workers who, though they are over the compulsory age, should still be in school, or those who are employed in unsatisfactory positions may often be helped by a word dropped to the proper authorities. Children in temporary distress, or needing some physical attention, are apt to betray it to the watchful eye of the librarian or in casual talk with her. The head of the children department tries, therefore, to ally herself with the organizations for civic betterment and to keep in touch with all projects looking toward the welfare of children.

To summarize, children's librarians believe in the efficacy of books for children, not primarily for the pleasure and profit to be derived from them when they are young, but because they lay the foundation for the intelligent use of books in later life, without which a person is seriously handicapped in the fierce industrial competition of the time. They believe that to use books wisely requires education in their use, and that this can best be accomplished by starting with the child when he is not older than ten or eleven. They believe, if the library is to be maintained out of public funds as an educational project, the books must be carefully selected, that the money may be spent most wisely. They believe in following the child's natural interests as far as possible, but meeting him with the best books of each type available, and they have proved that they can maintain a high standard of selection. They realize that they must study the child's point of view and establish sympathetic relations with him, but they know also that they must train him to help himself.

Lastly, they feel the need of getting in touch with parents.

teachers, or social workers in order that the library may co-ordinate its work with that of others working individually or through organizations for the welfare of children.

The cost of maintenance of a library depends naturally upon the size of the book collection and the number of volumes circulated. Taking the figures of twenty-six American cities with a population of over two hundred thousand, the average cost per volume circulated is 13 cents, and the average *per capita* expenditure 29 cents. This includes both adult and juvenile figures, but those of a children's department alone would not exceed them. In one such department, with a book collection of between twenty-five to thirty thousand volumes and an annual home circulation of 206,000 books, through a central children's room, one branch, two stations, and loans of small collections to the schools, the cost is approximately 12,000 dols. The staff employed is a head of department, a supervisor of work with schools, four assistants, two pages with salaries ranging from 360 dols. to 1,500 dols.; also the unremunerated services of two students during seven months. The appropriations come from the municipality, slightly aided by the State. It is rather too soon to know how profitable this expenditure of public funds is; perhaps it is too intangible for us ever to know, but one can not but believe that it will be fruitful of good.

BOOKS OF THE MONTH.

Annals.

SCHOOL NATURE STUDY AND THE STUDY OF NATURE.

THE June *Journal of Education*, in an "Occasional Note" on the *Spectator's* "discovery" of education, referred to the difficulty of practical natural history in schools. The difficulty, while existent, is liable to be exaggerated by those who have not themselves attacked the problem. Practical natural history has been found possible, if not in school, then out of school *because* of school, by the pupils of many town teachers, Londoners for example, who have come to their work with enthusiasm for Nature and for child nature, and with a moderate stock of initial knowledge. These teachers have found that children take to closer contact with their "little brethren," with ladybirds and tadpoles, with garden flowers and their many visitors, like ducks to water. Difficulties may indeed be created if the teacher disregards in practice the psychology he has learnt in theory, and demands the observation, naming, and enumeration of details of structure from children whose natural interests lie in activities. Let the children go on watching without being urged to express, as yet, what they observe, and they will enjoy the stirrings of sympathetic understanding, or it may be of æsthetic appreciation. Expression will come later; we do not ask the just matriculated to write theses.

It is probable that the writer of the paragraph in *The Journal* may agree so far, but say that, even though the teacher have sufficient equipment, yet the difficulty of establishing a true "living in common" (*συνζῆν*) of the children and the living things is still too great. The writer believes that this is because the teacher's ambition is too often extensive rather than intensive; superficial observation lessons on a great many types are given rather than opportunity for the acquisition of an intimate acquaintance with a few. In most so-called Nature study courses for teachers many and varied types are used for instruction in those facts of plant and animal life which a teacher needs to serve as a scientific basis for his own continuous Nature study later. This mode of instruction, meant for the adult, he too rashly transfers wholesale to his classroom, and takes snails to-day and water-spiders to-morrow and elicits a full description of each. What a child wants if he is to study pond life, for example, is to keep, tend, and watch a group of beasts, somewhat carefully selected for life in common, and housed in an aquarium of the least possible elaboration and greatest possible comfort: for snails and spiders a wide-mouthed 3 lb. or 7 lb. glass jam pot, with sanded bottom and a few water weeds, will serve excellently well.

But pond life or bog associations of plants are themselves exotic to the town child; the green fly in the window box and the ladybird that comes after them, the gnat larvae in the

water-butt or the woodlice under the brickbat on the waste plot, the coltsfoot and pepperwort that spring up in the patch of London clay exposed by the new railway cutting, the gulls by the bridges and the pigeons in the city squares, and even the common house-fly and house spider—all these, instead of being ignored or dreaded, may become friends to be looked for eagerly and welcomed with joy.

But, granted that such creatures may occur in and about the children's homes, how does this bear on the difficulty of natural history in schools, or on making Nature study equal "the study of Nature"? Let but the teacher start his course by keeping in school some few creatures which will live happily in captivity—as silkworms, water snails, sycamore or chestnut seedlings—he will find that the boys and girls will readily act on the suggestion that similar creatures are to be found out of school, and "woolly bears," garden snails and slugs, and many self-sown seedlings will be brought into school and will serve not only as material for the Nature lesson, but as links between the school and the natural environment.

But this natural history in school, and *out* of school as a consequence of the school work, and *in* school yet again, is admittedly rare; instead of it we have too many "observation lessons"—dreary wastes of terminology and enumeration. "We call them *stipules*. Repeat after me—*stipules*. *What* do we call these little wings? How many are there?" and so on *ad nauseam*. An easy resource for the teacher whose ignorance of biology causes him to fear the children's searching questions—and they can be very searching and pertinent. The "observation lesson" is one easy way out; another is "I don't know," with the salve to conscience, "Nature study isn't natural science; we only claim to deal with the thing *as such*, not to understand all its relationships." The honest way out is a step on the path to research: "I don't know, but we will try to find out; if we can't answer it that way, I will see if I can find anything about it in books." But this recourse to books is taboo to the unfortunate teachers who have had "You can't get Nature study out of books" drummed into them without its correlative, "By all means get the direct contact with Nature first, but go to books to suggest further possibilities of observation and experiment, and then back to Nature again for confirmation, and to discover further problems." The ardent lover of Nature at first hand is rarely without the nucleus of a Nature study library.

To summarize: Nature study in school can, and should be, the study of living things at first hand, but should always point beyond itself to the study of Nature outside the school. This should first be essayed in the immediate environment, no matter how unpromising. The method must not be one of lessons on this, that, and the other object by a catechetical treatment followed by expression of a repetitive and formal kind; instead, opportunity for continued informal watching must be provided, and all discussion should be free and at the child's initiative. Finally, the teacher should be, and must be, encouraged to use books, not as a substitute for first-hand study of Nature, but as a stimulus and aid to such study.

OBITUARY.

MISS SHAW LEFEVRE.

THE death of Miss Madeleine Shaw Lefevre must have come as a shock to all and as a surprise to many of her old students. It was not easy to realize that Miss Lefevre was even growing old. Her vigour of mind, her interest and energy, were as marked when I saw her last, some six months ago, as they were in 1884, when I entered Somerville College. There was the same keen sympathy in all that her friends were doing; the same spirit of enterprise; the same clear memory of all her students' professional work, and of the ways in which they needed help. Those who knew Miss

Lefevre best, realize most what a remarkable woman she was, and know that it was only her intense humility which made it difficult for the world at large to recognize her unique qualities as a Principal of one of the first of the women's colleges. There was no one better fitted to fill such a post, just because she had no ambition to rule. In coming to live at Oxford she was giving up much. She was peculiarly attached to her family, and her life was full of many and varied interests. To leave home for the half of every year during ten years—not for the sake of any career for herself, but solely to further the cause of women's education, was a very real sacrifice.

Nor was it an easy task which she undertook. At that time there was much prejudice against the establishment of women's colleges at Oxford. She had to face that prejudice, and to make the undertaking a success. The steady progress of the movement for higher education of women in Oxford was largely due to her care and watchfulness: the tone of Somerville owed everything to the example that she set. With her quiet dignity of manner, she was perhaps, of all heads of colleges, the only one who could ever have laid claim to being something of the *grande dame*. Her courtesy never failed and her manner and bearing were full of distinction. She had great and gracious ways. She always believed the best of her students, saw possibilities in them, and quietly guided them. I remember that at one period, when the Hall was growing larger, the students were apt to get rough and noisy after dinner in the evening. Miss Lefevre said nothing, but made it a custom to come into the common room after dinner, and her presence there was quite sufficient to make roughness or rudeness impossible.

Her anxiety that nothing should bring discredit on the College was shown by her unremitting care in small matters. She was always anxious that girls who worked in the laboratories should be quietly dressed and that no students should attract attention. On one occasion a student, who was well aware that the Principal did not like her hats, proclaimed triumphantly to a friend that she was going out with Miss Lefevre, and that there would be no escape from the over-smart hat which she knew was disliked, since it was the only one in her wardrobe. She had, however, reckoned without her host. Miss Lefevre suggested a change of hat, and, to the answer that this was impossible, she merely replied: "Come along with me; you shall have one of mine"—would hear of no refusal, and the student in question went to the party in Miss Lefevre's toque.

Stories are handed down in college which testify to her plans for doing kindnesses, though they were never proclaimed upon the housetop. She felt—and rightly—that it would be a great advantage to the students, many of whom were very young and ignorant of all society life, if they could go about with her in Oxford. Miss Lefevre was a *persona grata* in society, and enjoyed the dinner parties and *soirées* which abound in a University town. She would select the unsophisticated and the awkward, whose opportunities would be few at home and who needed education in social matters. She was long-suffering with the clumsy, but she was quite firm when she saw that it was possible for a girl to improve. For example, if a student did her hair in a vulgar or *outré* fashion, Miss Lefevre would say to her before a party: "Do go up and see Miss X——. She wears such pretty things in her hair. I am sure she would like to help you arrange yours."

She was naturally extremely shy. It must have cost her much to regulate the life of students who could not always see the necessity for any rules at all, and to organize the commonwealth of Somerville so wisely that the University came to accept gladly and without question the existence of women students in its midst. She was so shy that she was apt to make others shy, and it needed the audacity of youth, with all its strong feelings and definite views, to overcome that shyness and venture on a visit to the Head. But it was always more than worth while—both for the wisdom of her counsels and for the obvious pleasure it gave her to be wanted by her students and treated as their friend and not merely their Principal.

There is no question that in those early days there were often grave difficulties to overcome, and an apparent absent-mindedness in the Principal might have been explained, one suspects, by the fact that she was facing problems which it was difficult to share with others. Some hint of those problems we who worked with and under her could catch. She was very deliberate in action, and thought much before she came to any decision. To an impulsive secretary it was something of a trial to write letters which were put aside and not posted, but reconsidered and perhaps redrafted more than once. Yet delay often prevented indiscretions and mistakes, and the judgment formed after much meditation did not need to be reversed. Often Miss Lefevre seemed to be hesitating and undecided, but it was only that she remained for a long time in an attitude of suspended judgment. When she had arrived at a conclusion she was adamant. In many respects she had the qualities of a diplomatist. She was quite clear as to the general policy to be pursued, and worked untiringly to carry out that policy. She came of a family of politicians and diplomatists. Politics were always of intense interest to her. She was a strong but temperate Liberal, and in her government of the College she allowed as large a measure of freedom as was compatible with safeguarding the cause which she had at heart. She had no love of petty restrictions, and we were subject to extraordinarily few rules. She always said that she had learned much from Miss Clough of Newnham, and used to quote Miss Clough's saying, that "no rule should be made until it had really been broken." She believed that the ruler of a college should study character and should know her students, and she trusted largely to her instinct in determining which of the girls under her care could be trusted not to abuse freedom, and in curtailing the liberty of those of whom she was not so sure. She rarely talked to one student of another, but would occasionally make some comment which revealed a knowledge that would hardly have been expected. She was not given to admonition, and I cannot remember a single occasion in six years in which she held any meeting of the students or addressed them corporately. If anyone acted unwisely, she was dealt with privately, and the College at large knew nothing about it.

It was characteristic of her never to abandon what she had begun. I do not think that she ever had any idea of the work that she had done in her ten years at Somerville, and it was part of her humility and of her high standard of duty that she sent in her resignation while still well and strong, in the belief that a Principal with new ideas and a fresh outlook would be good for the place she loved. But, in dedicating ten years to her work as Principal, she did not think she had done enough; for she continued up to the last her connexion with the College, and maintained with her successors the happiest relations, using her power as a member of Council never to interfere, but only to help. Her intimate knowledge of the doings and movements of her old students and her interest in the work of each astonished me again and again. She would mention a student whose very existence one had forgotten, and take it for granted that one shared her own keen interest in her. As she spoke of student after student, shadowy personalities would loom out of the distance, but to her they were as vivid and as present as in their student life twenty years before.

Looking back over thirty years of friendship, one is conscious that throughout the whole period there was never a time when her kindness or her sympathy or her advice in difficulties failed, and that as the years went on the sense of her wisdom and clear perception and foresight made her one's most valued counsellor. Those of us who knew and loved her must always feel the deepest reverence mingled with our love. There is much to remember of joy in her friendship and nothing to forget of pain in a relationship the unique character and beauty of which will always be felt by those who worked with her. It was no small part of our education at Somerville to have known her, and I am sure that I am only one of many who would not for all the world have missed being under her.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON). REGENT'S PARK, N.W.

PRINCIPAL: Miss M. J. TUKE, M.A.

LENT TERM BEGINS JANUARY 14.

HYGIENE COURSE.
SECONDARY TRAINING DEPARTMENTS.
FOR RESIDENT AND DAY STUDENTS.

MADAME BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.
For particulars apply—THE SECRETARY.

MADAME BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS. *Ling's Swedish System.*

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

BEDFORD KINDERGARTEN CO., LIMITED, AND TRAINING COLLEGE, 14 The Crescent.

Council:

THE BISHOP OF BIRMINGHAM;
C. W. KAYE, Esq., M.A., Bedford Modern School.

Principal: Miss AMY WAMSLEY.

A thorough training is given at the above College to Students preparing for the National Froebel Union Examinations. Opportunity for Class Teaching is afforded in the Kindergarten, Transition and Preparatory Classes.

House of Residence for Students—Shenstone Lodge, Osborne House, and Magdala House.

Branch School—Froebel House, Goldington Avenue.

For terms and particulars apply to—
The Secretary, ALEXANDER MORRISON, 28 Mill St., Bedford.

GEORGE GILL & SONS, Ltd.

Before selecting Textbooks write for particulars, or specimen copies, of

The Oxford and Cambridge Edition.

"Guides and Syllabus Extracts" for the 1915 Local Examinations post free.

A NEW FRENCH READER.

"LA GUERRE." Being leading articles and extracts from the leading French and Belgium Journals
on the present European War.

The extracts have been, as far as possible, arranged in sequence, and are carefully chosen. The retaining interest of
the book will widen the vocabulary and impress modern French constructions upon the mind of the student much
more readily than the hackneyed "unseens" from which, hitherto, the master has had to choose. Crown 8vo, cloth 10d.

A NEW READER FOR JUNIOR FORMS.

GREEK AND ROMAN GODS AND HEROES.

By P. C. SANDS, M.A., late Fellow St. John's College, Cambridge. The aim of the writer is to introduce to
pupils of 12 to 14 years of age the stories of the Greek and Roman Gods and Heroes, and some account of Greek
and Roman beliefs, and so not only to bring them into contact with a most beautiful series of legends, but to
enable them to understand allusions to classical lore in their later reading. With 8 full-
page reproductions of world-renowned pictures and numerous other illustrations. Crown 8vo, cloth ... 10d.

The Oxford and Cambridge **LAY OF THE LAST MINSTREL.** Edited by Rev. F. MARSHALL, M.A.
Introduction and Cantos I-III (prescribed for Cambridge Preliminary Local, 1915). With the necessary Notes for the
Examination ... 8d.

THE STUDENT'S WORD BOOK. By F. A. GINEVER, B.A. With Introduction by Professor W. W. SKEAT ... 4d.

The great difficulty in teaching spelling is overcome by "The Student's Word Book." This is not the usual disconnected and meaningless list of
spelling words, but a comprehensive and classified arrangement which excites the curiosity and creates a live interest in the subject.

FIRST AID IN ACCIDENTS. By Sir J. COLLIE and

London: GEORGE GILL & SONS, Ltd., 13 Warwick Lane, E.C.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

CLASS-BOOKS SUITABLE FOR UPPER FORMS OF SECONDARY SCHOOLS.

MATHEMATICS AND SCIENCE.

ALGEBRA, THE SCHOOL. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers. 5s.

A new elementary Algebra fully abreast of modern ideals and embodying the advances made in recent years in the teaching of the subject.

ARITHMETIC, THE SCHOOL. By W. P. WORKMAN, M.A., B.Sc. With or without Answers. Second Edition. 3s. 6d. Also in Two Parts: Part I, 2s.; Part II, 2s. KEY, †5s. 6d. net.

A complete School Course, including Graphs and Logarithms. Special care has been taken to provide a good variety of interesting exercises, and to group them in well-graded sets.

BOTANY, THE SENIOR. By F. CAVERS, D.Sc., F.L.S., Lecturer in Biology at Goldsmiths' College (University of London). 4s. 6d.

A school course of Botany in which great stress is laid on outdoor and indoor observation and experiment.

CHEMISTRY, SENIOR. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. 4s. 6d.

Provides a clear and adequate account of the elements of systematic chemistry and of the fundamental chemical laws, together with a good supply of experimental illustrations which the student can work through in a laboratory.

GEOMETRY, THE SCHOOL. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

Also in two Parts:—

Part I.—Covering Euclid I, III (1–34), IV (1–9). 2s.

Part II.—Covering Euclid II, III (35–37), IV (10–16), and VI. 2s.

The order of proof adopted in this book follows closely the general plan indicated by the Oxford and Cambridge Local syllabus.

HEAT, THE NEW MATRICULATION; LIGHT, THE NEW MATRICULATION; SOUND, THE NEW MATRICULATION. By R. W. STEWART, D.Sc. Three Volumes, each 2s. 6d.

These volumes provide a complete school course of co-ordinated theoretical and practical work in Physics, including all that is required for London University Matriculation and similar examinations.

MAGNETISM AND ELECTRICITY, MATRICULATION. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s. 6d.

The treatment runs on modern lines, being based as far as possible on easy experiments. Modern ideas on the nature of electricity have been included, so far as this is compatible with a strictly elementary account of the subject.

MECHANICS, MATRICULATION. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. Second Edition. 3s. 6d. KEY, †3s. 6d. net.

An elementary account of Statics and Dynamics, in which a knowledge of Trigonometry is not assumed.

LANGUAGES, GEOGRAPHY, & HISTORY.

ENGLISH COMPOSITION, SENIOR COURSE OF. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s. 6d.

This is a progressive Course dealing with the matters most important to pupils of 17 and 18.

FRENCH ESSAYS, MATRICULATION. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and Dr. W. G. HARTOG, M.A., Examiner in French at the University of London. 1s. 6d.

A carefully graduated course in Free Composition in French.

FRENCH READER, SENIOR. With Introduction, Notes, and Vocabulary. By R. F. JAMES, B.A., French Master at Wellingborough Grammar School. 2s. 6d.

Contains extracts in prose and verse long enough to be of sustained interest. Biographies of the authors represented, notes, and a vocabulary are provided.

FRENCH COMPOSITION, GROUNDWORK OF. By ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham. 2s. KEY, * 2s. 6d. net.

This is an introductory book containing the main rules of French syntax as they affect composition, general hints on the turning of English into French, and a number of extracts.

GEOGRAPHY, TEXTBOOK OF. By G. C. FRY, M.Sc. Second Edition, Revised and Enlarged. 4s. 6d.

This book deals with both Physical and Regional Geography. Stress is laid on the interconnexion of Physical Geography and Political Geography. There are numerous diagrams, illustrating chiefly the general chapters on Physical Geography; two weather charts, and a number of railway maps.

HISTORY OF ENGLAND, SCHOOL. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three Parts as follows:—

I, to 1603; II, 1485 to 1714; and III, 1660 to 1910. 1s. 6d. each.

LATIN COMPOSITION. By A. H. ALLCROFT, M.A., and J. H. HAYDON, M.A. Sixth Edition, Enlarged. 2s. 6d. KEY, * By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. 2s. 6d. net.

This book, together with the Exercises and easy continuous Passages, is intended to serve as a guide to the writing of Latin for examinations of the standard of London University Matriculation.

LATIN COURSE, MATRICULATION. By B. J. HAYES, M.A., and A. J. F. COLLINS, M.A. 4s. 6d. KEY, * 2s. 6d. net.

This book-work is so arranged as to enable the learner to construe a Latin period as early as possible.

*Copies of Keys marked * in this list are supplied only to Teachers. Keys marked † may be obtained through any bookseller without restriction, but at net prices only.*

OCCASIONAL NOTES.

WE rejoice to announce that the third Joint Conference of Educational Associations will be held as usual in the University of London during the week beginning January 4, 1915. The opening address will be given by Bishop Welldon on the afternoon of January 4, and Prof. E. A. Gardner, the Public Orator, will take the chair, and during the week fifteen Educational Associations have arranged about thirty other meetings. On account of the national crisis several Associations represented on the Committee have been unable to organize meetings, but members are invited to attend any of those that are open. There will be an extensive Publishers' Exhibition in the East Gallery of the University buildings.

FOR the following list of public schools that have 500 or more Old Boys serving with the colours we are indebted to *The Times*. The list there published includes 36 schools, but several of these, as the Crystal Palace School of Engineering, can hardly rank as public schools, and some famous schools—Winchester, for example—are absent. We have omitted the numbers of killed, wounded, and prisoners, as these can form no gauge of what any school has done at the front. Again, "mentioned in despatches" must be largely a matter of happy opportunity, but it is noteworthy that, out of a total of 286, two-thirds fall to four schools—Wellington, 54; Harrow, 54; Cheltenham, 36; Charterhouse, 28. Needless to say, the returns are provisional and the number of the school must be taken into account. Thus, Eton has over a thousand boys and Sedbergh under two hundred and fifty. Numbers with the

colours: — Charterhouse, 2,030; Wellington, 1,951; Marlborough, 1,860; Clifton, 1,378; Harrow, 1,351; Haileybury, 1,246; Cheltenham, 1,159; Rugby, 1,150; Sedbergh, 1,103; Malvern, 969; Tonbridge, 751; Eton, 736; Uppingham, 730; Dulwich, 730; Bradfield, 601; Shrewsbury, 561; Bedford, 500.

IT is hard to get away from the War because we cannot help seeing everything in the glare of battle, which seems to throw a searchlight into every chink and corner of our national life. We have often talked about the lack of solidarity amongst secondary teachers and contrasted it with that keen professional feeling amongst elementary teachers, which, in spite of its inevitable drawbacks, is yet a great force for good. On this, as on all other things, the War sheds its illuminating ray. Every week the *Schoolmaster* publishes the names of teachers who have joined the colours, notes of the doings of old colleagues on active service, and lists of subscriptions to the relief funds, the information being supplied by the National Union of Teachers. What body of secondary teachers could furnish such records? We know, and sympathize with, that most healthy feeling against anything savouring of "advertising" which characterizes secondary teachers, but the publication of lists of recruits is not "advertising"—it is the gratification of feelings of legitimate curiosity and honest pride. Besides, such facts are likely to make the public think more of teachers than it does at present. But we fear that secondary teachers have not yet sufficient corporate consciousness to feel the necessary curiosity about and pride in their doings as a body. We wonder if the Assistant Masters' Association will publish a list of secondary teachers who have gone to the front.

MR. CYRIL ALINGTON, Head Master of Shrewsbury School, is a bold man. In his book, "A Schoolmaster's Apology," he attacks cricket. This, for the Head Master of one of the historic "Nine," would be bold at any time; it is specially bold in these days of War. For some of the peculiar virtues of our soldiers (so supporters of games will urge) are due to the national cult of games. They will point not merely to our men's physical qualities, but to their keenness and briskness, and, above all, to that cheerfulness and gaiety which, if observers at the front are to be trusted, is the special characteristic of the British soldier. Games bring with them, as nothing else can, a sense of exhilaration and joyousness; they warm the blood and make glad the heart, and, the more seriously they are played, the more pronounced are these good effects. The Englishman, our friends will say, takes his football as seriously as if it were war, and goes into battle as joyously as if it were football. They will add, too, that co-operation in games forges a link between officers and men to which nothing in Continental armies is comparable.

WITH all this we cordially agree, and yet we hold that Mr. Alington is largely right. We would not, indeed, condemn cricket as he does because it is "fundamentally a selfish game." Reverse the shield and it appears as a game that cultivates, as no other does, self-reliance. Every boy, each time he plays it, must, at least for a

minute or two, stand up alone against the world. He is surrounded by a ring of implacable enemies bent on his destruction. The whole universe is against him, and nothing but his skill and coolness can save him. But, when Mr. Alington denounces not the soul of cricket, but its limbs and outward flourishes, its over-specialization, its averages and analyses, we are heart and soul with him. Games are suffering from over-organization. All the benefits they can give may be got from them without the paraphernalia of caps and coats, the unhealthy stimulus of gala days and numerous out matches, and the demoralizing assistance of professionals and groundsmen that are now turning what ought to be a wholesome recreation for body and mind into an absorbing struggle for distinction.

WE have not yet seen much criticism by teachers' associations of the Board of Education's proposals for co-ordinating and reforming examinations.

Examinations. The Head Mistresses' Association, whose views we reported in our last number, stand at present alone in having expressed an opinion on the Circular—at least, so far as we are aware. Perhaps other associations have not yet had time to consider the subject. If that is so, we would urge upon them that it is highly desirable that they should find time. The record of these bodies in the matter of the reform of examinations is not one that does them very great credit. What usually happens is this: the Committee of an association produce a report on examinations; they send it to the Board of Education, where it is duly acknowledged, pigeon-holed, and forgotten; the Committee then fold their arms placidly and await results, with a childlike faith in the efficacy of reports. Now this is not the way battles are won. The secondary teacher, who does not possess much political instinct, has yet to learn that reforms can be secured only by seizing every opportunity to press their claims, and by persistently hammering at the nail till it is driven home. The head mistresses appear to be the only people who understand the necessity of continual agitation. Unless other bodies of teachers show something of their energy and perseverance, the Authorities and the public will probably conclude that, after all, the discontent with the prevailing system is confined only to a few, and that, for the mass, examinations are what the cat is to the careless housemaid—an excuse for everything that goes wrong. Teachers grumble incessantly; but it is hard to induce them to make steady and continuous effort to get their views accepted.

THE London Education Committee decided last April to award 75 probationer bursaries to girls between thirteen and fifteen years of age attending the elementary schools, who were considered suitable to become teachers. The scholarship consists of a free place in a secondary school and maintenance grant till the girl reaches the age at which she can compete for an ordinary bursary. The scheme was adopted avowedly as an experiment, but without waiting to see the result of the experiment the Committee has decided to double the number of the bursaries. It is rather difficult to see what it is hoped to gain by the plan. Most girls who are intellectually fitted to become teachers have passed into the secondary schools before they are thirteen; if they have not, then the Council's scholarship system must be at fault. Appar-

ently the Committee are hoping to catch some children young for their teaching service, and bind them fast by agreements, but we think that they are making a mistake. It is very difficult to know whether a girl of thirteen will make a good teacher. The naval service, cited by the Chairman of the Teaching Staff Sub-Committee, presents no real analogy. Almost any thoroughly alive boy, with a sturdy character and good health and intelligence, can be made into an efficient naval officer, but the qualities required for teaching are not necessarily finer, but certainly rarer and less visible in childhood. Experienced public-school masters can pick out with tolerable confidence the boys of thirteen who are likely to develop into good officers, but how many would care to select candidates for masterships from amongst boys of such an age?

MR. HOUSEHOLD, the Secretary to the Gloucestershire Education Committee, and Mr. Hollingworth, their agricultural organizer, have published glowing reports on the results of teaching

School Gardens. gardening to elementary-school children. The former speaks of the "revolution"

that has been worked through the instrumentality of the school garden, and wants everybody to see the mensuration, drawing, composition, and Nature study that is done in connexion with it. Old educational hands are rather distrustful of "revolution" in school work; but, while we discount a little Mr. Household's superlatives, we have no doubt that valuable work is being done in Gloucestershire in and through gardening, and we see no reason why the garden should not be the centre of most of the work of the school. Certainly that any country boy or girl should grow up ignorant of how to manage a garden, or should pass through life without having a garden to manage, is as much a tragedy as if he lived and died unable to read a book—which Carlyle declared was a tragedy, however often it happened. But it is not country children only who are taught gardening. One of the best gardens in the county is managed by town boys, some of whom had never before known the names of flower, or weed, or insect. Nor is the benefit of the garden confined to those who work in it. The whole school, from the infants upward, may walk there and enjoy its beauties. The best results, says Mr. Hollingworth, are attained when the teacher is one of the class, and all work together—where the boy is taught during the first year, and in the second year works more independently and becomes a proprietor. It must be indeed a great moment in the life of a boy when he first feels himself to be a landed proprietor!

SIR THOMAS HOLDICH, in his address to the Society of Arts on "Map Making," gave a useful little hint to teachers, though his remark was not intended as such. He observed that a common feature in the earliest maps was the play of pictorial imagination to describe the ethnology of the regions plotted. He referred, no doubt, to the drawings of savages and monsters with which the old map-makers used to embellish their productions. Now this device of our forefathers is just the kind of thing which impresses the minds of children, and there is no reason why we should not go back to it. Pictures of men, animals, trees, and natural productions printed on the regions to which they belong would be much more effective than any representations detached from the

The Dearth of Teachers.

Maps.

maps. The principle is not unknown to teachers; children are sometimes set to make little maps with such representations on them; but it might be acted upon far more widely than it is. When the time comes for geographical publishers to renew their activities (which, in view of the likelihood of structural alterations in the map of Europe are, we imagine, rather in abeyance at the present moment) they might consider whether they could not take a hint from some of the old cartographers. Wall maps are improving but slowly; there is a general consensus of opinion, indeed, that the old map, crowded with names, is useless for teaching purposes, and orographic maps are coming in; but one sees few of them as yet, while symbolism and pictorial representation are almost unknown.

THE Board of Education has on its staff one, if not more, sound historian. In its latest memorandum on teaching (Circular 869), which we noticed briefly last month, a course of modern European history for Higher Forms, from the Congress of Vienna down to 1900, is suggested, indicating the countries, the national, political, and economic movements that should be emphasized, and what parts of history should be lightly touched on or wholly omitted. It is recommended that the course should end with the last century, but if the development of the Balkan States and the extension of French and Italian territory in the north of Africa have been properly explained, the pupil will have grasped the situation that had arisen just before the outbreak of the War. Such a course would be above the heads of Lower Forms, and it is recommended that these should pursue their normal English History lessons; but here, too, the past may be vivified by constant reference to the present—the growth of the Navy, the command of the sea, the part that English armies have played on the Continent, the Low Countries as the cockpit of Europe, &c. Lectures or supplementary lessons on the War are by no means to be discouraged; but these should be extras not included in the regular History Course.

MR. J. W. GILBERT, Chairman of the London Education Committee, may be a very capable administrator, but he knows nothing about children. He desired the head teachers of the London schools to address their children on Lord Roberts's work on the day of his funeral at St. Paul's. An excellent idea, but he spoils it by suggesting that the best way to make the children acquainted with Lord Roberts was to read to them the six panegyrics delivered in Parliament. Apparently it never occurred to Mr. Gilbert that not a single school child was born when Lord Roberts marched to Kandahar, and not one had left the infant school when he entered Pretoria. That is to say, none of them really knew anything about Roberts; to them he was a great name and nothing more. The head teachers, we may feel sure, did not read the speeches to their children, admirable as they were for an adult audience, and above all they dwelt on his moral grandeur, comparing him, it may be, with Wordsworth's "Happy Warrior" or Tennyson's "Duke of Wellington." They told them stories of Roberts's life and achievements. Mr. Gilbert's suggestion is a curious illustration of the Committeeman's lack of knowledge of, and sympathy with, the daily work of the classroom.

WE regret to announce that Prof. Schüddekopf has on mature consideration decided to withdraw his article on "German" in the "Idola Linguarum" series till the termination of the War. We had counted on the article not only as the ripe experience of an eminent scholar and teacher, but also as a symbol that *Wissenschaft* knows no nationality; that the English can, or should, appreciate Goethe as the Germans do Shakespeare. Dr. Schüddekopf, however, takes a different view, and writes to us: "Though personally I have been treated with the greatest consideration and even friendship, yet in view of the feelings aroused by the War with regard to Germany and everything German, including the language and literature, I think it would be expedient to defer my article till happier times arise."

WE heard a zealous and thoughtful teacher remark the other day that nothing was of any use to him except accounts of what had actually been done, and done successfully, in the classroom. This view is probably common amongst teachers, but it seems to us a very wrong one. In the first place, it is not very complimentary to the intelligence of school masters and mistresses, for it implies that they can make progress in their art only by imitation. They must be told not only what to do, and what to aim at, but exactly how to do it. All they can learn is to do particular things in particular ways. They can never pass out of the stage of pupil-teachership. The truer view seems to us to be that the teacher ought to be able to learn something from anyone who has in his head any ideas at all about education which are not palpably absurd. The theorist will doubtless frequently suggest much that is unpractical. It is for the teacher to consider whether his principles are sound, and, if they seem to be so, to sift what is practical in his recommendations from what is unpractical. Let masters and mistresses remember that "outsiders" have some advantages which they have not. The looker-on sees most of the game as frequently in the classroom as elsewhere. If the theorist is often in the clouds, the teacher is quite as often in a rut. It is the same in politics as in education. The statesman who neglected Burke and Mill because they were not successful heads of departments would be as foolish as the teacher who scorns Rousseau and Herbert Spencer because they were not schoolmasters.

IN a short article, called out by some remarks in our June "Notes" on the teaching of natural history in schools, the writer, after making some most useful suggestions, observed that Nature study in schools should be the study of living things at first hand, and should further point beyond itself to the study of Nature outside the school. Of the first there is now a good deal in elementary schools; the second aim is not so easy to carry out. The Bucks Education Committee have found a way to encourage at least a certain number of children to observe Nature for themselves. They offer each year a Bird and Tree Challenge Shield for competition. The Shield goes to the school whose team of scholars write the best essays on three selected birds and trees, those chosen this year being the kingfisher, green woodpecker, and sedge warbler amongst birds, and the true service, whitebeam, and larch amongst trees. The children are expected to show that they have made observations for

Idola Linguarum
"German."

themselves, and it ought to be easy to distinguish between facts got from books and won in the open air. This year the Shield was won by a girls' school, and we are told that the composition of the essays was excellent, and that they were well illustrated. We ought to add that the same kind of thing may be done in some other counties, of whose work in this direction we do not happen to have heard.

LOCAL AUTHORITIES.

In their last report the Board of Education point out that "the number of bursars and pupil-teachers has diminished in the most alarming manner during the last six years," and the figures certainly justify this conclusion. In 1907-8 the total number of entrant pupil-teachers and bursars was 10,340; in 1913-14 it was 4,486. If the supply in 1907-8 may be regarded as sufficient for normal requirements, the total number of assistants enrolled over the period of six years (1908-9 to 1913-14) should have been 62,040. The actual number, it will be seen, was 34,888—a deficiency of 27,152. During the same period the number of pupils in secondary schools aided by the Board increased from 135,671 to 158,832.

THE figures appear to point to the conclusion that, considerable as the educational merits of the present system may be, it is not producing the anticipated results. Under the old plan of training pupil-teachers, either in the elementary schools or in special centres, the further education of the pupil of promise was directed solely to the purpose in view. The training now afforded by the secondary school is on a broader basis, and provides a satisfactory preliminary for access to various other employments. Moreover, under the old system the pupil earned a small wage throughout his career as a candidate and pupil-teacher. It is possible that immediate rather than prospective remunerative possibilities determine to a greater extent than is generally appreciated the pupil's choice of employment, especially in the case of boys. Under present conditions any allowance which the boy may receive as a bursar and student-teacher is more than absorbed by his training college expenses. He is not, therefore, in a position to contribute towards his own maintenance until he reaches the age of twenty.

PARENTS who can dispense with the earnings of their children until they are out of the teens do not usually favour the teaching profession, while, on the other hand, those who cannot afford to do so are not sufficiently compensated under the present system. Consequently the number of "entrants" is declining, and is likely to decline, unless more substantial maintenance grants are available in the preparatory stages or the prospective remuneration is increased. A report issued recently by the Northumberland Education Committee directs attention to another question, arising out of the present system of training teachers, which has an important bearing on the staffing of elementary schools. The pupils who have received a satisfactory preparatory education in secondary schools naturally desire to complete their professional training by entering training colleges. The following table shows the immediate distinction of students who qualified as uncertificated teachers during the past three years:

Year.	Number qualified.	Entered Training Colleges.	Employed as Uncertificated Teachers.	Not accounted for.
1912	105	62	42	1
1913	66	41	24	1
1914	75	57	14	4

It is estimated that, under normal conditions, apart from new schools and improvements in staffing, between thirty and forty uncertificated teachers are required each year.

As far as Local Authorities are concerned, therefore, the position appears to be that, having placed the preparatory education for the teaching profession on the same general basis as the preparatory education required for other professions and employments, it will be necessary for the remuneration for teaching, both immediate and prospective,

to compare favourably with that available in other professions and employments. It is further to be observed that, in areas where there are a considerable number of such schools, Authorities are likely to be confronted with a problem of increasing difficulty by a further falling off in the supply of uncertificated teachers.

It may be doubted whether in the rural districts of the country the desire to enlist has been sufficiently pronounced to occasion any serious deficiency of agricultural labour. The Somerset Education Committee have, however, instructed their District Committees not to take proceedings for non-attendance at school in the case of boys of twelve years of age, or if employed in agriculture of eleven years of age, (1) who are employed in the place of men who have left to serve in the Forces, or (2) who are members of a Boy Scouts' Association, Church Lads' Brigade, Boys' Brigade, or similar organizations, who are certified by their commanding officer as employed under proper authority as guards, messengers, &c. The Committee have also requested the Board of Education to approve temporarily an alteration in the School Attendance By-laws to provide, that during the War, a child between twelve and fourteen years of age, or if employed in agriculture of eleven years of age, employed with the sanction of the Local Education Authority, shall, for the purpose of obtaining a certificate, be allowed to reckon such employment as attendance at school.

THERE is a good deal to be said for the system, adopted in certain states of central Europe, of providing a scale of salaries applicable to all qualified teachers, with supplementary allowances for those who are placed in charge of a school. A scheme on these lines has been put in force in Worcestershire. What may be termed the basic salary of college trained certificated teachers is for men £85 to £130, and women £75 to £110, with the possibility of further increments up to £150 and £120 respectively in special cases. Head teachers, in recognition of their responsibility, receive additions to the scale salary in accordance with the size of the school as follows:

Attendance.	Men.	Women.
Under 75	£ 5	£ 5
75 and under 100	10	5
100 to 149	20	10
150 to 199	40	20
200 to 249	60	30
250 to 299	80	40
300 and over	100	50

In addition to these amounts, the Committee reserves power to grant further additions up to a maximum of £30, in recognition of long or meritorious service.

It is a difficulty incidental to nearly all scales of salaries for head teachers which are based upon average attendance that, as frequently happens, a difference of two or three in the number of scholars makes a difference of £20 in the amount of the salary. This may lead to various unsatisfactory expedients to maintain a certain average attendance. It is also a very obvious hardship for a teacher who has accepted an appointment on the assumption that the salary would be, say, £200 a year to find that by the accident of the birth-rate in the school district it falls to £180. There is a further objection to scales of this type which is not sufficiently recognized. There are great differences in the advantages and disadvantages of various schools and of the localities in which they are situated. In determining the remuneration of the teacher a Local Authority would be well advised to take these varying conditions into account and to offer some compensation for places of special difficulty. The plan of a "basic" salary for a qualified teacher is a good one: it should, however, be an easy matter for a Local Education Authority to divide the schools in their area into, say, six grades, and to attach a suitable additional subsidy for the responsibility of headship in each grade. The size of the school would, of course, be an important factor in determining the grade in which a school would be placed, but not by any means the only factor. And the grade assigned to a school should not be altered during the tenure of any head teacher.

A GILCHRIST Studentship in Geography of £100 is announced, open to geography teachers, men or women. Applications must be sent before February 7, 1915, to the Hon. Secretary, Geographical Association, 40 Broad Street, Oxford, from whom further particulars may be obtained.

SCIENCE NOTES.

Laying a Good Foundation. THE London Branch of the Mathematical Association is devoting a large part of the meetings of the present season to discussions on difficulties met with in elementary teaching. Naturally, this course has elicited many instructive queries and valuable hints drawn from the experience of practised teachers. Furthermore, as is bound to occur when the teaching of rudiments is adequately investigated, several fundamental questions involving the philosophy of arithmetic and algebra have come under discussion. As it has not unfrequently happened that two or three mathematicians of the front rank have been present, the arguments have been clearly put, and light has been shed on obscurities which often interfere with effective teaching.

R.I. Christmas Lectures. THE course of Christmas lectures to juveniles, which was inaugurated by Faraday at the Royal Institution in 1826, will be given this year by Prof. C. V. Boys. The lecturer, who is unsurpassed in the art of devising and performing original experiments, has entitled his course "Science in the Home."

The Beginnings of Home Science. THE Association of Teachers of Domestic Subjects has now a well established position, and it is quite opportune that a brief history of the growth of the teaching of home subjects should be published under the auspices of the Society. Accordingly, we welcome "A History of the Teaching of Domestic Economy," in which Miss Yoxall traces our progress from the early days, some three-quarters of a century ago, when the introduction of needlework began the movement.

P.S.S.M.A. THE annual conference of the Association of Public School Science Masters will be postponed from January until later in the year. It is hoped that at the later date (not yet fixed) the exhibition of apparatus will include a display of apparatus made by British firms. If such an achievement be really possible it will mark a revolution. It was just twenty years ago that the writer called the attention of a few influential City men to the fact that the laboratories of his school were stocked mainly with German goods. It was pointed out that there was not a British factory in existence which made glass tubing, &c.; but it is scarcely necessary to add that the information did not interest anybody. We are glad that the British Science Guild and the P.S.S.M.A. are trying to encourage the manufacture of chemical apparatus in England.

The Supply of Glass. AT the outbreak of hostilities it was pointed out in this column that a shortage of glass and porcelain was to be expected. Already prices have risen, the existing stocks in the dealers' hands being about enough to last for another school term.

Transit of Mercury. THE writer observed the last fifteen minutes of the transit of Mercury under exceptionally good conditions as regards definition. The result—no black drop, no white spot, no halo—no anything but a sharply defined black disk gradually leaving the sun's face. The magnification was insufficient to test the circularity of the planetary disk, which Jonckheere suspects to be elliptical. Prof. Fowler, of South Kensington, saw Mercury projected on the sun's corona.

PUBLIC SCHOOL FIELD DAYS—OLD AND NEW.

TIME was when the terminal field day was looked forward to as the one great picnic of the term. For one day no rules held; to eat, to drink, to smoke, all three to one's heart's content, were the main objects of the scheme. No ulterior ideas of benefiting from a military standpoint ever occurred to the majority of the Corps; it was universally recognized as a whole holiday; some marching had to be done; with exceptional luck there might be, but it was very unlikely, some fighting; neither the general nor special idea was understood by or even mentioned to any below the rank

of sergeant, consequently the interest taken in the proceedings was fairly haphazard and lifeless. Non-military masters complained because they lost their forms just at a critical point in their work; masters who were officers in the Corps sometimes countered by suggesting that as they were taking all the boys off their hands for a whole day they ought, instead of complaining, to be jolly glad!

At the end of a day spent in lying under hedges and listlessly obeying orders every two hours, more or less, there would be a "pow-wow," and a lot of umpires, richly arrayed, would appear from nowhere and give their impressions, not having seen one-fiftieth part of the operations. Speeches would be made to the entire Corps, who would in return express their boredom by running comments in an undertone on the physical peculiarities of the speaker. This over, stanchly fortified by an immense tea, the entire manoeuvre would be completely forgotten as the school marched back singing lustily through the darkness. How completely is all this changed! No more War Office officials can spare the time to come and watch us carry out a preconcerted scheme, there is all too little ammunition, there is not much time to spare . . . but how trivial are these once all-important matters! I am just back from our first attempt at a tactical exercise this term. Will the hubbub never die down? Shall we always be at each other's throats as we are now? We started quite peacefully too. It was a simple enough idea. One subaltern with two platoons was to explore a particular district while we, with four more, were to attempt to drive them back.

All the term on parade there has been a remarkable alertness; but to-day this developed into a state of real genuine excitement; the War-fever was beginning to tell. We chafed, like hounds in leash, to get at the enemy. My men were acting as advance-guard, and took us along at such a speed that we ran right into the enemy in a bunch before they had time to get into position at all. The "Standfast" went, giving us a quarter of an hour's much-needed rest. On re-starting the country became a little difficult, and one House in its anxiety to get up into touch with the opponent tried to rush a turnip-field, and succeeded only in rousing two hares and exposing their line of approach to the enemy, who, however, mistook them for our entire line; whereupon I led my men by a devious route, enfiladed them with one platoon, and took them in the rear with another after crossing a large area at top speed; the "Standfast" then went again, and we held ourselves well content, thinking that it was to enable the enemy to take another position, as their present one was obviously untenable. But as in all peace conditions we were sadly at fault: our umpire, an elderly gentleman who never knew that we existed—imagining, like the enemy, that our whole contingent were crossing the turnips in a frontal attack—had stayed the action in order to point out that we were wiped out.

It was now about time to go home, but when this verdict was made there was much searching of heart and anger, which vented itself in a splendid hubbub on the return journey, for the enemy were now told off to harass our march. We again went out to dislodge them; again enfiladed them and captured their commander, who with supreme cheek endeavoured to hold that they were all put out of action by daring to rise and rush him. While strenuous arguments between rival officers were being carried on, the platoon quietly dispersed in the gloom, and in a few minutes could be just discerned, but more easily heard, as they charged the entire remaining enemy across an open field into a dyke, where the most gorgeous chaotic "scrum" imaginable took place, to the great indignation of the elderly umpire, who by then had managed again to keep up with the action by coming in at the end. It also had the excellent effect of readjusting many tempers that had been lost over the umpire's strange decision.

The way home, instead of our singing carelessly as of yore, there was audible the subdued hum of voices as each section of fours earnestly went over the main incidents of the day, excitedly, agitatedly, quite unlike the old time non-

chalance. "A jolly good rag!" "I hope we have another." "Good Lord! Next time we'll do without an umpire."

To-night in Common Room maps were produced from every pocket, and animated arguments between opposing officers in different corners added a new note to the usual bedlam of voices just before dinner. The wordy warfare seemed about to degenerate into strenuous action, for the umpire, in a fit of ungovernable rage, had clinched his argument with the apparent irrelevance, "Well, all I can say is, it's about time all the younger masters were out at the front. I call it disgraceful that you young men should go on doing this sort of thing and teaching, loitering, I call it, when your obvious duty is to go away and fight."

"All right, you provide for my wife while I'm away: I owe £200, and I only get £200 a year, and my wife won't get a penny while I'm away or when I'm killed; what about that? It's all jolly fine, you old fools in your security, gassing a lot of truck like that; you know too that the War Office told us to carry on here when we offered our services to them in September; stuff that in your pipe..." The air gets thicker with personal abuse.

All this out of an afternoon's playing at war! Keeness leads to strange results. So for weeks we shall be a divided camp, but no one will accuse us of treating field days as a casual holiday any more; we are only longing once again to get to grips, and have another try to assert our superiority in cunning and military strategy over other platoons. Think what we should be like against a real enemy! We are learning our job all right, if somewhat quaintly.

S. P. B. MAIS.

THE LOGIC OF SPEECHES.

THE oration as a form of expression is marked by distinctive characteristics that impart to the study of it a special interest and enable us to deal in the English curriculum with subject-matter that cannot be so conveniently treated through any other form.

One of its advantages is that we may use it to introduce our pupils informally to the study of rhetorical logic or logic applied to ordinary argument. Everyone will agree as to the utility of teaching boys and girls while yet at school to appreciate the value of evidence in argument and to distinguish accurately between sound and fallacious reasoning, and it is by the consideration of concrete arguments actually used by speakers that such teaching can be given most effectively. The study of logical principles taught in this way will be seen to be in close touch with the needs of our daily lives. In the reading of a single oration the various methods of argument used by speakers may be explained and their validity, with the conditions on which it depends, may be examined, and opportunities will be afforded of discussing the fallacies and weaknesses that most commonly occur in argument.

Thus, it may be shown by actual instances how speakers frequently employ the deductive method of reasoning. The typical form of deductive reasoning, as set forth in textbooks of logic, is the syllogism, but in actual discourse arguments are seldom or never formally stated as syllogisms. Very often, however, they may be reduced to this form, and to express the essential point of a deductive argument syllogistically is a useful exercise in logical analysis.

For instance, at the beginning of the "Speech on Conciliation with the American Colonies," Burke declares that his proposal is to give peace, and that this implies concession from one side or the other, and he proceeds as follows:—

In this state of affairs I make no difficulty in affirming that the proposal [of concession] ought to originate from us. Great and acknowledged force is not impaired, either in effect or in opinion, by an unwillingness to exert itself. The superior power may offer peace with honour and with safety. Such an offer from such a power will be attributed to magnanimity.

The main point of this argument may be expressed thus:

The superior power, in disputes between two parties, should be the first to offer peace;

England, in this instance, is the superior power;

Therefore England, in this instance, should be the first to offer peace.

Later in the speech, Burke asserts that in the character of the Americans—

A love of freedom is the predominating feature which marks and distinguishes the whole; and as an ardent is always a jealous affection, your colonies become suspicious, restive, and untractable whenever they see the least attempt to wrest from them by force, or shuffle from them by chicanery, what they think the only advantage worth living for. . . . From all these causes a fierce spirit of liberty has grown up. It has grown with the growth of the people in your colonies, and increased with the increase of your wealth; a spirit that, unhappily meeting with an exercise of power in England which, however lawful, is not reconcilable to any ideas of liberty, much less with theirs, has kindled this flame that is ready to consume us.

The essential point that Burke here seeks to establish may be expressed syllogistically as follows:—

Peoples who are strongly attached to freedom should not be governed harshly or repressively;

The Americans are a people who are strongly attached to freedom;

Therefore they should not be governed harshly or repressively.

Frequently, in discourse, the major or the minor premise of a deductive argument is taken for granted, and not expressed. Thus, in the first passage quoted above from Burke the minor premise is suppressed—the proposition that England is a stronger power than America is assumed to be so self-evident as not to require statement. Pupils may be asked sometimes to complete syllogisms that are not fully expressed, or to abbreviate fully stated syllogisms—e.g. Burke's second argument, referred to above, might be put shortly thus: "The American colonists should not be governed harshly or repressively, for they are strongly attached to freedom."

Practice of this kind, in expressing the deductive arguments of a speech in syllogistic form, will afford the teacher numerous opportunities of explaining, with more or less detail, according as he may think advisable, the nature of the syllogism, the conditions on which its validity depends, and the most common fallacies to which it is subject.

So, too, the various kinds of inductive argument that are used in discussion may be taught. In this connexion, however, it is important to observe that the methods of induction cannot be applied rigorously to the subject-matter of ordinary discourse; they are applicable, in their strictness, only in the discovery and explanation of scientific facts and laws. The subject-matter of oratory is generally too complex to admit of scientific proof; and we should expect from a speaker only that degree of proof of which his subject-matter may be capable. A scientist may often explain the behaviour of natural phenomena by reference to a general law; but, in suggesting legislation to regulate the action of human beings as members of a State, a politician in his speeches can hardly hope to base his proposals on any universal law of human nature; he must be satisfied with some approximate generalization that will be applicable to the conditions, not of all, but of the greater number of, the people for whom the legislation is intended. The scientist attains a more rigid degree of proof because he is able to use the method of experiment; but the complexity of the material with which the politician has to deal, and the dangerous results that might follow, make it impossible for him to experiment to any appreciable extent.

From the nature of the Inductive Methods [says Mr. Carveth Read], it is plain that in such a complete and tangled situation as history presents a satisfactory employment of them is rarely possible; for they all require the actual or virtual isolation of the phenomenon under investigation. They also require the greatest attainable immediacy of connexion between cause and effect, whereas the causes of social events may accumulate during hundreds of years.*

* "Logic, Deductive and Inductive." By Carveth Read, M.A. (Alexander Moring.)

The statement that "there are two sides to every question" applies pre-eminently to the subjects discussed by the politician and public speakers generally. The speaker's task is to make *his* side of the question—the theory or policy that *he* advances—appear as plausible and true to his audience as it is to himself; but it is only rhetorical truth, not scientific truth, that he can demonstrate. This is rendered inevitable, not only by the complex nature of his subject-matter, but also by the very circumstance that scientific proof is a process usually requiring long time and much care for its fulfilment, while the time at the disposal of the orator is short.

It must be recognized, then, that the inductive methods of logic are applied in oratory only in a rough fashion. This circumstance, however, detracts in no way from, but rather adds to, the utility of teaching pupils to examine inductive method as it is used in ordinary discourse and to estimate the value of the proof that it affords. In our daily lives the subject-matter to which we apply our reasoning is, as a rule, not capable of being investigated strictly by inductive methods, and the canons of inductive reasoning that may be taught through the medium of arguments actually employed by speakers and writers are likely to be even more useful to our pupils in the ordinary affairs of life than a knowledge of the strictly scientific method applicable to natural phenomena would be. If a subject under discussion is so complex that it cannot be investigated by a rigidly scientific method, obviously we must be content to apply induction only with that degree of strictness which the subject permits.

The three main kinds of inductive argument, as it occurs in ordinary discourse, may be said to be:

(1) The argument from an example or examples, or, as it is sometimes called, induction by simple enumeration, in which we proceed from mere enumeration of one or more cases to a general proposition; as when a speaker, after enumerating particular Liberal measures that had been rejected by the House of Lords, propounded the general statement that "the House of Lords has been the invincible obstacle to Liberal legislation, and wrecks all our principal measures."

(2) Induction based on a causal relationship. In this kind of argument the inference may proceed either (a) from "cause" to "effect," or (b) from "effect" to "cause." (a) The argument from cause to effect was employed extensively by the Right Hon. Robert Lowe in his speech on Parliamentary Reform, delivered in the House of Commons, April 26, 1866. Postulating the passing of the proposed measure of extended franchise as a given cause, the speaker sought to establish that its effects would be "to destroy one after another those institutions which have secured for England an amount of happiness and prosperity which no country has ever reached, or is ever likely to attain." (b) From a given effect, the decline of the agricultural population of England and Wales since 1851, may be inferred such possible causes as the conversion of arable into pasture land, the growth of foreign competition and increased importation of agricultural products, the introduction of machinery on a large scale, agricultural depression and falling prices, lack of housing, and the attraction of other countries and industries.

(3) The Argument from Analogy, in which we draw a direct inference from one instance to a similar instance. Thus Burke, in his speech on Conciliation, draws an analogy between the situation of Ireland and Wales in the past and that of the American colonies, and infers that a policy of conciliation ought to be pursued. As soon as Ireland was allowed the privileges of the English Constitution she became peaceful and prosperous. Up to the reign of Henry VIII the Welsh people had no share in English liberties, and their country was in a state of perpetual disorder; but when they were given the rights and privileges of English subjects, "from that moment, as by a charm, the tumults subsided, obedience was restored, peace, order, and civilization followed in the train of liberty."

The nature of these arguments may be easily explained by reference to the instances that occur in speeches. Absolute proof is afforded by none of the three, but the degree of probability established by each varies according to the observation of certain conditions which can be studied

through the examination of particular arguments. It should also be noted that in practice the several kinds of inductive argument, which have been classified above as if they were distinct and separate, are often used in combination with, and shade off imperceptibly into, one another, and that induction is frequently employed to reinforce deduction. To be effective a speaker must argue both deductively, from general principles and the nature of the case, and inductively, from facts.

The most common fallacies of induction should also be taught—e.g. the fallacy of hasty generalization, the inference of causal connexion between phenomena on the ground merely of their existence, *post hoc propter hoc*, the mistaking of a single condition of an event for the whole cause, or of one consequence of a cause for the whole effect, *petitio principii*, *ignoratio elenchi*.

The following exercises may serve to indicate more precisely the kind of work that may be done:—

(1) State briefly and classify the argument contained in the following passage. Point out any weakness you find in it—

Perhaps there are in this room—I am sure there are in the country—many persons who hold a superstitious traditional belief that, somehow or other, our vast trade is to be attributed to what we have done in this way, that it is thus that we have opened markets and advanced commerce, that English greatness depends upon the extent of English conquests and English military renown. But I am inclined to think that, with the exception of Australia, there is not a single dependency of the Crown which, if we come to reckon what it has cost in war and protection, would not be found to be a positive loss to the people of this country. Take the United States, with which we have such an enormous and constantly increasing trade. The wise statesmen of the last generation, men whom your school histories tell you were statesmen serving under a monarch who they tell you was a patriotic monarch, spent £130,000,000 of the fruits of the industry of the people in a vain—happily a vain—endeavour to retain the colonies of the United States in subjection to the monarchy of England. Add up the interest of that £130,000,000 for all this time, and how long do you think it will be before there will be a profit on the trade with the United States which will repay the enormous sum we invested in a war to retain those states as colonies of this Empire? It never will be paid off. Wherever you turn you will find that the opening of markets, developing of new countries, introducing cotton cloth with cannon balls, are vain, foolish, and wretched excuses for wars, and ought not to be listened to for a moment by any man who understands the multiplication table, or who can do the simplest sum in arithmetic.—John Bright, at Birmingham, October 29, 1858.

The conclusion sought to be established in this passage is that English wars and conquests, so far from increasing, have actually diminished our national wealth and greatness; and to establish this proposition the speaker cites the War of American Independence as a case in point. We have here an induction from example; and it may be criticized as affording an instance of "hasty generalization." Only one case is cited—that of the American War—and the speaker's opponents might argue that this was an exceptional, and not a typical, case, since our defeat by the colonists involved the loss of our American possessions.

(2) Examine the validity of the following, considered as an argument in favour of Free Trade:—

For upwards of half a century Free Trade has been the mainspring and source of our national prosperity. To the abolition of protective duties is due the vast increase of our wealth in recent years. For many years before the adoption of Free Trade our commerce was almost at a standstill.

It may be objected that in this argument the speaker has selected only one out of several or many operative conditions, and has described it as being the sole cause of our national prosperity. Such essential factors in the increase of wealth as the development of railways and improvements in machinery are ignored.

(3) Comment on the logical value of the following retort made by Mr. Gladstone to a charge of obstruction brought against his party:—

I myself charged the Tory opposition under the late Government with obstruction. I will give you a specimen. We proposed a plan of Closure of Debate. . . . That proposal, which was so feeble that it never but once was brought into operation, and then it was not worth putting into operation—that proposal, on the pretext of respect for liberty of

debate, was opposed by the Tory Party for nineteen nights altogether. There is obstruction! There are the masters of it! There are the professors of it!

The fallacy of *ignoratio elenchi*, "ignoring of the question," may be said to be here involved, in the form of an *argumentum ad hominem* or *tu quoque* argument.

(4) "Proud of your confidence, and encouraged by your sympathy, I now deliver to you, as my last words, *the cause of the Tory party, the English Constitution, and of the British Empire*" (Lord Beaconsfield). What does the speaker imply, or take for granted, when he groups the italicized phrases together? Is any "begging of the question" here involved, or not? Give reasons for your opinion.

(5) "An attack has recently been made upon the Throne on account of the costliness of the institution" (Lord Beaconsfield). Classify and give a short account of the argument used by Lord Beaconsfield to refute this attack. Can the argument from analogy, used by itself, ever be really conclusive. Give reasons for your answer.

(6) "Gentlemen, I shall not stop for a moment to offer you any proofs of the advantage of a Second Chamber: and for this reason. That subject has been discussed now for a century, ever since the establishment of the Government of the United States, and all great authorities—American, German, French, Italian—have agreed in this: that a representative Government is impossible without a Second Chamber" (Lord Beaconsfield). Classify the argument here employed, and examine its validity.

(7) "Considering that you [Mr. Gladstone] stated in 1886 that the wit of man could not devise a plan for retaining the Irish representation at Westminster, how is it that you say now that there are a great many modes in which it can be done?" Does this prove Mr. Gladstone to have been wrong in his second opinion? What, from a strictly logical point of view, in relation to a question under discussion, is the value of a charge of inconsistency against an opponent, even if the charge be substantiated? What fallacy is involved?

(8) "If one-twentieth part of what has been said is true, if I am entitled to any measure of your approbation, I may begin to think that my public career and my opinions are not so un-English and so anti-national as some of those who profess to be the best of our public instructors have sometimes assumed."—Mr. John Bright. Is it a good argument against any opinion or proposal to say that it is "un-English"? Give reasons for your answer.

In many of the arguments that we read daily in books and newspapers, or use ourselves in discussion, fallacies are frequently found, and the inductive method is often applied in an excessively loose fashion, with a much less degree of strictness than that of which the subject may admit. Teaching that will enable our pupils to detect the weakness and insufficiency of such arguments will be of the utmost practical value.

W. MACPHERSON.

THE BIBLE AS A CENTRE FOR HISTORY TEACHING.

A LITTLE book* was noticed in these columns a few months back which suggested a new point of view for the popular teaching of History. Not new, of course, philosophically, but new in our schools and colleges, new to the ordinary historical textbooks and to the current conception of what history means. The difference lies superficially in two directions, though when we pierce beneath the surface we see that the two are vitally connected and are in fact only two aspects of one process or thought. In the first place, it was suggested that history should be regarded as one throughout the world, whereas the accustomed presentation of it is national. In the second place, if we accept the universal point of view instead

* "The Living Past." (Clarendon Press.)

of, or as dominating, the national, it will be seen that the strongest link of the whole—a link which has grown conspicuous only in the last hundred years and is now growing more rapidly than ever—is science with all its applications in industry, communication, and international finance.

It will be objected that such matters, and the universal point of view generally, are unsuited to children; and there is force in the objection. Whatever ideas we may have at the back of our minds, the child must be approached by stories and images familiar and congenial to him. But there is no real contradiction between the two methods. Only, if we accept the wider point of view as the ultimate goal, we shall choose the preliminary and intermediate steps as leading to it, and at each step the presentation will be coloured by our own fuller knowledge and purpose, which the child cannot yet appreciate. It is a commonplace in teaching other things. A few notes follow on how the teaching of the most familiar piece of literature in English may be used for the wider historical view, to obtain glimpses of the general progress of mankind.

That the Bible has been regarded as the leading clue by all great writers of universal history from the Christian point of view is well known. To St. Augustine it was the story of the revelation of a City of God, superseding the imperfect pagan *civitas*. To Bossuet it led up to the ideal modern State where the all-powerful and divinely appointed monarch held joint sway over Christian communities with God's viceregent in the spiritual sphere. To Cromwell it was the record of the triumph of a chosen few, firm in their consciousness of a divinely supported mission. So in each age and country of the Christian world it has reflected the mind and policy of those who have looked into it. Modern science and research have opened fresh vistas connecting the Bible with other sides of human progress, especially with primitive and early civilization. Some of these points will be suitable material for the teaching of the young. Others can only be grasped by the fuller and more mature mind. To the first class belong the references which throw fresh light on the great Empires surrounding the Jewish world to the South and East, Assyrian and Babylonian kings and legends, Egyptian stories and remains. To the latter class perhaps would be generally relegated most of the traces of an earlier savagery, of human sacrifice, of impure rites. To understand the stage of purgation belongs rather to the adolescent than to the child. The normal child and youth had better revel in the "Iliad" and study the "Rise of the Greek Epic" at college or just before. And so, in the Bible, the stories of Abraham and Joseph are best in their primitive simplicity. Robertson Smith's "Religion of the Semites" is a later stage, meat only for a John Stuart Mill before fourteen, for most of us at sixteen or later. But to the teacher, to any one who wishes, as an adult, to understand the real bearings and parallelisms of early thought, nothing could be more enlightening or stimulating than the famous chapter in Dr. Murray's "Rise of the Greek Epic," where he shows how an epic on the Greek model might have been constructed from the material in the Books of Joshua and Judges, had there been a Homer in Judah.

The simpler and clearer links with other history will be sufficient in most cases, and are not, I fancy, so much recognized in the current teaching of the Bible as they might be. They are exceedingly striking, and suggest inevitably the working of deep common causes in the evolution of quite independent civilizations. The great landmarks in Jewish history correspond closely with those of Greek history, which has divided with the Jewish the allegiance of the modern world. The parallelism suggests the wisdom of connecting the two with our teaching, and avoiding the unnecessary opposition between Hellenism and Hebraism which the course of Western history is working to overcome.

About the beginning of the last millennium B.C. is the first date at which the parallel development of the two peoples strikes the eye. It was a time of tribal migration, and the occupation of the Greek lands by Achaeans from the North-west and of Canaan by the Jewish tribes from further East and South were approximately at the same time. The movements which gave birth to the Books of Joshua and

Judges among the Hebrews and of the "Iliad" among the Greeks were both similar and contemporary. The Temple at Jerusalem and the Epic of the Greeks sum up for that first century of the last millennium B.C. the comparative genius of the two peoples. Pass over a third of the thousand years, filled by the colonization of the Greeks and the discords of Israel and Judah. There then appeared, again nearly at the same time, the two characteristic types of prophetic men among the Jews and Greeks. We know them as the Prophets of the Bible, and in the person of Amos, Hosea, and the first Isaiah appeared some hundred years before the *Sophoi* of Ionia, who filled a similar place in Hellenic civilization. Intellectual curiosity and the beginnings of exact science thus seem, in time as in substance, to occupy the place in the Greek mind which a religion, strict in belief and in moral practice, was to hold among the Jews. Another step takes us just beyond the middle of the millennium. The remnant of the Jews have returned from Babylon; the stamp which their national character was to wear henceforth had been impressed. They are a people separated by religion and living under the protection, tempered by persecution, of nationally alien political powers. They rebuild their Temple at Jerusalem just at the time that the Athenians are rebuilding their Parthenon, the symbol of the repulse of a theocratic and retrograde enemy.

It is the last great meeting point between Old Testament history and the outside world, and perhaps the most impressive of all. One can imagine a whole philosophy of history developed from the companion pictures, Nehemiah's Temple and the Parthenon. But, when we pass on to the New Testament, another opening is given for the comprehensive method. What comes between the Old and the New Testament? Just that portion of Ancient History which it most concerns us to know, and which is most generally taught in places of learning—the crisis of the Hellenic world and the rise and triumph of the Roman. Thus broadly treated, the covers of the Bible may be made to contain a complete sketch of ancient civilization; and the modern world, with all its problems, may be viewed as a pendant to the New Testament.

It is not our meridian, but our breadth of view, which determines the outlook. We may take this meridian of history where we will and measure the world from it. And to many of us the Bible is the most familiar, a spiritual fatherland from which it is easier to approach the distant horizon than even from the land of our natural birth.

F. S. MARVIN.

SAFE NOVELS.

Broken Shackles. By JOHN OXENHAM. (6s. Methuen.)

The novel falls into two distinct parts, between which almost the only connecting link is the identity of the hero. The first part relates the *débâcle* after Sedan, the discomfiture and rout of the new Army under Bourbaki, and the disarmament on Swiss territory; the awful march of starving troops through slush and sleet and snow, the incompetence of the general staff, the consequent demoralization of officers and men, and the vacillations of Bourbaki. The only man who keeps his head is Le Comte de Valle, a young and brilliant staff officer married to an heiress, from whom he virtually, though not legally, separated. The pendant to the battle-piece is a pastoral idyll—de Valle, a famished and footsore fugitive, is fed and fended by a Swiss *Mädchen*. He interposes in a fray with French marauders and receives a pistol-shot intended for the brother. He is conveyed to the girl's home in the mountains, where the father and brother own a sawmill, is nursed to health, and determines to abjure his name and country and live as a Swiss *Bauer*. Here we may leave the hero. Peril and adventure are by no means at an end—avalanches and *Staub-Lawinen* and incendiarism. Enough to say that he commits two justifiable homicides, but is not guilty of bigamy. The psychology seems to us doubtful. Would the born soldier, trusted by his chiefs and beloved by his men, with every gift of birth and fortune,

have been content to expatriate himself and turn rustic without one regret or backward glance?

(1) *Waiting.* By GERALD O'DONOVAN. (6s. Macmillan.)

(2) *Old Andy.* By DOROTHEA CONYERS. (6s. Methuen.)

(1) Irish novels are always popular in England, and both these are worth looking at. Mr. O'Donovan shows us priest-ridden Ireland, peopled, however, by some charming human beings. He shows us tyranny and ignoble submission pitted against the spirit of life and freedom in the person of the young peasant scholar and school-master who dares to marry a Protestant. The rebel has not actually won out within the pages of the book, but he is fighting and waiting, as Ireland herself is fighting and waiting. Father Mahon, the unscrupulous, violent, and petty priest, who might have come out of the chronicle of Gregory of Tours, is not drawn quite enough from within to be convincing. Indeed, though there are some good minor sketches, the characters, on the whole, interest us less than the theme. But there is good work in the book.

(2) Mrs. Conyers shows us the Ireland of foxhunting priests and foxhunting farmers. Everybody hunts, and enjoys several hunts during the book, and would have gone on hunting to the end, but for an attack of foot-and-mouth disease. There is no excuse for anyone who has read "Old Andy" to make as many or such elementary mistakes about the points of hunters as the conceited, crude young Englishwoman who has brought her husband over to speculate in horses, for their points and flaws are explained to us again and again. But it is a charming book, written with much love and knowledge of Irish life and Irish people on the land. Every page has some delightful scrap of conversation. Old Andy himself is admirably drawn. The nearer to the land the better are the characters. The superior people are types, rather wooden and tiresome, but they serve quite well to hold up the web of Irish life as it is lived from day to day, with its fatalism, tears, laughter, and quaint deceptions, and its generous self-sacrifice.

EDUCATION IN AN INDIAN DISTRICT.*

THE biography that one high-minded Indian Civil Servant has written of another well deserves attention. To teachers it shows what one man was able to effect in a single Indian district for the education of the people. It is true that the Government of India is a great achievement, a model to other nations of imperial rule. It is none the less true that whenever a frank, impartial, and unprejudiced history or biography is written by an Anglo-Indian we learn something to remind us that governments of subject races are not and cannot be perfection. Not long since Mr. Gokhale's Bill for the Extension of Elementary Education in India, based on the Irish Education Act of 1892 and the English Acts of 1870 and 1876, was rejected by the Imperial Legislative Council, although the Indian National Congress, the Moslem League, and large numbers of Indian rulers approved the Bill. It was a first step towards making education free and compulsory, naturally with great limitations, necessary in a poor country where so much of the work is performed by children. It applied only to boys between six and twelve, the intention of the promoters being to apply the Act to girls at a later date and with greater reserves. The Council threw the Bill out.

Mr. Hume entered the Indian Civil Service in 1849, at the age of twenty, when the East India Company was still in power. He was the eighth child of the well-known economist, Joseph Hume, and inherited no small share of his father's courage and enthusiasm for reform. He was educated at Haileybury, and once mentioned to the reviewer that his Indian career was nearly wrecked at starting. He and a number of fellow students, after completing their course, abused their few weeks of unchartered liberty by some reckless frolics; several parents were informed that their sons lacked the qualities essential to the work and that the Company was unable to accept their services.

* "Allan Octavian Hume." By Sir William Wedderburn, Bart. (5s. net. T. Fisher Unwin.)

Mr. Hume began low down in the service as clerk of a police court and occupied two other minor posts before he ever heard a case of petty assault. He possessed every quality of a great ruler—sound judgment, determination, courage, enthusiasm. Nature, too, had been kind to him: tall and handsome, his appearance was distinguished, his manners affable and charming. His aim was not to occupy an easy post, but to take wise measures for the welfare of the people he ruled, to lessen ignorance, superstition, and the twin scourges of India, famine and plague. His zeal and energy were unbounded, he knew how to choose subordinates who helped in a great forward movement. It is permissible to doubt whether a Collector working to-day could achieve so much as Hume between 1849 and 1867. Mr. Hume reformed the police and the law courts, improved agriculture—including, of course, irrigation—started a good paper in the vernacular, began a national reformatory for bad boys, rebuilt and drained Etawah City, capital of Etawah district, Bengal, until it was the admiration of all visitors. Not least was his work for education. A few months before the Mutiny broke out he described his work in a detailed report. He had received semi-official permission to attempt to establish free elementary schools. The zemindars had to pay voluntary cess to support the scheme. Soon there were 32 village schools; by January, 1857, there were 181, with 5,186 scholars, including two girls.

There were only three buildings at first, schools being chiefly held in a zemindar's house or in some old building repaired for the purpose. The teachers received the modest pay of four to six rupees per month, only eight enjoying the larger sum, and we are assured they were capable men. Rules were drawn up, inspection arranged, and a central English and vernacular school opened at Etawah for 104 scholars whose secondary education would carry them on to Agra College. After the Mutiny the Government of India hummed and hawed over education. Instead of reforming itself and its methods, thus removing the cause of the outbreak, it warned Mr. Hume against over-zeal for education and contributing money to forward it. Before Mr. Hume left Etawah in 1867 the schools had increased to 250, and he had even secured a grant from the public exchequer to forward the work. On a piece of ground in the centre of the city, and one of its chief buildings, stands Hume High School, which Mr. Hume caused to be built and helped to endow. Its shape, chosen entirely for convenience, is that of the letter H. On the day that news of Hume's death reached Etawah (ob. July 31, 1912) all the shops of the bazaar were closed out of respect for his memory, though over fifty years had elapsed since he had assumed the position of Collector.

From 1867 to 1870 he was Commissioner of Customs. At the former date there existed in India the great salt barrier, 2,500 miles long, a grotesque fortification against the cheap salt of Rajputana, a barrier whose existence harassed and impoverished the people. Hume was ready with a fresh scheme, razed the barrier, with the result that the Indian tax-payer paid half as much for a purer article, whilst the Government gained more than twice the former sum by a scientific method of taxation.

When Lord Mayo became Viceroy in 1869 a genuine agriculturist was in power who boasted that he had often stood in the market the livelong day selling his beasts. Hume then became Secretary to the Viceroy's Council, and both these great Governors worked out an Agricultural Department of which India stood sorely in need. In India the best of cultivators can do little without the co-operation of a scientific and far-sighted administration to aid him and prevent total ruin when the monsoon fails and famine stalks the land. It was an open secret that Mr. Hume, also a practical agriculturist, would make an ideal Director-General, with an expert staff of eight provincial directors under him, working by means of experimental farms and agricultural schools. The India Office whittled the whole scheme down to nothing. Sir William Wedderburn significantly remarks of the agricultural scheme: "The sheep needs feeding as well as shearing." When Lord Lytton became Viceroy, Mr. Hume was summarily ejected from the secretariat, an action which the

whole Anglo-Indian press, usually not too favourable to Hume and his forward policy, characterized as gross jobbery and a cruel wrong. It appears that Lord Lytton, even in the privacy of the Viceroy's Council, could not endure a full discussion on the merits of any policy after he had announced his own. So remote is the Viceroy from the affairs of the vast populations of India that those who surround him need to be his very eyes and ears, what Voltaire well styled "the procurators of the poor." A few years later Mr. Hume founded the Indian National Congress, which claims for Indians some modified form of representative government, that they may press forward the movement for social reform. This was secured to them by Lord Morley's India Councils Act in 1909. One of the articles of Congress is a demand for a free and compulsory system of national education.

One could wish that Sir William had adopted a different style for this interesting biography rather than that of wholesale quotations from numerous reports. This method permits others to take the brush from his hand and to produce rather the effect of a composite photograph. Sir William shows himself possessed of an excellent style. Had he digested these reports, reproduced the substance, and made a homogeneous story of the whole, we should have had an eminent Englishman's biography by another equally eminent, two men whose great and self-sacrificing labours for India are recognized, from the Himalayas to Cape Comorin, who are revered as rishis or saints by all intelligent enough to realize what their devotion to India's welfare has entailed. A native has been known to observe that Britain's rule in India would last for ever if the supply of Humes and Wedderburns were guaranteed.

C. S. BREMNER.

BERNHARDI AS EDUCATIONIST.

A FEW years ago the name of Bernhardi was unknown in England except by a few military writers and specialists, and now it is quoted by every journalist and pamphleteer as the embodiment of aggression and unscrupulous militarism, though few of these can have studied his writings. A translation of his "Germany and the Next War" will now enable the million ignorant of German to form a juster view of the man and, we think, convince them that the devil is not so black as he is painted. His views in the chapter "The Army and Popular Education" are, with some reservations, pedagogically sound, and his strictures on German elementary schools point out much the same defects as those which our English reformers have noted in ours, and striven with some measure of success to correct. (1) He denounces big classes and demands attention to the individual. Germany, in this respect, is worse off than England—classes of eighty and schools of a hundred and twenty with two teachers. (2) "Religion" has the lion's share in the curriculum—four to five hours a week in every class, and it is formal and dogmatic—the Catechism, the Pericope (our Lectionary), and hymns learned by heart. There is no attempt to make it a spiritual or moral influence. (3) *Realien*, which include history, geography, Nature study, and science, are begun late and have only six hours a week assigned to them. (4) Education stops at fourteen, and compulsory continuation schools are to form not only the soldier, but the citizen and the complete man. The points of difference from our ideals are comparatively few. He points to England as a warning against English devotion to games and sport, and he looks on the clamour of Trade Unions and Labour members for shorter hours as a sign of softness and degeneracy. He would have no schools for children under eight, and he condemns mixed classes of any age. He holds that the main object of history is to teach patriotism. In spite of the military bias, General Bernhardi may firmly rank as an educational reformer.

NEW GIFT BOOKS

Herbert Strang's Story of the Great War

A HERO OF LIÈGE. The Adventures of an English Airman in Belgium. With Colour Plates by CYRUS CUNEO. Cloth, **3s. 6d.**; picture boards, **2s. 6d.**

BARBARA PEEK-A-BOO'S HOLIDAY. With Eight Plates in Colour and numerous Black and White Illustrations. **2s. 6d.** net.

HENRY FROWDE AND HODDER & STOUGHTON.

THE FOUNDING OF EXETER SCHOOL.*

THIS is an excellent book for those who are trying to arouse an interest for local history as helping to illustrate general history; for the writer really gives out to us from the original sources which are in the Exeter Muniment Room and the Chapter Records the story of an epoch in the municipal life of the city in the seventeenth century, and, besides many "Worthies" of Exeter, we have brought before us some of the great names of the period, such as King Charles at the meeting of the Privy Council, with Archbishop Laud and Mr. Secretaries Coke and Windebanke; whilst Noy was Counsel to the City in April, 1625, at the fee of £3. 6s. 8d. per annum; and he so pleased his clients at the end of 1631 that they resolved "that a tonne of the best syder that can be gotten and that two good samon pyes shall be provided att the charge of the Cittie to be bestowed uppon Mr. Attorneye as a token of the thanckfulness of this Chamber unto hym for his great love and care in the public affaires of this Cittie."

In 1602 a Mr. Perryman was appointed Master of the High School by the City Chamber, to whom the Bishop had passed over the nomination, in return for the part the City had played in the restoration of the school buildings. They came to rue the day when they made their choice; for Perryman was evidently a truculent and masterful man, and made many enemies, whilst, on the other hand, he tells us that the school buildings caused him much expense. At any rate, by the year 1622 we get a petition presented by Perryman to the Privy Council complaining that an outrage had been offered

* "The Founding of Exeter School: a History of the Struggle for Freedom of Education within the City of Exeter." By H. Lloyd Parry, Town Clerk of Exeter. Dedicated to the Exeter City Council. (Exeter: James Commin.)

to him and to his school, and that the magistrates countenanced it and would grant him no redress.

But soon Perryman brought further charges against the Chamber, having reference to certain proposals of the Chamber for establishing a new school, and to sundry rates or charges that had been levied on him. It is evident from a petition of the citizens and others about this time that Perryman's school did not suit all, for it was stated that the children there "profited nothing at all. For which Cause and for the Crewell and Tiranicall Whippenge of Divers of our said children being apt to learne and of mild nature . . . some of our Children went of meechinge refusinge to goe to schoole chosinge rather to hange themselves, drowne themselves, cutt their owne Throates or otherwise murder or mischeife themselves." Consequently, citizens sent their children to Thomas Spicer, and they felt that if Mr. Thomas Spicer were forbidden to teach (as was threatened at the instance of Perryman) the "children are likely to be utterlie undone and to be barred from learninge, which is most lamentable."

In 1623 the Recorder, and later on sixty leading citizens, petitioned that the Bishop should permit the establishment of a Free School. But the Bishop considered that no cause had been shown, as Perryman had for the most part rebuilt the High School at his own charges, as there was plenty of room for more scholars, and as it would be a disadvantage to the city to have another school, because indulgent parents would upon slight occasion remove their children from one school to the other.

In 1624 the quarrel broke out again over the question of rating. Perryman was assessed for a powder rate and for subsidies and tenths and fifteenths. Perryman refused to pay the rate, was summoned to appear before the Lord Lieutenant at Westminster, and appeared there, having fortified himself with the assistance of Archbishop Abbot,

RALPH, HOLLAND, & CO.'S PUBLICATIONS.

Complete Catalogue and Prospectuses post free on application.

ENGLISH COMPOSITION. A System-

atic Course for School Use. By HARRY PINE, with an Introduction by F. H. HAYWARD, D.Litt., M.A., B.Sc. In two parts for pupil's use, containing 80 and 76 pages respectively. Crown 8vo. Price 6d. each. Complete in one volume, together with additional matter for the teacher. Crown 8vo. Cloth. Price 1s. 6d.

The work is intended for class use, and aims at the direct teaching of composition on a definite plan by means of a series of original and progressive exercises. These are designed to correct the faults most frequently found in children's composition, both oral and written.

It forms the basis for the teaching of children of all ages, and yet leaves plenty of scope for originality on the part of the teacher.

THE STORY THREAD. By EDITH KIMPTON,

M.A., A.K.C. Illustrated with 21 line drawings by PETER CAMPBELL. Crown 8vo. 155 pp., cloth. Price 1s.

A series of interesting stories from English Literature, starting with the legend of Beowulf, and covering broadly the whole of the ground down to modern times.

Suitable as an introduction to the study of English Literature for children in the lower forms of Secondary Schools and the middle standards of Elementary Schools.

"A delightful book of stories from English Literature re-written in simple language."—*The Schoolmistress*.

"With numerous pretty illustrations."—*Educational Times*.

"As a reading book in schools or as a gift book for a child we could imagine nothing better."—*Westminster Gazette*.

ENVIRONMENT: A Natural Geography.

By G. R. SWAINE, F.R.Met.S., Geography Master at the Manchester Warehousemen and Clerks' Schools. Crown 8vo, cloth, 244 pp. Containing 8 folding maps, 6 plates, and 20 other illustrations. Price 1s. 9d.

The World in Natural Regions treated under the following sections:—

- I. The Polar Regions.
- II. The Cool Temperate Regions.
- III. The Warm Temperate Regions.
- IV. The Hot Lands.

The treatment of the book is Regional, with a Climatic Basis. Thus, for example, Chapter I of Section III deals exhaustively with "The Equable Lands," that is to say, all the lands of the Mediterranean type, proceeding from the Mediterranean Basin itself to a treatment of *California, Central Chili, the Australian "Mediterranean" Regions, the North Island of New Zealand, and the South-West of Cape Colony*. Chapter II, again, of Section IV deals with "The Tropical Monsoon Lands" in order—*Asiatic, African, Central and South American, and Australian*. It will thus be seen that the book forms an admirable revision course for classes that have already covered the geography of the world in the usual way, presenting as it does the previously acquired knowledge in an entirely new and original setting. The book is both interesting and informative, and is written in such a style that it may be used either as a textbook or for class reading.

The primary aim is to show the intimate connexion between man and his geographical environment, and special attention is paid to the climatology, structure, and general physical conditions of each region. The origin and development of towns is fully dealt with, and the influence of environment on plant and animal life is made a special feature.

RALPH, HOLLAND, & CO., 35 & 36 Temple Chambers, London, E.C.

For Health's Sake!

Advise that children under your tuition should wear the "Liberty Bodice" (Knitted Fabric), especially for Swedish Drill and Games.

The "Liberty Bodice" is designed to allow freedom while giving needed support. Children who wear it are aided in their graceful development, and gain full advantage from their exercises. Entire weight of underclothing supported by strapping from shoulders.

These ESSAYS, RECOLLECTIONS, and CAUSERIES, by the HON. LIONEL TOLLEMACHE, were collected in their original form, which, of course, did not contain the Pattison Recollections, at the late Mark Pattison's request. **The Books are issued at Cost Price.**

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

who prayed "the Lord Russell to give the best assistance that his Lordship can to this petitioner in his honest cause." Russell informed Perryman that he was liable, but that on making proper submission to the Mayor and Deputies he should this time be exempt.

We may be sure that the Authorities took good care that Perryman's submission should be a very public one, and the reception which he received from the crowd evidently stirred him to anger, and this time he set forth in full his grievance in a petition to the Privy Council. In answer to the complaints, the Chamber justified their assessment and defended their action. Their desire to establish a new school they regarded as praiseworthy. The city had increased, and in the past the city had frequently had two schools. Perryman had done well out of the school, and his rebuilding had been done by means of subscriptions. In the end the Privy Council decided that the Authorities had been too hard on Perryman, and they ordered that the magistrates should be admonished to forbear to put any like unnecessary charges upon him.

So far the victory rested with Perryman, but the Chamber was not content to let the matter rest, and, taking advantage of legacies left for the purpose, they proceeded to set up a Free School in part of the buildings of the St. John's Hospital, and this in spite of the opposition of Bishop Hall.

The result was a further petition of Perryman to the Privy Council and a reopening of the old quarrel. The Chamber pointed out that the number of inhabitants had greatly increased, that Perryman's school was not large enough, that the fees charged had been increased, and that it was "not right that such a multitude of people should be tied to the humours of one school," but that competition would be good for the discipline of both the old and the new. The Chamber further objected to the plan proposed by the Chapter that it and the Chamber should join in electing the Master, stigmatizing the proposal as "a mere mouse-trap," and it declared

that the Dean and Chapter would do no good work themselves and would hinder others.

The Privy Council in their order of February, 1631, declared themselves unwilling to check the new Free School, but fearing the ruin of Prettyman's school they bade the Mayor, Magistrates, Dean and Chapter confer for making both schools free.

The result was that the Free School was erected, and it was agreed that the High School should continue, but that each should take 150 scholars before the other was allowed to receive more pupils.

During the time of the Commonwealth a hospital for poor maiden children, called the Blue Maids' Hospital, was founded, and money was also left to assist boys in obtaining education at the school at St. John's Hospital.

In 1876 a scheme was framed for reconstituting the charities mentioned above. This was really the work of Bishop Temple, and he sets forth his ideas in a very interesting letter, dated February, 1872, which Mr. Parry has given in Appendix E.

Bishop Temple points out that it was the intention of the Commissioners to reorganize the endowments so as to provide a complete system of education from lowest to highest. They assumed that the Education Act of 1870 provided for elementary schools. They therefore proposed to see to the provision of the other steps in the educational ladder, if one may be permitted any longer to use this well-worn simile. He then proceeds to give the details of the scheme, after which he enlarges on the question of higher education and scholarships. The highest grade was to be provided by the Grammar School and a girls' school, and they were to receive a much larger share of the joint endowment of the St. John's Hospital and Grammar School than previously assigned. This was necessary if a thorough system of education was to be established, and in doing this the Commissioners considered that

A NEW

COMMERCIAL ATLAS GEOGRAPHY.

By **THOMAS FRANKLIN, A.C.P., A.R.S.G.S.**
(late Lecturer in Commercial Subjects, London County Council),
and **ERNEST R. SHEARMUR, B.Sc., London**
(late Lecturer in Geography, London County Council).

THE COMMERCIAL ATLAS GEOGRAPHY CONTAINS
87 SPECIAL MAPS AND 29 DIAGRAMS.

Each area is illustrated by

- (1) A map showing the chief trade routes by land and sea and the position of the chief route towns and seaports.
- (2) Four Climatic Maps showing the distribution of summer and winter temperatures, pressures, and rainfall.
- (3) Two Vegetation Maps—one showing the natural vegetation regions and the other the distribution of the cultivated products together with the chief agricultural centres.
- (4) Two Mineral and Manufacture Maps—one showing the distribution of minerals and the chief iron and steel manufacturing areas, the second showing the distribution of the chief manufactures and the position of the chief manufacturing towns.
- (5) A Population Map showing the density of population by means of shading, and a Political Map showing the chief boundaries with the towns printed in different sizes according to their population.

Hints on French Syntax.

By **FRANCIS STORR**, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

they were carrying out the real objects of the founders. He notes that an efficient school for girls is essential to the educational needs of the district, and it was the intention of the founders to provide for such. Then there was to be provision for admission of children selected by merit from the lower to the higher grades by means of exhibitions.

The Bishop points out that the poor lad lost the opportunity of "satisfying an honourable ambition" not because anyone had purposely taken it away, but because the old system of grammar schools had perished, and this was a boon which the Commissioners wished to restore. He answered the objection that the poor were being robbed by the new scheme, showing that it was much better to provide for the advancement of every poor boy who was capable and diligent, rather than for the maintenance and instruction of twenty-five poor children, which he considers as frittering away the endowments.]

Finally, he points out that the school was intended to be of county rank. The difference in the dignity of the head master would be considerable, and would attract more able men—a necessity, if the school was to succeed. Thus we see the way in which the grip of the "dead hand" was loosened from the throat of Exeter education.

The subsequent history of the schools in Exeter is merely of local concern, but in Appendix B in the Statutes and Ordinances of the "free Grammar Schoole" we return to matters of wider interest. We read that "the schoolmaster and usher shall be of approved skill and knowledge in latyn and Greek and be also of good name and credit, and of honest conversation and life. Every day except Sundays and Holydayes, at 6 a.m. the schoolmaster and usher shall make their repayr to the said school and then joyned in prayer and singing of a psalm together with the scholars. If any be absent, the schoolmaster shall send for him and shall correct him discreetly according to his demerit." School was to go on till 8 a.m., when all went off to breakfast, and returned at 9 a.m., going on till 11 a.m., when they went home to dinner. Then back again at 1 p.m., to continue till 5 p.m., when, after prayers said and a psalm sung, the scholars were to return home, "passing through the streets in civil and decent manner."

The holidays were on Tuesdays and Thursdays, thus making a more reasonable distribution of the week than we get at the present time.

The scholars were to be taught "to demeane and behave themselves schollerlike . . . that they wear their apparel clean and decently without wilful spoiling thereof, and the defects and decayes therein to intreat their Parents, Tutor, and Hostes to cause to be amended in tyme fitting. That they use not swearing, ribaldry, or filthy communication, nor frequent Taverns, Alehouses, or howses of gaming."

Weekly two of the scholars were to be appointed as prefects. The schoolmasters were not to absent themselves for their recreation or business for longer time than twenty schooling days a year, except for illness or for some reasonable excuse, and both were not to be absent at the same time.

We will end our quotations with the directions for the education of the scholars, who are not to be taught any "Author, Book, principle, or Rules tending to Heresy, schism, superstition, or error in Religion." W. J. H.

IN Trevelyan's "Life of Macaulay" we are told how his uncle demonstrated to an Oriental pundit that the number of the Beast was the English House of Commons. In a prophetic ode by W. Nathan Stedman there is a different interpretation.

"Unseen in the regions far over the Styx
The man-god-fiend reigns as Six Sixty-Six."

We wonder that no Daniel has drawn attention to a strange prophecy in the Apocrypha (Esdras ii, 16), where a three-headed eagle sets up a world-wide tyranny and then is rebuked and chastened by a roaring lion.

CLASS BOOKS FOR PREPARATORY AND JUNIOR FORMS.

MATHEMATICS AND SCIENCE.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and A. BARRACLOUGH, M.A. 2s. 6d. *[In the press.]*

Arithmetic, Preliminary. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 9d.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.
"Quite admirably suited for its purpose."—*London Teacher*.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPE, B.A. (With or without Answers.) *Third Edition*. 2s. 6d.

"The book has our fullest appreciation."—*Schoolmaster*.
"Just as good a handbook on arithmetic as the student can desire."—*Nature*.

Botany, Junior. By Prof. F. CAVERS, D.Sc., F.L.S. 2s. 6d. *[In the press.]*

Chemistry, Preliminary. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.

"It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—*Educational News*.

"Nothing is taken for granted; everything is carefully and simply explained."—*School Guardian*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition*. 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

The object of this book is to combine simplicity of treatment with logical accuracy, and thus to develop the full educational value of the subject.

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.

"An excellent little volume."—*Educational News*.
"A good practical course. The diagrams are very clear and the subject-matter all that could be desired."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. 2s. 6d.

"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster*.

Plant Biology. By F. CAVERS, D.Sc., F.L.S. 3s. 6d.

This is a textbook of Elementary Botany arranged for modern methods of teaching.

"The freshness of treatment should secure for Professor Cavers's book an instant welcome."—*School World*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition*. 2s. 6d.

"Mr. Hooton... has condensed very well a couple of years' good junior work into one handy half-crown volume."—*Guardian*.

"An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News*.

Sound and Light, Junior. By R. W. STEWART, D.Sc., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

"Reaches a high standard, with plenty of practical work and exercises."—*Guardian*.

"In this book the pupil is encouraged to experiment as well as to think for himself, and his way is made plain by careful explanations and good illustrations."—*School Guardian*.

LANGUAGES, HISTORY, AND GEOGRAPHY.

English Course, Preliminary. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 1s. 6d.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded and the author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenæum*.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"This is the work of a clever practical teacher. The success of the method adopted is evident. A really helpful, well written book."—*Schoolmaster*.

English Grammar, Junior. By A. M. WALMSLEY, M.A. 1s. 6d.

"A simple and satisfactory grammar, which avoids most of the superfluity of quaintness of the old grammarians."—*The Journal of Education*.

French Course, Preliminary. By H. J. CHAYTOR, M.A., Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. 1s. 6d.

"This Elementary course supplies an excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method and also to the necessity for thoroughness in the accidence of the language. Free use is made of black type for emphasis."—*Athenæum*.

French Course, New Junior. By G. A. ROBERTS, M.A., Senior Modern Language Master, Royal Masonic School, Bushey. 2s. 6d.

"The short extracts are generally well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., late Senior Modern Language Master, Secondary School, Southend, and L. J. GARDINER, M.A. 2s.

"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education*.

Geography, Preliminary. By E. G. HODGKINSON, B.A., Assistant Master, County Secondary School, Crewe. 1s. 6d.

"This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils for whose use the book is intended."—*Teachers' Times*.

Geography, Junior. By G. C. FRY, M.Sc. 2s. 6d.

The following parts are issued separately:—

The British Isles, with Outlines of Physical Geography. 1s. 6d.
Asia. 8d. South America. 8d. North America. 8d.

History of England, Preliminary. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With Illustrations. 2s.

This book deals fully, though in an elementary way, with those social and economic questions to which modern history teaching now rightly attaches such importance.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, To 1603; II, 1485 to 1714; and III, 1660 to 1910. 1s. 6d. each.

The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., Senior Classical Master, Strand School, and LL. M. PENN, M.A., Classical Master, Beckenham County School. 3s. 6d.

"Bears the hall-mark of practicality that appears on all Messrs. Clive's educational books."—*Guardian*.

Latin Reader, New Junior. By A. J. TATE, M.A., Assistant Classical Master, Owen's School, Islington. 2s.

"Great care and thoroughness have been employed in the preparation of this reader. Mr. Tate shows a fine discrimination in the selection of the extracts from the Classics."—*Literary World*.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE EFFECT OF THE WAR ON SCHOOLS AND SCHOLARS.

LAST month we noticed briefly Sir John McClure's appeal on behalf of the Professional Classes War Relief Fund. The Council have decided that the fund should be devoted to the purpose of enabling children to go to school who would otherwise be prevented, and to remain at school when they would otherwise be withdrawn. To secure this object, the Council will approach the proprietors and governing bodies of schools, and, as far as the funds permit, assist them to continue and extend the generous offers that many of them have already made to parents of the professional classes whose incomes have been seriously reduced by the War.

Since then we have tried to ascertain from educational agents how far the War has hitherto affected the numbers and staffing of secondary schools. We give the complete answer to our inquiry furnished by one of the largest and most important of them. It is more sanguine than we should have expected, but it must be borne in mind that the stress of War is only beginning to be felt. The War Tax is still to be paid and notices of removal have still to be given.

Pupils.—Generally the War has not had a serious adverse effect on the number of pupils being educated in this country, for, whilst some schools have suffered more or less severely, others have gained. This applies more to girls than to boys, on whose education the War generally has had little or no effect. The schools that have suffered most are the more expensive boarding schools which have been in the habit of receiving in large numbers older girls from the Continent and colonies. During the last few years a large number of girls from Germany and Austria have finished their education in this country, and nearly all of these returned home on the outbreak of hostilities. There are also many girls from other parts of the Continent who, owing to the War, have been kept at home instead of being sent to schools in England; and

girls from the colonies—Canada, South Africa, and elsewhere—who, for financial and other reasons connected with the War, have been prevented from coming to or remaining in England. On the other hand, we find, on inquiry, that the number of pupils sent to day schools has increased this term, probably owing to the fact that parents who, in the ordinary way, would have sent their children to boarding schools, have been prevented, for financial reasons, from doing so, and are keeping them at home and sending them to day schools. A certain number of schools in Paris and elsewhere receiving English girls to finish their education have taken temporary premises in and near London, where they are carrying on their work, and there are also a number of refugee children from Belgium, for a certain proportion of whom hospitality and free education are being provided by the principals of schools.

Teachers.—A very large number of assistant masters, many of them old members of the University and Public Schools Officers' Training Corps, have received commissions or joined the ranks of the new Army, and there has been great difficulty in filling their places. The supply especially of Oxford and Cambridge University men for work in the leading preparatory and public schools has been very small for some years past, and has now almost vanished. The supply of men from other Universities, which has usually been fairly good, is also affected, though not so seriously. The consequence is that the places of assistant masters in a large number of schools, both public and private, are being filled this term by women teachers, and there are signs that for next term this number will be considerably increased. Since the commencement of the War we have introduced between sixty and seventy women teachers to boys' schools to take places hitherto held by men. There is, however, a fairly good supply of well qualified lady teachers available for this purpose, and head masters of boys' schools who have tried the experiment of filling the places of men who have volunteered for the Forces by lady teachers have generally been well satisfied with the result. We have thought for some time past that, apart from the War, the time was bound to come when lady teachers would be regularly employed in boys' schools where usually the whole of the work has been done by men, due to the rapidly decreasing number of men who adopt the teaching profession.

The effect of the War on the number of teachers required for ladies' schools has not, up to the present, been so noticeable. Lady teachers who have been teaching in Germany for some time past have been returning to England since the War broke out, and several of these have been appointed to fill the posts in schools that have hitherto been taken by ladies of German and Austrian nationality, very few of whom are now employed in English schools.

During the month of October, however, the applications made to us for assistant mistresses in girls' schools was considerably below the normal demand, although there has been no falling off in the number of candidates seeking appointments. In many cases the places of mistresses who are giving up their appointments will doubtless have to be filled, but we are inclined to think that principals are waiting to see what effect the War is likely to have on their schools at the commencement of next term before taking steps to fill their vacancies.

For instance, we know for a fact that, in a very large number of boarding schools and in some of the more expensive day schools, many parents have given provisional notice for the removal of their children, feeling that their financial position may be seriously affected by the continuance of the War. Probably only a portion of these notices will be carried into effect. So far as we have been able to judge, the majority of the public secondary schools receiving day pupils have not been affected by the War, but there is a tendency, we think, for both principals and assistants to avoid making changes. The number of vacancies occurring in boys' schools, excepting in the case of masters who are offering themselves for the Army, is probably less than usual.

Financial Position.—There is no doubt that the great

public and leading preparatory schools for boys, and the more expensive boarding schools for girls, are being financially affected, more or less seriously, through the War, whilst many small schools will probably have to close altogether. We hear that, in many of the more expensive schools, the children of parents who, through loss of income owing to the War, are unable to pay the usual fees, are being kept on at nominal fees, and some of these schools are finding difficulty in filling the places of boys and girls who in the ordinary course of events will be leaving at the end of this term. We are inclined to think, however, that the larger day schools are not being adversely affected, but, on the contrary, many are benefiting through an increased entry of pupils.

Other agents report less favourably. Preparatory schools have suffered most, especially those on the South Coast. One of these started this term with 90 boarders, and has received notices of withdrawal of 35. Another school in the Home Counties, with 37 boarders, will lose next term by withdrawal 21. A lady principal writes:—"Last term my numbers were 40; this term they are more likely to be 8 or 9." Another writes:—"In spite of an announcement that the ordinary school fees would be liberally reduced, I have no new entries. I can see nothing but ruin ahead, with the loss of a very large capital."

Public schools and endowed schools have been less gravely affected. Liberal allowances have generally been made to masters serving with the colours, and those that remain have cheerfully undertaken the work of their absent brethren. But our chief concern is for the rising generation. To begin school at twelve or thirteen, instead of at ten or eleven, may be no serious loss if home conditions are favourable, but to be cut short of the last year or two of school may be, and would often be, calamitous. Not only would it block the way to a liberal profession, but it would mean a lowering of the high water-mark of national education.

We remember hearing many years ago a speech of Lord Lansdowne in which he told how a country squire, complaining of agricultural depression, had said to him: "I have got rid of my girls' governess and given my boys' tutor notice. If times don't improve, I shall have to sell my third hunter." This was Early Victorian, and our experience to-day is of poor parents, unpaid schoolmasters and clergymen, briefless barristers, and country doctors, who stint themselves, and even run into debt, in order to send their sons and daughters to college. For the families and dependents of our soldiers and sailors adequate provision has been made by State allowances and the Prince of Wales's Fund, but those who serve and wait need no less our active sympathy.

Donations should be sent to the Treasurer, Professional Classes Relief Council, 13 Prince's Gate, S.W.

SUGGESTIONS FOR GEOGRAPHY TEACHING IN TIME OF WAR.

PROBABLY the teacher of geography at the present time will feel that, in the upper forms at least, it will be necessary to modify the course already planned and to pay special attention to Europe.

Central Europe includes the War area, and also nearly all the important features of European geography. These features will have to be dealt with separately, although, through the changing fortunes of the War, with its various needs and scenes, they will appear in quite a different order from that which we endeavour to follow logically. This does not really matter, as all the time the pupil is gaining information from newspaper reports and sketch maps that will prove very useful in the special lesson that he will receive at the right time.

A course which is given with the intention of enabling the pupil to follow the War intelligently, through a better understanding of the geographical conditions under which it is

conducted, might very well take as a preliminary lesson some account, however slight, of the difficult problems which armies must solve—such points as the meaning of a base, the need of good communications involved in big movements, the provision of food and ammunition. The preparation in advance of lines of approach and retreat would be used to show the necessity of geographical knowledge on the part of those who are in command, and it is needless to say that such a preliminary lesson would be received with the deepest interest, not only by boys, but by girls also.

The following short scheme is proposed for a senior class:—

1. Preliminary lesson.
2. The build of Central Europe. Position of lowlands, highlands. [Special attention to be paid to contours and gradients.]
3. (a) *Natural routes*: Rivers and valleys. Hill gaps and mountain passes. [The Moravian Gate between North-eastern and South-eastern Europe. The Burgundian Gate connecting the Saône-Rhône Valley and the basin of the Rhine. The old routes leading through Leipzig, Thuringia, and Westphalia. The valley of the Meuse through the Ardennes.] (b) *Artificial routes*: Railways and canals. Berlin, Paris, Brussels, Vienna, Cracow.
4. *Boundaries*.—(a) *Natural*: Sea, rivers, mountains. Rivers and mountains not effective boundaries in the Alps, Rhine, and Danube, as shown in France, Switzerland, and Austria. Defence of these. (b) *Artificial*: Boundaries resulting from conquest or agreement. Irregular form. Want of geographical character. [Angle of Russian boundary between Austria and Germany. Boundaries of France, Belgium, Germany, Denmark. The position of Switzerland.] Defence of these.
5. *The Sea-Coast*: Ports and maritime power. The North Sea and Baltic, with consideration of river-mouths, sandy shores and banks. Difficulties of navigation; attack and defence. Advantages of coast-lines and ports. [Special attention to be paid to Antwerp, Rotterdam, Hamburg. In lesser detail the Mediterranean, with Marseilles, and the Adriatic coast-line.]
6. (a) *Nature of surface*: Sandy, clayey, marshy, rocky, and its varying character under wet or dry conditions. [This might have been touched upon in the lessons on surface and relief, now with some climatic considerations added.] (b) *Position and value of towns* at important points. [Some have already come under "Boundaries and their Defence"; others under "Sea-Coast and Ports."] Meeting of routes, as Berlin or Frankfurt-on-the-Main; on coal-fields, as Liège, Zwickau, or Namur; chief points on rivers, Namur, Basel, Regensburg, Mannheim. Gap towns as Belfort or Minden.
7. *Resources*.—(a) *Agricultural*. [Connect with surface and soil.] (b) *Mineral and industrial*. [From general conditions of resources lead on to local developments as seen in the food and industries of Germany, Belgium, Denmark, France, Russia, and Austria.]
8. *Chief Imports and Exports* of each country now at war. [Connect with resources, surface, ports, and routes of each country. Some were slightly touched upon in "Position of Towns." This should sum up and make more definite some of the previous work.] Considerations of how far each country at war can feed itself and an invading army; also how far its power to supply itself and to trade with other countries is stifled by war.
9. *Political Divisions* on map more closely studied, and their independence of natural boundaries, due to historic causes. [Part of this would have come nearer to the beginning of the course, but without great emphasis. It might follow on "Boundaries,"

which would have done some of it.] The composite nature of the Empires of Germany, Russia, and Austria. The Neutral States, and their place in Europe, with special reference to the Netherlands.

10. *Population*. Its distribution according to factors already touched upon—"Surface," "Soil," "Products," "Routes."

Some study of races.

Chiefly under "Imports," "Exports," and "Supply," some notice should be given to the splendid co-operation of other parts of our Empire.

The whole of the course would be well illustrated by maps drawn on the board by the teacher (rapid, effective sketch-maps), maps drawn by the pupils to bring out salient features, boundaries with position of fortified towns; routes boldly marked in red, black, and blue; many separate maps to show value of position of chief towns, and connexions in various directions; maps to show respectively climate, population, and products; not elaborate, but each dealing with one prominent feature bearing upon the lesson. Every school, probably, already has a map of the War area pinned up, to follow events with tiny flags. Illustrations should be many and frequently changed. Often those in the newspapers are very useful; as, for instance, one which showed a picture of part of the Franco-German frontier, where the left-hand side of the road is in France, and the right-hand side in Germany.

It is difficult to specify time for such a course, which must depend entirely upon the provision made for it in the timetable. A large number of schools have two periods a week of forty-five minutes each for geography, in the upper forms. Some have three periods. But, whatever time is allowed, the War is going on, and interest in it never flags, both of which factors are doing more than half the teacher's work. He has only to lead the class.

For a junior class the teaching would be largely pictorial and descriptive. The War Map with its flags is always to the front. The following is a suggestion as to the form the lessons might take:—

1. A talk about war. Why we fight. Armies moving, feeding, resting.
2. A bird's-eye view of the contending countries of Europe from a British aeroplane. [Pictures of aeroplanes, and views.]
3. The sea-coast. On board a battleship patrolling the sea and keeping in touch with ports. [Pictures of ships and ports.]
4. By airship to Belgium. Its country, occupations, and people.
5. A motor-car in France. From Calais, through Paris to Marseilles, and west to Bordeaux. The choice of easy routes. [Maps.]
6. Border-lands where armies meet. Boundaries and their meaning.
7. A flight over Germany, ringed in by Denmark, Russia, Netherlands, France, Austria, and Switzerland. Where it touches the sea.
8. The meaning and position of Neutral States: (a) By the sea—Holland and Belgium; (b) Inland—Switzerland.
9. The feeding of a country. Russian wheat, German sugar, Danish dairies, French wine. Chief industries.

Every good geography teacher knows that his reading must be continuous, varied, and not limited to geography text-books. He must also encourage reading in his pupils. Many now will read with great interest Erskine Childers's "Riddle of the Sands." Among books of particular geographical interest may be mentioned: "Outlines of Military Geography," by T. M. Maguire. Cambridge University Press, 1900, 10s. 6d.—"Military Geography of the Balkans," by L. W. Lyde. Black.—"The Continent of Europe," by L. W. Lyde. Macmillan, 1913, 21s.—"Central Europe," by J. Partsch. Frowde, 1903, 7s. 6d.—"The Nearer East," by D. G. Hogarth. Frowde, 1905, 7s. 6d.—"Tableau de la Géographie de France," by de la Blache Vidal. Hachette, Paris, 1903.—"Régions et Pays

de France," by J. Févre and H. Hauser. Alcan et Guillaumin, Paris, 1909.—"Germany of To-day," by Charles Tower. Home University Series, 1914, 1s.—Also articles by Belloc and Holdich.—"A Textbook of Geography," by A. W. Andrews (Arnold, 1914, 5s.), is the best to use.

As for maps and atlases, the teacher is lucky who possesses the splendid atlas known as Dierke's "Schul-Atlas für Höhere-Lehranstalten," otherwise he will not now be able to get it. Probably Murray's "Historical Atlas" is the best available of its kind, but expensive. Easier to procure is *The Times* "War Atlas," which, however, is entirely political, and does not show land features. For class use the diagram maps are excellent. Bartholomew's "Map of N.E. France, Belgium, and Rhine" (2s.) is very good. For wall-maps the Sydow-Habenicht are among the best and also the dearest. Others to be recommended are Mackinder's maps, published by Stanford; and cheaper, good, but not aiming so high, Herbertson's Oxford Wall Maps.

E. C. MATTHEWS.

A PIONEER OF THE SUNDAY SCHOOL MOVEMENT.

THE importance of the work of Sunday schools in the early nineteenth century has hardly received due recognition from later educational historians, probably in part because of the greater academic interest attaching to the contemporary experiments of Pestalozzi abroad, and in part because the many social developments of the post-Reform Bill period, after 1832, overshadow in interest those of the preceding forty years.

The education of the poor depended wholly on charitable foundations, supplemented by sporadic efforts of philanthropists, as in the case of Sunday schools. Their originator, Robert Raikes, the good printer of Gloucester, who, though dubbed "Bobby Wildgoose" from his supposed chimerical fancies, was yet shrewd enough to conduct an independent newspaper without Government interference in a difficult period, lived from 1736 to 1811. From Gloucester reports of his work percolated readily into South Wales, where Thomas Charles (better known through his connexion with the Methodist revival) was the first to organize the movement on any large scale. But the value of such a work rises above the cavil of sectarian controversy.

Thomas Charles himself had attended a school near Llan-dowr, the native place of Griffith Jones, who had earlier attempted to cope with the general stagnation by establishing a system of itinerating schools. From Carmarthen Academy he went as a sizar to Jesus College. After Oxford, which he found a "fiery furnace," he passed on to a curacy at Queen's Camel in Somerset, and thence settled down at Bala, which town, through his activity, became for a time the centre of new movements in North Wales. There he married a vigorous, capable, and businesslike wife, who used these complementary virtues to manage a large drapery business so successfully as to enable him to live in independence.

His life coincided with the rise of that wave of philanthropic energy which crystallized in the later nineteenth century into various societies, in most of which he played a part. He himself was a pioneer of the Sunday School Society in Wales, a country member of the Religious Tract Society, and an initiator of the British and Foreign Bible Society. Of the slave trade he writes in 1811: "It would be highly gratifying to see the Liverpool merchants assisting to send Bibles to the shores of Africa instead of fitting out horrid vessels to captivate the miserable inhabitants."

A man of his practical and sympathetic temperament welcomed the idea of Sunday schools in spite of the initial difficulties. Sabbatarians were inclined to cry sacrilege. Even in pre-compulsory days the thirst for knowledge was not always an adequate stimulus to attendance, in a land of sparse and scattered population. "In such places where the gentlemen

of influence are not friendly, and where there are no masters of manufactories to exert any authority, it is no easy matter to keep up the number"—a refreshing aspect of the maligned factory owner of the Georgian novelist. Suitable teachers were not easily found when the poorer classes had no education at all, and when it had not yet become fashionable for the Miss Brocklehursts in silk gowns and feathers to patronize the Jane Eyres of the neighbourhood. Even Robert Raikes had found it necessary to pay his Sunday-school instructors a guinea a quarter. Thomas Charles, therefore, proposed to combine the accepted principle of the itinerating school with that of the Sunday school by employing a master permanently. Thus a system gradually developed, about 1790, by which itinerating schools visited districts for three to six months, and the Sunday school carried on their work. "Before the school is removed I go there . . . and examine the children publicly, and I exhort them earnestly to support the Sunday schools that have been begun among them."

The number of these schools is difficult to estimate, save from casual references in the correspondence. In 1789 15 schools are mentioned; in 1794, "about 20 schools in 5 different counties"; and, in 1811, 40. These figures probably represent the number of places visited by itinerating schools during a year, though they may be duplicates, as later on it was found advisable "that the circulating schools shall . . . revisit those places where the Sunday schools are kept . . . else in time they gradually decay in country places where the children are scattered far from one another."

Thomas Charles provided for instruction at first by "hiring a poor man and keeping him near . . . for £8 per annum." In 1801 he had "thought it necessary to promise them some advance in wages. The sum I have mentioned is £14 a year, though, indeed, in my opinion that is too small a pittance . . . in these dear times." The expense of the salaries was borne by subscriptions eked out by Thomas Charles. The buildings were "a house or schoolroom generally provided by the neighbourhood, and firing also in the winter time." The masters were men of humble rank, and besides, with a tacit acceptance of the eighteenth-century belief in fixity of station, "a poor person can assimilate himself to habits and modes of living among the poor, as it is his own way of living." Though their wages were low, the standard set up for them was exacting. The master was to be a person of "moderate ability, but high character." Religious zeal must not outrun educational discretion—"not captious, not disputatious, not conceited, no idle saunterers, no tatlers." Neither was instruction to be confined to precept only, for each was "to have family prayers wherever he goes to reside for a night, and to introduce conversation respecting his own work . . . that they may see how a Christian lives and how they ought to live." In face of this ideal they might well be faint-hearted, as Thomas Charles realized. On several occasions he thinks "donations of books from your Committee would have very great effect in reanimating the teachers," and, in other places, "they only wanted a little encouragement to go on with fresh vigour"—a pleasant, if obsolete, sentiment.

The ultimate object of the school was to impress the children that they are "candidates for another world," especially as they may, "as the majority do, die in infancy." Adults, too, have no time to lose, "and therefore, from the ages of five to twenty-five or thirty, they generally attend," and many old people also, so that in one place "the shopkeepers could not immediately supply them with spectacles." Thus pioneer work among adults in the evening also fell to the masters. The immediate aim of the school was to teach reading. In this they were extremely successful, in spite of untrained teachers and lack of material, for it "was pitiful to see many children holding before them old tattered slips with neither beginning nor ending, instead of books." Half a year was found sufficient to teach a child to read the Bible well in the Welsh language. This preference for the teaching of reading in Welsh did not lack criticism. But Thomas Charles strongly supported the use of his native tongue—a course which is not necessarily due to perversity, as the opponents of the study of vernaculars

sometimes infer, but to a sense of nationality deeper than ordinary. "By teaching the Welsh first we prove to them that we are principally concerned about their souls . . . whereas that most important point is totally out of sight in teaching them English . . . for that is connected only with their temporal concerns," and therefore—humanly enough—"many of them were exceedingly anxious to learn it."

The method of teaching was that called Catechetical, using the word in its true sense of teaching by oral questioning, and not in its later pernicious development of Mangnallian times—learning a catechism by heart. This plan of questioning was extended until it became customary to group together several schools, and eventually a whole district, for a display of knowledge.

The report of the good work of the schools spread to other parts of the British Isles, in particular to those Celtic districts with similar geographical difficulties. The Gaelic Schools Society, founded in 1811, which was attempting to provide instruction for the Highlands of Scotland, communicated with Thomas Charles as to the principles of the itinerating and Sunday schools, and incorporated his detailed reply in their first year's reports. In Ireland, too, opinion was stirred on the matter, and when, in 1807, Thomas Charles visited the country his laconic private summary of places—"Clonmel; all country spoke Irish; principally papists; assizes just over; nineteen tried, mostly for murder"—supported his conclusion that "circulating schools might do wonders." Eventually the Hibernian Society took up the work, and about 1830 had 14,000 children under instruction. Thus both Celtic countries recognized and took advantage of the experience of the work in Wales.

After 1811 the itinerating schools appear to have declined, possibly through the definite secession of Nonconformity from the Church. Thomas Charles himself died in 1814, and, as the Sunday School Society was then well established, his aims were in part fulfilled. His work as a pioneer deserves to be ranked high in the history of the education of the poor.

EVA KNOX.

SWISS EDUCATION AND THE WAR.

THE following circular letter (slightly abridged in the translation), addressed to the Education Authorities and teaching staffs by the Director of Public Instruction, appeared in the Official Educational Magazine (*Amtliches Schulblatt*) of Canton Zurich for October 1, 1914. It applies, *mutatis mutandis*, with equal force to English schools and teachers.

The present War, which divides the States of Europe into hostile camps and lays such heavy burdens on peoples and countries, touches our land too in its effects.

The Swiss nation is united in the resolve to defend, with all its might, its independence and neutrality. . . . The Government has called our troops to the frontiers to protect us against invasion from alien troops. We shall be one of the happiest nations in Europe if we are able still to fulfil our self-appointed mission as a place of safety where freedom and international brotherhood may take refuge. But . . . this can only be accomplished if we apply all our resources . . . to the special needs of the time. To increase and husband these resources demands a great measure of self-discipline, of simplicity . . . of enhanced consideration for the weal and woe of others, of an intensified and active consciousness of our oneness and solidarity.

Current events affect deeply the ordered progress of our school life. More than five hundred of the teachers in our elementary schools have responded to their country's call. Teaching has been able to continue undisturbed only to a limited extent by the appointment of temporary substitutes. In most cases those who have remained behind have willingly undertaken the extra work. Although here and there it has been found necessary to reduce the instruction given, yet . . . the permanent success of education consists not so much in the quantity of learning imparted as in the kind of work done at school, and that depends on the insight, the joy of work and the power of self-sacrifice in those who are responsible for success. . . . So far as we have observed, the whole body

of teachers are striving to fulfil their increased duties. Winter will bring us fresh tasks. . . . The Ministry of Education considers it necessary that school authorities and teachers should keep a specially careful watch over the scholars, who might without public assistance suffer want. Thus it will be necessary to arrange for school meals and to provide clothing on a larger scale than in normal times. Children should be admitted to school meals whose parents are able to bear only a modest share of the cost.

It also seems advisable that, as far as the necessary teachers are available, the organization of instruction in handicrafts for boys should not be neglected. For it is this which gives the children regular employment out of school hours . . . and just at the present time the school must pay especial attention to the conduct of the children in their free time. The warlike events, of which they are daily hearing . . . threaten to exert a bad effect. It is the duty of the school to counteract this brutalizing influence, to check a spirit of boastful superiority towards those of other nations, and to implant a spirit of conciliation and friendliness. . . . The school is neutral ground, as in religion so in politics. It is not the right place in which to arouse sympathy or antipathy towards either of the hostile parties. . . . It would be a serious error should the school give offence to the parents of alien children or reason for just complaint. Rather let it take this opportunity of emphasizing the civilizing influence of peace, and of moulding our youth into advocates of peace between the peoples.

CORRESPONDENCE.

THE WAR AND SPELLING REFORM.

To the Editor of the *Journal of Education*.

DEAR SIR,—An American correspondent writes in the *Winnipeg Free Press* that certain of the Belgian leaders have cabled to him the following remarkable proposal:—

"We realize," they say, "that our nation is seriously hampered by lack of one national language. It is impossible to make either Flemish or Walloon universal because of the rivalry of races. We do not wish to encourage further use of French, wishing to maintain our distinct individuality and cultivate British rather than French characteristics; therefore we propose that Belgium should adopt English as a national language, making herself the England of the Continent, the sister nation of England of the Isle."

Deducting a little from the exuberance of gratitude for immediate help, we have still the certainty that a strong link has been beaten out in blood and tears between Belgium and ourselves, and that the friendship thus begun will continue for years. But, in attacking the English language, the most courageous Belgian might well quail before the spelling difficulty. This is probably more familiarly known as the pronunciation difficulty. It is not the pronunciation, however (except, perhaps, the *th* sound), that is difficult, but the orthography that has lost touch with the sounds represented.

What better linguistic service could we render those brave Belgians who would pay us the compliment of adopting our language than that of simplifying our spelling? The mercy—like all mercies—would be twice blessed and redound on our own heads. Prof. Gilbert Murray wrote to me the other day that he had been told by a lady who was trying to teach English to some Belgian refugees what insuperable difficulties appeared when she came to the spelling problem.

The sprightly contributor "Bob," in *L'Indépendance Belge*, tells of the trouble his countrymen in London are having with the English language—"the language of Shakespeare and Mr. Asquith," he calls it, although the latter would probably admit some discrepancies between the two. The "twittering" pronunciation of English adds further bewilderment. It is instructive to note the phonetic spelling which "Bob" gives of the phrase "What is the time?" The Belgians, he thinks, will gain a good idea of the correct sound if they repeat "*Boîte à musique*."

We might return the compliment of our Belgian guests by undertaking, as soon as the War is over, to appoint a Departmental Committee, if not a Royal Commission, to deal with spelling reform.—I am, yours, &c.,

48 Grafton Road, Acton, W.

November 5, 1914.

CHRISTINA JUST.

MILTON IN SCHOOLS.

To the Editor of *The Journal of Education*.

DEAR SIR,—In your current issue you ask certain pertinent questions as to my views upon the teaching of Literature, so I presume

that some answer is expected. To begin with, you quote Mark Pattison's opinion that "an appreciation of Milton is the last reward of consummated scholarship." You do not say whether you agree with this verdict; I, personally, feel called upon to protest against it. However great Milton may have been as a scholar, it is as a supreme artist that he holds his grand position in our annals; as supreme artist he appealed to ploughboy Burns and countless humble folk with no special claim to "culture"; and any attempt to make Milton in any sense the special property of a small coterie of scholars should be resented. The poetry of Milton is the proud possession of the entire English-speaking race. . . . But even this appears too limited, and I ask myself why I have not said "of all civilized humanity."

You proceed to suggest that, when reading Milton with a class (the age mentioned in my letter was thirteen to seventeen), I ought to discuss with them Milton's Theology (I hope not!), his cosmogony, his blindness, his relation to his age, his classical and Biblical allusions, his long words and hard sentences, "to mention only a few points out of many." And you appear to ask for my reply.

I will admit, then, that a teacher should touch on most, if not all, of these points, in brief, not in wearisome detail, *provided that in doing so he is not deluding himself with the idea that this is the main part of a Literature lesson.* In point of real fact, it would probably prove far more enlightening to hand round the portrait of our noble-visaged poet; but that could be done too. But all these things are unessentials if compared with the one thing that is in my mind the absolute essential, and which I will now try to explain.

When Beethoven was asked what was the basic idea underlying his mighty music, he answered: "To raise man upward by giving him grand emotions." This seems to me to sum up all that is greatest in the world's art. And whenever a teacher takes "Paradise Lost" with his class, I would have him remember this, as what Milton can undoubtedly do for many in that class, if he be allowed. He can extend the bounds of the imagination, and with it all the meanings and possibilities of life; he can make the mean things look ever so much meaner, and the great things ever so much greater; give haunting ideas by day and night of heights and depths of the human spirit as yet unexplored, with a trumpet challenge to the spirit to explore them; compel a grand forgetfulness of self in the sublimities of the eternal, and give an impetus to the inner spiritualities which will only end with life itself.—Faithfully yours,

WILLIAM PLATT.

The Home School, Grindleford, Derbyshire.
October 3, 1914.

PROF. STRONG AND "FAKED" STORIES IN LATIN. *To the Editor of The Journal of Education.*

DEAR SIR,—There is one statement in Prof. Strong's article on Latin teaching in the November *Journal of Education* from which I strongly dissent, as I expect many others will do. He advocates the use in early stages of Latin of such "faked" stories as Prof. Sonnenschein's "Story of the Boer War" or Newman's "Robinson Crusoe." Now, as Prof. Strong himself indicates in his article, it is of great importance that something of a Roman atmosphere should be felt in the Latin lessons. But how can this be if the pupils are initiated into the language through a medium so entirely unclassical as that of South Africa and the British Army? (There are other grave objections to the subject of this particular book into which I need not enter now.) The pupil himself will feel that he is in a false atmosphere; in fact, many beginners are so eager to plunge at once into "res Romanas" that they are disappointed to find that the Latin of their first reading lessons is not the work of Livy or Cicero.

I agree with Prof. Strong that, since we lack Roman books written by Romans for children, we must use Latin books written by modern writers. But that does not mean that the subject-matter should be unclassical. Rome herself, the life and habits of her people, the stories of her deeds, afford ample scope and material for a good reading book, which shall pave the way to the real Latin authors. Such books are beginning to appear now—e.g. "Puer Rōmānus," by Jones and Appleton (Clarendon Press).—Yours truly,

EFFIE RYLE

(Assistant Lecturer, Training Department,
Bedford College for Women).

November 6, 1914.

THE subject of the C.O.S. Essay, open to students of elementary training colleges, is this year "The Relation of Individual and Domestic Thrift to National Wealth and Prosperity." February 1, 1915, is the last day for sending in essays.

COLONIAL AND FOREIGN NOTES.

FRANCE.

In education, as in other departments of the national life, war, without dominating, pervades the whole. Institutions are affected by the departure of those who govern or frequent them; thus at the Conservatoire de musique et de déclamation six of the professors have been called out, and about a hundred out of the 575 pupils are also serving with the colours. War causes a ministerial circular admitting children of all ages to the *garderies*; war increases the hours that a girl gives to manual work, for she is busy with winter clothing and linen for the soldiers. The Golden Book, or *Livre d'Or de l'Université*, is being compiled. In its first three "pages," as reproduced in the *Bulletin administratif* of the Ministry of Public Instruction, are written the names of ten higher, eight secondary, and thirty-three primary teachers, killed outright, as well as long lists of wounded. Later pages add many names to the scroll of nonour. University and school are giving of their best to vindicate the cause of right.

Here is a story published officially for schoolboys. At the beginning of the War Emile Degaudez, sixteen years old, of Bourg-et-Comin (Aisne), had for a fortnight been accompanying the French troops as a guide. On September 20, upon the occasion of the attack on Fort B., whilst he was resting at T. with a group of soldiers, a German shell burst in a farmyard, killing one man and wounding nine, as well as young Degaudez and a child seven years old. Whilst all were seeking cover from the shells, the brave boy, his arm pierced by a fragment and streaming with blood, lifted the child, whose skull was broken, and bore him, under fire, to a place of safety a hundred yards away. In the evening the child died. Emile Degaudez uttered no moan as his arm was dressed; then mixed cheerfully with the wounded men.

UNITED STATES.

In the United States there is, as we learn, a growing sense of the horror of the great War. "Schools, churches, and homes," says the *New England Journal of Education*, "are being made centres of peace-inspiring impulse." The November number of the *Educational Review* consists of reprints of articles relating to the War, and neutrality is the attitude recommended by President Butler, its editor. To keep a neutral mind when contemplating the innocence and the ruin of Belgium must be a hard task. But the United States is the melting-pot of nationalities. In the process of fusion the school is an important agent, and the neutral spirit—we are giving the American view—must reign in it, if its work is to be done efficiently. Superintendent Maxwell, of New York, in an address to the principals of schools, lays stress on this point. "Our aim is to have Teuton and Slav, Saxon and Kelt, Greek and Italian, live together as neighbours, in peace and in quiet, with mutual respect, with mutual forbearance, and with mutual helpfulness. Sublime is the undertaking to strip millions of children in whom the lust to strike the racial enemy is innate of their inborn propensities to strife. Therefore a teacher who, before her pupils, assails the Austrians or the Belgians, the English or the French, or the Germans, or the Russians, or the Serbians, is guilty of two heinous offences. The first is an offence against a child. He may wound the sensibilities of a deeply sensitive boy or girl, and this is the teacher's cardinal sin. He offends against our national patriotism, which was, and is, to make one on American soil the children of all the earth's nations; to wipe out and not to perpetuate racial prejudices. Therefore the order should be issued, clear and positive: No assault on the motives or conduct of any nation engaged in this war."

The pedagogic world in America pays continued attention to the subject of vocational guidance. Thus, the Women's Educational and Industrial Union of Boston offers this year a course of training for vocational counsellors. The untrained teacher cannot guide, lacking knowledge of the prospects in the country to be traversed. With a wish to be useful we give a list of books relevant to the subject, taken from the Report of the Twenty-sixth Educational Conference of the Secondary Schools in connexion with the University of Chicago. It will be remembered that Chicago is the centre of the vocational movement. The list runs thus: "Industrial Education," by Albert Leak; "The Problem of Vocational Education," by David Snedden; "The Worker and the State," by Arthur Dean; "Education for Efficiency," by E. Davenport. "Education for Citizenship," by Georg Kerchensteiner; "Ex-

amples of Industrial Education," by Frank Leavitt; "Vocational Guidance of Youth," by Meyer Bloomfield; "Choosing a Vocation," by Frank Parsons; "Vocations for Girls," by E. W. Weaver; "Vocational and Moral Guidance," by Jesse Davis. The book ("Choosing a Vocation") by Prof. Frank Parsons is said to have originated the introduction, in a systematic way, of vocational guidance into the American public schools.

President Wilson appointed a Commission to consider the subject of National Aid to Vocational Education, and this Commission has now reported and drafted a Bill. There is outlined, first, an expenditure of 200,000 dols. a year to go to the Federal Board

for Vocational Education, for administration, studies, investigations, and reports to aid the States, the studies covering the subjects of agriculture and home economics, trades and industries, commerce and commercial processes, and methods of teaching and courses of study for such subjects. Secondly, appropriations to the States for the training of teachers, beginning with 500,000 dols. for the fiscal year ending June 30, 1916, and increasing in 1918-19 to a maximum annual appropriation of 1,000,000 dols., and continuing at that figure. This money it is proposed to distribute among the States in accordance with the relative percentage of their population. Moreover, there will be large grants to promote agricultural education, beginning with 500,000 dols. in 1916 and raised until a maximum annual appropriation of 3,000,000 dols. is attained in 1924. These grants are to be distributed among the States in proportion to their several rural populations, they themselves making large local contributions. Similarly, sums will be allotted for trade and industrial education in proportion to the urban populations. As the agricultural appropriations are to reach the country, so these appropriations will go to the towns.

Free from the alarms of war, the United States has leisure to discuss the subtlest educational problems. Thus parents and teachers, administrative officers and professors of education, have been debating

the question whether girls should be allowed to graduate from, or, as we sometimes say, to "absolve," the high school without offering algebra. Some urge that a certain knowledge of the subject is essential in many commercial and industrial vocations. On the other hand, a Western Superintendent is reported to have exclaimed to the National Education Association at St. Paul: "God bless the girl who refuses to study algebra! It is a study that has caused many a girl to lose her soul." The utterance has been variously criticized in the newspapers. "Glad tidings of great joy," says an enthusiastic advocate of abolition. "With a boldness equal to that of Thomas Paine, an educator stood before the teachers of the nation and made a plea for human mercy and kindness—that girls should not hereafter be taught algebra." Not in English experience has algebra spelt perdition for girls any more than for boys, although a successful pursuit of it has been playfully associated with low cunning. Yet the alternative subject proposed would, we fear, cause many desertions. It is costume-designing!

The "howler" still flourishes. We offer to collectors three American specimens, apparently of the genuine sort. Asked who Tennyson was, a boy answered: "Tennyson was a wonderful poet with long hair who wrote the idle king." A biographical note on Samuel Johnson ran thus: "In 1709 there was born in Lichfield, England, a most eccentric, gruff, and fat old man. He translated the Pope's 'Messiah' from Latin into English, and between 1759 and 1760 wrote a dictionary." Loud indeed is the howling in the statement that "George Washington in 1492 ascended Vesuvius to see the Creator smoke." But the final error is pleasant, and the writer did well in avoiding all reference to the trite subject of Washington's immutable veracity.

INDIA.

A meeting of teachers was held recently in one of the chief cities of India. There were present Hindus, Jains, Mohammedans, Parsis, Anglo-Indians, and Europeans, men and women, lay and religious; head masters, head mistresses, assistants and student-teachers. *Indian Education* (XIII, 2) quotes the remarks of a keen observer: "I was struck by two points in particular, the earnestness and the weariness of these faces. All, without exception were earnest, but the young looked resentfully weary, the middle-aged looked resignedly weary, and the elderly looked weary beyond expression, too weary even for resignation. And all looked ill. With hardly an exception they looked ill—with illness of anxiety, overwork, long hours, bad air, and a dreary future. I wished that their Excellencies, sympathetic in the true sense of the word, could have been on the platform, and that I could have asked them if they did not agree with me that there

was something wrong—and very wrongly wrong and dangerously wrong—that the key-note of expression on the faces of that entirely representative gathering from the most potential community in the State, was one of utter weariness and illness. Especially so when each face was stamped with earnestness, zeal, and that best of good things, goodwill. Many of those people are living truly noble lives, most of them are the models consciously and unconsciously copied by hundreds of children, all belong directly or indirectly to the grandest and highest and greatest profession in the world—and the dominant expression on their faces was weariness and discontent. On the lowest grounds it is an evil thing that teachers should be a discontented class. On the highest grounds 'divine discontent,' a noble thing, is surely not to go unallayed in a civilized community. Rotten indeed is the State in whose educational fabric there is rottenness."

QUEENSLAND.

Vocationalism is making its influence felt in Queensland. The thirty-eighth Report of the Secretary for Public Instruction forecasts a widening of the scheme of education so as to fit a boy for almost any calling that he may choose to follow. Queensland is primarily an agricultural State, and agriculture is the vocation for which the chief provision must be made. It is proposed to establish a Farm School at which scholarships will be available, and in which the elements of the science of agriculture will be taught practically. The *Education Journal* (XXII, 6), having regard to the diverse forms in which agriculture is carried on in the various parts of the vast territories of the State, suggests the creation of several Farm Schools: one outside Warwick or Toowoomba, to meet the wants of the southern and western Downs; one on the outskirts of Bundaberg, or Gladstone, for the central coast with its sugar and sub-tropical products; and one near Townsville, for the teaching of tropical agriculture.

NATAL.

Let us write a brief note, on the basis of the recently issued "Imperial Conference Paper," upon the qualifications and payment of the teachers in the Province of Natal. A First Class Certificate is issued not by the Province, but by the Union of South Africa. The Natal Education Department confers the Second Class and the Third Class Teacher's Certificate, as also to teachers in Indian schools a Senior and a Junior Indian Teacher's Certificate, and to teachers in native schools a First, Second, or Third Grade Native Teacher's Certificate. Other persons may be employed as "uncertificated teachers" with the approval of the Department. The majority of such teachers are found in the Government-aided schools, in which there are 269 of them to 180 certificated teachers. In the Government schools the certificated teachers outnumber the uncertificated by more than five to one. A Training College has been established at Pietermaritzburg, and most of the teachers holding certificates will in the future have received professional training. Assistance is given to the students of the Training College, and they, in return, bind themselves to a certain period of service. Salaries in Government schools seem to be at an adequate rate. The head master of a high school receives from £500 to £600 a year, of a primary school from £270 to £550. Assistant masters in high schools are paid from £250 to £400. Women are remunerated on a somewhat lower scale. The just system of annual increments is recognized in all schools standing directly under the Education Department.

CAPE OF GOOD HOPE.

Not the least sad thing about the War is its action in destroying in their infancy small schools in remote parts of the Empire. Thus the *Education Gazette* of this province reports as an effect of war the closing of the private Farm School at Obobogorup, in Gordonia, the place having been captured by a German force.

EUROPEAN HISTORY FOR YOUNG PEOPLE.—Dr. J. Holland Rose has undertaken a work of national importance in the preparation of a little book for young people entitled "How the War came about." In order that no school in the country may be debarred by considerations of expense from making use of the work, the price has been fixed at 4d. The publishers are the Patriotic Publishing Co. (agent, Francis Collas, 3 Wine Office Court, Fleet Street, E.C.)

EDUCATION IN THE PERIODICAL PRESS.

- Architectural Schools Section. *Builder*, October 23.
 A section dealing with several phases.
 Correlation of Uncleanliness with Mental and Physical Retrogression.

 Universities in War Time. *Queen*, October 31.

CHRISTMAS BOOKS.

- How I Tamed Wild Squirrels*. By ELEANOR TYRRELL. (2s. 6d. Nelson.)—Miss Tyrrell sets us wondering why squirrels are not more often kept as pets, not in treadmill cages, but as prisoners on parole, or rather as interned aliens. One such it was our privilege to know, for years the friend and playmate of a famous naturalist who mourned his death more than Lesbia did her sparrow's. The wooing of a wild squirrel is a long and delicate business, and needs genius—that is, infinite patience. Miss Tyrrell was thus gifted, and she knows, too, how to tell her lover's tale.
Lickle Tickle. By JEAN LANG. (2s. 6d. Nelson.)—The sobriquet of the heroine is a riddle left for child readers to guess, and it will not need a child Oedipus to find the answer before he reaches the end. Lickle Tickle is "what nurses call a limb," and her escapades are many and marvellous. She serves up a jelly-fish she has picked up on the beach for luncheon, with terrible effect on her great-aunt. She goes a-fishing on her own hook with a stick, a bit of twine, and a fly dressed impromptu by the gardener, and lands a salmon of fifteen pounds, or, to speak by the card, is landed by the gardener—rod, salmon, and all. To judge by the picture, her age is five or six. Small folk will enjoy the Puck-like mischief, and not boggle at the miraculous draught.
Under Greek Skies. By JULIA D. DRAGOUMIS. (3s. 6d. net. Dent.)—Three stories of Greek children, intended to illustrate child life in modern Greece. Boys and girls are much the same all the world over, and with a change of names and shifting of scenery the heroes of the first and the shoeblack of the third might be transplanted to London or New York: the latter for preference, for an English child needs not to be told that elderly ladies ought not to be addressed as "Goody," and he will be surprised to hear that "aubergine is always used by cooks and greengrocers in England." The middle story is more redolent of the soil: a tale of four children besieged in a cave, with a mad shepherd for Cyclops.
Treasures of the Earth. By CYRIL HALL. (3s. 6d. Blackie.)—This is an attempt to instruct boys and girls about mineral wealth, its formation in the earth, its extraction, how it is worked, and the uses to which it is put. We have chapters on coal, iron, the precious metals, oil fields, glass, porcelain, and so forth. Histories of discoverers and inventors are pleasantly interspersed, and there

are plenty of pictures and photographs. Some of the stories are not strictly relevant, e.g. the recovery of the Venus of Melos told at full length; but these lend variety. Young readers, however, will resent the too frequent notes of admiration and questions—Shall I tell you? Would you be surprised to hear? &c.—and if they are of a sceptical turn they will smile at the Rev. Dr. Kinn's attempt to square the first chapter of Genesis with geology, and the author's "Moses, as you know, wrote out the book of Genesis."

Stories of Great Pioneers. By EDGAR SANDERSON. (2s. 6d. Seeley.)—An abbreviated and cheaper edition of Mr. Sanderson's "Heroes of Pioneering."

The Wonders of Savage Life. By G. F. SCOTT ELLIOT. (2s. Seeley.)—This is an entertaining Christmas book. What boy does not love to hear of savages, and, in an early stage of his development, play at savages? And it is something more. Thanks to the constant references to authorities given at the foot of each page, it will serve as an introduction to anthropology.

The Wood People, and Others. By MAUD D. HAVILAND. (5s. net. E. Arnold.)—Anthropomorphism, though confined by usage to theology, is a term that might with equal justice be applied to natural history. It is inevitable that man should make animals as well as gods in his own image, and ascribe to them his own motives and passions. Hence totems, werewolves, and metamorphoses, and in a later literary age bestiaries, Reineke Fuchs, Aesop's "Fables," and "The Jungle Book." It is not a bow that every man can draw, and in most modern story-books the beasts are merely lay figures for the artist's drapery. Not such is Miss Haviland. She is a close observer of Nature, and she paints with her eye on the object. Walt Whitman supplies her with an apt motto: "I think I could turn and live with animals. . . . I stand and look at them long and long." Take at random "The Hunter in the Dark." Tufoigin, the blind stoat, hunts perforce underground and solitary. At last he finds a mate, and the pair live happy for a while, and fatten on rabbits in the warren. But she pines for sunshine, and insists on hunting in the open. His blindness is discovered and she leaves him, as is the way of other Jills. We tell the story to show that there is nothing fictitious or fanciful. The stories are all true in the spirit, if not in the letter; but of course the charm of the book lies in the telling, and nothing but a long extract could show how it has charmed us.

New Tales of Old Times. By W. E. SPARKES. (3s. 6d. Nelson.)—It is a pity the author did not choose a more distinctive title, or add a sub-title. The tales retold are of four early British missionaries—Patrick, Columba, Aidan, and Cuthbert. The first describes the court of Miliuc (here called Milchen) and his feuds with rival chieftains; and we are half-way through before we are introduced to the Saint. In a story where chronicles and legend, fact and fiction, are interwoven we do not look for dates, but some indication of the century might have been given; and young readers will not understand the meaning of a "shee-maiden" or even of a "rath." The coloured illustrations by Norman Ault are well drawn and spirited, especially the frontispiece.

Once a Week. By A. A. MILNE. (6s. Methuen.)—If Punch, as the dictionaries inform us, is a festive drink compounded of five ingredients, of these assuredly A. A. M. is one: which one it would be hard to define. His sketches are racy, but never vulgar; his dialogues witty, but the wit is never forced; his men and women "say just what all say, or only a little stronger"—that is, what they would have wished to say. Here is true comedy; and we are glad to reread the sketches which for the last year or two have delighted us once a week.

Outa Karel's Stories. South African Folk-lore Tales. By SANNI METELERKAMP. (3s. 6d. Macmillan.)—Outa Karel is an old bushman who plays the same part as Uncle Remus, and the tales of Oom Leeuw and Broer Babiaan, of the Little Red Tortoise, and of How the Jackal got his Stripes, match those of Brer Rabbit and the Tar Baby. Outa Karel, it appears, was a real character, and these stories are a free version of the native folk-lore as narrated by him in the Taal.

Gai Iuli Caesaris et Auli Hirti Commentarii rerum in Gallia gestarum, ex Recensione T. RICE HOLMES. (£1. 1s. net. Philip Lee Warner.)—This *édition de luxe*, which it is a pleasure to handle and to read, would be an acceptable Christmas present to any classical scholar who has left the memories of Fourth Form far enough behind. Dr. Holmes is *homo unius libri* in so far as he has identified his name with Caesar. The text is conservative, few emendations being admitted, and corrupt or suspicious passages being marked by brackets. His indebtedness to Heinrich Mense is generously admitted, and for justification of the readings adopted the reader is referred to the editor's Clarendon Press annotated edition and an article in the *Classical Quarterly*.

Macaulay's History of England. With Illustrations. Vol. IV. Edited by C. H. FIRTH. (10s. 6d. net. Macmillan.)—In our notices of previous volumes we have said something, but not the

half of what might have been said, of the wide research and sound judgment shown in the choice of illustrations and of the admirable manner in which they have been produced. The present volume fully maintains the high standard, and it covers a period with which the human schoolboy (not Macaulay's) is familiar, and in which Macaulay's graphic powers are at the best. The Covenanters, the Jacobites, Killiecrankie, the Battle of the Boyne, are household words, but to see, as it were, in the flesh James II and William III, Claverhouse, Sir Cloudesley Shovell, Bishop Ken, Sacheverell, Titus Oates in the pillory, Rachel Lady Russell and Sarah Jennings, Duchess of Marlborough, visualizes the History. The present time lends a singular interest to the plan of the Battle of Beachy Head and the engraving of Louis XIV in the trenches before Mons.

Modern Weapons of War by Land, Sea, and Air. By CYRIL HALL. (2s. 6d. Blackie.)—Though for the last three months most of our leisure hours have been absorbed in reading about the War, yet a general information paper—asking how are a 13.5 gun, a torpedo, a mine constructed? how do a submarine and an aeroplane take aim? what is the difference between dynamite and cordite?—would stump most of us. Here are clear answers to such questions. We wish that the author had given some figures as to cost. Money is more than ever the sinews of war, and herein lies our main hope that the War will have a speedy end.

The British Army Book. (3s. 6d. Blackie.)—Colonel Cyril Field has undertaken the revision of the popular "Red Army Book," bringing it up to date and adding several new chapters. Thus, under the title of "The Fourth Arm," aeroplanes and airships are dealt with and well illustrated. The latest exploits at Düsseldorf and Friedrichshafen would have modified the author's complaint of England's backwardness in this branch, and Mr. Winston Churchill deserved a word of recognition. There are chapters on the Sikhs and Gurkhas, the Colonial troops, and the Territorials. "Despatch Work in War" is full of good stories. A new chapter might have been added on the Victoria Cross. Among the numerous illustrations is a good portrait of Lord Roberts on his favourite charger, "Varonal."

The Training of a Sovereign. Edited by Viscount ESHER. Published by the authority of the KING. (5s. Murray.)—This abridged selection from "The Girlhood of Queen Victoria" puts the record of a singularly attractive and innocent childhood within the reach of all who can afford a crown, and should prove an antidote to the spawn of *chroniques scandaleuses* and memoirs of royal mistresses which infest the circulating libraries.

A Sturdy Young Canadian. By Captain F. S. BRERETON. (5s. Blackie.)—George Instone's career is of the most varied kind. Starting at the age of seventeen, with five dollars in his pocket, to make his way in the world, full of pluck and the determination to get on, he gets so many rebuffs from the hands of fortune in the first few months that any less determined person might have succumbed to them. George, on the contrary, has a knack of turning everything to good account, and, more than that, of making friends with all kinds of people by the way. His first and last adventure is with a ruffian who "holds up" unsuspecting people, and who, by a bit of poetical justice, is sent to his account by the son of the man he ruined. George does not always escape scot free, but in the end he makes good all along the line. There are some well drawn illustrations by Charles Sheldon.

Rob Wylie of Jordan's. By F. COWLEY WHITEHOUSE. (3s. 6d. Blackie.)—Rob is nothing if not thorough. Rather unfortunately for his object in life, which is to get into Woolwich, he throws all the energy and determination he possesses into sports. Like Miss Edgeworth's hero, he is always going to begin "tomorrow" or next week or next month to work seriously, and it is not until the routine of school has been broken by a rather startling experience—nothing less than a taste of the Balkan War and a capture by brigands to follow—that Rob settles down determinedly to work. It is, perhaps, a doubtful moral that, if repentance comes too late, Rob still gains the desire of his heart. F. M. R. Whitwell's illustrations are well drawn.

The First Mate. By HARRY COLLINGWOOD. (3s. 6d. Blackie.)—This is called the story of a strange cruise, and strange are all the people connected with it, from the lady skipper to her particularly obnoxious, spoiled boy. The yacht, "Stella Maris," is fitted up in sumptuous fashion, and Mrs. Vansittart, who owns and commands her, has also everything handsome about her. Walter Leigh joins as third mate—a lad of seventeen—engaged at sight by Mrs. Vansittart, who very soon begins to call him Walter and to take his advice. He is a good sort of fellow, and rises to his responsibilities, so that when, after adventures galore, through storms, pirates, and a submarine eruption, he is left sole representative of the crew and ship's officers, barring the skipper, his ingenuity and courage practically save the small party left. Mr. Collingwood does full justice

to these thrilling experiences. The illustrations by E. S. Hodgson are very effective.

Helen of the Black Mountain. By BESSIE MARCHANT. (3s. 6d. Blackie.)—The latest of Miss Marchant's heroines vies with her predecessors in energy and resource, both of which were badly needed in the difficulties into which she was suddenly plunged. It appears that in Montenegro you must walk warily, and that even the payment of a handsome donation to the Black Rangers, though it may secure you from being molested by them, leaves you still at the mercy of any dishonest official who covets your possessions. To have your father mysteriously spirited away, to have to hide a brother who is flying from justice—as he thinks—and to be saddled with a wounded man and a company of soldiers just at the most inconvenient moment is enough to task any one's powers. Helen rises to the occasion, and, though her decisions seem often more brave than wise, she wins through triumphantly. It is a very readable story, and is illustrated by William Rainey.

Half-holiday Pastimes for Children. By G. B. CROZIER. (5s. net. Jack.)—To name the pastimes described in the book is a recommendation in itself, if we add that the descriptions and illustrations are thoroughly practical and tell all one needs to know as to materials, prices, amounts—in fact, all the things that are so often omitted in a book of this kind. The book deals with gardens (indoor and outdoor), pets, photography collections, books, framing, sweet-making, signalling, and many other attractive pastimes which need some help and guidance in their pursuit.

Games for Playtime and Parties, with or without Music. By S. V. WILMAN. Illustrated by MARGARET TARRANT. (3s. 6d. net. Jack.)—We cannot catch the author tripping. Every game we ever loved and played in our childhood seems to find a place in these pages, from "Ring a ring of roses" to "We've come to see Jenny Jones," that melancholy but strangely attractive, dramatic ditty. All explanations are given very clearly, and the words are given in full. The book throughout is very daintily illustrated in colour and black and white. Fathers of large families had better purchase the book at once.

The Prize. (1s. 6d., 2s., or 2s. 6d. Wells Gardner.)—There is plenty of reading in "The Prize": two serials (one of home life, one of life in France), many life-histories of various fruits, and a series, which will not be unwelcome, on sweet-making, besides the shorter stories and poems. The coloured illustrations are specially good this year. The black-and-white illustrations to "Blackwater House" are not up to the level of the others in the book.

Chatterbox News-Box. (1s. 6d. net. Wells Gardner.)—This is for older children, when curiosity and interest have spread to a rather wider circle. "Birthdays to Remember" tell of Shakespeare, Bacon, Grimm, Newton, and others. "Half-holiday Visits" describe St. Paul's, Greenwich Observatory, the Tower, and various other places of interest. "By Wood and Stream" supplies the Nature interest; "The Panama Canal" will suit the budding engineer. The book is full of interesting matter.

The Daughter in Possession. By ROSA MULHOLLAND. (6s. Blackie.)—This is a very readable book, of just the kind to please sweet seventeen and onward. That the fairy bountiful should choose "Fandango" for his professional name, that Mrs. Petworth should be possessed of "supreme" refinement, that Mattie should put on "a rich dress of soft grey green and a plumed hat of a deep splendid crimson," and so on, are just the touches that please the young, but to the more critical give the feeling of slight artificiality and over-colouring. But to keep up interest through close on four hundred pages is no mean feat. The attractiveness of the book is greatly enhanced by Miss Hammond's illustrations.

The Girls of St. Cyprian's. By ANGELA BRAZIL. (3s. 6d. Blackie.)—Miss Brazil has succeeded in writing a story about a girls' school which is both fresh and interesting. The idea of centring the interest in a school Eisteddfod is novel, and gives scope for development rather out of the ordinary line. Mildred, the heroine, is quite a lovable person, and meets with deserved success, though we hardly think in real life she would have won a three years' music scholarship apparently solely on the playing of the Valse Triste. The illustrations deserve commendation.

The Sea-girt Fortress. By PERCY F. WESTERMAN. (3s. 6d. Blackie.)—This is an exciting story of Heligoland while England and Germany were at peace, but the latter was obviously spoiling for a fight. An English sub-lieutenant and an American, on a holiday cruise in a yacht, fall in with a flotilla of German destroyers out on manoeuvres and are nearly run down, but manage to pick up a German sailor who has fallen overboard and whom they transfer later to a Dutch vessel. Whether or not it is owing to him that a heavy iron pin is placed so near the compass as to affect it, this is

the result, and after wandering about in rain and fog they come to anchor in the dark off Heligoland, and are promptly taken prisoners. How they escape, and range about the wonderful defences and admirably constructed shell-proof pits containing Zeppelins, we recommend our readers to discover for themselves. The book is full of interest, especially at this moment. It foreshadows a great victory, where the English-speaking races join together and eventually restore Heligoland to her original owners. There are some good illustrations.

A Hero of Liège. By HERBERT STRANG. (Frowde & Hodder.)—The thrilling adventures of a young Englishman who, having German connexions and a German guardian, is living at Cologne when the War breaks out. An enemy has him arrested as a spy and, while he is planning an escape, an English Secret Service agent is thrust into his temporary prison. Starting from this first escape there is a breathless series of dangers braved and successfully evaded, each one seeming as if it must be the last. Kenneth Amory has always had a weakness for aircraft, and a hope that he will some day join the Flying Corps, and he shows his fitness for it when, with a Belgian comrade, he does good service for Belgium both by causing and preventing explosions, and finally in destroying a Zeppelin. A first-rate story, with good pictures by Cyrus Cuneo.

Blackie's Children's Annual. (3s. 6d.)—This will appeal to all young folk. There are verses and pictures for quite little ones, and stories that will interest older children, such as "The End of the Feud," "The Troubles of Billy," &c. The pictures are of all kinds, coloured and black and white, some grotesque, some pretty and dainty, with some good drawings among them. So there is a good choice, and all can please themselves.

Blackie's All-story Book. (1s. 6d.)—As its name implies, this is a book entirely of stories suitable for children of nine or ten. "The Carol Singers," "Jim," and "How to Make the Best of Things" are among the best. The stories are all short and simply told. The illustrations in colour and black and white are by H. M. Brock and others.

Off we Go! By Land, Sea, and Air. (1s. Blackie.)—A number of short stories and descriptions of the various modes of transit in these days. Trains, motor-boats, sledges, aeroplanes, motor-cars, hydroplanes, balloons, are all represented. There are numerous illustrations, the first being of Stephenson's "Rocket." The super-Dreadnought makes an effective picture.

The Frank Adams Book of Nursery Rhymes. (Blackie.)—The coloured plates are bold and really humorous. "Nursery Rhymes" is liberally interpreted, and includes John Gilpin. "Canterbury Bells" is an inferior version of "Madam, will you walk?"

Little Folks (Cassell) fully sustains its reputation as the Magazine for Boys and Girls. This year there are four serial stories, by Ralph Simmonds, Dorothea Moore, Murray Fisher, and Olaf Baker.

The British Boy's Annual. (5s. Cassell.)—A treasure-house of stories for boys. A glance at the authors' names is sufficient to show that interest and excitement will follow on each other's heels throughout its pages. There is a long school story, with plenty of incident of the kind dear to schoolboys; others by S. Walkey tell of fierce fights with Indians and an attack on an English castle in old times. Claude Grahame White and Harry Harper contribute a wonderful experience in an air-mail—a vision of the future. Besides these, there are adventures in all parts of the world. Of the seven coloured plates, "The Captain of the Colours" and "The Tramp Ship" are specially good, while "Eagle Plume" makes a fine piece of colour.

Cassell's Annual for Boys and Girls. (3s. 6d.)—This contains a large number of stories and verses for children, mostly of an amusing sort, with a few graver ones interspersed. We could wish that, among the illustrations which are liberally supplied, there were fewer of the golliwog kind which has lately been so much in vogue. They are, however, happily varied with others of a different type, and there are clever little black-and-white drawings on many pages. A new feature seems to be the placing of an illustration in one colour on the face of the printed page to which it refers.

The British Girl's Annual. (5s. Cassell.)—A bookful of stories which girls will welcome and which are, on the whole, above the average of those relegated to "girls' books." School stories are mingled with adventures of many kinds. There are

several coloured pictures, one of them taken from G. H. Boughton's "Evangeline," and several clever drawings in black and white.

Messrs. Nelson send us their three annuals: (1) *The Chummy Book*, (2) *The Jolly Book*, (3) *The Girl's Annual*. (1) Is for the nursery, with nursery rimes and lots of pictures, plain and coloured. Edward Shirley is a master of fun that will appeal to children. (2) Appeals to a slightly advanced age. There are fewer pictures and stories in chapters. That of "King Lud and Levelys" is a capital saga. (3) Besides short stories by E. Nesbit, Ethel Talbot, Jean Lang, and many other well known names, has serious articles on Nursing, Gardening, Dairy Work for Girls. The illustrations are reproductions of pictures by Alma Tadema, McWhirter, and Waterlow.

(1) *Privates Three*, (2) *The Twins of Bunnyville*. By ERNEST A. ARIS. (Cassell.)—It is a great pull when an author can be his own artist. The frontispiece of the three privates—George Cockerel, the Black Rabbit, and Dick Tuck—sets one agog to learn all about their doings and adventures, and the interest does not flag.

CHILDREN'S BOOKS.

Golden Tales from Grimm. Edited by EDITH ROBERTS. (1s. net.)—Eleven of Grimm's Märchen, in good print, and prettily illustrated.

The Busy Bunny Book. (Nelson.)—A dozen coloured pictures by an anonymous artist, with Bunny's soliloquies *en face*, luxuriously printed on thick paper which will not tear. Infants will love the book but ask for more, and want to know what became of Bunny when he grew up.

The Great Ball on which we Live. By CHARLES R. GIBSON. (3s. 6d. Seeley.)—Mr. Charles Gibson is a past-master as a popularizer of science, and in his latest book he has made the elements of cosmogony (to use for brevity a tall word) intelligent to children of twelve or under. His secret of success is twofold: he knows what to omit, and he can bring himself to the child's level without condescension. It is easy to carp at omissions, but there is nothing in these pages that a child will afterwards have to unlearn. We may, however, suggest that, under "Gravitation," he might have made it clear that the moon pulls the earth no less than the earth pulls the moon.

The Matilda Book. (1s. Nelson.)—A volume of the same series, relating the visit of a cockney child to her country cousins, and intended for the next stage of childhood. The pictures by Elsie Anne Wood are good in composition, and well drawn. The doggerel which serves as text is not remarkable. A goose is chasing a chick, and William, who chases her away, remarks to Matilda:

"How sadly unkind are the strong:
The weak are oppressed, we see it each day,
And the good are defeated by wrong!"

Our Good Slave Electricity. By C. R. GIBSON. (3s. 6d. Seeley.)—The book is dedicated to those children ranging in age from nine to fourteen. Simply and clearly as it is written, we doubt whether the youngest would make much of it, though he will be delighted by the picture of a toy bicycle sticking in a girl's throat, shown by the X rays.

USEFUL RECIPES.

A FAULTLESS DOMINIE.

HOLIDAY PRIZE COMPETITION BY "L'ARDENT."

TAKE twelve stone of brawn, bone, and flesh, and place in a stew-pan (obtainable at Polly Crammer's or the University Provider's); let it simmer *very gently* for four years, taking care to prevent it from becoming too soft by running off all the fat; add a little colouring—a good blue is best (Reckitt's is too dark, but that supplied by Rigger at Cambridge will do excellently). If it runs white stewing (the brawn, not the blue) so much the better; it will gain strength. At the end of four years bake till crusty (it does not take long) in a hot oven, testing with a mathematical paper to see if quite done. If it comes through the paper, lift into a Form (II) with the aid of a third class tripos (supplied cheaply by Fellows & Dons, Cambridge); leave till cool and well-set. Boys appreciate this dainty and fondly christen it "A good sport."

JOTTINGS.

As we go to press we learn that the Council of the Teachers' Guild has authorized the signing of a lease with the Foundling Hospital, for thirty years, of 9 and 10 Brunswick Square. The houses will need extensive alterations and repairs, but all has been put in train, and there is ample time for the Guild to occupy their new and enlarged premises by Lady Day. Members have responded most generously to the appeal for financial aid. The amount received or promised as donations and loans with or without interest is already over £2,000. After thirty years of strenuous labour the Guild has taken literally a new lease of life.

THE subjects for the Essay Competition for Empire Day, 1915, are:—For Seniors (over fourteen and under twenty), "For what Principles do the British Empire and its Allies stand in the present War?" For Juniors (under fourteen), "What has been done, or can be done, by your County, Town, or District, to help in the present War?" The prizes are two silver Challenge Cups, value ten guineas each, presented by Lord Meath, and prizes of five and three guineas by the League.

IN the Cambridge Regulations for Locals, 1915, we note that an additional paper is to be set on "Outlines of European History, 1815-1900." Distinction in French and German may still be obtained without any oral examination. Mr. W. N. Williams, Fellow and Lecturer of Selwyn College, has been appointed Assistant Secretary for Examinations.

AT a meeting of the Women's Local Government Society, held on November 17, a motion was carried protesting against police surveillance of the wives and dependents of our soldiers and sailors. The increase of drinking among these was frankly acknowledged. Lady Bunting related that she had visited three small public houses in one street, and found thirty-eight women at the bars. But the remedy was to establish women's clubs. All that is needed is a fair-sized room, and a lady superintendent, where women may foregather, read the daily papers, and discuss the War among themselves.

LETTER of Middy to his parents:—"It is awful for Reg. being kept at Harrow while this is going on, but I have written to try and cheer him up, saying that the War is certain to last two years, by which time he will be able to join in."

A CORRESPONDENT writes to the *Schoolmaster* questioning the right of the N.U.T. Executive on its own initiative to cancel the Annual Conference, and suggesting that in 1915 "the usual saturnalian features" be omitted, and that Blackpool as a meeting place should be reserved for 1916, lest the town should suffer loss. It is evident that the *Schoolmaster* has no Press Censor, or that the epithet "saturnalian" has escaped his notice.

THE Victoria University among others has offered hospitality to Belgian professors and teachers. The Employment Sub-committee is circularizing educational authorities and principals of schools with a view to finding temporary posts for teachers of French, whose credentials and linguistic attainments will be certified by the Committee. Inquiries should be addressed to G. E. K. Branholtz, Hon. Sec., Downwood House, Withington, Manchester.

"CASSELL'S NEW FRENCH DICTIONARY," of which during its short existence over a million copies have been sold, has just been revised and brought up to date, the new conditions of the War imperatively demanding that newly coined words, new terms in aviation and motoring should be added. The revision has been entrusted to M. De V. Payen-Payne who, in addition to these features, has included in its 1,212 pages new medical and scientific words as well as "slang words."

WE advise any one thinking of giving his friend (or himself) a fountain pen for a Christmas present to apply to Messrs. Mabie, Todd, & Co., 79 High Holborn, W.C., for their catalogue, which gives, with illustrations, endless varieties, from the 5s. Fount pen to the £12 gold chatelain Swan for ladies.

UNIVERSITIES AND SCHOOLS.

LONDON.

KING'S COLLEGE AND KING'S COLLEGE FOR WOMEN.

An event which is, as far as we know, unique in the history of colleges will next term take place at King's College, when the Women's College, now in Kensington Square (originally the Women's Department), will, as regards the Arts, Science, and Divinity Faculties, be practically amalgamated with the main College in the Strand. It would take up too much space to go here into the reasons which have led to this departure, but it should be noted that the Women's College is academically at the present time at least as strong as it has ever been, and that its accession ought to be a source of added strength to the original Institution in the Strand.

The liberal policy, by which all the permanent members of the teaching staff in Kensington will be included in the King's College staff of the future, should ensure the continuity of the educational spirit of King's College for Women.

The students in both Colleges are loyally co-operating in the task of developing a strong co-educational College, the particular ethos of which must depend largely on the part they play.

The buildings in the Strand have shown themselves more adaptable to the new conditions than could have been expected, and the women students will have an unusually good common room, as well as a satisfactory cloak-room and refectory.

The Household and Social Science Department will not go to the Strand, but remain in Kensington Square until the new buildings on Campden Hill, of which the foundation stone was laid last June, by H.R.H. Princess Christian, are ready for it. This should be by October 1915 at the latest.

Miss F. R. Shields, M.A., late Lecturer in Philosophy at Bedford College, has been appointed Warden of this Department from January 1915 and Head of Queen Mary's Hostel as soon as established.

The University of London has approved the institution of a Readership in Chemistry tenable in the Household and Social Science Department.

MANCHESTER.

The following awards have been made to women:—Entrance Scholarships: Jones Scholarship (History, £35)—Margaret R. Sackur, Southport Municipal Secondary School; Dora Muir Scholarship (£30)—Elizabeth M. Rickards, Llandrindod Wells County School. Advanced Studentship in Education (£50)—Elizabeth M. Bradley, B.A., Manchester. Graduate Bursaries in Education—Margaret E. Bowman, Mathematical Tripos, Cambridge (Girton College); Hilda Carr, B.A. Manchester, French Honours; Jessie S. Davis, B.A. Manchester, Classical Honours; Annie Ellis, Mathematical Tripos, Cambridge (Girton College); Gladys M. Mason, Mathematical Tripos, Cambridge (Newnham College); Dorothy A. Stewart, M.Sc. Manchester, Zoology Honours. Research Studentship of £50—Agnes M. Sandys, Honours History School, Oxford.

WALES.

Lord Kenyon, the Senior Deputy Chancellor, presided over the annual Extra Collegiate Meeting, which was held at Shrewsbury, on Saturday, November 21. The actual business transacted was of the most formal character, as the Senate considered it desirable, in the present national crisis, to confine its discussions and recommendations to matters of urgency and the routine business of the University.

Two matters of public interest were, however, dealt with. Reference has already been made to the survey of the work of the University by Lord Kenyon. But in its enlarged and improved form, it contains a great deal of most valuable information about the work and progress of the University during the last five years. Of special importance is the long list of original papers and of contributions in different journals by the professors, graduates, and students of the University, and Lord Kenyon rightly claims that this long record of original work is in itself a complete answer to any criticism that might be levelled at the University. The great increase in research work which has been such a marked feature of the last quinquennial period is largely due to the additional grant which the Treasury gave in 1909 for Fellowships and post-graduate Studentships. Since 1909 twenty graduates have been working as Fellows in different branches of research, and forty-three graduates have pursued two years' courses of advanced study in approved subjects, either at the colleges or other centres. As an instance of the effect of the grant it may be stated that at Cardiff College five times the number of original works were produced as compared with the preceding quin-

quennium. Special importance is also attached to the influence of the University on the national life and language of the Principality. Thus, out of ninety-three M.A. dissertations, thirty-four dealt with the Welsh language or history, and the only D.Litt. degree yet awarded was for a work in Welsh history. The University has, in fact, already become an Academy for Welsh Literature, and it is due entirely to it that the much needed reform in Welsh orthography has become recognized and enforced, while the new Welsh dramatic movement is particularly identified with the University.

Remarkable statistics are also given to show the great progress which the Medical School at Cardiff has made despite the paucity of the funds at its disposal. With the large sums which are now available through the generosity of Sir W. J. Thomas and an anonymous donor, it should rapidly take its place among the most important medical schools in the country.

The further progress of the University is largely dependent on the increased financial aid which the Treasury may be persuaded to give. At present, extension and development are difficult unless additional funds are forthcoming.

Sir Harry Reichel's address on the relation of the University to the War was excellent, and he had no difficulty in persuading the Court to give the Senate full power to make such temporary arrangements as regards residence, &c., as were desirable in order to enable students to undertake military duties during the present crisis. It might be said that this was not a University, but a national matter; but Sir Harry claims that a national University should represent and lead, not only in intellectual, but also in its best social and patriotic ideals; and at a time like the present it was incumbent on the University to hold up a high ideal of patriotic duty and self-sacrifice.

Mr. D. Emrys Evans, M.A. (Bangor College), Mr. D. I. Price, M.A. (Aberystwyth), and Miss G. P. Williams, B.A. (Bangor), have been awarded Fellowships of the University of Wales.

Fellowships.

At the last meeting of the Board, which was held at Shrewsbury, on November 20, the most important question discussed was the proposed scheme of reorganization of the Central Welsh Board. Owing to the serious trouble in the financial department of the Board, which was disclosed during the recent Assize trials at Swansea, immediate steps were taken to place that department on a sound basis, and now a very complete system of organization for the whole of the office staff has been drawn up by a strong special committee. Judging by the length of their report and its detailed character, the Committee has spared no pains in order that its scheme may be workable and efficient. A very clear distinction is drawn between the duties of the Chief Inspector and those of the Clerk. This will certainly tend to efficiency and harmonious working. The Clerk will, in general, assume full responsibility for all financial matters, perform all necessary secretarial duties, deal with correspondence, &c., while the Chief Inspector will presumably confine his activities to the purely educational work of inspecting the schools. Mr. Owen Owen, M.A., the present Chief Inspector, has accepted the office of Chief Clerk, and during his tenure of the office will also act as Superintendent of Examinations, so that the schools will not lose the benefit of his great experience in this department of the work. The duties of the new Chief Inspector will be considerably lightened by this transference of the control of Examinations to the Chief Clerk, but it is not likely that the arrangement will be a permanent one, as it is not desirable, except in such exceptional circumstances as the present, that inspection and examination should be completely separated. The new scheme should do a great deal towards restoring confidence in the business efficiency of the Board. Its educational work has been unaffected throughout by the recent disclosures.

The Welsh Department has sent to all the secondary schools of Wales the Circular on Examinations which had been circulated previously in England; with a preface stating its general approval of the principles contained therein. The Circular has been discussed at the Central Welsh Board and by the Welsh County Schools Association. The only vital difference between the system advocated by the Circular and the existing system in Wales—at least, as far as the intermediate schools are concerned—is that the former recommends the abolition of all external examinations below the standard of the Senior Certificate. To this suggestion both the above bodies are strongly opposed, for they regard the Junior Certificate as not only useful but also a valuable educational test. The Welsh County Schools Association have drawn up a memorandum in which they embody their objections in a concise form. Serious doubts are expressed as to the value of the proposed alternative to the certificate—viz. the school record. It is pointed out that if a head master in writing a report on a pupil is all the time conscious that his remarks are likely to affect the boy's after life very seriously,

and are not meant for immediate corrective purposes, then the teacher will hesitate to express himself freely, and the reports will therefore lose considerably in value. This seems a fatal objection to the substitution of the "report" for an independent certificate. In Wales we have a Higher Certificate for pupils between seventeen or eighteen years of age, and in this respect we conform to the ideas of the Circular. At the Central Welsh Board several speakers took the line that the Department by endeavouring to force its views on the schools by the threatened withdrawal of the grants in case of non-compliance, was infringing on the rights of the Central Welsh Board, to whom the examination and inspection of the schools have been assigned by the scheme. However, we hope that we shall not see any revival of this rather wearisome controversy between these educational institutions and that the special conference which will be convened to consider the whole question will find an amicable solution of it.

We regret to hear that Miss Collin, B.A., has resigned her membership of the Executive Committee of the Board. She has been a very active member of it since the Central Welsh Board was established, and her work has been of the greatest possible value and help to the schools. Miss Jones, B.A., Head Mistress of Wrexham School, is her successor. Mr. E. T. John, M.P., has been elected a co-opted member of the Board.

According to the returns of the Central Welsh Board, 95 candidates sat for the Honours Certificate and 89 passed; 201 sat for the Higher Certificate and 145 passed; for the Senior Certificate 1,660 sat and 1,117 were successful. The total number on the school rolls in October 1913 was 14,192, as compared with 13,309 in the preceding year.

In his presidential address, Mr. Rhys Morgan, M.A., referred to the recent controversy between the Welsh Department and the Central Welsh Board, and he trusted that there would be no recurrence of ill feeling between the two institutions, as it tended to nullify the excellent work of the schools. He also deprecated the establishment of municipal secondary schools in close proximity and in competition with existing intermediate schools. In his reference to Circular 74 Mr. Morgan upheld the system of holding junior examinations as, in his opinion, the record book would be of too inquisitorial a nature and might be used to ruin the future prosperity of the pupil. The address also dealt with other matters of interest and importance to educationists in Wales.

By the resignation of its Secretary, Mr. Wm. Lewis, M.A., Llanelly, the Association has lost the services of a most devoted and energetic official. Mr. Lewis has contributed very largely to the influence of the Association in Welsh educational circles. His successor is Mr. D. E. Williams, M.A., the Head Master of Gowerston School. The Association has for the second time elected a lady president—Miss M. I. Mason, B.A., the Head Mistress of Bangor School.

We regret to have to record the death of two well known educationists. Sir T. Marchant Williams, B.A., occupied a rather prominent position in Welsh University circles by his scheme of reorganization. But his controversial methods were such that few members could work harmoniously with him, with the result that none of his schemes bore fruit. He was, however, a very sincere Welsh nationalist. Rev. Dr. Aaron Davies had a long and honourable record of educational work. He was Vice-Chairman of the Executive Committee of the Central Welsh Board.

SCOTLAND.

The Senate has approved the draft Ordinance of the four University Courts on Preliminary Examinations, and has expressed the hope that it will become law without further delay. The University Court and Senate have sent an address to the authorities of the University of Louvain expressing their sympathy with the University in the losses it has recently sustained, and offering, so far as it lies in their power, to assist the authorities of Louvain in restoring their University to activity. The Court will send to Louvain a fresh set of the St. Andrews University publications already issued and will also contribute towards the replenishing of the Louvain Library by giving to the University such duplicates as it may be able to part with from the Library at St. Andrews. The Court and Senate have published an intimation to the students that in their opinion no man who is physically capable can neglect military training at the present time without incurring grave reproach. As regards students who go on active service, it has been arranged that their scholarships and bursaries and the fees they may have paid shall be held over, in order that they may resume their studies without loss on the conclusion of their period of service. Arrangements have also been made for accepting, as students of the University without payment of fees and as women students resident in University Hall at

The University and the War.

The Central Welsh Board.

Circular 74 (Wales).

The Welsh County Schools Association.

St. Andrews.

reduced rates, children of officers, &c., killed or injured in the War. Prof. Musgrove, who recently retired from the Chair of Anatomy at St. Andrews, has given to the University his anatomical museum. The University Court has authorized Prof. Irvine to communicate with a Committee of the Royal Society, acting on behalf of the Board of Trade, and to offer to place the resources of the Clinical Research Department at St. Andrews at the disposal of the Government for the preparation of synthetic drugs and other organic products for the use of the Army and Navy.

Later statistics as to matriculation show that the number of men students this session is 1,675, as compared with 2,105 last year, a decrease of 430. The decrease in the Faculties of Arts, Science, and Law is between one-third and one-fourth, and in the Faculty of Medicine it is one-sixth. The smaller decrease in Medicine is probably due to the increase in first-year students, to which reference was made in these notes last month. The first-year medical students are, of course, for the most part under military age. Arrangements similar to those of St. Andrews University have been made in order that students on active service may suffer no academic loss, except that of the time spent on service. Over seven hundred of the present students are undergoing military training in connexion with the Officers' Training Corps. The University Authorities have offered academic hospitality to accredited teachers and students of Belgian Universities who have taken refuge in Glasgow. On November 19 a memorial service was held at the University in connexion with the funeral of Lord Roberts, who was an honorary graduate. The chief business of the autumn meeting of the General Council was a discussion on the draft Ordinance regarding Preliminary Examinations. The Council reaffirmed its resolution to the effect that, before the draft Ordinance is passed, the University Courts, or one or more of them, should have a conference with the Education Department with a view to obtaining the co-operation of the Department in the conduct of the Preliminary Examinations. This proposal has, of course, been dismissed as impracticable by the representatives of the four Courts, and the draft Ordinance entrusts the negotiations with the Education Department to the new Entrance Board. The University Court has received from the Livingstone Centenary Memorial Committee a sum of £400 to be invested towards an endowment for a lectureship in geography.

The number of matriculated students is 785, as compared with 1,024 at the same date last year. The number of men students is 458. The decrease in men in the Faculty of Arts is 42 per cent.; in Science, 35 per cent.; and in Medicine, 28 per cent.

The number of matriculated men students is over 2,000, a decrease of about 720 as compared with last year's figures. Twelve members of the staff are serving with His Majesty's Forces, and between three and four hundred members, past and present, of the O.T.C. have received commissions. The Lord Rector, Earl Kitchener, has nominated Mr. James Walker, C.A., as his assessor on the University Court, and the Senate has re-elected Prof. Rankine as one of its assessors. Mr. W. W. Rouse Ball, Fellow of Trinity College, Cambridge, has given to the University a sum of 50 guineas to provide a medal, to be called the Napier Medal, in connexion with the Department of Mathematics. The late Dr. Thomas Clifford Davies, of Bury, Lancashire, has bequeathed £1,000 to the University, to be applied to such purposes as the University Court may think fit. The General Council has approved the draft Ordinance on Preliminary Examinations.

The report of Sir John Struthers on Secondary Education in Scotland during 1914 indicates a general satisfactory progress, though there are no important new developments. It remains true that, if Scotland as a whole be taken, one child out of every six or seven who leave the primary school does so to embark upon a course of secondary education. Steady efforts are being made to deal with the problem of secondary education in rural schools, and these efforts have had considerable success. The report refers specially to the diminution in the number of boys who are making one or other of the learned professions their goal. This is explained by the fact that the attraction towards other lines of life is becoming daily more powerful. This change is nowhere more evident than upon the northern side of the Grampians. In several secondary schools situated in small burghs it has been noted that the post-intermediate classes consist almost entirely, or altogether, of girls. "The openings for boys to enter good and not blind-alley employments have recently become much more numerous, and parents are naturally unwilling to sacrifice the known and profitable present for an uncertain and expensive future, a consideration which undoubtedly weighs all the more heavily because of the more extended course necessitated by the steady rise in the standard of University work."

This change, it may be remarked, is doubtless due to the pro-

perous trade of recent years. In the past the Universities have generally lost students in prosperous times and gained them in times of trade depression. During the last few years this tendency has been less evident than it used to be, and it was hoped that it had been checked by a growing appreciation of the advantages of University education. It will be interesting to see whether, as Sir John Struthers seems to suggest, the tendency to forgo a University career is mainly confined to the less industrial parts of the country. The experience of the University Appointments Committee is that in the large commercial and industrial centres there is an increasing number of openings for University graduates.

At the annual general meeting of the Secondary Education Association, the President, Dr. Andrew Thomson, Rector of Perth Academy, devoted his address to the consideration of the State system of education in Germany. He warned teachers that they must at all hazards preserve their freedom from purely State control, which usually ended in bureaucratic government of the most mechanical and deadening kind. Mr. J. W. Butters, Rector of Ardrossan Academy, was elected president for next year.

The Glasgow School Board has appointed a Committee to consider the arrangements for the merit certificate and to make recommendations to the Education Department for their amendment. The chairman pointed out that the intention of the Department was that all scholars who had attended school regularly should, between the ages of twelve and fourteen, be in the supplementary classes. As a matter of fact less than one-third of the scholars leaving school at fourteen had the merit certificate, and of these the majority had only been one year, or a little over, in the supplementary classes. The present arrangements discouraged education, as the possession of the merit certificate was supposed to show that the education of the scholars had been finished. He suggested that no merit certificate should be given for less than two years in day supplementary classes, and that a simpler class be formed for those who were not likely to profit by the ordinary supplementary classes.

Merit Certificate.

IRELAND.

The Rev. J. P. Mahaffy, C.V.O., hitherto Vice-Provost, has been appointed Provost of Trinity College, and was installed at a meeting of the Board, on November 20, at which the following appointments were also made:—Vice-Provost, Dr. F. A. Tarleton (on the refusal of the Rev. T. T. Gray to accept the office); Bursar, Mr. G. L. Cathcart; Senior Lecturer, Rev. W. R. Roberts; Registrar, Rev. T. T. Gray; Auditor, Dr. L. C. Purser; Senior Proctor, Mr. E. P. Culverwell; Junior Proctor, Rev. A. A. Luce.

The results of the examinations for degrees and moderatorships have just been announced. The Mathematical Studentship goes to Maurice Collins, who has secured senior moderatorships in Mathematics (second place), and in Mental and Moral Philosophy; the Classical Studentship to Charles Seymour Mullan, who carries off the Large Gold Medal in Classics and a Gold Medal (second place) in Mental and Moral Philosophy. The Large Gold Medal in Mathematics falls to a woman student, Miss Jane Anderson. The women have been very successful this year, having gained 12 Senior Moderatorships (1 in Mathematics with first place, 2 in Philosophy, 1 in Experimental Science with first place, 2 in Natural Science, 2 in History, 3 in Modern Literature, 1 in Celtic Languages with first place), and 11 Junior (2 in Philosophy, 1 in Experimental Science, 5 in History, 3 in Modern Literature) besides two supplemental Junior (in Classics and Modern Literature). They have also gained 8 prizes at the autumn entrance, and, in the course of the year, 5 Senior Exhibitions, 1 Junior Exhibition, 1 Sizarship (in Modern Literature, with first place), the Cluff Memorial Prize for History, the Littledale Prize for English Literature, and numerous term prizes.

The College Societies have held their inaugural meetings during the month. The Philosophical Society opened its session on November 5, when Dr. Mahaffy was in the chair, and an address was delivered by Mr. B. C. Waller, B.A., the President, on the subject "Opportunities for Irish Statesmanship," dealing mainly with the present political outlook in Ireland. The speakers included Sir Horace Plunkett, the Lord Mayor, the Rev. T. Finlay, S.J., and Lord Ashbourne (who spoke in both Gaelic and English). The Theological Society had its meeting on November 18, when the Rev. N. J. D. White presided, and the Auditor, Mr. Alec Hardy, read a paper on "Christianity and Individualism," followed by speeches from the Bishop of Ossory, Canon J. O. Hannay, and Prof. W. F. Trench.

The Gaelic Society had arranged to celebrate the centenary of Thomas Davis, which falls this year, at their inaugural meeting, which was fixed for the evening of November 17; Dr. Mahaffy, the Vice-Provost, had promised to take the chair, and the speakers were Mr. W. B. Yeats, Mr. O. Fisher, B.A. (the Auditor), Mr.

P. H. Pearse, B.L., and Mr. F. J. Bigger. On November 10 Dr. Mahaffy wrote to the Secretary saying that he could not permit the inclusion of Mr. Pearse among the speakers, having just learnt that Mr. Pearse was a declared supporter of the anti-recruiting agitation. (Mr. Pearse, the Head Master of St. Enda's College in Rathfarnham, a prominent Gaelic Leaguer and a Gaelic writer, figured prominently in the recent split in the National Volunteers, being one of those who objected to Mr. Redmond's policy with regard to the Volunteer Organization, and set up the "Irish Volunteers" in order, as they asserted, to carry out the original aims of the movement. The speakers for the meeting, it may be added, had been invited before the Volunteer split occurred.) The Committee of the Gaelic Society represented that posters, tickets, and invitation cards for the meeting had already been printed and circulated, that the subject for discussion would be the life and work of Davis, and that they had sufficient confidence in the discretion of the speakers to believe that no irrelevant political references would be made. As they refused to alter their plans, however, Dr. Mahaffy on the 12th inst. wrote forbidding the opening meeting to be held inside Trinity College. The Committee thereupon sent the correspondence for publication to the Press, and at the same time, interpreting the Vice-Provost's prohibition in the letter rather than the spirit, advertised their meeting (with the original list of speakers minus the chairman) to be held in the Ancient Concert Rooms on the date already fixed. This led to a meeting of the Board, at which the Gaelic Society was dissolved and the Auditor and Secretary suspended. The whole incident is much to be regretted, as the Gaelic Society, though the youngest of the College Societies, had already a vigorous existence and had done much to leaven the general spirit of Trinity College. It is unfortunate that the President of the Society, Mr. E. Gwynn, F.T.C.D., has been away this term through illness; had he been on the scene, it is probable that the difficulty would not have arisen or that some *modus conciliandi* might have been found between the Board and the Committee.

The T.C.D. Voluntary Aid Detachment have fitted up a house for the reception of Belgian refugees. The Elizabethan Society (the union of the women undergraduates) have given up their weekly debate for a working party to supply comforts for the troops at the front and help the schemes of the Voluntary Aid Detachment.

Prof. W. Alison Phillips, who was recently appointed to the Lecky Chair of Modern History, delivered his inaugural lecture on November 4, the subject being "Great Britain's Continental Policy." It was the first of a series to be given through the term, bearing more or less on the present War and its causes. The second lecture dealt with "The Problem of Nationality."

The Donnellan Lecturer for this session has been Bishop Boyd Carpenter, who delivered the first of a series of four lectures on the afternoon of November 21, on the subject "Religious Consciousness: Its Relation to Fact." These lectures, as well as those of Prof. Phillips, attract a large outside public. On Sunday, November 22, Dr. Boyd Carpenter preached in the College Chapel.

University College, Cork, has inherited a considerable bequest amounting to over £30,000, from the late Mr. James O'Kineady, of Cavan, to be applied to the furtherance of secular scientific instruction in the College.

The Commissioners of National Education have appointed Mr. R. W. Hughes, M.A., District Inspector, to be Senior Inspector in place of Mr. W. M'Clintock, M.A., retired.

The annual Hermione Lectures were delivered during the month at Alexandra College, by Mr. C. J. Holmes, Director of the National Portrait Gallery, who lectured on four successive afternoons on "Rembrandt and the Dutch School."

The Irish Association of Women Graduates held its annual meeting on the evening of October 30, when the President, Prof. Mary Hayden, was in the chair, and Miss Barwell, M.A., read a lucid and instructive paper on the £40,000 grant for secondary teachers.

SCHOOLS.

ACTON COUNTY SCHOOL.—Two scholarships in the school have been won by R. S. Clark and A. H. Hornsby. In the past year the school has won:—1 place in the "Intermediate" Civil Service Examination; 4 Junior County Scholarships; 1 Entrance Scholarship to the Imperial College of Science, South Kensington; 10 Senior School Examination (Matriculation) Certificates, 4 in honours, with 36 distinctions; 2 University of London Commercial Certificates, with 6 distinctions. We are without the services of Sergt.-Major Lamport, who is with the Marines, and of Sergt. Pain, who has been at Ostend. Ninety-six Old Boys have joined the Armies of the Allies; one is on the French side and another on the German. The Cadet Corps numbers over eighty members.

DULWICH, JAMES ALLEN'S GIRLS' SCHOOL.—The annual Prize-giving took place on Friday, November 6, when the chair was taken

by D. C. Richmond, Esq., C.B. (Chairman of the Governors). The prizes and certificates were distributed by Miss Stephen, Principal of Newnham College, Cambridge. During the year the following successes have been obtained:—Ivy Gurney, a Scholarship of £45 a year for three years at Somerville College, Oxford, for French; School Leaving Exhibition of £45 a year for three years, Ruby Skene Smith. In the Grand Concours de la Société Nationale des Professeurs de Français en Angleterre, the school won the Sèvres Vase offered by the President of the French Republic to the girls' school obtaining the highest total of marks. Among former pupils of the school, Ellen Delf, D.Sc., has been appointed to the Yarrow Fellowship of £150 a year for three years at Girton College, Cambridge, for Research Work in Botany. Winifred Brencley, D.Sc., has been made a Fellow of University College, London; at Cambridge Maud Lee obtained a Second Class in the Classical Tripos, Margaret Jepps a First Class in the Natural Sciences Tripos, and Mary Mühlberg a First Class in the Medieval and Modern Languages Tripos, with distinction in Spoken German; Winifred Jacobi, a Scholarship of £25 a year for three years at Girton College, for Classics.

NORTH LONDON COLLEGIATE SCHOOL.—The sixty-fourth annual Distribution of Prizes took place on Thursday, November 5. Mr. Edward Bond, the new Chairman of Governors, took the chair. In consequence of the postponement of Prize Day from June to November, there was an unusually long list of honours. Mr. Bryant reported that, in addition to their usual social activities, her girls had been largely occupied in making clothing for our soldiers and sailors. The prizes were given by Dr. Michael Sadler. In his address he paid a high tribute to Mrs. Bryant, "a valued friend and comrade (with intervals of fighting) for many years." He impressed on the scholars the one great lesson to be learnt from their founder, Miss Buss—the duty of courage. He quoted from a report on German schools which showed that, both in Great Britain and her Colonies, these schools are either disappearing or becoming Anglicized. The Berlin Authorities noted that Germans resident abroad preferred to send their sons to English public schools, valuing the "unformulated and growing tradition" of our best type of schools.

PRIZE COMPETITIONS.

The Translation Prize for November is awarded to "Tristapatte."

The winner of the October Translation Prize for French is Lindley Latham, Esq., 61 Friends' Road, Croydon. For Latin the prize is divided between Prof. Strong ("Wiccamicus"), Clyst, Farnham Common, Slough, and C. F. Boden, Esq. ("Chris"), 8 Richmond Road, Smethwick, near Birmingham.

Winners of Holiday Prizes are Miss Rosalind Farnell ("L. Johnston"), Twyford House, Bishop's Stortford; Dr. R. L. Batterbury ("Rolobo"), Berkhamsted, Herts. At the request of "Albus an ater" we have sent his prize of £1, together with a long-unclaimed prize of £1, to the Women's League of Service, King's Cross Centre, 26 Cumming Street, Pentonville Road.

Il appelle, il agite son chapeau ou son mouchoir, le sable le gagne de plus en plus: si la grève est déserte, si la terre est trop loin, si le banc de sable est trop mal famé, s'il n'y a pas de héros dans les environs, c'est fini, il est condamné à l'enlèvement. Il est condamné à cet épouvantable enterrement long, infailible, implacable, impossible à retarder: à hâter, qui dure des heures, qui n'en finit pas, qui vous prend debout, libre et en pleine santé, qui vous tire par les pieds, qui à chaque effort que vous tentez, à chaque clameur que vous poussez, vous entraîne un peu plus bas, qui a l'air de vous punir de votre résistance par un redoublement d'étreinte, qui fait rentrer lentement l'homme dans la terre en lui laissant tout le temps de regarder l'horizon, les arbres, les campagnes vertes, les fumées des villages dans la plaine, les voiles des navires sur la mer, les oiseaux qui volent et qui chantent, le soleil, le ciel. L'enlèvement, c'est le sépulchre qui se fait marée et qui monte du fond de la terre vers un vivant. Chaque minute est une ensevelisseuse inexorable. Le misérable essaye de s'asseoir, de se coucher, de ramper; tous les mouvements qu'il fait l'enterrent; il se redresse, il enfonce; il se sent engloutir; il hurle, implore, crie aux nuées, se tord les bras, désespère. Le voilà dans le sable jusqu'au ventre; le sable atteint la poitrine; il n'est plus qu'un buste. Il élève les mains, jette des gémissements furieux, crispe ses ongles sur la grève, veut se retenir à cette cendre, s'appuie sur les coudes pour s'arracher de cette gaine molle, sanglote frénétiquement; le sable monte. Le sable atteint les épaules, le sable atteint le cou; la face seule est

R.

YOUR KING AND COUNTRY Need Another 100,000 Men at Once.

In the present grave national emergency another 100,000 men are needed at once to rally round the Flag and add to the ranks of our New Armies.

TERMS OF SERVICE

(Extension of Age Limit).

Age on enlistment 19 to 38. Ex-Soldiers up to 45. Minimum height 5 ft. 4 in., except for ex-soldiers and those units for which special standards are authorized. Must be medically fit. General Service for the War.

Men enlisting for the duration of the War will be able to claim their discharge, with all convenient speed, at the conclusion of the War.

PAY AT ARMY RATES.

Married men or Widowers with Children will be accepted, and if at the time of enlistment they sign the necessary form, Separation Allowance under Army conditions will be issued **at once** to the wife or other dependants.

HOW TO JOIN.

Men wishing to join should apply in person at any Military Barrack or at any Recruiting Office. The address of the latter can be obtained from Post Offices or Labour Exchanges.

God Save the King.

visible maintenant. La bouche crie, le sable l'emplit ; silence. Les yeux regardent encore, le sable les ferme ; nuit. Puis le front décroît, un peu de chevelure frissonne au-dessus du sable ; une main sort, troue la surface de la grève, remue et s'agite, et disparaît. Sinistre effacement d'un homme.

By "TRISTAPATTE."

He shouts, waves hat or handkerchief, the sand creeps higher and higher ; if the shore is deserted, if solid earth is too far off, if the sand-bank is of too evil fame, if there is no hero near at hand, all is over, he is doomed to be swallowed up. He is condemned to that ghastly burial, by a power slow, but unfaltering, relentless, not to be hastened or delayed in the accomplishment of a task that lasts for hours and seems unending, a power that seizes you still erect, free, sound in wind and limb, that draws you by the feet, that at each effort you make, at each shout that you utter, drags you a little further down, that seems to punish your resistance by gripping you twice as tight, that slowly brings man down back into mother earth, leaving him full time to gaze round the horizon at trees and green fields, smoke rising from the villages on the plain, sails of ships on the sea, singing, flying birds, the sun, the sky. This Thing that engulfs you is the tomb become like a tide, rising from the bowels of the earth, and moving towards a living man. Each minute plays its merciless part in the entombment. The wretched man would fain drag himself to a sitting posture, lie down, crawl away ; each movement made buries him the deeper ; he rears himself upwards and sinks downwards ; he feels it devouring him ; he shrieks, implores, shouts to the sky, flings his arms about, despairs. Behold him up to his middle in the sand ; the sand reaches his chest ; he is naught but a bust. He throws up his arms, utters groans as of a madman, his nails clutch the sand, he would gladly get a grip on it, but it slips like ashes through his fingers ; bearing on his elbows, he tries to tear himself from that soft enveloping sheath ; he sobs in frenzy ; the sand creeps up. The sand reaches his shoulders ; the sand reaches his neck ; only his face is now to be seen. His mouth opens to utter a cry, the sand fills it ; silence. His eyes still see, the sand shuts them ; night. Then the brow shrinks from sight, a few locks of hair quiver above the sand, a hand comes forth, pierces the sand, stirs and flutters, and disappears. Sinister blotting-out of a man.

We classify the 165 versions as follows :—

First Class.—Berenguela, P.O.L., Amiens, Bland, Rosario, Olio, Jaques, Allobroge, Sirach, Tristapatte, Gothicus, Quicksand, Wiccamicus, Chingleput, Corbar, Jonah, Artevalde, Shamrock.

Second Class.—Llantwit, Respice Finem, Toto, Gaudeamus, March, Tim, Tanje, Noiram, Martin, Jersey, Nutcracker, W.E.M., Rastra, W.G., Oscar, Chichester, Miramichie, W.L., Thistle, Beta, J.E.M., Gregory, Smee, Leila, Pauunnene, Maedh, Nessko, Nemo, Quincunx, Greenfinch, Koko, E.C.H., H.I.M., La Bohème, Truant, Black Pearl, A., Limpet, Balme, Lily, G.M., Commonwealth, Fife, Menevia, H.E., Audrey Bell, Celt, Instar, Luria, Catherine Parr, R.K.B., Audax.

Third Class.—Lapis, Felice, N.F.G., Kwasind, The Pink Lady, Fugitive, A. Flapper, Trefoil, D.M.S., V.H.J., J.P.S., W.M.Y., G.L.P., Spes, Langdon, Effil, Aberdeen, Cicely, Gollina, Jimbo, E.J.P., Nemus, Irelanda, Rats, Gebe, Ellis, Aquae Solis, Two Crows, Nibbedard, Salopia, W.H.S., Salammbo, Keilah, Loulou, Fée, Ypres, L.M.L., Marcus, Middlemarch, Eureka, Retsil, H.C., Euterpia, Wintoniensis, H.A.C., R.C.S., Dublin, Mrs. Gummidge, Oakthorpe, Pupa, E.M.B., M.M., L.C.H., Libys, Hooky.

Fourth Class.—Dorothea, A.U., Durra, Tombstone, Chiselhurst, Dorothy X, Orient, Corncrake, Jupiter, S.M.P., Val, Legion, Grotesque, Pip, T.M.M., Hope, Somerset, Espérance, B.M.H., Moco, Victoria Cross, C.D.B., Mrs. Wiggs, White Hawthorn.

Fifth Class.—Primrose, A Cornish Girl, Coronal, Salvia, Pearl, J.A.M., Mater, Nis, Saxon, Bella, B.T., O.M.R., Dunlop, Sikh, Dum.

Any who have kept their *Journals* should turn back to the number which contains notes of a brilliant lesson on this very passage by a French Professor of Rhetoric. If it does not help them to translate, it will at least help them to realize the perfection of Victor Hugo's style—how the tragedy rises to its climax, each scene intensifying the terror, how the sound is an echo of the sense, how each word is *le mot juste*, and each word is in place. The translator of such a masterpiece is foredoomed to failure, and the most he can aspire to is a far-echo of the original. "Hard, hard, hard it is, only not to stumble."

In the first sentence, simple as it seems, there are several

350 MEDALS AND PRIZES!!!

STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward copy **Index** and **Specimen Pages** on receipt of
Post Card addressed to **Box A 27, Huddersfield.**

355 Pages. 19th Edition. Post free 2/-.

100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1/-.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The **exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Society of Arts, the W.R.C.C., and College of Preceptors** are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

THE STUDENT'S BUSINESS METHODS

and

Commercial Correspondence.

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward **Specimen Pages** and **Index** on receipt of Post Card
addressed to **P.O. Box A 27, Huddersfield.**

Seventh Edition. 370 Pages.

2/6 Post free.

**80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.**

This is the only **practical, up-to-date** book on **Commercial Correspondence** and **Office Work**, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well **graduated**, and the teacher is **saved the drudgery** of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers**. **PRACTICAL** work is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the only **Complete Guide**, covering all the **Elementary Examinations**. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the **Junior** in the **Office**. **Teacher's Specimen, from Author only, 1/3 post free.**

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

BLACK'S SCHOOL TEXTBOOKS.

JUST ADDED TO THE SERIES.

STORIES OF LONDON

By **E. L. HOSKYN, B.A.**

Containing 16 page illustrations, of which 8 are in colour.

Small crown 8vo. Price 1s. Cloth.

The idea of this book was suggested by the fact that many pupils in the schools of the Metropolis have little or no knowledge of the legends and stories of London. While many of them have a vivid impression of romance in connection with some foreign cities, they seem to be quite unaware of anything of that sort, or even of any beauty, in their own. Recently, the subject set for a composition for a class of about twenty-five children, average age 13, was "A Scene in London"; with one exception they all chose squalid subjects, such as a street accident, a slum, the beggar at the corner, &c. This, and this only, was their impression of London.

The stories approximately cover the course of English history.

JUNIOR REGIONAL GEOGRAPHY THE AMERICAS

By **J. B. REYNOLDS, B.A.**

Containing 80 Illustrations, Maps, and Diagrams.

Price 1s. 4d.

BLACK'S TRAVEL PICTURES

Edited by **ROBERT FINCH, F.R.G.S.**

Each set contains 48 carefully selected pictures: 24 in colour from water colours painted on the spot, and 24 in black-and-white from photographs. In special detachable file portfolios.

Price 10d. per set.

Now Ready.

1. Europe.
2. Asia.
3. Mediterranean Region.
4. British Isles.
5. Countries of the War.

Ready Shortly.

6. British Empire.
7. North America.
8. Africa.
9. South America.
10. Australasia.

Carefully selected illustrations in colour and in photograph, combining accuracy of detail with truth of atmosphere and characteristic colouring.

1. Typical scenery and vegetation, in both summer and winter aspects.
2. Vivid representations of human and animal life.
3. Illustrations of products and industries.
4. Pictures of great cities and famous buildings.

OUTLINES OF PHYSICAL GEOGRAPHY

By **H. CLIVE BARNARD, M.A., B.Litt.**

Containing 92 Illustrations, Maps, and Diagrams.

Price 1s. 6d.

Published by **A. & C. BLACK, LIMITED, 4 Soho Square, London, W.**

stumbling-blocks. "Calls for help," not "shouts" or "screams," which are needed later on. "If there is no one on the beach," not "if the shore is deserted." "Terra firma" is out of tune. "If there are no heroes in the neighbourhood" suggests genteel residences; "if the sandbank has a bad reputation" suggests a shady character, and "it's all up with him" is colloquial. In the next sentence observe the French order—"the horrors of a sepulture, slow, certain, pitiless." *Qui vous prend*: "which seizes you as you stand there, a free man in the prime of life." *Revenir dans la terre*: "thrushes him underground," not "makes him return to the dust whence he sprang." *L'enlèvement*, &c.: "to be buried in a quicksand is death in the shape of a tide that surges from the bowels of the earth to whelm a wretched mortal." This is the first real difficulty. Such a bold metaphor in the form of a tidal wave is hardly admissible in English and must be softened down. The following metaphor must be preserved:—"Each minute is a grave-digger at his ruthless task." For "stomach" and "bust" read "waist" and "torso." *Crispe ses ongles*: "digs his nails into the sands and tries to prise himself by what is but dust and ashes." *Grève* cannot here be "shore," and *cendres* is used of any loose rubbish. *Gaine molle*: "elastic sheath," "strait-jacket of sand," or, more freely, "shirt of Nessus." The ending is inimitable. I hesitate between "silence" and "then silence," but a word more would be fatal. For the final crux I would suggest, with diffidence, "The mystery of a vanished man."

A Prize of Two Guineas is offered for the best translation of the following passage from Cicero:—

Ego Q. Maximum, eum qui Tarentum recepit, senem adolescens ita dilexi ut aequalem. Erat enim in illo viro comitate condita gravitas nec senectus mores mutaverat. Quamquam eum colere coepi non admodum grandem natu, sed tamen iam aetate provectum. Anno enim post consul primum fuerat quam ego natus sum, cumque eo quartum consule adolescentulus miles ad Capuam profectus sum quintoque anno post ad Tarentum. Quaestor deinde quadriennio post factus sum, quem magistratum gessi consulibus Tuditano et Cethego, cum quidem ille admodum senex suator legis Cinciae de donis et muneribus fuit. Hic et bella gerebat ut adolescens, cum plane grandis esset, et Hannibalem juveniliter exsul-

tantem patientia sua mollebat; de quo praeclare familiaris noster Ennius:

Unus homo nobis cunctando restituit rem;
Noenum rumores ponebat ante salutem;
Ergo postque magisque viri nunc gloria claret.

Tarentum vero qua vigilantia, quo consilio recepit! cum quidem me audiente Salinatori, qui amisso oppido fugerat in arcem, gloriantur atque ita dicenti: "Mea opera, Q. Fabi, Tarentum recepisti."—"Certe," inquit ridens; "nam, nisi tu amisisses, numquam reciperem."—"Nec vero in armis praestantior quam in toga, qui consul iterum, Sp. Carvilio collega quiescente, C. Flaminio tribuno plebis quoad potuit restituit agrum Picentem et Gallicum viritum contra senatus auctoritatem dividenti; augurque cum esset, dicere ausus est "optimis auspiciis ea geri, quae pro rei publicae salute gererentur; quae contra rem publicam terrentur, contra auspicia ferri."—"Multa in eo viro praeclara cognovi, sed nihil est admirabilius quam quo modo ille mortem filii tulit, clari viri et consularis. Est in manibus laudatio: quam cum legimus, quem philosophum non contemnimus? Nec vero ille in luce modo atque in oculis civium magnus, sed intus domique praestantior. Qui sermo, quae praecepta, quanta notitia antiquitatis, quae scientia iuris augurii! Multae etiam, ut in homine Romano, literae: omnia memoria tenebat non domestica solum, sed etiam externa bella. Cuius sermone ita tam cupide fruebar quasi iam divinarem, id quod evenit, illo extincto fore unde discerem neminem.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by December 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill. E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs.

GABBITAS, THRING & CO.

36 SACKVILLE STREET,
LONDON, W.,

have a Department for SECURING APPOINTMENTS as MISTRESSES or MATRONS in Schools, and as GOVERNESSES in Private Families.

They invite applications from qualified ladies who are looking for posts in the teaching profession.

The Agency, which is under distinguished patronage, has been established 40 years.

Prospectus will be forwarded gratis on application.

NO CHARGE FOR REGISTRATION.

No fee of any kind is due unless an appointment be obtained through the Agency.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS

Messrs. GABBITAS, THRING & CO. have a large number of GIRLS' SCHOOLS on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. 5,350. **TRANSFER** of excellent Boarding and Day School for Gentlemen's Daughters, in a healthy residential district near London. Average annual receipts and profits of last 3 years about £2,800 and £860 respectively. Vendor retiring for private reasons. Prepared to transfer on **EASY TERMS**. **EXCEPTIONAL OPENING, STRONGLY RECOMMENDED.**

No. 5,348. **TRANSFER** of **OLD ESTABLISHED AND SUCCESSFUL** Boarding and Day School, with Boys' Preparatory Department, in **HEALTHY COUNTRY TOWN** near London. 6 Boarders, fees £50 to £60, and 49 Day Pupils. Gross receipts over £700. Part purchase money accepted in first instance.

No. 5,337. **TRANSFER** of Day Connexion and Domestic Economy Section, with good opening for Boarders, in a **WESTERN COUNTRY TOWN**. Principal, with University qualifications, wishing to move to another locality, would transfer her flourishing **DAY CONNEXION** of about 30 Pupils, at fees of £7. 10s. to 24 guineas per annum. **DOMESTIC ECONOMY SECTION** usually containing about 25. Good Premises.

No. 5,333. **TRANSFER** of **OLD ESTABLISHED** School, for **BOARDERS ONLY**, at South Coast Resort, containing about 30 Pupils. Fees 60 to 75 guineas. Receipts nearly £4,000. **RECEIPTS AND PROFITS INCREASING.** Goodwill £1,000.

No. 5,315. **TRANSFER** or **PARTNERSHIP WITH A VIEW TO SUCCESSION:** flourishing School for Gentlemen's Daughters, at South Coast Resort, containing 25 Boarders and about 20 Day Pupils. Fees 75 to 87 and 24 to 30 guineas per annum. **PROFIT NEARLY £1000. AND INCREASING. EXCEPTIONALLY BEAUTIFUL PREMISES, SPECIALLY ERRECTED.**

No. 5,274. **TRANSFER** of **REMUNERATIVE BOARDING AND DAY SCHOOL** at South West Coast Resort. About 20 Boarders and the same number of Day Pupils. Fees 60 to 75 guineas and 15 to 21 guineas. Gross Receipts and Net Profits about £2,400 and £750. Goodwill £1,000.

No. 4,982. **TRANSFER** of **SMALL, GOOD CLASS BOARDING AND DAY SCHOOL**, on the South Coast. Vendor retiring for reasons of health. Containing about 15 Boarders, and 8 or 10 Day Pupils. Prospectus fees 50 to 48 guineas, and 6 to 12 guineas. **EASY TERMS** would be made.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

SCHOOL TRANSFER AGENCY.

(Established
1833.)

Proprietors—Messrs. GRIFFITHS, POWELL, SMITH & FAWCETT.

Offices—34 BEDFORD STREET, STRAND, AND 22 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.

Schools Transferred and Valued. NO CHARGE whatever will be made to Vendors of Schools or School Partnerships, by Messrs. Griffiths, Powell, Smith & Fawcett, unless a sale is effected or agreed upon.

SPECIAL NOTICE TO VENDORS.

As Messrs. GRIFFITHS, POWELL, SMITH & FAWCETT have at all times the names of a large number of intending Purchasers of Schools and School Partnerships on their books, they have every confidence in stating that they can readily effect a sale of any desirable Property they may be instructed to dispose of. All instructions receive the personal attention of one of the Partners of the firm.

No commission charge whatever will be made by Messrs. Griffiths, Powell, Smith & Fawcett, to Purchasers of Schools, or School Partnerships.

APPLICATIONS FROM INTENDING PURCHASERS ARE SOLICITED FOR THE FOLLOWING PROPERTIES:—

GIRLS' SCHOOLS.

ABOUT 150 MILES FROM LONDON.—TRANSFER OR PARTNERSHIP. Average income over £3,000. Net nearly £800. Number of Boarders 13, and 95 Day Pupils. Splendid premises. Only £1,000 required for goodwill, or a partnership will be arranged on very easy terms.—No. 2,582.

HANTS (Seaside).—Gross income past year nearly £2,000. Net profits about £360. Number of Boarders 20, and 48 Day Pupils. A reasonable offer for goodwill will be accepted.—No. 2,584.

ESSEX.—GIRLS' BOARDING AND DAY AND KINDERGARTEN. Income £1,600. Net over £300. Number of Boarders 8, and 90 Day Pupils. Excellent premises and grounds. Goodwill by capitation fee.—No. 2,587.

EAST OF ENGLAND.—PARTNERSHIP in middle-class BOARDING AND DAY SCHOOL. Income over £800. Net £260. Number of Boarders 15, and 36 Day Pupils. Rent nominal. Partner desires to retire. Terms of partnership easy. Purchase money can be paid by easy instalments. Exceptional offer.—No. 2,653.

BUCKS.—BOARDING AND DAY SCHOOL. Average income £850. Number of Boarders 6, and 49 Day Pupils. Very nice premises in good position. Terms of sale to be arranged.—No. 2,589.

CHESHIRE.—BOARDING AND DAY SCHOOL. Old-established. Gross receipts

past year £1,490. Net profit £600. Number of Boarders 20, and 50 Day Pupils. Goodwill only £500. Excellent opportunity.—No. 2,590.

HANTS (Seaside).—High-class BOARDING AND DAY. Average receipts about £2,500, but this term at rather lower rate. Number of boarders 17, and 22 Day Pupils and Day Boarders. A reasonable offer will be accepted for goodwill.—No. 2,592A.

ATTRACTIVE INLAND WATERING PLACE.—Present income about £900 per annum. Splendid premises, property of the vendor. There are 15 Boarders, number lower than usual owing to the War. In the case of a good tenant the usual premium might be waived. School plant at valuation.—No. 2,593.

SUSSEX (Seaside).—BOARDING AND DAY SCHOOL. Income for 1914, £520. Number of Boarders 11, and 8 Day Pupils. Rent £105. Goodwill by capitation fee.—No. 2,594.

SUSSEX (Seaside).—Partnership in first-class Boarding School. Income between £2,000 and £3,000. Net income about £600. There are about 26 Boarders and 20 to 30 Day Pupils. Terms of partnership to be arranged.—No. 2,596.

LANCS.—Successful DUAL SCHOOL. Number of pupils 70. Excellent Music connexion. Goodwill and valuable school furniture, £500, or close offer.—No. 2,602.

LANCS (Seaside).—Income over £800. Number of Boarders 11 and 24 Day Pupils, all at fairly good fees. Rent of fine premises only

£100. Price for goodwill and a large quantity of furniture for Boarders and Day Pupils, only £200.—No. 2,599.

KENT.—Partnership in Successful SCHOOL. Income about £550. Number of Boarders 3, and 47 Day Pupils. Rent of fine premises, only £67. Price for half-share of goodwill and household and school furniture, £300.—No. 2,588.

WEST OF ENGLAND.—Income over £1,500. Number of Boarders 24, and 70 Day Pupils. Goodwill £500 or by capitation fee.—No. 2,608.

BOYS' SCHOOLS.

YORKSHIRE.—BOARDING SCHOOL. Net income over £500. Gross nearly £1,100. Number of Boarders 18. Splendid premises and grounds. Rent only £55. Goodwill to be arranged.—No. 6,497.

WALES.—Transfer or Partnership. BOYS' PREPARATORY SCHOOL. Income about £1,200. Number of Boarders 14, and 5 Day Pupils. Very reasonable terms of sale or partnership.—No. 6,498.

NORTH WALES.—BOYS' PREPARATORY SCHOOL. Number of Boarders 6, and 14 Day Pupils, all at fair fees. For a quick sale, vendor will accept £200 for the goodwill and the household and school furniture.—No. 6,508.

DEVON.—BOYS' DAY SCHOOL. Gross income £360, net £160. Goodwill only £150.—No. 6,504.

A Complete List of Girls' and Boys' School for Sale, as also of Partnerships, will be sent to intending purchasers on application.

These School and Teachers' Advertisements are continued from page 802.

The Times.—"A sensible, clearly told book intended for the use of middle forms in schools, as an introduction to the history of the nineteenth century in Europe."

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.

By G. TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge, Master of the Modern Side in Harrow School. **5s.**

A BRIEF HISTORY OF GREECE AND ROME.

By the Rev. E. C. EVERARD OWEN, M.A., Assistant Master and Tutor, Harrow School. With 23 maps (4 in colour). **3s. 6d.** Also in two Volumes: **Greece, 2s.; Rome, 2s.**

TILLAGE, TRADE, AND INVENTION. An Outline of Industrial History.

By GEORGE TOWNSEND WARNER. Crown 8vo, cloth, **2s.**

This most successful History of recent years is now issued in THREE styles.

THE GROUNDWORK OF BRITISH HISTORY.

BY

GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c.,

AND

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

Complete in One Volume. With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo, **6s.**

In Two Parts, **3s. 6d. each**:—Part I, 55 B.C.-1603; Part II, 1603-1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, **2s. 6d. each**:—Section I, 55 B.C.-A.D. 1485; Section II, 1485-1714; Section III, 1714-1911.

LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large clear type, with Brief Notes, Exercises, Phrase-list, and Vocabulary. Fcap. 8vo, **8d.** each.

Jules Verne—Voyage au Centre de la Terre. Edited by C. W. BELL, M.A., King's School, Canterbury. With Retranslation Exercises.

Nodier—Contes de la Veillée. Edited by C. G. HOLLAND, M.A., Chief Modern Language Master, Sevenoaks School. With Retranslation Exercises.

Féval—Le Petit Gars. Edited by S. TINDALL, M.A., Bradford Grammar School. With Retranslation Exercises.

Theuriet—L'Oncle Scipion et sa Promesse. Edited by JAMES P. PARK, Hillhead High School, Glasgow. With Retranslation Exercises.

Mérimée—Lettres d'Espagne. Edited by J. LAFFITTE, B. ès L., Principal French Master, City of London School. With Retranslation Exercises.

Complete List of the Series on application.

LITTLE FRENCH CLASSICS.

Representing all important French authors from Montaigne to Bourget. Fcap. 8vo, **4d.** each.

Thierry—Récits des Temps Mérovingiens. Edited by TAYLOR DYSON, B.A., Head Master, King James's Grammar School, Almondbury.

Aimard—Les Contrebandiers. Edited by EDITH FIELDING, Croydon Borough School for Girls.

Balsac—Le Réquisitionnaire and El Verdugo. Edited by C. W. BELL, M.A., King's School, Canterbury. With Exercises.

Gérard—Le Tueur de Lions. Edited by CLÉMENTINE SAUNOIS, Officier d'Académie. With Retranslation Exercises.

Madame de Ségur—Mémoires d'un Âne. Extracts edited by F. CRITCHLEY, M.A., Modern Language Master, Barnstaple Grammar School.

De Yigny—Laurette. Edited by THOMAS KEEN, M.A., High School, Glasgow.

Madame Le Brun—Souvenirs. Edited by EDITH H. HERBERT.
 Complete List of the Series on application.

DELAVIGNE—LOUIS XI.

Tragédie en cinq actes, en vers. Edited by MARGUERITE D. M. GOLDSCHILD, B.A., French Mistress, North London Collegiate School. Cloth limp, **10d.**

COURS DE FRANÇAIS, d'après les Textes.

By M. ANCEAU and E. MAGÉE, Edgbaston High School for Girls, Birmingham. Cloth boards, **1s. 6d.**
 Introduces pupils of 12 to 14 years of age, who have had one year's teaching by the direct method, to a more systematic knowledge of the necessary grammar.

BAMBOULA.

An Original Story in Simplified French. By A. S. TRÉVES, B. ès Sc., County High School, Ilford. With Questionnaire, Exercises, and Coloured Frontispiece. Cloth boards, **1s.**

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By E. MAGÉE, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap 4to, **1s. 6d.**

BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Over 100 Volumes. To be used in correlation with the study of **English Literature and History.**

THE WARWICK SHAKESPEARE.

Edited by Prof. HERFORD, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Price **1s.** and **1s. 6d.**

 Prospectuses giving full particulars of above books will be sent post free on application.

**BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.
GLASGOW AND BOMBAY.**

JULY IN THE FOREST.

"FOREST" is a vague term, as all know, and includes much country where trees are few and far between. Our forest is a rolling hill country of heath and sandy soil, with ironstone not far from the surface, but mingled with great tracts of woodland, where oak and birch and red-stemmed pine grow to full size. Tradition still lingers there of iron-smelting with wood fuel, and the craft of "collier" or charcoal-burner has not quite died out. The air freshens as we mount from the green valley that parts the forest from the great barrier of the south-downs, and it is cold in our cottage on July nights, and a good fire is pleasant company. The height on whose edge our cottage stands is distinguished by three noble clumps of pine trees, each with its proper name, that give us landmarks for return from our rambles on the heather; but they are not the only trees of the open forest. For it is no unbroken stretch of heather and bracken and ever-springing gorse; wooded combs lead down from the upland to the iron-coloured brook that feeds the far-off Medway, and here and there amid the lower growths rise tiny groves of primeval oak and holly, covered with a tangle of sweet honeysuckle or bramble blossom, fit haunt for fairy revellers. These close-set thickets give the forest a special note of beauty. The gorse for once in the year is in scanty bloom and the broom has seeded long ago, but there is no lack of colour. The green of the bracken is still vivid, and though the ling will not bloom till August, the purple bell-heather is in full bloom, often interwoven with glossy shoots of low-growing holly, and in the peaty regions there is abundance of the pale pink heath, with its softer beauty and its reminder of many a tramp over wet hillsides in Wales and Scotland. And here and there in a hollow you are suddenly greeted by the white plumes of the cotton-grass, waving merrily in the wind, with the golden starry flowers of the bog asphodel for its unfailing neighbour; most enduring of moorland beauties, for long after its flowering time is over its orange-tawny seed-pods will remain to gladden the grey hillside. Not far off are the sweet blooms of the spotted orchis on its tall succulent stem. There is little sound of birds; we have seen a pair of hawks, and the larks bear us company night and morning, and now and again a young blackbird darts through one of the towering hedges that bound some of the forest roads; but for the most part it is a silent world. Even the bees this summer are strangely hushed. We have the forest to ourselves. From time to time a motor flashes past in the distance, but the only walking company we meet is an occasional tramp or a road-mender, or forest folk going about their business: fetching water from a hillside spring or searching for cattle that have strayed from their accustomed pasture; for they are lost sometimes, though they carry bells here to mark their whereabouts. We are on the margin of two worlds, for just below us are plentiful cherry orchards, which make an industry of their own, and still lower down are a few scattered hop gardens; but these we see only when business takes us cycling into the valley. Our holiday is spent on the forest above, and there we wander all day long, carrying our lunch with us and camping under one of the great pine circles or on some heather-bank overlooking a quarry of the golden-tinted forest stone. The fragrance of the wild country is about us; the hot scent of heather and bracken, blended with the aroma of countless unregarded flowers—lady's bedstraw, and eye-bright, tormentilla and St. John's wort, and trefoil, and a score beside—mingled in subtle and penetrating sweetness, the concentrated essence of the forest. As we sit there looking southwards we see the great line of the chalk stretching east and west from Eastbourne to Chichester: we mark the dip where Newhaven lies and the white scar of the quarry above historic Lewes, and guess where Brighton is hidden from us, for the Devil's Dyke, they tell us, is not within our sight. The downs are a perpetual joy, and ever changing. When we came they were a vague blue line seen through a dreamy haze; then after a storm they stood out clear, every fold lit up by

the level evening sun; and then, again, they vanished utterly in the enveloping fog after a heavy rain.

We no longer count as strangers here. The shop of our small hamlet has us on its books; the cycling postman visits us twice a day, and the kind, efficient dame who "does for us" brings most of the local news; the rest, and much besides, we learn in measured speech and sometimes unfamiliar phrases from the small farmer who drives our hired pony-chaise. Like many folk here, he feeds a few cows in the forest, and grows cherries and other fruit for market, and earns something with his horses and traps. He has a thrifty and a thriving air and the complexion of a russet apple. He is at peace with his neighbours, and has a good word for them all. His cottage is typical of the forest: brick, with a jacket of tiles on the upper half and tiles on the roof; some cottages are of wood, with tiles above, but in all of them happily slate is unknown. Our friend's garden is gay with Canterbury bells—blue and pink and white—and great masses of white and purple "goat's-beard" and blue anchusa. From his hill-side home, where his predecessor squatted on a patch taken from the forest, he looks across to a thick woodland, from which most of his fuel comes (for coal is dear hereabouts), and he has stories to tell of the cannon-founding in the forest in early days. There is no lack of children, playing about among the heather—half shy, half wild, but ready to make friends when they have got used to our strange faces and unaccustomed ways. At first they are almost as silent as the moorland itself. The world of wealth and fashion spins past us on the neighbouring road from day to day, but our paths are on the heather, and, as there are no golf links near us, we live in an unfrequented world and possess our souls in quietness. The spell of the forest is upon us, and we shall find it hard to come away. We pray that the Conservators may keep the forest ways unspoilt for ever.

P. E. M.

REVIEWS AND MINOR NOTICES.

The Cambridge History of English Literature. Vol. XI:
The Period of the French Revolution.

The new volume of the "Cambridge History of English Literature" deals with a transitional period, which does not belong whole-heartedly either to the eighteenth century or the nineteenth, and the editors have been obliged to select somewhat arbitrarily from the authors and subjects which in strict chronology fall within it. For instance, Coleridge is chosen but not Lamb or Hazlitt, Wordsworth but not Keats, Godwin but not Shelley, and, for some occult reason that can have nothing to do with dates, Southey but not Landor. Wordsworth and Coleridge are buttressed by Cowper, Crabbe, Burns, and Blake, but they occupy small space themselves and are not supported by those contemporaries whom they influenced most. The result is that the two greatest literary figures of the age are isolated in position and dwarfed in importance. Another instance of defective arrangement is Prof. Saintsbury's generally punctual, always welcome, but this time belated chapter on the Prosody of the Eighteenth Century. Set in the midst of criticism of the Romantics, it deals strictly with the prosody of the preceding age, and it deliberately postpones the treatment even of Blake and Chatterton.

The first chapter in the volume deals fittingly with Burke, and Prof. Grierson has succeeded in putting him in his right connexion with the thought of his age. His statement of Burke's relation to the doctrine of the revolutionists and of his link with Wordsworth is especially illuminating. He emphasizes one characteristic of Burke which many critics miss, namely, his pessimism. And finally his analysis of Burke's rhetoric, if short, is incisive and suggestive.

The editors' choice of critics is unusually happy in the case of Wordsworth and Coleridge, and we could wish the limited

space allowed them had been generously extended. To the critic of Coleridge, no less than to the critic of Wordsworth, sympathy is in a special sense the one thing needful. Prof. Vaughan approaches Coleridge with this rare gift, just as M. Legouis approaches Wordsworth. He knows and loves Coleridge in his weakness as well as his strength, and his estimate, based on a compassionate knowledge of human frailty and a sensitive appreciation of genius, succeeds in reaching his supreme qualities, without excusing or ignoring his defects.

The touchstone of a critic's understanding of Coleridge is "Kubla Khan" rather than "The Ancient Marinere," and Prof. Vaughan writes admirably of "Kubla Khan," clearing it from the charge of emptiness of content, and yet vindicating its unique triumph in the sphere of purely sensuous expression. He does another service to Coleridge by pointing out the interest of "Anima Poetae," a work that deserves to be better known as a revelation of the inner workings of this poet's mind. It would be absurd to suppose that so good a scholar as Prof. Vaughan had neglected the textual study of Coleridge, now facilitated by Mr. E. H. Coleridge's excellent edition, with its complete *apparatus criticus*; but his textual references are slight, and in one important case directly misleading. He pays no attention to the interesting artistic problem of the recast of "The Ancient Marinere," and his one quotation of a textual emendation is stultified by an error. On "Christabel," line 252, he writes: "If we are to believe a contemporary reviewer in the *Examiner* (June 2, 1816) the original version of

A sight to dream of, not to tell!

was

Hideous, deformed, and pale of hue.

The reviewer scornfully remarks that the rejected reading was 'the keystone to the whole poem.' Now the one line cannot have been the *original version* of the other nor in any way its substitute. The rhymes are different. What the reviewer really wrote was:—

The MS. runs thus, or nearly thus:

"Behold her bosom and half her side

Hideous, deformed and pale of hue."

This line is necessary to make common sense of the first and second part. "It is the keystone that makes up the arch." For that reason Coleridge left it out.

In fact the line here imperfectly remembered occurs in three MSS. of the poem *between* lines 252, 253, thus:—

Behold her bosom and half her side

Are lean and old and foul of hue,

A sight to dream of, not to tell!

O shield her! Shield sweet Christabel!

It is this information that Prof. Vaughan should have given, instead of quoting the reviewer at second-hand.

Coleridge's political philosophy is admirably treated in its mature phases, but we could wish that some analysis of its development through the actual period of the Revolution had been added. The central truth about Wordsworth's influence upon Coleridge—its liberating effect upon his mind and imagination—is well stated, but the further and more intimate question of the influence upon his style and his conception of Nature is, unhappily, not pursued. Prof. Legouis reaches down to the truth about Wordsworth's essential strength in poetry when he emphasizes his triumph in "poetical psychology," and "his extraordinary faculty of giving utterance to some of the most elementary and, at the same time, obscure sensations of man confronted by natural phenomena." In two points his study of Wordsworth is disappointing. It fails to do him full justice as an artist, and, to us it seems, misreads him as a political thinker. On the first point, there is no consideration of the remarkable change in style from the "Lyrical Ballads" to "The Poems in Two Volumes" of 1807, nor is any reference made to the huge question of the textual emendation which Wordsworth pursued with all the faith and energy needed for a lifelong task. On the second point we cannot endorse M. Legouis's charge of a change of ideas "which made his old age diametrically opposed to his youth," and of uncompromising anti-Liberalism and dogged

opposition to reform. In his old age Wordsworth watched the Italian struggle for liberty with the same ardent sympathy that he felt for France in his youth. He advocated stringent reforms in the Poor Law, and he earned the praise of John Stuart Mill, who as late as 1830 found Wordsworth the man with whom on matters of principle, though not of fact, "one's mind would really be in communion" on any political question of the day. This man was not the "Compleat Conservative" that Legouis would paint him.

The chapters on Cowper and Crabbe contributed by Mr. Harold Child are unequal in value. That on Crabbe is fundamentally unsympathetic. It is relieved by practically no quotation, and the Crabbe of "Peter Grimes," with his sombre imagination and power to make the flesh creep by the magic of the simple, jerky words of common speech, is not seen at all.

I saw my father on the water stand,

And hold a thin pale boy in either hand;

And there they glided ghastly on the top

Of the salt flood, and never touched a drop.

In this vein is not Crabbe already a past master of the art in which Masefield is hailed as a pioneer to-day?

The chapter on Cowper is, on the other hand, essentially sympathetic, illustrated by plenty of quotation, and, on the whole, just in its estimate of his qualities as man and as author. One or two things are lacking. There is no full recognition of Cowper's felicity in the Miltonic manner, ranging, as it does, from the splendid solemn vein of masterly imitation to the delicate humour of burlesque. Nor is any praise given to the Wordsworthian imagination of his greatest poem in the Miltonic manner, "Yardley Oak." Mr. J. P. R. Wallis, in his chapter on Blake, gives an interesting exposition of the poet's ideas, and clears the way for an intelligent study of whatever of Blake's mystical writings is intelligible. This was perhaps the most useful thing he could do, but we regret, nevertheless, that little space is given to artistic analysis, and that, consequently, there is no attempt to trace the vital connexion between Blake's poetry and his other arts as designer, painter, and engraver. Blake is essentially an artist, and probably the ultimate value of his gospel will be found to lie rather in his use of line, of colour, and of melody than in any system of ideas.

Amongst the other contributions to the volume we notice two attractive chapters under attractive titles—"The Blue-stockings," by Mrs. H. G. Aldis, and "Children's Books," by Mr. F. J. H. Darton. In the latter case, the careful bibliography supplies a crying need of students, and we can only regret that space prohibited a more comprehensive list of the chapbooks, one important department of the subject.

The volume is, perhaps, more disappointing in its whole impression than it is in the detail of particular chapters.

The Idealistic Reaction against Science. By Prof.

ALIOTTA. Translated by AGNES MCCASKILL. (1p. xxiii + 483. 12s. net. Macmillan.)

This book is not a mere translation of the original Italian edition which was published in 1912; it has been revised throughout, and in the concluding chapter all the constructive portions of Prof. Aliotta's philosophy are gathered together into one organic whole. Briefly, the object of the work is to trace the bearing and influence of the irrationalism of contemporary philosophy in relation to its criticism of science. The author shows that philosophy must take into consideration the data of artistic and moral life as well as the results of science. He shows that these three functions of the mind are synthesized in the unity of the human subject, and that no permanent and stable equilibrium arises from the alleged supremacy of any one of them over the others. A period of philosophy, based on one aspect of experience alone, tends to be followed by a period of reaction which goes too far in the other direction. Extreme rationalism is followed by the ravings of excessive mysticism. Contemporary thought, however, as interpreted by Prof. Aliotta, asserts the right of feeling

(aesthetics) and will (morals) against the excesses of materialism and the unstable indifference of agnostic positivism.

The book commences with a criticism of Spencer's agnosticism, and the author points out that the absurd *unknowable* is, in its ultimate analysis, a confession of failure on the part of that rationalism which attempts to reconcile the conflicting claims of science and theology. Any claim to reduce reality in its totality to a system of knowable relations is doomed to grope in the empty darkness of its own contradictions. There follows a chapter on the reaction from the negative attitude of the materialists which was instituted by the more critical method of Lange. To him belongs the credit of having relegated to the domain of poetry the solution of those problems which transcend the limits of intellectual experience. Further attempts to escape from the agnostic position are illustrated by the movement in which all reality is reduced to phenomena only, and by that, represented by the philosophy of Green, in which the eternity of consciousness and thought is postulated. Bergson's doctrine of intuition next calls for attention, and the difficulty of understanding how intellect and science can have sprung from a life of which the essence is to be sought in creation and artistic contemplation, is clearly demonstrated. Pragmatism, in which the value of ideas lies in their good and useful consequences, is boldly criticized, and shown to be a solution justified only as a reaction against the undue extension of scientific method into the realm of philosophy.

After this lengthy review of modern tendencies in philosophy, the author deals successively with non-Euclidian geometry, recent elaborations of pure mathematics and physics, and Ostwald's philosophy of energy. The latter is destructively criticized. To say that energy is the common source of phenomena is to argue in a circle, implying as it does that changes take place because energy (which is merely the potentiality of change) exists! The fact is, our sensations do not give us energy and energy alone; energy is a construction of our thought just as matter is. How, then, can energy or matter include thought and consciousness as inherent properties? Here is the vicious circle of the materialist revealed.

In the final chapter the author gives us his own conception of reality. He attempts to find a position of equilibrium between materialism and idealism, and lays much stress on the importance of looking into the creative spontaneity of our own consciousness if we would try to understand the nature of reality.

The work is, both critically and constructively, a valuable contribution to scientific and philosophic thought. It is unfortunate that modern philosophy should have become so painfully technical and so difficult to read as it undoubtedly has, and this book is no exception. No doubt the reader is supposed to be already well informed in philosophical nomenclature; a glossary, would, however, be a useful addition to many books of this kind. Once these difficulties are overcome, a wealth of fascinating thought and penetrating insight will be revealed to the reader beneath the technicalities of this masterly work.

Who is Responsible? Armageddon and After! By CLOUDESLEY BRERETON. (7d. net. Harrap.)

This is one of the earliest pamphlets (apart from official papers and tracts) that the War has called forth. Mr. Cloudesley Brereton has a ready pen, and he had all his facts ready to hand. He knows France intimately, and for the last thirty years has kept in close touch with both France and Germany, and the book is enlivened by personal reminiscences and conversations he has had with eminent French statesmen, letters from American friends, and travel experiences. The causes of the War is a twice-told tale, but Mr. Brereton brings out a point too often overlooked, that the present power of Germany is due not only to her successes in war, but even more to the use she has made of her spoils, the enlightened State socialism she has practised in subsidizing trade and commerce, in providing liberally for technical education, in organizing labour, and in preventing destitution. No one in

England, except a few cranks or professional jesters, like G. B. S., now needs convincing that our cause is just. The good qualities of our foes are here frankly acknowledged, and their present aberration is shown to be in part a *damnosa hereditas* from Frederick the Great and in part a corruption of the best—intense patriotism, loyalty, obedience to authority, and unbending resolution.

The character of William II as *le Néron de nos jours* is worthy of Suetonius. We are not implying that it is not justified by facts, but to Germans it will seem a venomous caricature.

On his own subject, Education, Mr. Brereton is most instructive. *Lehrfreiheit* is a German word, but the thing does not exist. All, from the University professor to the village schoolmaster, are dependent on the State, and must play the tune that the State calls. A School Geography in the two hundred and thirty-second edition contains the statement that Germans are the one civilized people of Europe, and that traces of civilization elsewhere are due to an infusion of German blood. In the Educational Section of the Brussels Exhibition there was a map of "Germany of the Future," with Belgium, Holland, and parts of Italy, France, Russia, and Hungary painted German.

We wish we had space to deal with the "After." Mr. Brereton holds that the settlement must be based on Nationalities, and hopes that the outcome of this principle will be Internationalism, with a glorified Hague Tribunal as its executive and a drastic reduction of armaments as its result. The brave words with which he ends will find an echo in every heart: "We are fighting not only for our own soul, but for the soul of Germany as well." That we should be beaten is to him inconceivable, but, even so, we must still fight on. "Better a thousand times to die for freedom, for justice, for all that we hold most dear, than to live on as slaves and bondmen who have lost the right to think for themselves and direct their own lives."

MATHEMATICS.

A General Course of Pure Mathematics. By ARTHUR L. BOWLEY, Sc.D. (7s. 6d. net. Clarendon Press.)

The student using this book is assumed to have reached matriculation standard, and the course here covered may be regarded as a framework upon which the reading for a pass degree should be based. It will be necessary to use other textbooks on algebra, conics, and calculus for fuller treatment of specific subjects, but the fundamental propositions are all dealt with in these pages and discussed with more rigour than in most elementary textbooks. A work of this character serves a very useful purpose, since most students at this stage, using several books, fail to obtain a proper perspective until the end of their course. The treatment of series in Section V is clear and vigorous. The discussion of plane co-ordinate geometry in Section VI omits all those details that tend to distract the reader's attention from the main argument without increasing his power. The section on the calculus needs more in the way of introduction; at present it can only be used as a summary by the student attending lectures on the subject. The section on the complex variable is a very careful piece of work and of considerable value, if it merely convinces teachers of the great need for care in applying the elementary rules to the imaginary quantity.

The Theory of Proportion. By Prof. M. J. M. HILL, F.R.S. (8s. 6d. net. Constable.)

An exceedingly valuable contribution to pedagogic literature. The expressed aim of the author is a simplified presentation of the theory of proportion as expounded in Euclid V and applied in Euclid VI. This aim has been very definitely attained by consistently using the fifth definition to the exclusion of the seventh and by developing the fifth definition in a more natural manner than that adopted by Euclid without sacrificing any of Euclid's rigour. This simplification of Euclid V would alone be a fully sufficient reason for the publication of this piece of work, but to most teachers its chief value will arise as an introduction to modern ideas on number. These pages give the simplest presentation of Dedekind's ideas that has so far been published and the first ten chapters should be digested by every teacher of mathematics in secondary schools. It is a distinct misfortune that the high price of this comparatively small volume will probably prevent it from reaching the wide circle of readers to whom it would be of value.

An Introduction to the Infinitesimal Calculus. By G. W. CAUNT, M.A., M.Sc. (12s. Clarendon Press.)

This textbook can be cordially recommended to all who wish to obtain a knowledge of the Calculus either for the purpose of applying it to physical science or as an introduction to further developments in mathematics. It is especially suitable for science degree students offering mathematics as one of their subjects. The order of presentation has been guided by interest, and the reader should soon begin to feel the increased power that the calculus gives in other departments of mathematics. Considerable teaching skill is shown in developing the fundamental ideas of "limit" and "continuity," and in indicating the care which is necessary in applying Taylor's Theorem. The note on Pringsheim's function is very much to the point in this connexion and is one of those suggestive side-notes which occur here and there throughout the book forming one of its most interesting features. There is a very good chapter on elementary differential equations and the appendix includes tables of exponential and hyperbolic functions. The illustrations from geometry, mechanics, and physics are all well chosen and there are numerous collections of well-graded examples.

Key to Hall's "School Algebra," Parts I, II, and III.

By L. W. GRENVILLE. (10s. Macmillan.)

The solutions of the harder examples are given in full, and for the easier there are sufficient hints. The graphs are clearly drawn, and, as far as we have been able to test it, there are no mistakes in the working.

Arithmetic. In Two Parts. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. (Bell.)

We note that this Arithmetic is now in its second edition.

SCIENCE.

Life and Evolution. By F. W. HEADLEY. (5s. net. Duckworth.)

This is a new and revised edition of a book that has attained a not altogether unmerited vogue as an introduction to natural history. The arrangement and substance remain much as they were in the first edition, and they will not, therefore, be discussed here. We are among those who hold that it is not least, but most, difficult to write for the young or the technically ignorant, and that no condescension is involved in doing so. Mr. Headley is seemingly of another opinion. His book is nothing if not "chatty." Now to adopt the "chatty" style (save the mark!) is not to pay a compliment to one's reader's intelligence; it is not, in fact, good manners; and in the book under review there are passages that would make any self-respecting schoolboy indignantly rebel under what he would rightly judge to be their oppressive patronage. It may easily happen, however, that a writer with no graces of style to recommend him, no discrimination in dealing with evidence, no insight into the probable causes of what he sees, can be, nevertheless, so ingenuously interested in Nature and so fortunate in the things which interest him that he achieves a mitigated success in spite of the inevitable defects and crudities that mar his work. An old lady, after a visit to the picture galleries of the Louvre, was heard to say, "My dear, how I wish I could have gone without a guide!" The best that can be said of Mr. Headley's book is that those who make in its pages their first acquaintance with natural history will echo the old lady's sentiments. And perhaps to say that is rather high praise after all.

Handbook of Photomicrography. By H. LLOYD HIND and W. BROUGH RANGLES. (7s. 6d. Routledge.)

To treat the subject of photomicrography adequately postulates a knowledge of the latest developments of two rapidly advancing branches of applied science, that of microscopy and that of photography. The improvements in the microscope within the last seven years have rendered obsolete many methods and appliances in vogue at the beginning of the century. Fortunately we can assure our readers that in the book under review they will find an unusually reliable account of the instrument and accessories in their latest forms. Their skill as photographers is illustrated by nearly a hundred specimens of their art, and the publishers also may be congratulated on the success of their reproductions. The book is full of practical information and advice, is devoid of padding, and we hope it will find its way into schools and thus increase the number of amateurs who take up this fascinating pursuit of photographing the smaller forms of life. The only point on which the instruction seems obscure is with regard to the working distance of objectives, as from the definition on page 65 it is not clear whether the thickness of the cover-glass is to be included. We will make the matter clear by considering the first example given, a Zeiss lens of working distance one-fifth of a millimetre. This means that an object in contact with the under-side of a cover-glass 0.17 mm. thick will be in focus when the air-distance from the top of the

cover-glass to the front lens of the objective equals one-fifth of a millimetre. The photographic details cover a wide range of work, including colour processes and lantern-slide production. The most suitable stains and screens for various purposes are described. Some of the illustrations have been produced by use of inexpensive apparatus and show what good results can be obtained by moderate means, if the most difficult subjects (e.g. diatoms) are avoided.

Laboratory Textbook of Chemistry. Part I.

By V. S. BRYANT. (4s. Churchill.)

Here are brief directions and questions for each lesson, some short explanatory notes, and blank spaces to be filled in by the pupils. We have no doubt that the book will be very useful at Wellington in Mr. Bryant's classes; but it is not very likely that many teachers will desire to follow precisely the same lines, and it is difficult to adopt this kind of book on any other terms. The course of exercises is a good one, and the questions are numerous and well aimed, so that an inexperienced teacher—one with a good knowledge of chemistry, but not practised in teaching the subject—could adopt the book for class use with great advantage. It is the kind of outline an experienced teacher prepares himself, but on such matters as the best stage at which to introduce the atomic theory there are great differences of opinion, and the peculiar arrangement of this book affords no elasticity of method.

Chemistry and its Relations to Daily Life. By L. KAHLBERG and E. B. HART. (5s. 6d. net. Macmillan.)

This interesting and readable book is intended primarily for elementary students who are likely to take up agriculture or economics. It represents a new departure in the teaching of chemistry, and one which is worthy of all praise. Its authors, who are Professors respectively of Chemistry and Agriculture in the University of Wisconsin, have united their authority in producing a little book which cannot fail to arouse in the reader a vivid scientific interest in the substances of everyday use and consumption. After a preliminary outline of the fundamental principles of chemistry, illustrated abundantly by simple experiments and with reference to useful facts and interesting items of information, the chief mineral products—e.g. metals, paints, fertilizers, plant products—e.g. oils, cotton, rubber, tea, coffee, sugar, and animal products—e.g. leather, silk, wool, and milk and its products are dealt with. The book will prove valuable not only to elementary students, but also to teachers, both for simple object lessons and more advanced chemistry lessons. Too often chemistry is taught with little or no relation to the facts of daily experience. The successful teacher knows the importance of inducing his students to see the application of their knowledge in the objects with which they are already most familiar and to discover problems in the things which are generally taken for granted. Indeed, to all persons who are keenly interested in the why and the wherefore of the necessities and the modern appliances of life we would strongly recommend a perusal of this little volume. The authors' zeal for illustration has resulted in the inclusion of a number of unnecessary figures. An agricultural student is not likely to be unaware of the appearance of a cow or a sheep. Pictures of wool, asphalt streets, barrels of white lead, and cats with broken legs are not usually to be found in books on chemistry. If, however, they lend an additional interest to the curious, the authors' object will, no doubt, have been attained.

Physiological Plant Anatomy. By Prof. Dr. G. HABERLANDT.

Translated from the fourth German edition by MONTAGU DRUMMOND, B.Sc. (25s. Macmillan.)

Botanists of the English-speaking peoples will welcome the appearance, in their own language, of Prof. Haberlandt's great work. It has obtained a well deserved recognition in the botanical world, and its popularity and its value have increased during the transformations it has undergone from the modest proportions of the first edition to the ample bulk of the fourth, of which the volume before us is a translation. Haberlandt, more perhaps than any one, has cultivated the field opened up by Schwendener and others, and he has succeeded in investing the study of plant anatomy with a charm and an interest which few would naturally expect to find therein. The union of physiological conceptions with anatomical description has not only proved fertile in suggestion as to the course of evolution of structure, but has justified itself by acting as a potent stimulus to research, whereby many previously unsuspected relationships have been revealed. Details, such as the shape of the epidermal cells or the occurrence of crystalline substances, cease to be trivial, and gain much in interest, when they are seen to be correlated with the manifestations of irritability which are expressed in the apparently autonomous movements of the organs in which such structural features occur. It is, perhaps, difficult to avoid a somewhat pronounced teleological bias in dealing with the subject of anatomy from such a point of view; but little harm need accrue

to the student so long as he remains conscious of the danger of mistaking mere teleological speculations for a scientific explanation of the origin of an anatomical (or, indeed, of any other) character. Even if the philosophical danger were far greater than it actually is, it would still be worth running, for the sake of the admirably marshalled masses of fact with which Prof. Haberlandt's treatise is so richly stored. It is, finally, a pleasure to refer to the translation itself. Mr. Drummond has discharged his task extremely well, and although here and there he has perhaps not quite given the meaning of the original text, such instances seem to be few and of no very great importance. The book is well printed and illustrated, and on the whole represents one of the best, as it should also prove one of the most useful, of the more recent translations of German botanical works.

"Playbooks of Science."—*Electricity and Electrical Magic.*
By V. E. JOHNSON. (Frowde and Hodder & Stoughton.)

A capital companion for boys who have had a term or two of electricity at school. The hundred and odd experiments here given vary greatly in difficulty, and some are quite beyond the power of any boy; others might profitably form part of class work. It may not be superfluous to warn parents against the danger of presenting a Wimshurst machine to any youngster who asks for it.

Common British Beetles. By Rev. CHARLES A. HULL.
(1s. 6d. net. Black.)

Of the four thousand or so species of British beetles a selection of the larger or more remarkable are here described and pictured in colour or in black and white. By help of these the young collector will be able to identify any species he is likely to find, and the striking photographs of parts and organs will tempt him to investigate the structures with the microscope. Young naturalists are more given to collecting than to observation, but the introductory chapters will stimulate the chosen few to embark on the harder but far more profitable pursuit.

The Wonder-World. By AGNES GIBERNE.
(1s. 6d. Religious Tract Society.)

The author of "Sun, Moon, and Stars" has no superior as an expositor of the elements of science. Her latest volume is a series of object lessons, not the inanities which the name too generally suggests—coal is a black, opaque substance which ignites, &c.—but rational conversations on the laws and forces that have produced and are latent in the commonplace things of everyday life: an empty box, a boiling kettle, a lump of ice. These are hackneyed themes, but Miss Giberne puts them in new and striking lights, and she has succeeded in making intelligible to children the latest atomic theory revealed by radium.

Psychology in Daily Life. By C. E. SEASHORE.
(6s. net. Appleton.)

As an introduction to the study of psychology this volume may be useful to many. Topics such as mental health, efficiency, measurement, &c., play, the law in illusion, and memory are discussed, but not very deeply. Little that is new occurs, and, in our opinion, too much stress is laid on rules and rigid law—in fact, the author goes so far as to declare that "nothing is done well until it is reduced to an automatic stage." The chapter on Mental Law is attractive and shows most individuality of treatment; but the book in general does not go beyond the commonplace. The Law in Illusion, a chapter with illustrations, explains several optical illusions and indicates that there is method in our errors.

The Mastery of the Air. By WILLIAM J. CLAXTON.
(2s. 6d. Blackie.)

Mr. Claxton has succeeded in his endeavour to provide laymen with the information needed to follow with understanding the rise and progress of aviation. He begins *ab ovo* with the Mongolier brothers, and ends with the Aerial Derby of 1913. A quotation from Sir John French's despatch of mid-September, acknowledging the services of the Royal Flying Corps, is added as a postscript, and it is tantalizing to have nothing but theory on the uses of the air-ship in war. Sir Hiram Maxim makes our flesh creep. For £1,000,000, the cost of one Dreadnought, 500 aeroplanes could be made, each capable of carrying half a ton of nitro-glycerine. In dark and foggy weather they could visit London twice in a night, and drop 500 tons. How, he asks, would London look after a week of such treatment? Mr. H. G. Wells has supplied an answer; and fortunately the supposition is still in the region of pure romance. Mr. Winston Churchill, to whom due credit is given, has taken sufficient precautions against the visit of one Zeppelin. Taubes, too late inventions to find mention, may annoy us, but they will be only pin-pricks. The book is profusely illustrated.

DIVINITY.

The Book of Job interpreted. By JAMES STRAHAN, M.A.
(7s. 6d. net. T. & T. Clark.)

This is an excellent volume in every respect. It forms a competent exposition of the somewhat complicated text of Job, and is the work of a writer thoroughly acquainted with the investigations of recent scholarship and able to expound them in an easy, popular style. The book is well arranged. A short introduction of twenty-eight pages is followed by the exposition proper. Here the text is broken up into sections, headed by the translation (with variants), which is based mainly upon that of the Revised Version. A summary of the meaning of the passage, together with the detailed exposition of particular points, follows. The book has none of the forbidding appearance of the set commentary. It is admirably suited for the intelligent general reader and student who desires to grasp the poem as a whole and to be put in touch with all the important problems of exegesis, without at the same time being unduly distracted on points of detail.

Joshua. Annotated Hebrew Text. With Introduction, Vocabulary, &c. By the Rev. S. FRIEDBERG, B.A. (5s. net. Heinemann.)

The present volume is the first of a promised series of annotated Hebrew texts. Such a series would certainly meet "a long-felt want." The only Books that have been dealt with in this way by modern English scholars are Genesis (Spurrell), Samuel (Driver), and Kings (Burney). Mr. Friedberg's volume will, however, hardly bear comparison with any of these. His notes, which are printed below the Hebrew text, though useful, are somewhat elementary and lack distinction. The maps, too, might well be improved. It would have enhanced the interest of the commentary if the Jewish commentators (who are referred to not infrequently) had been cited in fuller form. It must be confessed that Joshua is not the most interesting of texts. Other volumes in the series may well have a wider scope. The plan adopted affords ample opportunity for excellent work, which would be warmly welcomed.

The Book of Wisdom. With Introduction and Notes. By the Rev. A. T. S. GOODRICK. (7s. 6d. net. Rivingtons.)

This is the first volume of what promises to be a valuable and important series of commentaries planned and edited by Dr. Burney. It is true that commentaries on the Books of the Bible abound. But there is room for a new type which will offer as a basis for exposition carefully revised critical texts. This is the outstanding feature of the new series. The new translations on which the notes are to be based are to be critical. In careful hands this plan ought to lead to important results. To judge from Mr. Goodrick's volume, the scale of the commentary itself will be quite considerable. There is an introduction covering eighty-four pages, the translation and commentary occupy nearly three hundred more, and the last fifty pages are devoted to additional notes and appendixes. Mr. Goodrick's work is very thorough and scholarly. He assigns the Book of Wisdom (originally written in Greek) to about the middle of the first Christian century. Its author was an Egyptian Jew, whose Greek, though copious in vocabulary, often falls below literary standards. Nor did he possess any real first-hand knowledge of Greek philosophy. The aim of the book is a patriotic one—to recall to their ancestral faith those Jews who were in danger of losing their national identity under the spell and stress of Roman culture and pressure. The introduction is, perhaps, somewhat overloaded with detailed discussions of competing views, but the whole forms a very thorough and valuable piece of work—the last, unhappily, of a gifted scholar who was cut off in the prime of his powers.

Isaiah XL-LXVI. Edited by the Rev. W. A. L. ELSLIE, M.A., and the Rev. JOHN SKINNER, D.D. (1s. 6d. net. Cambridge University Press.)

This little volume is a worthy addition to the series of small commentaries, based on the Revised Version, which is being published by the Cambridge University Press. The names of the editors in this case are a guarantee of good work. They have produced a volume which combines the best scholarship with lucidity and simplicity of statement. There is an excellent introduction, which discusses the authorship, historical and literary features, unity, and teaching of the Book. The composite character of this section of the Book of Isaiah is accepted, and full attention is given to such difficult questions as those involved in the "Servant songs." The notes are both full and terse. The volume ought to be warmly welcomed as not only a competent, but stimulating, textbook for class purposes.

The Great Salvation. A Study of the Epistle to the Hebrews.
By C. R. CUFF. (3s. 6d. net. Methuen.)

This is a devotional and expository study, covering the whole of the Epistle to the Hebrews. An introductory chapter deals with

"Access to God"; then the rest of the volume discourses on "The Word of Salvation," "The Work of Salvation," and "The State of Salvation." The book will assist readers who are willing to read Books of the Bible as a whole, and continuously, in a devotional spirit.

A Handbook of Christian Apologetics. By A. E. GARVIE, M.A., D.D. (2s. 6d. net. Duckworth.)

This volume, by the accomplished Principal of New College, London, is an important contribution to theological literature. It is packed with thought, and will repay careful study. The aim of the treatise is to present "as complete an outline of the argument for the Christian faith as the intellectual situation of to-day demands," and "the order of the chapters has been determined with the view of exhibiting, as far as possible, a continuous argument." In Chapter I the Purpose and the Problems are defined: Chapter II deals with Religion and Revelation. This is followed by chapters on Inspiration and Miracle (III), the Lord Jesus Christ (IV), the Christian Salvation (V), the Christian View of God (VI), the Christian View of Man (VII), the Christian Ideal (VIII), and the Christian Hope (IX). Though only claiming to present an outline, Dr. Garvie deals with his themes very thoroughly. For instance, in the chapter on Jesus Christ, he discusses (1) the denial of the existence of Jesus Christ, (2) the eschatological view of the teaching of Jesus, (3) the anti-supernatural view of the Person of Jesus, and (4) the rejection of the Johannine interpretation of Jesus. Those who wish to see the theological position presented by a thoroughly competent scholar who, while loyal to the fundamental positions of orthodoxy, is alive to modern issues, may be recommended to study this volume.

(1) *The Early History of the Liturgy.* By J. R. SRAWLEY, D.D. (2) *The Offices of Baptism and Confirmation.* By T. THOMPSON, M.A. (Each 6s. net. Cambridge Press.)

These volumes belong to the "The Cambridge Liturgical Handbooks" series, the purpose of which is "to offer to students who are entering upon the study of Liturgies such help as may enable them to proceed with advantage to the use of the larger and more technical works upon the subject which are already at their service." Such a series has long been needed, and students will warmly welcome these volumes. In "The Early History of the Liturgy" Dr. Srawley summarizes and discusses the evidence as to the institution and celebration of the Eucharist in the Apostolic age, and in the sub-Apostolic age, and the subsequent development of the early types of liturgy. The result is an extraordinarily interesting volume and admirable handbook. Mr. Thompson's volume deals fully and impartially with the much-vexed history of baptism and confirmation.

Biblical Ideas of Atonement: their History and Significance.

By Profs. E. D. BURTON, J. M. P. SMITH, and G. P. SMITH. (4s. net. Cambridge University Press for Chicago Press.)

The aim of this exceedingly useful volume is concisely stated in the preface. It is "to set forth the content of the Biblical teachings upon the subject of Atonement and to suggest the point of view from which these conceptions may profitably be studied at the present day." The book is divided into five parts. Part I surveys the idea of Atonement in the Old Testament and is the work of Prof. J. M. P. Smith; in Part II Prof. Burton sketches the conception of Atonement in non-canonical Jewish literature, and in Part III the New Testament Conception; a summary of the Biblical teachings concerning Atonement follows in Part IV, and the last two chapters deal with the significance of the Biblical teachings concerning Atonement (Part V). The whole forms a careful and thoroughly trustworthy survey of a wide field of theological development. The exposition is, however, not burdened with too many details, but the salient points are properly emphasized. As is natural, a larger space is given to the exposition of the New Testament data than to the rest. Here Prof. Burton reviews the teaching of John the Baptist, of Jesus, of the Early Church, of St. Paul, of I Peter, of the Epistle to the Hebrews, and of the Johannine writings. The debt of the New Testament writers to the Old Testament is well brought out.

The final section of the book will, perhaps, be read with the greatest interest. Here an attempt is made to estimate the value of the Biblical ideas for modern life and thought. It is shown that the Biblical writers, in their method of formulating doctrine, utilized concepts taken straight from the actual world in which they lived. Thus ideas connected with sacrifice, the shedding of the sacrificial victim's blood, passover, &c., were vital elements in the contemporary world of the New Testament writers. They were natural and familiar ideas: but are no longer so in the modern world. Hence in any reconstruction of the doctrine which shall appeal to the modern mind, and grip the modern conscience, these concepts must be replaced by others which have a vital connexion with modern life. "The significance of the Biblical teaching con-

cerning atonement . . . is to be found in the spiritual meaning which was given to the current modes of thinking about God's relations to men (page 289). Our first task . . . must be to ascertain the essential elements of modern thought, to find what are the great realities in the spiritual life of to-day, and to ask how we may best interpret these in the light of our Christian convictions (page 295). . . . The modern counterpart of the old sense of individual sin is found in the quickened social conscience as to the evils wrought by mammon worship, sweating, &c., and the individual responsibility therein involved" (pages 300-1). The true doctrine of Atonement for our modern age is found in social movements to remedy social injustice. "In the social movements of our time we can read the steady determination of our age that our evils shall be atoned for" (page 305). God Himself suffers with outraged humanity; consequently "Atonement made to an outraged humanity is Atonement made to God" (page 313). Enough has been said to show that the volume is a valuable and timely contribution to the theological literature of to-day.

The Text and Canon of the New Testament. By ALEXANDER SOUTER. (2s. 6d. net. Duckworth.)

This handbook, written by an acknowledged master of the subjects with which it deals, is of real importance. In compact and lucid form it gives a masterly survey of the science of textual criticism and the most important points connected with the history of the Canon (of the New Testament). In the preface the author remarks that "the progress made in these subjects is such that, every ten years or so, a brief treatment of them, and attempt to gather together the results of multitudinous books and articles, is a necessity if any beyond the narrow circle of experts are to be put in possession of the new facts." When such a survey can be set forth in a popular way by one of the best equipped of the experts we are fortunate indeed. The first part of the book, which is devoted to the Text of the New Testament, deals with ancient texts and their transmission (I), Sources of the New Testament Text (II), Greek MSS. (III), the older versions (IV and V), the secondary versions (VI), Patristic (and other) citations (VII), Printed editions (VIII), Principles of Criticism, &c. (IX), and the future outlook (X). The second part, dealing with the Canon, discusses the idea of the word (I), earliest collections of New Testament Books (II), the earliest period for extensive quotation (170-220), and the earliest versions (III), Books of temporary and local canonicity (IV), from Origen to Chrysostom in the East (V), from 250 to 450 in the West (VI), Conciliar Deliverances (VII), the Reformation and later (VIII). A striking feature of the book is the collection of "selected documents" printed at the end (pages 205-237). Here the original texts are given of such documents as the Marcionite Prologues to the Epistles of St. Paul, the "Muratorian" Canon, &c., and some relevant letters and conciliar decrees. A "selected bibliography," covering ten closely printed pages, closes the volume. The book is one that no serious student of the New Testament can afford to neglect. The careful study of it will prove a most valuable discipline.

Lands and Peoples of the Bible. By the Rev. JAMES BARKER. (3s. 6d. Black.)

These Bible studies were composed in the form of lectures for a class of young men and women, and will serve as a most useful companion for the Sunday-school teacher. Section I deals with the physical geography and ethnology of Palestine; Section II with Mesopotamia and Babylonia; Section III with Egypt and the lesser tribes, Hittites, Moabites, &c. For the geography of the Holy Land G. A. Smith's monumental work is taken as authoritative, and the author has wisely refrained from discussing disputed points of topography, but he shows himself well abreast of recent explorations in Cyprus and the Nile Valley and the work of Maspero, Flinders Petrie, and the Egyptologists. One of the most interesting lectures is the excursus on Akhenaten, entitled "The Light that Failed." It is unreservedly acknowledged that the creed he taught and practised was far in advance of the Mosaic religion, and his Psalm, here quoted, is ranked with the best of the so-called Psalms of David. The vulgar notion of Philistines (for which Matthew Arnold is in part responsible) is corrected, and it is shown that the Hebrews owed to them letters and the few traces of art that are found in the Palestine of the Jews. On the other hand, the defence of the divine command to exterminate the Amorites is too much like special pleading, and might be taken to justify the treatment of the Mexicans by Spain, of the Congo by King Leopold. The illustrations by photographs of scenery, monuments, and documents are well chosen and well executed.

The Dictionary of Educationists. By Rev. J. E. ROSCOE. Fourth Edition. (5s. net. Pitman.)

This valuable book of reference has quickly reached a fourth edition. May we hope to see before long a new and revised fifth

edition? The chief defect, which needs radical amendment, is a lack of proportion. The editor has not made up his mind whether the book should be a cyclopaedia or a Who's Who. Some of the articles, giving name, qualification, experience, and titles of publications, might have been transferred from "Who's Who." Others are essays, and "Froebel" runs to twenty pages. Joseph Payne, as the first English professor of education, is memorable, but hardly merits four pages. C. H. Johnston, of whom (we confess with shame) we had never heard, has five pages. The article on "Montessori" shows that the book has been brought up to date; but, again, four pages seem to us out of perspective. Benjamin Jowett has about as many lines. Why, we ask, Miss Beale and not Miss Buss; why Joseph Butler, Head Master of Shrewsbury, and not Nicholas Murray Butler?

- (1) *The Origin and Development of Public Administration in England.* By G. T. REID. (1s. 6d. Macdonald & Evans.)
- (2) *The King's Government.* By R. H. GRETTON. (2s. net. G. Bell.)

(1) Students of history need books of this type in order to gain a knowledge of side issues not usually fully treated in ordinary histories. Interesting sidelights are thrown on the constitution by these two studies, and, though the research has been minute, the result is expressed in each case in a form not too elaborate or detailed. Mr. Reid, in his treatise on public administration in England, traces the changes in the function and power of King and Parliament, gives an account of the national funds, the army and the navy; treats of local government, the law, party organization, &c.; and concludes with a chapter dealing with the exercise of the political instinct at the present time. Thus it is seen that his range is very wide, but his discriminating power is sufficient to avoid unnecessary detail. His attitude towards kingship is scarcely that of the twentieth century, as what he claims for that office can as legitimately be claimed for the idea of the State as an entity: "... an idea that the king is separate from, and above, the ordinary run of men. The argument in favour of maintaining such an attitude on the part of the people towards the king is that, by sharing a common reverence and affection towards a person who is recognized as the head of the State, the people are knit together and given a unity of aim and purpose which they might not otherwise have." The various pages dealing with local government are particularly useful, especially in these days when Civics is becoming more important as a school subject. Teachers will find a store of information here. The concluding chapter contains remarks warning democracy not to confuse ends with means, and merely maintain rights without using them as instruments: "Political freedom is a noble thing, and a consciousness of the power to influence the government of the country may be of value in itself. But unless the power is accompanied by the exercise of political faculties, and by a conscious effort on the part of the individual to maintain and strengthen the nation's political life, enfranchisement may mean very little." There is a synopsis of each chapter at its head, which gives the contents at a glance.

(2) Mr. Gretton designates his book "a study of the growth of the central administration," and he traces such growth from Norman times to the present day in each Department of State. He is right in thinking that his research was suitable for treatment by itself, as the manner of growth of our Government Departments emphasizes certain tendencies of our constitutional history and national development. The complexity of our system of Government, the great number of persons employed by Government, and the concentration of power in the "ring of official advisers to the Crown" are facts which come home with a perusal of this book. But perhaps the fact most unknown or unrealized is that "government, as a continuous operation, bearing on the daily life of the ordinary inhabitant of these islands, is little more than a hundred years old." An example of the author's method of comparison, from his chapter on the Rise of the Modern System, will show that he realizes the great change that comes in the development of government. He is tracing the changes in the functions of the Board of Trade: "It would be impossible to exaggerate the extent of the change involved in the steps thus briefly summarized. It was in essence a change from negative to positive legislation on behalf of the community, and that means a change from control of the public welfare to control by the public welfare. Take any of the old statutes on domestic affairs, from the early laws against engrossing and forestalling to the Bubble Act of 1720; the common characteristics of them is repression. The same might be said of the Elizabethan Statute of Labourers. Positive though it sounds, its real nature is the checking of the labour market. In other words, older legislation was confined to giving such directions as could be carried out by the officials of the King's justice, and necessarily so confined. . . . This was the sense of official government; it was not the sense of the community. . . . In the over-

rush of commercial, humanitarian, and municipal legislation during the first half of the nineteenth century the sense of the community was substituted by the sense of official government. Parliament became not the voice only, but the hand of the community." There is a good bibliography, and the book is useful for many references.

Forty-four Years of the Education Question, 1870-1914. By J. THOMPSON. (2s. net. Sherratt & Hughes.)

A presentation of the Catholic claim for the control and management of Catholic schools, the cost of which shall be borne by the State. The argument is simple: the parent has an inalienable right to determine the religious education of his child; the State as regards education has put itself *in loco parentis*; therefore the State is bound to provide such religious instruction as each parent desires. The only logical conclusion to which these premises would lead, viz., secular education, is ruled out of court as one that no one in England desires.

- (1) *How the War Came About.* By J. HOLLAND ROSE.
- (2) *Britain's Duty To-Day.* By EDWARD LYTTELTON. (Each 4d. Patriotic Publishing Company.)

(1) Dr. Rose traces in broad outline the remoter causes of the War, the national movements since the times of the Armada which explain the political map of Europe to-day. He sets forth the opposite ideals of English and German colonization, and so refutes the railing accusation of English greed and exclusiveness. The narrative and argument are so plain and simple that a sixth standard child will find no difficulty in grasping them. (2) Dr. Lyttelton's is more ambitious, and suited for a public-school sixth form. He carries back the history of Germany to pre-Christian times, and traces German "Kultur," as preached to-day, to Frederick the Great. We pass from what is more or less common form to the moral. First we must establish compulsory service, not conscription; next we must set ourselves as a united nation, no longer torn asunder by religious, social, and political sects and parties, to set our house in order, and remedy the social and moral evils which all of us acknowledge to our shame. Lastly (and here we are on dangerous ground), we must "get all the foremost nations of the world to see, to understand, and to know the Gospel message." The tract bears traces of hurry. No one who has read Nietzsche would couple him with Treitschke and Bernhardi. On page 33 "Romola" is obviously a slip of the pen for "Tito."

Naval and Military Essays, being Papers read at the Congress of Historical Studies in 1913. (7s. 6d. net. Cambridge University Press.)

So much has happened in the last few months that the Historical Congress of last year seems far away, and these papers are somewhat belated. Some of them are merely summaries of papers which were read, and which have been printed elsewhere. Two are biographical: a most interesting study of Pepys as a naval official, by Dr. Tanner; and a character sketch of Prince Schwartzenberg, by Dr. Norák. The latter is the longest paper in the volume. The Prince is shown to have been an estimable man and a devoted husband, but the claim made for him that he was a great commander is hardly borne out. He was humane, and it is curious to note his protests against the brutality of the North Germans and their plundering habits. But the chief interest of the volume lies in the discussion of the value of naval and military history and the best way of dealing with it. Sir Lonsdale Hale, whose life of indefatigable industry in this field has lately come to an end, speaks forcibly of the difficulties. The historian has to gather his facts partly from impressionist accounts of eyewitnesses who cannot see things in true perspective, partly from official narratives which are biased and suppress, if they do not distort, many incidents. Such is their reticence that it was not until eight years ago, thirty-six years after the battle of Gravelotte, that a really full account of it was given to the world by the German General Staff. Hence the most recent wars, which in themselves should be the most instructive, are the wars about which it is most difficult to learn the truth. We can get a better grasp of Napoleon's campaigns than of the Balkan war. Who is the right man to deal with these subjects? Captain Richmond says that naval men must look to the professional historian. "The historian's raw material lies out of reach of the naval officer, in the museums, the public and the private collections. His finished article is the history: and this history is the raw material on which we have to build up our finished article, which is our knowledge of war." But Sir John Laughton and Mr. Julian Corbett show how historians (e.g. Macaulay) go astray from want of technical knowledge. The case, as Mr. Corbett puts it, is nearly hopeless: the naval officer cannot handle the evidence; the historian cannot interpret it. The soldier and sailor will do well to act on Lord Wolseley's advice, "to read little and to think a great deal—to think it over and over again."

Why Britain is at War. By Sir EDWARD COOK.
(2d. Macmillan.)

For a clear and dispassionate account of the immediate causes of the War and a résumé of the Diplomatic Correspondence and Speeches of Ministers nothing better has appeared than Sir Edward Cook's masterly pamphlet.

Pan-Germanism. By ROLAND G. USHER. (2s. Constable.)

Every man has read, or is reading, Bernhardt and Cramb. He should add to his library this contribution to the question of the day by an American Professor of History. It was published last year, and supplements the works of the German and Englishman not only by an independent confirmation of the ends and objects of Germany, but by showing how their aims have so far been defeated in the Near East, in Persia, and in North and South Africa. The chapters on the economic condition of Germany are of special interest. When Prof. Usher speaks of the alliance of England, France, and the United States as a *fait accompli*, we may take heart of grace as to the ultimate issue of the War.

The Comedies of Plautus. Five of his Plays, translated into English Verse by Sir ROBERT ALLISON. (7s. 6d. net. A. L. Humphreys.)

The five comedies here chosen—the *Aulularia*, *Captivi*, *Menaechmi*, *Rudens*, and *Amphitruo*—are fairly characteristic of Plautus, and there was room for a new translation. Bonnell Thornton's is quite out of date, and that of W. L. Collins is a spirited but very free rendering. Sir Robert Allison is a sound scholar, and his verse is fluent, sometimes admirable in the narrative portions. Take the following from *Rudens* ("The Tempest"):

"I see two women sitting all alone
In a light raft, and tossing up and down;
Poor wretches! Ah! 'tis well, the mountain wave
Is driving them in safety towards the shore,
And past the rocks: no pilot could do better.
Methinks I never saw a wilder sea:
If they can but escape those waves they're safe.
But now's the danger; one is cast ashore,
But where 'tis shallow she will get to land.
Thank God! But see the other, how she's cast
Abroad. Ah! now she stands and gets her clear.
Yes, she is saved."

In line 2 for "raft" read "skiff"; but line 6 has a true Shakespearean ring. In the same play the changes of metre should have been indicated by rimed or unrimed lyrics. In the dialogues there are too many weak endings and an excess of monosyllables. We think, too, that Sir Robert is needlessly euphemistic, substituting, for instance, "master" for "pimp."

Wit and Wisdom from Martial. By ALFRED S. WEST.
(2s. 6d. net. Hampstead: Priory Press.)

One hundred and fifty of the epigrams are here translated into vigorous prose, a happy medium between verse paraphrase and the bare fidelity of a crib. We cannot help wishing that the translator had tried verse, for his verse rendering of the famous medieval epigram is first-rate:

"Three things must epigrams, like bees, have all—
A sting, and honey, and a body small."

(It is a pity that the Latin, as here quoted, has two false quantities). Prose, however good, cannot give the point, the sting of the original. For *tace*, which gives the *coup de grâce*, the last word in III, 55, we have "I want you to keep your mouth shut." The selection is propriety itself and might safely serve as a Latin reader in a girls' school. Martial, as a whole, must be left for Mr. Loeb to tackle, but there is one side of him—his love of the country, the trim villa with its garden and orchard—that should not have been passed over.

A Latin Prose Grammar. By E. L. CHURCHILL and E. V. SLATER.
(3s. 6d. G. Bell.)

This new Latin grammar by two Eton masters has several new and highly commendable features. The type and print leave nothing to desire; the declensions and paradigms are set out so as to try neither the eyesight nor the temper. From the accident all unusual forms (such as Greek declensions) and rare words are rigidly excluded, and nouns and verbs presenting any difficulty are given in an alphabetical list, as in Eve's French and German grammars. Parts II and III deal respectively with the simple and compound sentence, and Part IV gives the constructions of common verbs, and also hints on how to render common English words—mostly adverbs, prepositions, and conjunctions, both in alphabetical order. It will be seen that, to avoid ambiguity, the title might have been printed with a hyphen, "A Latin-Prose Grammar," and as such the book may serve as a *cadecum* for young composers. Our only criticism is that it will tend to perpetuate the exaggerated importance that is still attached to composition. The pupil will be encouraged to think that the object of learning Latin is not to read

Latin, but to talk it, and to rely rather on the lists and hints than on his own observation and intelligence. Thus the hints under "as," "since," "or," "that," are not needed by any boy who has been properly taught the analysis of sentences and the elements of Latin syntax. The authors, however, have to cater for boys who have not begun with English grammar, and have to pass for Responsions or similar entrance examinations, and for such, we repeat, the Grammar will provide an excellent textbook.

Horace, Epistles I. Edited by F. G. PLAISTOWE and J. F. STOUT. (1s. 6d. Clive.)

The notes are brief and to the point, supplying all that a school-boy needs to read the text with understanding. In the introduction there is perhaps too much on the Greek philosophers, with whom Horace had only a bowing acquaintance, and too little of Horace himself, with references to his other writings.

"Bohn's Popular Library."—*The Idylls of Theocritus, and Virgil's Eclogues.* Translated by C. S. CALVERLEY. (1s. net. Bell.)

This should be a popular reprint. Calverley's special genius is shown no less in his translations from the Latin and Greek than in his Latin version of Lycidas. The late Prof. Tyrrell contributes an introduction, erratic and brilliant as all his work was. Scholarship, both textual and critical, has made rapid strides since these translations were made, and we wish that, instead of pointing out Calverley's beauties, the few obvious misrenderings had been corrected.

Fabulae virginibus puerisque aut narrandae aut recitandae.

By R. B. APPLETON. (2s. G. Bell.)

This is just one of the readers that Prof. Strong desiderates in his article on the teaching of Latin, and had it appeared in time he would doubtless have added it to his short list. The stories are mainly mythological and drawn from Hyginus, the arguments of the "Metamorphoses," and various other sources. The glossary is in the form of Latin definitions. We are sceptical as to the gain of excluding English. The Latin only gives approximate meanings. Thus the definitions of *fur* and *latro* are identical, and *denarius* is *nummus quidam*. The boy will look in vain for *nummus*.

Contes de la France Contemporaine. Edited by W. M. DANIELS. (With Vocabulary, 2s. 6d.; without, 2s. Harrap.)

This selection of stories has been made by plébiscite, so Mr. Daniels informs us—that is, by his own pupils in Westminster School; and it does credit to their taste. It is natural that incidents of war predominate; the others (it is cross division) relate to life in the provinces. Daudet's "Dernière Classe," Maupassant's "Les Prisonniers," Bazin's "Boîte aux Lettres," are familiar friends; but Anatole Le Braz is a new acquaintance well worth making. The notes, wholly on the matter, are brief and to the point. Boys will not miss the now fashionable *questionnaire*.

"Bell's Sixpenny French Texts."—*La Rose Rouge* and *Le Curé de Boulogne.* Par ALEXANDRE DUMAS. Edited by MARK P. MAYO.

The first of these is a tragic episode of the Reign of Terror that appeared in the *Revue des Deux Mondes*, and shows in the germ Dumas' wonderful powers of rapid narration and telling portraiture. The second is an exquisite little comedy. A *curé* goes for an hour's drive with an old college chum, and finds himself let in for a three years' crime in foreign parts. The two make a capital reader.

French Lessons on the Direct Method. Senior Course.

By MARC CEPPI. (2s. Hachette.)

These lessons are designed for pupils taking the Oxford and Cambridge Senior Locals and examinations of a similar standard. To unseens actually set in them are appended explanatory notes in French, and full *questionnaires* follow. The questions seem to us, as a rule, too easy for seniors or else so general that they would need a page or more to answer fully. Thus, in one lesson we have: "Citez quelques cas de l'omission de l'article. Que savez-vous de la position de l'adjectif en français? Quand emploie-t-on le subjonctif imparfait?" We hoped that by now the Tolérances would have put an end to the fine old-crusted questions on *gens, nouveau-né* and *garde-malade*.

Deutsche Stunden. By V. KRUEGER. (2s. Blackie.)

Frl. Krueger has been unable to find a German textbook or primer suitable for girls beginning German in the upper classes of a high school, and has attempted to supply the want. "The Direct Method alone is too slow and too narrow for pupils of fourteen. A mass of varied reading is necessary, and formal language teaching strongly advisable." There is nothing we can find in "Deutsche Stunden" that is not approved and practised by Direct Methodists, but the pace is more rapid than in most primers. Thus, the first lesson consists of sentences—"Ich habe eine Feder. Was hast du?" &c., followed by questions and the present and imperfect of *haben* for "formal" teaching. The best feature in the

book is the simple lyrics with musical accompaniments. Girls of that age will find the prose pieces for reading rather dull and matter-of-fact.

German Prose Composition. By JAMES A. CHALLIS. (3s. Ginn.)

A well graduated course of exercises in composition founded on German models. They are intended for the second year, and with each exercise there are hints to serve as reminders of grammar and questions on the German story to be answered orally. The exercises form a consecutive narrative, but this is broken up into short sentences. The anecdotes are mostly of the Joe Miller kind, and will not leave on the learner a favourable impression of German wit; but this is the only fault we have to find with a very serviceable introduction to German composition.

Misericordia. By B. PEREZ GALDOS. (1s. net. Nelson.)

The first edition of this work was published in Madrid in 1897. The price was then about 2s. 6d. Now, in the "Colección española Nelson" we are offered a neatly bound, well printed, complete edition for one shilling. Moreover, the Nelson edition contains an interesting preface, written expressly for it, by the author; also some valuable remarks upon the writings and character of Galdós by Alfred Morel-Fatio. We confess we should not have chosen "Misericordia" for foreign consumption. It is crowded with jargon of the scum of Madrid society, and the author confesses that he himself does not understand some of the *argot*, and we must confess that the Hebrew-Arabic Spanish of the blind Jew baffles us.

"Heath's Modern Language Series."—*Geschichten und Märchen für Anfänger.* Compiled and edited by LILLIAN FOSTER. (1s. 6d.)

An attractive reader for pupils who have learnt orally the bare elements. The folk-tales and stories have been simplified. The first half are in roman type, and only the present tense is used. Instead of a vocabulary there is a *Wörterzeichnis*, which the pupil can tick off as he masters the meaning of each word.

Danish Fairy Tales. From SVEND GRUNDTVIG. Done into English by GUSTAV HEIN. (3s. 6d. Harrap.)

We can heartily recommend this collection of eighteen folk fairy tales from Denmark. They have plenty of humour and offer a hint of some wider significance than the story overtly expresses. But it remains a hint; no moral is drawn. The translation is excellent, so are printing and paper. The illustrations, which are fairly numerous, suffer by being rather too ambitious. They would have expressed more if the artist had been content with less realism of detail. As it is, the realism is rather grotesque and the outline confused; but children will get a good deal of pleasure out of them.

(1) *The Normans in England* (1066-1154). Compiled by A. E. BLAND. (2) *York and Lancaster* (1399-1485). Compiled by W. GARMON JONES. (1s. each. Bell.)

(1) Source books are now an indispensable adjunct to the proper teaching of history, and Bell's series of "English History Source Books," to which these volumes belong, is admirably suited to meet the wants of teachers in secondary schools as regards size, price, and selection. Well chosen passages from contemporary writers give a vividness to the study of a period which is not to be had from the work of a modern historian; they carry one back into the atmosphere of the time. For the earlier periods there is not the same field of choice as for later ones, and Mr. Bland has to draw largely upon William of Malmesbury and other chroniclers. But he by no means confines himself to them, and he sometimes borrows from out-of-the-way sources, as in the description of the ordeal of the hot iron taken from Gengler's "Germanische Rechtsdenkmäler." He makes good use of the "Dialogus de Scaccario," but it would have been as well to note its date, more than a century after the Conquest, and to guard the reader against accepting its statement that the Domesday survey was made in order "that every man might be content with his own right and not encroach with impunity on that of another."

(2) Mr. Jones, who deals with the fifteenth century, has had the advantage of being able to draw upon the Paston letters, and he illustrates the early steps in the growth of the House of Commons by quotations from the Rolls of Parliament and the Statutes of the Realm. Battles necessarily bulk large in this period. The account of Agincourt is taken from the "Vita et gesta Henrici Quinti," which Hearne wrongly attributed to Elmham. The chaplain who wrote the "Henrici Quinti Gesta," and was an eyewitness of the battle, has been shown by Mr. Wylie to be Elmham; his narrative is much more detailed and realistic, and less rhetorical than that given in the Life.

Album. Atlas of British Victories on the Sea, 1588 to 1914. (Syndicate Publishing Company.)

A series of sketch maps showing the number and movements of

rival fleets forms the nucleus of this patriotic manifesto. The maps and notes have been prepared by the Rev. J. F. Stirling, Chaplain to His Majesty's Forces, and they supply in a graphic form a *memoria technica* of our decisive naval battles. Round these maps is grouped a miscellany of facts and illustrations bearing on the Navy—portraits of admirals and sea lords, silhouettes of ships of war, directions how to join the Navy. There is a blank page for autographs of the brave—our brothers, uncles, nephews, and cousins now afloat in the Baltic.

The Miscellaneous Works of Joseph Addison. Edited by A. C. GUTHRIE. Poems and Plays. (7s. 6d. net. Bell.)

This handsome library edition, to be completed in three volumes, will include all the works of Addison except the Essays. It has been reprinted from Tickell's text, collated with earlier editions. We have here for the first time in an accessible form the Latin poems of Addison by which he first gained his reputation as an author. Addison is a palmary example both of the merits and demerits of a purely classical training, and Tickell's commendatory preface would be endorsed to-day by Dr. James of Rugby. It was he who first taught English poets "to tame the natural wildness of wit and to civilize the fancy," and this virtue may be justly ascribed "to his being first fashioned by the ancient models and familiarized to propriety of thought and chastity of style." The translation of Horace, Ode iii, Book III, is a fair sample of this product:

"The man resolved and steady to his trust,
Inflexible to all, and obstinately just,
May the rude rabble's insolence despise,
Their ceaseless clamour and tumultuous cries;
The tyrant's fierceness he beguiles,
And the stern brow and the harsh voice defies,
And with superior greatness smiles."

The last line exactly hits off Addison himself as the classical poet. But about the Latin poetry there is a masterly ease that we miss in modern Prologues, and we prefer the "Gratulatio (cum Domini [a misprint for Anno] 1690)" to "The Campaign (1705)."

"The Tutorial Shakespeare."—(1) *Henry IV, Part I.* Edited by A. J. F. COLLINS. (2) *Henry V.* Same Editor. (3) *Twelfth Night.* Edited by H. C. DUFFIN. (Each 2s. Clive.)

These editions mark a distinct advance in the study of Shakespeare. Attention is directed more to the matter than to the language. The plots and characters are analysed and discussed, and a précis at the beginning of each act points out the dramatic development. In the two historical plays the quotations from Holinshed are most serviceable. The notes eschew philology and confine themselves to explanations of words and constructions sufficient for understanding the text. We doubt even thus if too much is not given—whether it is not better to leave the pupil to form his own judgment of the characters, with perhaps a few hints from the teacher. The section on Metre seems to us the least satisfactory. We do not believe that Shakespeare can be stretched on the Procrustean bed of five feet, iambs or trochees. If the feet are the bricks, the architecture of the verse is determined by the *cæsura* here ignored.

"That né | ver mày | ill óf | fice òr | fell jeá | lousy"

does not help us to read the line.

In

"Therefore in fierce tempest is he coming"

we are instructed that "therefore" has the metrical value of a trisyllable. Surely "fierce" is to be pronounced as a dissyllable.

In

"Hides my heart. So let me hear you speak,"

"Hides" is not the foot of one syllable, but the pause at the break counts as half a foot.

We thought that Theobald's famous conjecture "Babbled o' green fields" had been generally abandoned. The restoration of the text (here ascribed to Dr. H. Bradley) is due to Dr. Creighton, who showed that it was taken from Hippocrates' "Praesagia Mortis."

A Pageant of English Literature. By EDWARD PARROTT. (6s. Nelson.)

The Pageant is designed as a prophylactic to "the ever-rising flood of novelties" and novels, and an antidote to the pemmican of the textbook. The author holds that the best way to send a young reader to the masterpieces of literature is to interest him in "the man behind the book"; and he depicts the most famous of English authors, from Caedmon to Tennyson, as they lived and moved. He has a keen eye for seizing the most telling situations and the most characteristic traits, and the reproduction of pictures by famous modern artists serve as stage decoration. We advise the reader to skip the first five chapters. Artists of the cave, invention of the alphabet, "the glory that was Greece and the grandeur that was Rome," cannot be set forth in fifty pages, and no such prelude was

wanted. All these are too remote, and it would have been better had the Pageant stopped short of Dickens, Thackeray, Browning, and Tennyson. These are too near at hand, and the numerous full-length portraits we possess make us critical of a thumb-nail sketch. Of Browning's wife we read: "In 1848 he made the acquaintance of a cousin of Elizabeth Barrett"; and Lionel Tennyson is described as the poet's eldest son. In the familiar quotation of Sidney's, "The Old Song of Percy and Douglas," &c. (page 144) a "not" has been omitted.

"Home University Library."—*Shelley, Godwin, and their Circle.* By H. N. BRAILSFORD. (1s. Williams & Norgate.)

The atmosphere generated in England by the French Revolution is here depicted as a setting for the figures that, in turn, are sympathetically treated by Mr. Brailsford. The controversies of Burke and Thomas Paine, the panic of the government, and the compelling influence of Godwin are the world in which Shelley grew. Of Godwin, whose power over his contemporaries seems to us so disproportionate, the author concludes that—"He stood erect and independent. He spoke what he deemed to be truth. He did his part to purge the veins of men of the subtle poisons which dwarf them." The chapters on Mary Wollstonecraft and Shelley are the best, perhaps because they belong more to our own time. But knowledge of the history of England in the early nineteenth century is inadequate unless account is taken of the ardent spirits who dreamed dreams and saw visions. Mr. Brailsford realizes the defect of some of the visions when he remarks: "There is something amiss with an ideal which is constrained to express itself in negatives. . . . When the present was condemned and the past buried, the future had somehow eluded it. It [the revolution] executed the mother and marvelled that the child should die. . . . If our waking life and our years of action are to regain a meaning we must perceive that the process of evolution is itself significant and interesting."—But he gives to them, unlike Matthew Arnold, full credit for their gift to humanity: "Their teaching is a tonic to the will, a reminder still eloquent, still bracing, that among the forces which make history the chief is the persuasion of the understanding, the conscious following of a rational ideal. . . . They taught a lesson which posterity has but half learned. We shall be the richer for returning to them, as much by what we reject as by what we embrace." The volume is a worthy successor of this useful series. The bibliography is both critical and helpful to the reader.

Kilnigh and Olwen, and Other Stories from the Mabinogion.

Retold by E. M. WILMOT-BUXTON. (2s. 6d. Nelson.)

The other stories are "The Lady of the Fountain" and "The Dream of Rhemebury." None of these three romances can compare with "Enid and Geraint," but the second, which is the simplest and easiest to follow, will please children.

Middle School English Composition. By GEORGE A. TWENTY-MAN. (2s. 6d. Rivingtons.)

This textbook falls into two parts—grammar and composition proper. There is a good chapter on punctuation and one on relative pronouns distinguishing the restrictive and what is here called the continuative use; but we doubt whether the grammar will greatly aid the young composer. To the second part we can award almost unqualified praise. The specimens for précis writing are interesting in themselves, and the directions for condensing or summarizing them are clearly given. Then we have notes for essays on various subjects, and the pupil is instructed how to work them into an essay and how to set about making similar notes for himself. The last chapter, "Exercises in Prosody," enters on more debatable ground, and we should be sorry to be set some of the exercises. Thus we should never have guessed that in the line "Our little life is rounded with a sleep" "ded with" is a Pyrrhic.

A New School Hymnal. Edited by E. M. PALSER. (1s. net. Harrap.)

This hymnal is a happy admixture of old and new. It has several Latin, two or three German, and one Greek hymn in the original, and it has an unusual number of hymns still in copyright by living authors, among whom we may mention the Deans of Norwich and of Wells, the Master of Trinity, Mr. H. Newbolt, and Mr. Rudyard Kipling. School collections of hymns have been freely consulted by the editor, and attached to each author's name is the school where he was educated. Notes such as "a private school (Mr. Wetherall's)," "a private school at Ealing," are not illuminating, and for the latter, attached to John Henry Newman, "Oriental College, Oxford," matter will be substituted, and to the name of Edmund Spenser added "Merchant Taylors' School." There is no trace of the hymnals of girls' schools—e.g. Cheltenham College. The editor has not observed the distinction between hymns and sacred lyrics. Several well worthy of inclusion as lyrics are wholly unsuitable for singing—the Prologue to "In

Memoriam," "How happy is he born and taught" of Henry Wotton, Keble's "There is a book who runs may read," and a few we should not have admitted under either head—115 (Pope at his worst), 205 ("A broken pole, a trodden heap, The standard of thy soul shall keep"), and 215 ("I learnt it in the meadow path"). We are glad to see H. J. Buckoll, of Rugby well represented. Can any reader inform us where a copy of his "Hymns" may be seen? It is mentioned in Dr. Julian's "Dictionary," but is not either in the British Museum or in the Bodleian.

A Book of Verse for Children. Compiled by ALYS RODGERS. School Edition. (2s. Cambridge University Press.)

This children's anthology is in five parts, and graduated. Part I is for the infants, with lullabies and selections from Stevenson's "Child's Garden." Parts II and III are mainly Nature poems; Part IV is religious; and Part V, the longest, contains poems of a romantic or patriotic type. The collection is not hackneyed, and several little-known American poets have been requisitioned. Humorous poems are inadequately represented by Lewis Carroll's "Will you walk a little faster?" and Thackeray's not very witty "Pigtail." An anthology that has any pretence to originality must necessarily exclude many old favourites, and we must not complain if, instead of E. A. Poe's "Annabel Lee," we find "Eldorado"; instead of T. E. Brown's "My Garden," "A Child's Prayer." On the other hand, there are very few poems that seem to us worthless or out of place—as, for instance, Tennyson's "Airy, fairy Lilian."

The Boy's Own Railway Book. Edited by CHARLES S. BAYNE. (3s. 6d. Cassell.)

Engines have a singular fascination, and the reviewer knew a child of four, now a distinguished civil engineer, whose bedroom had to be changed because he could not be cured of starting from his first sleep and gazing out of the nursery window at the sound of a passing traction engine. Such a boy may glut his eyes with pictures innumerable of engines, from the Rocket down to the latest mono-rail. The only complaint a boy is likely to make is that the feast of good things is too plentiful. No one but a professional could distinguish any difference between the types of engines now employed on the various English lines, and pictures of a porter, a guard, a ticket office, &c., are superfluous. The only thing we miss is a description of an armoured train and a chapter on strategic railways. There is a graphic account of a railway accident witnessed by the author as a boy.

The Gardener and the Cook. By LUCY H. YATES. (Constable.)

We take it that this book, like the sauce described in one of its pages, is meant to act upon the taste as a harmonious blend. It is not a book of recipes, nor of intensive culture, nor of character sketches: it is a harmonious blend of the three. The intelligent housewife who shakes herself free from the glamour of the blend will find many an aid to interest and variety of fare, and no doubt will be competent to deal with the vagueness of "some," "a little," "a spoonful" of the recipes. The writer is evidently a real lover of gardens, and such are always worth listening to on their hobby. The portrait of Charlotte is such as to fill with envy the hearts of those whose cooks are not artists—far, far from it. To Charlotte cookery is a fine art, and as such it has its own real dignity and character. To raise it to such a level for others would surely be a help towards the solution of the servant problem, and yet we understand that the County Council, whilst providing a three years' cookery course for boys, offers the girls no more than six months' training in the art.

Enchanted Tulips, and other Verses for Children. By A. E. and M. KEARY. (3s. 6d. net. Macmillan.)

The initials represent three generations, and we seem to trace a family likeness in the rimes. Some, like "The Cat's Letter," show the humour that will appeal to children, but few convince us as does R. L. Stevenson that this exactly expresses what he thought or fancied as a child. Take the first poem of any length, "Wild Flowers." Will a child know (we do not) what "fiery Golans" are, or appreciate the daisy's claim to "best-beloved"?

"I rise and spread beneath your feet,
In silver leaves, my portents sweet."

The few initialled "A. K." (Annie Keary) are by far the best in the volume, and the rest confessedly serve as padding.

Daudet's Lettres de Mon Moulin. Edited by MARC CEPPI. (1s. 6d. G. Bell.)

Not the first, and will not be the last, school edition of the delightful letters. Only the earlier letters are here given. The notes are very brief, but explain all the real difficulties of phrases and allusions. There is a vocabulary, and the usual *questionnaire*.

Literary Selections from Newman. With Introduction and Notes by A SISTER of Notre Dame. (1s. 6d. Longmans.)

If only as a master of style, Newman deserves a place among "Classbooks of English Literature," and the editor has not allowed her religion to prejudice her choice. "The Idea of a University" is well chosen as the heart of the volume. There is no reason why it should not serve as a classbook in Protestant schools. We light by chance on an eloquent eulogium of the site of the Louvain University, admirably translated from Lipsius. It would touch to pity, not remorse, the heart of a German professor.

BOOKS OF THE MONTH.

Annals.

Pitman's Year Book and Diary, 1915. 1s.
Blackie's Children's Annual. Eleventh Year of issue. 3s. 6d.
